
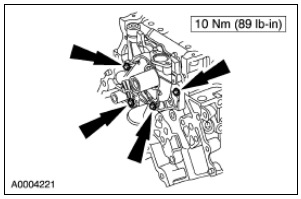
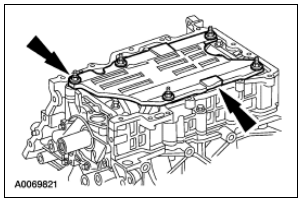
2. Position the oil pump and install the bolts.



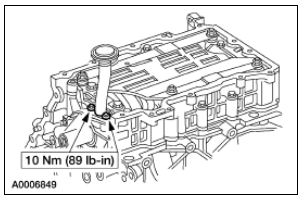
3. Position the oil pan baffle and install the nuts. Tighten in two stages:
   - Stage 1: Tighten to 5 Nm (44 lb-in).
   - Stage 2: Tighten an additional 45 degrees.



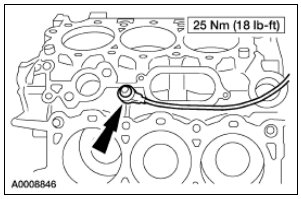
4. **NOTE:** Lubricate the O-ring seal with clean engine oil before installing.

   Position the oil pump screen cover and tube and install the bolts.

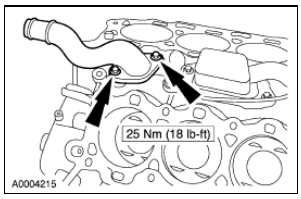
   - Use a new O-ring seal, if necessary.



5. Position the top-mounted knock sensor (KS) and install the bolt.



6. Using a new O-ring seal, position the coolant inlet tube and install the bolts.



Items 2-4: LH Cylinder Head, Gaskets and Bolts Assembly Note

1. ⚠ **CAUTION: The cylinder head gasket surfaces are ground to a precision finish. Do not rest cylinder heads on gasket surfaces. Do not use any abrasive materials during cleaning of the surfaces. Hairline scratches, small burrs, or dirt can provide a leak path for a cylinder head gasket to leak. If gasket material remains on the sealing surface, use only a plastic-tipped scraper to remove the material. Do not attempt to reuse the head gaskets.**

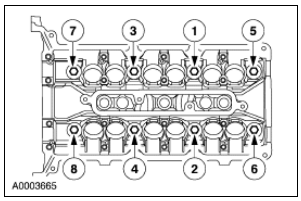
   ⚠ **CAUTION: Cylinder head bolts are torque-to-yield and cannot be reused.**

   NOTE: The LH and RH cylinder head gaskets are not interchangeable.

   Using a new cylinder head gasket, position the LH cylinder head, and install new bolts.

   - Tighten the bolts in six stages:
   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).

- Stage 5: Tighten an additional 90 degrees.
- Stage 6: Tighten an additional 90 degrees.



Items 5-7: RH Cylinder Head, Gaskets and Bolts Assembly Note

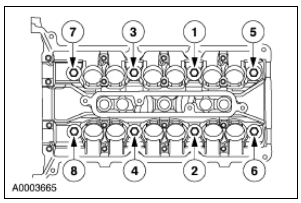
1. **⚠ CAUTION: The cylinder head gasket surfaces are ground to a precision finish. Do not rest cylinder heads on gasket surfaces. Do not use any abrasive materials during cleaning of the surfaces. Hairline scratches, small burrs, or dirt can provide a leak path for a cylinder head gasket to leak. If gasket material remains on the sealing surface, use only a plastic-tipped scraper to remove the material. Do not attempt to reuse the head gaskets.**

   ⚠ CAUTION: Cylinder head bolts are torque-to-yield and cannot be reused.

   NOTE: The LH and RH cylinder head gaskets are not interchangeable.

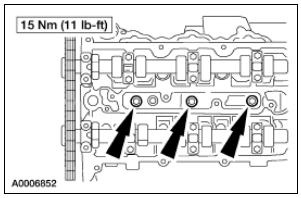
   Using a new cylinder head gasket, position the RH cylinder head, and install new bolts.

   - Tighten the bolts in six stages:
   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).
   - Stage 5: Tighten an additional 90 degrees.
   - Stage 6: Tighten an additional 90 degrees.



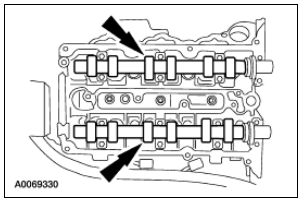
2. **NOTE:** LH is shown; RH is similar.

   Install the LH and RH spark plugs.



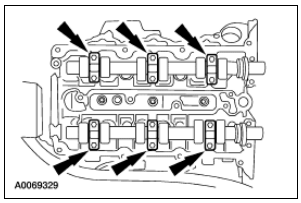
3. **NOTE:** Be sure camshaft bearing caps are installed in their original positions.

   Lubricate camshafts with clean engine oil and carefully position the camshafts into the cylinder head.

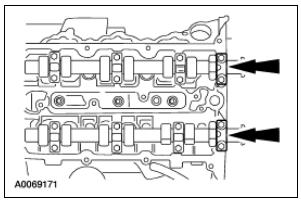


4. ⚠ **CAUTION: Do not install the camshaft journal thrust caps until all of the camshaft bearing caps have been installed, or damage to the thrust caps can occur.**

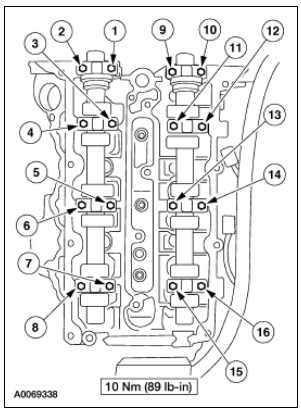
   Lubricate the bearing surfaces of the camshaft bearing caps with clean engine oil, install the bearing caps, and loosely install the bolts.



5. Lubricate the bearing surfaces of the camshaft bearing thrust caps with clean engine oil, install the caps, and loosely install the bolts.



6. Tighten the bolts in the sequence shown.



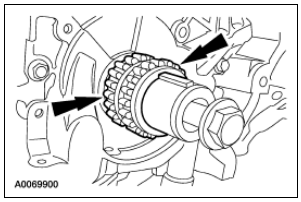
7. **NOTE:** If new camshafts were installed, refer to Valve Clearance Adjustment in this section.

   Lubricate the tappet shims and camshaft lobes with clean engine oil.

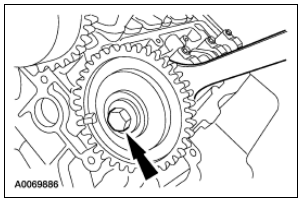
8. Rotate the camshafts to make sure they are not binding. If binding occurs, check to make sure that all bearing caps are in their original positions. Loosen all bearing cap bolts in reverse order and retighten.

Items 8-19: Variable Camshaft Timing (VCT) Actuators, Exhaust Camshaft Sprockets, Bolts, Washers and Crankshaft Sprockets Assembly Note

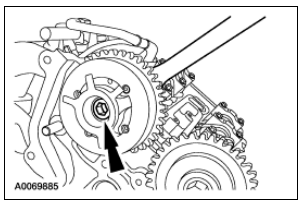
1. With the two keyways facing forward, install the crankshaft sprockets .



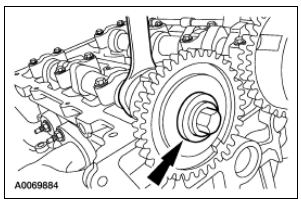
2. Install the LH exhaust camshaft sprocket and a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



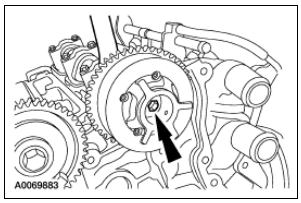
3. Install the LH variable camshaft timing (VCT) actuator and a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



4. Install the RH exhaust camshaft sprocket and a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

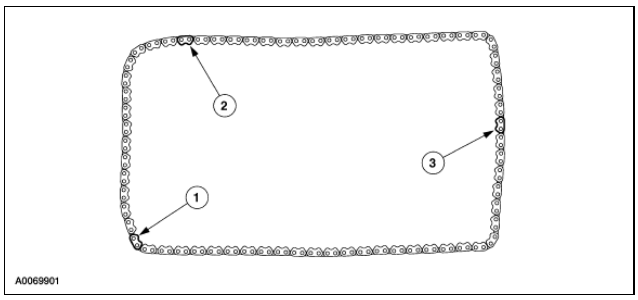


5. Install the RH variable camshaft timing (VCT) actuator and a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

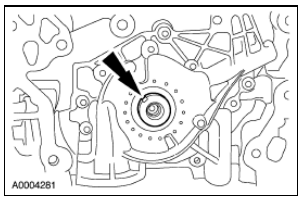


Items 20-33: Timing Drive Components Assembly Note

1. If timing marks in the timing chains are not evident, use a permanent-type marker to mark the crankshaft and camshaft timing marks on the LH and RH timing chains.
    1. Mark any link to use as the exhaust camshaft timing mark.
    2. Starting with the exhaust camshaft timing mark, count 16 links and mark the link as the intake camshaft sprocket timing mark.
    3. Starting with the intake camshaft timing mark, count 25 links and mark the link as the crankshaft sprocket timing mark.

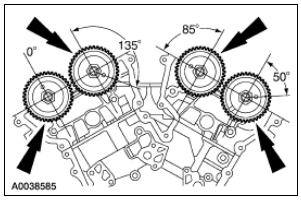


2. Verify that the crankshaft keyway is in the eleven o'clock position.



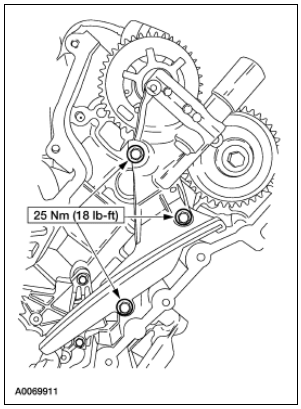
3. ⚠ **CAUTION: The crankshaft keyway must remain in the eleven o'clock position until the cams are located in the neutral position, or damage to the valves can occur.**

   Rotate the LH and RH intake and exhaust camshafts to locate them in their neutral positions.

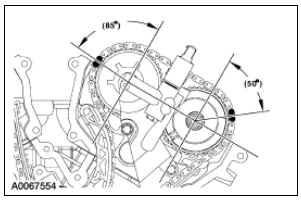


4. **NOTE:** Gold colored bolt must be installed in its original location.

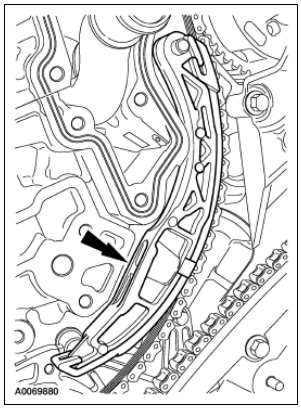
   Install the LH VCT solenoid housing assembly and the bolts.



5. Install the LH timing chain, aligning the copper (or marked) link with the marks on the camshaft and crankshaft sprockets.

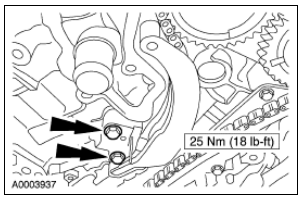


6. Install the LH timing chain tensioner arm.

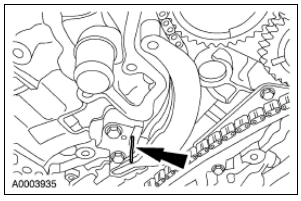


7. **NOTE:** Be sure to position the tensioner so that the tensioner piston is fully engaged in the tensioner arm.

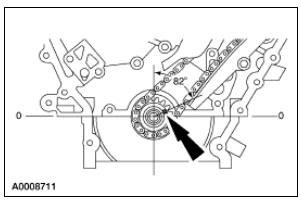
   Install the LH timing chain tensioner and bolts.



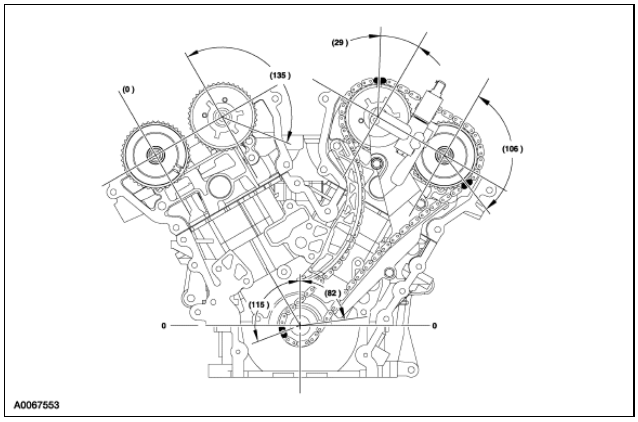
8. Remove the wire or paper clip from the tensioner.



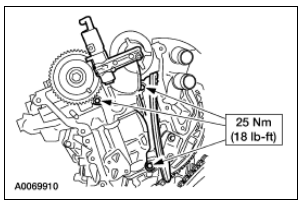
9. Rotate the crankshaft clockwise and position the keyway at the three o'clock position for RH timing chain installation.



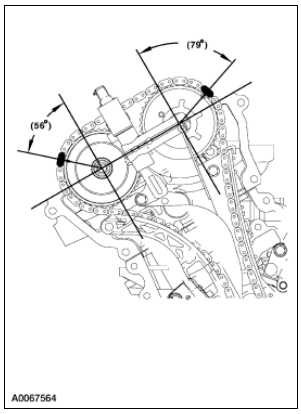
10. Verify that the copper (or marked) links on the LH timing chain are in alignment with the timing index marks on the camshaft and crankshaft sprockets.



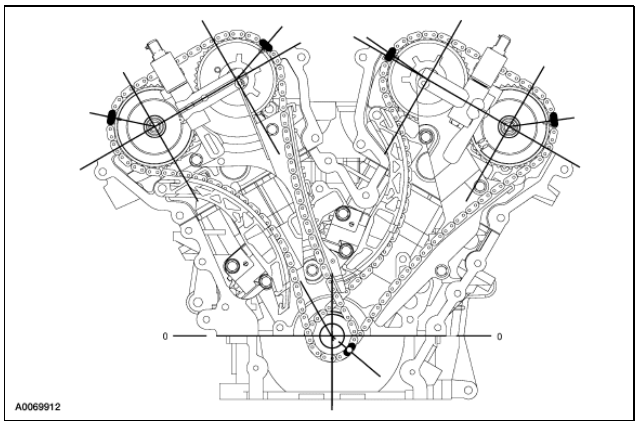
11. Install the RH VCT solenoid housing assembly and bolts.



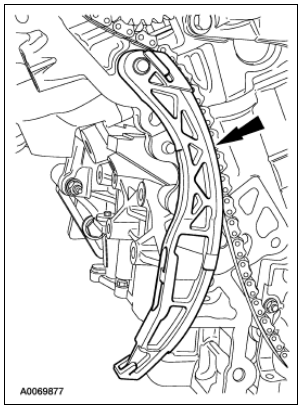
12. Install the RH timing chain, aligning the copper (or marked) links with the marks on the camshaft and crankshaft sprockets.



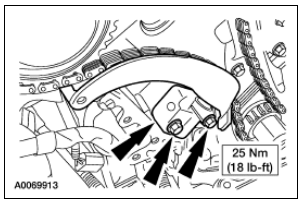
13. Verify that the copper or (marked) links on the RH timing chain are in alignment with the timing marks on the camshaft and crankshaft sprockets.



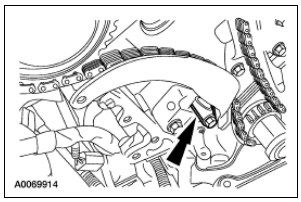
14. Install the RH timing chain tensioner arm.



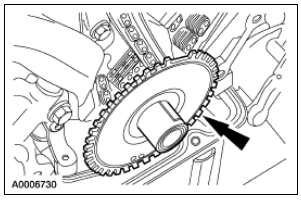
15. Install the RH timing chain tensioner and bolts.



16. Remove the wire or paper clip from the RH timing chain tensioner.



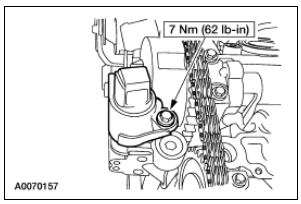
17. Install the ignition pulse wheel using the orange marked keyway slot and the teeth facing forward.



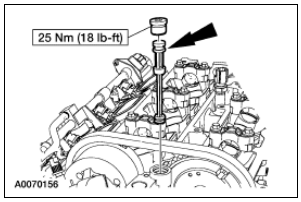
Items 20 and 27: VCT System Oil Filters Assembly Note

1. **NOTE:** LH is shown, RH is similar.

   Remove the bolt and the variable camshaft timing (VCT) solenoid.



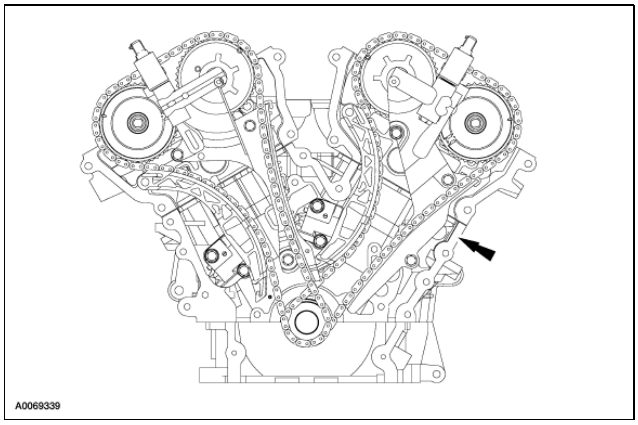
2. Remove the VCT system filter cap and replace the VCT system filter.



3. Repeat the previous steps for the RH VCT system filter.

Items 34 and 35: Engine Front Cover and Front Cover Gaskets Assembly Note

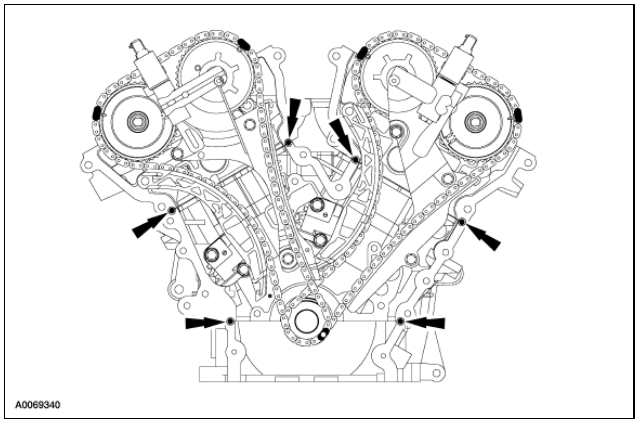
1. Clean the engine front cover to cylinder block and cylinder head sealing surfaces, using a clean shop towel and metal surface cleaner to remove all residue.



2. Install new front cover seals into the front cover.

3. **NOTE:** Install the engine front cover and bolts no more than four minutes after applying sealer.

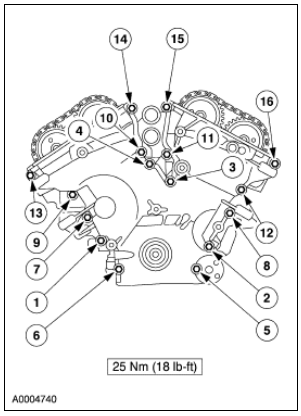
   Apply a 6 mm (0.24 in) diameter dot of silicone gasket and sealant to the areas shown.



4. **NOTE:** Fastener No. 14 is a stud bolt.

   Install the engine front cover and the bolts.

   - Tighten the bolts in the sequence shown.



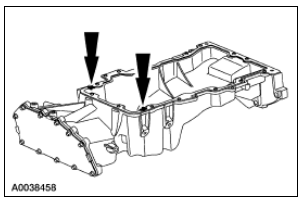
Items 36-39: Oil Pan Gasket, Oil Pan, Oil Pan Stud and Bolts Assembly Note

1. Rotate the engine upside down on the engine stand.

2. Clean the oil pan-to-cylinder block sealing surfaces on the oil pan and cylinder block with a clean shop towel and metal surface cleaner to remove all residue.

3. **NOTE:** Install the oil pan and bolts no more than four minutes after applying sealer.

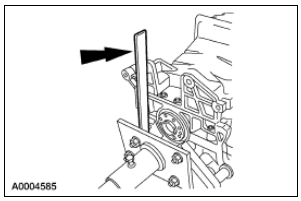
   Apply a 10 mm (0.4 in) dot of silicone gasket and sealant onto the top of the new oil pan gasket at the two locations shown.



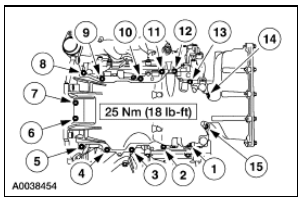
4. **NOTE:** The oil pan rear face must be installed flush to the cylinder block rear face to within ± 0.10 mm (0.0039 in). Failure to maintain this specification will require the oil pan to be removed and installed again.

   Install the oil pan.

   - Using a straightedge, align the rear face of the oil pan with the rear face of the cylinder block.



5. Tighten the oil pan bolts in the sequence shown.

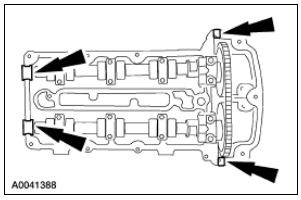


Items 40 and 41: RH Valve Cover and Gaskets Assembly Note

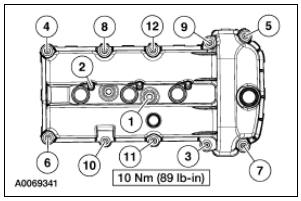
1. Install a new gasket in the RH valve cover.

2. **NOTE:** Install the valve cover and bolts no more than four minutes after applying the sealer.

   Apply an 8 mm (0.32 in) bead of silicone gasket and sealant to the cylinder half round surface and to the front cover gasket intersection places.



3. Position the RH valve cover and install the bolts in the sequence shown.

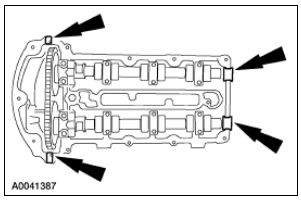


Items 44 and 45: LH Valve Cover and Gaskets Assembly Note

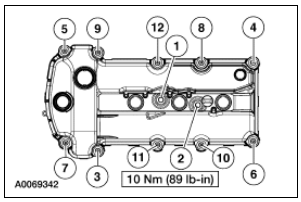
1. Install a new gasket in the LH valve cover.

2. **NOTE:** Install the valve cover and bolts no more than four minutes after installing the sealer.

   Apply an 8 mm (0.32 in) bead of silicone gasket and sealer to the cylinder half round surface and to the front cover gasket intersection places.

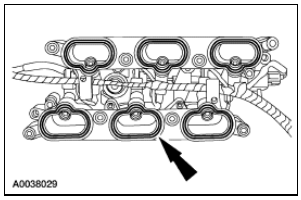


3. Position the LH valve cover and install the bolts in the sequence shown.

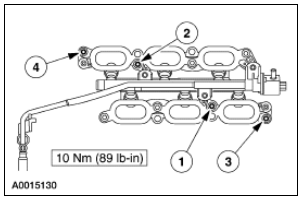


Items 47-49: Lower Intake Manifold Assembly, Gaskets and Bolts Assembly Note

1. Inspect the lower intake manifold gaskets. Install new gaskets if necessary.

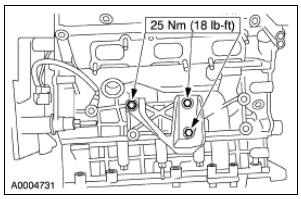


2. Position the lower intake manifold assembly and install the bolts in the sequence shown.

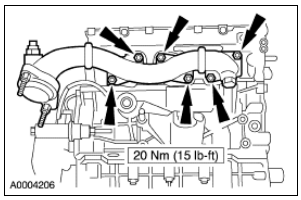


Items 57 and 58: RH Exhaust Manifold and Nuts Assembly Note

1. Position the RH engine mount bracket and install the bolts.



2. Using a new gasket, position the RH exhaust manifold and install the nuts.

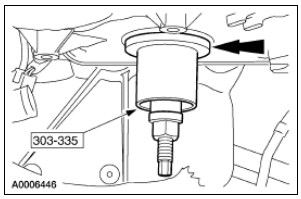


Items 68: Oil Filter Assembly Note

1. Using an oil filter strap wrench, install the oil filter until the seal makes contact. Tighten an additional 270 degrees.

Item 77: Crankshaft Front Oil Seal Assembly Note

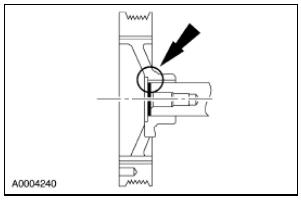
1. Using the special tool, install the crankshaft front oil seal.



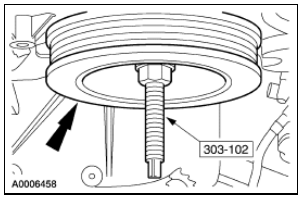
Items 78-80: Crankshaft Pulley, Bolt, and Washer Assembly Note

1. **NOTE:** Install the crankshaft damper no more than four minutes after applying the sealer.

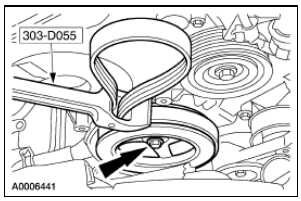
   Apply a dot of silicone gasket and sealant to the crankshaft damper keyway slot.



2. Using the special tool, install the crankshaft damper.

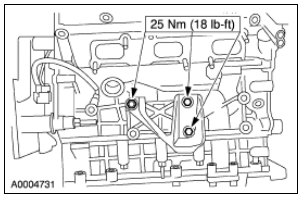


3. Using the special tool, install the washer and a new bolt.
   Tighten the bolt in four stages:
   - Stage 1: Tighten to 120 Nm (89 lb-ft).
   - Stage 2: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 50 Nm (37 lb-ft).
   - Stage 4: Tighten an additional 90 degrees.

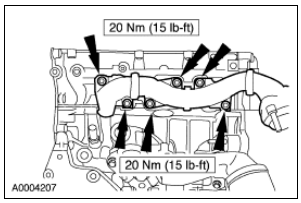


Items 81 and 82: LH Exhaust Manifold and Nuts Assembly Note

1. Position the LH engine mount bracket and install the bolts.

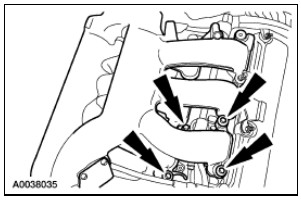


2. Using a new gasket, position the LH exhaust manifold and install the nuts.



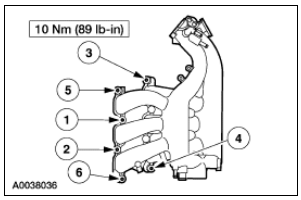
Items 92-99: Upper Intake Manifold, Gaskets and Bolts, and Fuel Regulator Shield and Bolts Assembly Note

1. Position the upper intake manifold and gaskets. Install the bolts finger tight.



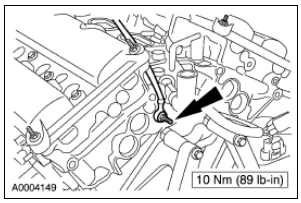
2. Position the fuel pressure sensor shield and install the bolts finger tight.

3. Tighten the upper intake bolts in the sequence shown.

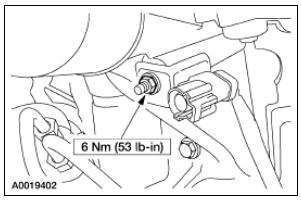


Item 104: Engine Wiring Harness Assembly Note

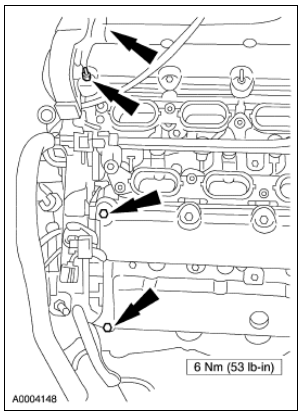
1. Position the ground strap and install the nut.



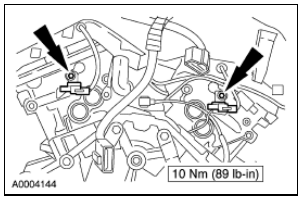
2. Install the bracket and the nut.



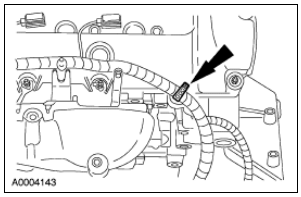
3. Position the wiring harness and install the four nuts.



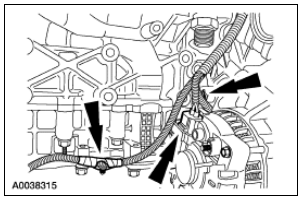
4. Position the two radio ignition interference capacitors and install the bolts.



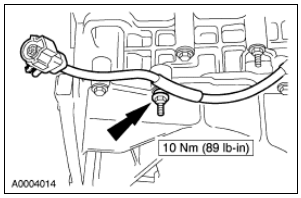
5. Attach the wiring harness retainer.



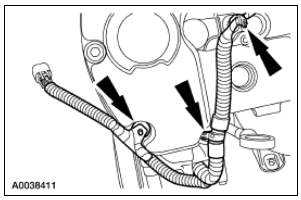
6. Clip the two wiring harness retainers into the brackets and connect the generator electrical connector.



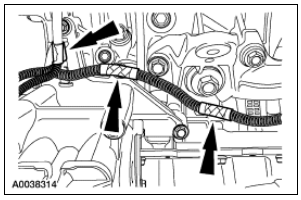
7. Position the wiring harness and install the nut.



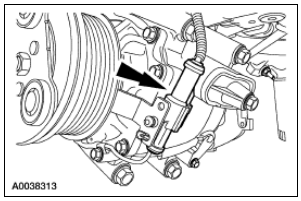
8. Attach the three wiring harness retainers.



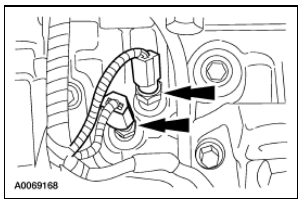
9. Attach the three wiring harness retainers.



10. Connect the A/C electrical connector.

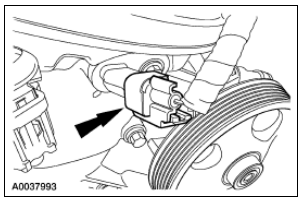


11. Connect the oil pressure switch electrical connector.

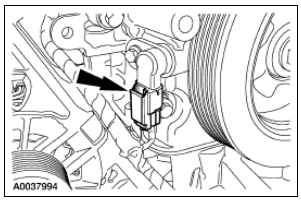


12. **NOTE:** LH is shown, RH is similar.

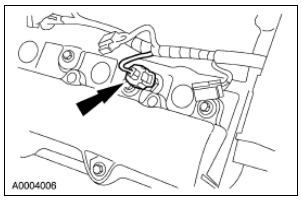
    Connect the two camshaft position (CMP) sensor electrical connectors.



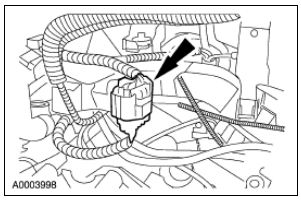
13. Connect the crankshaft position (CKP) sensor electrical connector.



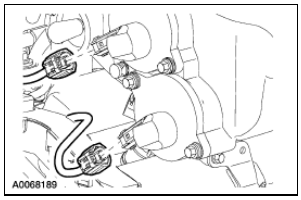
14. Connect the cylinder head temperature (CHT) sensor electrical connector.



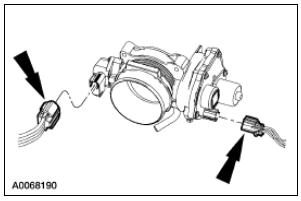
15. Connect the fuel injector wiring harness connector.



16. Connect the intake manifold tuning valve electrical connectors.

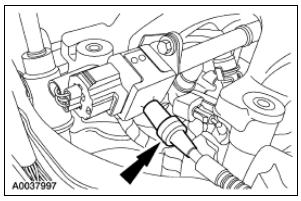


17. Connect the throttle body electrical connectors.



Item 106: Emissions Vacuum Hose Assembly Note

1. Connect the fuel pressure sensor jumper to the main vacuum harness.

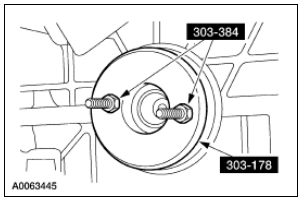


2. Connect the positive crankcase ventilation (PCV) tube at the rear of the upper intake manifold.

Item 125: Crankshaft Rear Oil Seal Assembly Note

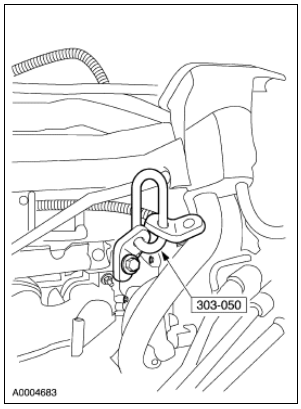
1. Lubricate the outer lips and the inner seal on the crankshaft rear oil seal with clean engine oil.

2. Using the special tools, install the crankshaft rear oil seal.

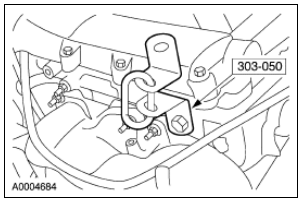


Items 126-128: Flexplate Bolts, Flexplate, and Spacer Plate Assembly Note

1. Install the special tool onto the engine as shown.

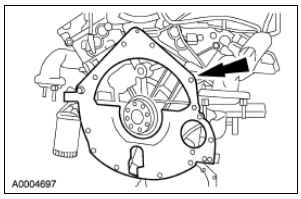


2. Install the special tool onto the engine as shown.

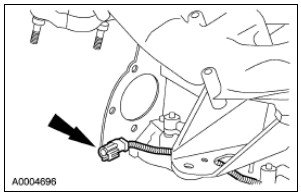


3. Using the special tool and an engine crane, transfer the engine from the stand to the floor or a bench.

4. Install the spacer plate assembly.



5. Attach both the wiring harness retainers, one on each side of the engine.



6. Install the flywheel and the bolts.

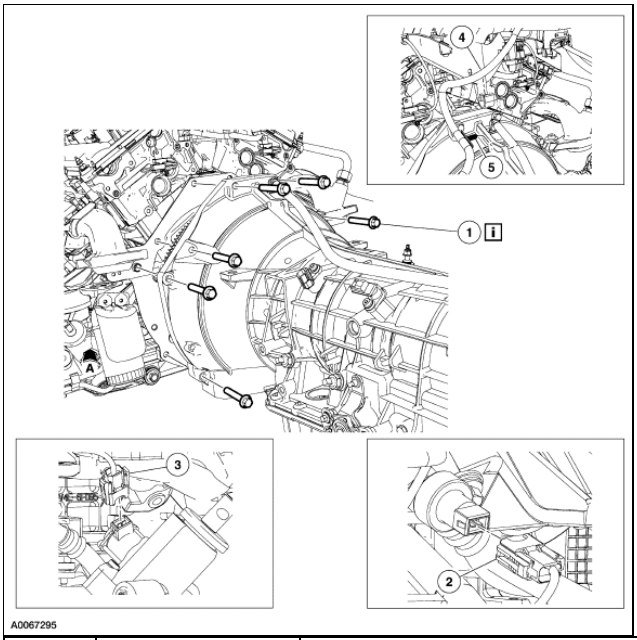
Special Tool(s)

 ST1595-A	Engine Lifting Brackets 303-050

Material

Item	Specification
Motorcraft Premium Gold Engine Coolant VC-7-A or equivalent	WSE-M97B51-A1
Motorcraft Premium Engine Coolant VC-4-A or equivalent	ESE-M97B44-A
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

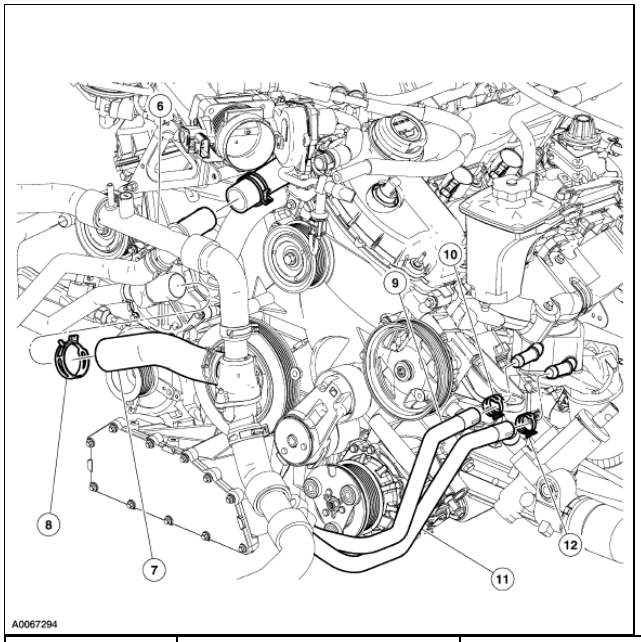
1. Illustration 1 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W500128	Transmission mounting bolts (7 req'd) Installation Note
2		Engine wiring harness electrical connector
3		Power steering electrical connector

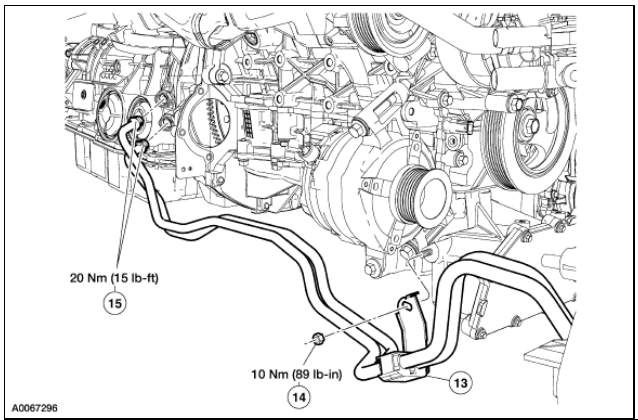
4	7E443	Transmission wiring harness
5		Wiring harness retainer (part of 7E443)

2. Illustration 2 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
6	129949	Coolant tube assembly
7	98945697	Coolant hose
8	15161	Coolant hose clamp
9	8B273	Coolant hose
10	15161	Coolant hose clamp
11	8B273	Coolant hose
12	15161	Coolant hose clamp

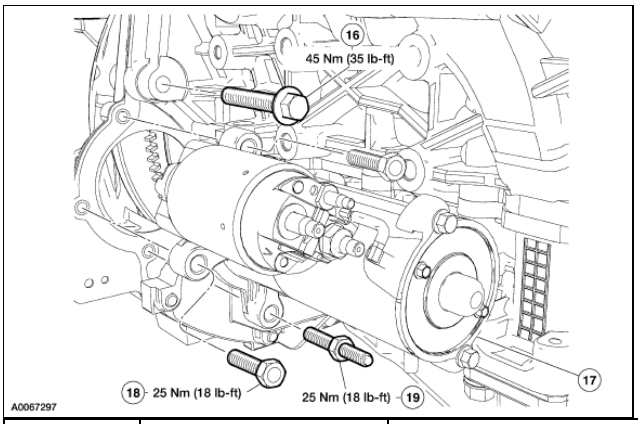
3. Illustration 3 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
13		Transmission cooler tube mounting bracket
14	W701706	Transmission cooler mounting nut

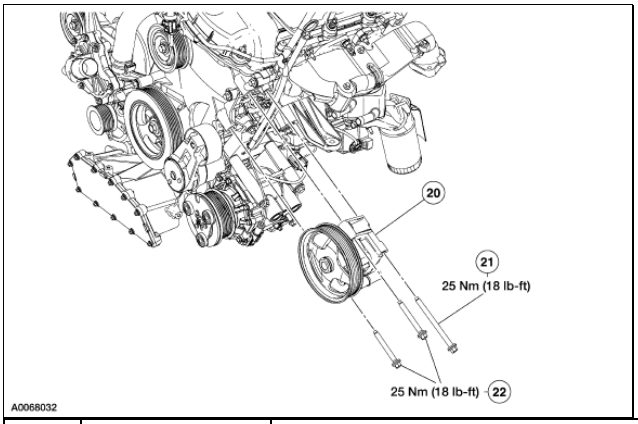
15		Transmission cooler tube-to-transmission nuts

4. Illustration 4 of 17. Install the components in the order indicated in the following illustration and table.



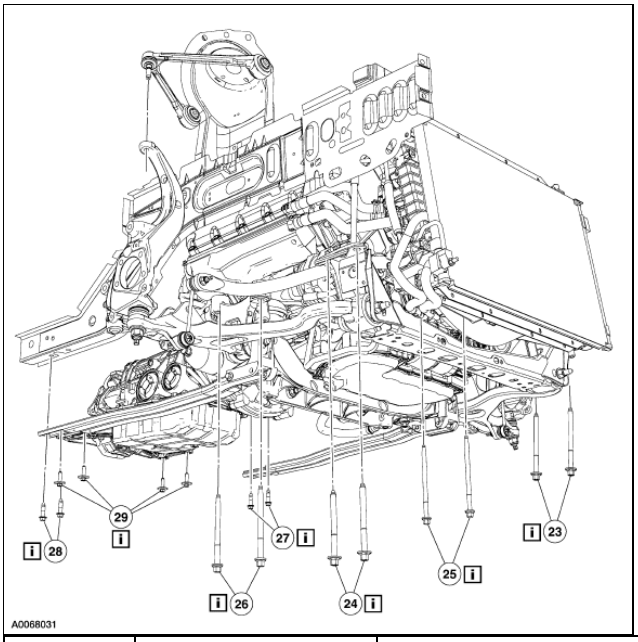
Item	Part Number	Description
16	W704666	Transmission mounting bolt
17	11000	Starter
18	W705359	Starter mounting bolts (2 req'd)
19	W704666	Starter mounting stud

5. Illustration 5 of 17. Install the components in the order indicated in the following illustration and table.



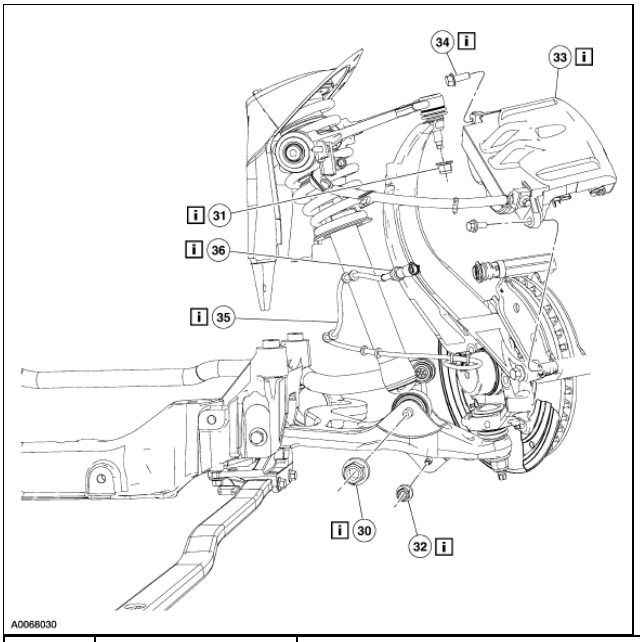
Item	Part Number	Description
20	3A696	Power steering pump
21	W701532	Power steering pump mounting bolt
22	W706902	Power steering pump mounting bolts (2 req'd)

6. Illustration 6 of 17. Install the components in the order indicated in the following illustration and table.



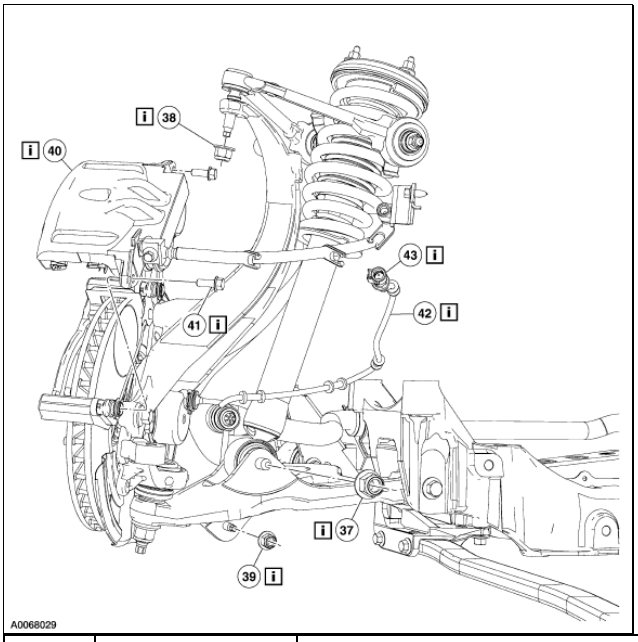
Item	Part Number	Description
23	W708091	Front crossmember bolts (left) Installation Note
24	W708091	Front crossmember bolts (left) Installation Note
25	W706239	Center crossmember bolts (left) Installation Note
26	W706239	Center crossmember bolts (right) Installation Note
27	W707186	Crossmember bolts (left) Installation Note
28	W707186	Crossmember brace bolts (right) Installation Note
29	W704971	Transmission crossmember bolts Installation Note

7. Illustration 7 of 17. Install the components in the order indicated in the following illustration and table.



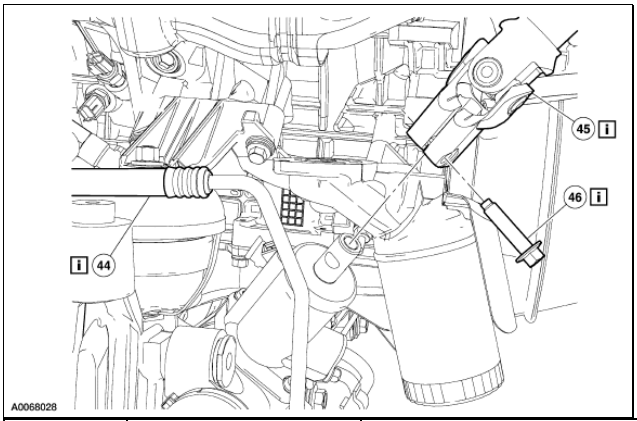
Item	Part Number	Description
30	W50213	Lower strut mount nut and bolt Installation Note
31	W520214	Upper ball joint nut Installation Note
32	W50213	Stabilizer bar nut Installation Note
33	2B119	Brake caliper Installation Note
34	2B118	Brake caliper bolts (2 req'd) Installation Note
35	2B663	Anti-lock brake sensor harness Installation Note
36	2B663	Anti-lock brake sensor electrical connector Installation Note

8. Illustration 8 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
37	W50213	Lower strut mount nut and bolt Installation Note
38	W520214	Upper ball joint nut Installation Note
39	W50213	Stabilizer bar nut Installation Note
40	2B119	Brake caliper Installation Note
41	2B118	Brake caliper bolts (2 req'd) Installation Note
42	2B663	Anti-lock brake sensor harness Installation Note
43	2B663	Anti-lock brake sensor electrical connector Installation Note

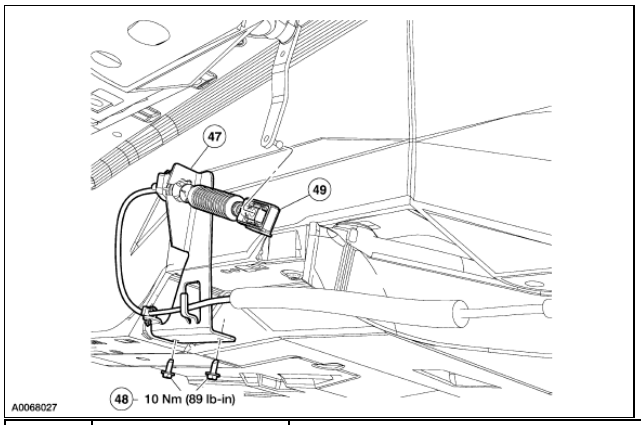
9. Illustration 9 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
44	3A713	Power steering hose bracket Installation Note

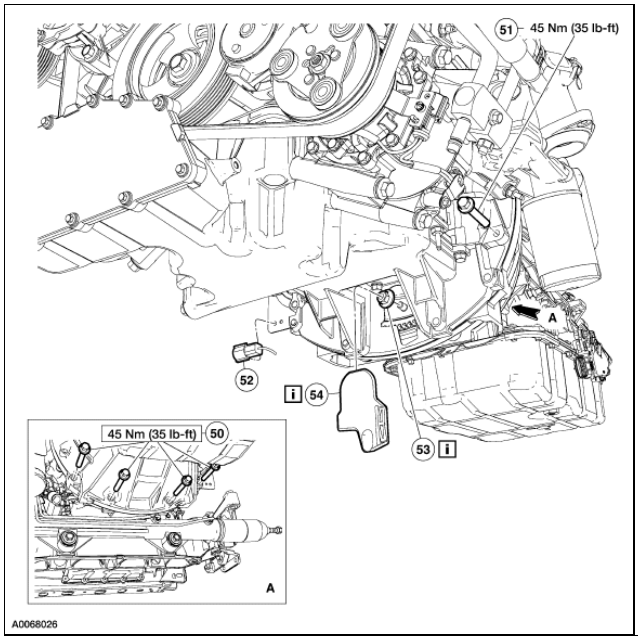
45	3C662	Steering column intermediate shaft Installation Note
46	W705113	Intermediate shaft pinch bolt Installation Note

10. Illustration 10 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
47	7B229	Transmission shifter bracket
48	W707491	Transmission shifter bracket mounting bolts
49		Transmission shifter cable

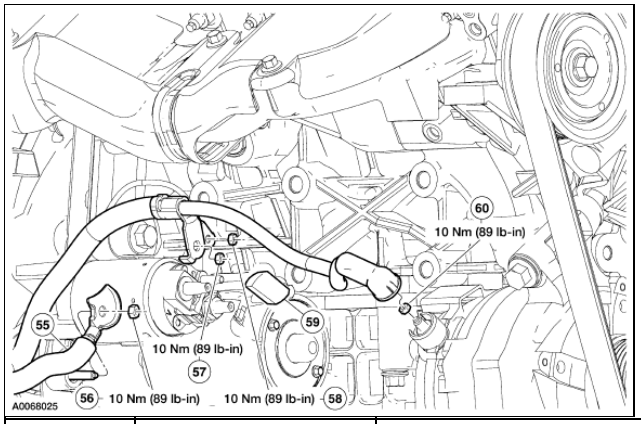
11. Illustration 11 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
50	W500128	Transmission lower mounting bolts (4 req'd)
51	W500128	Transmission mounting bolt
52	14A464	Electrical connector
53		Torque converter nuts (4 req'd) Installation Note

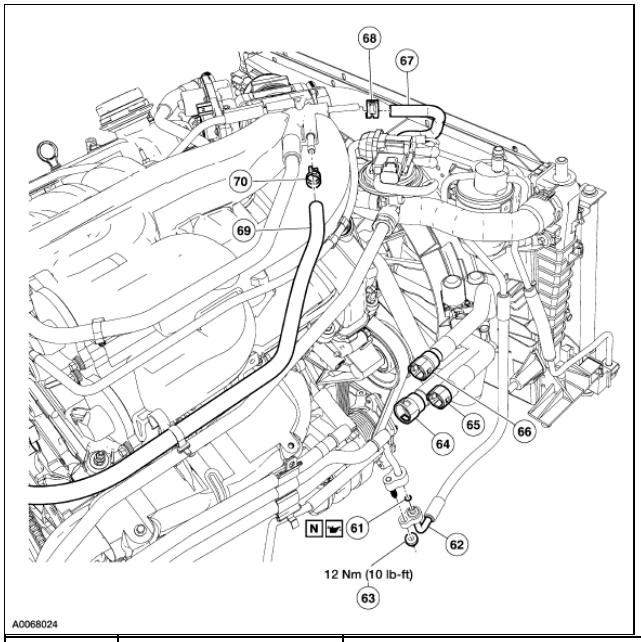
54		Access cover Installation Note

12. Illustration 12 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
55	14305	Ground strap
56	N500617	Ground strap nut
57	N800156	Starter solenoid wire nut
58	N800136	Starter solenoid battery cable nut
59	11N087	Starter terminal dust cover
60	N805403	Alternator terminal nut

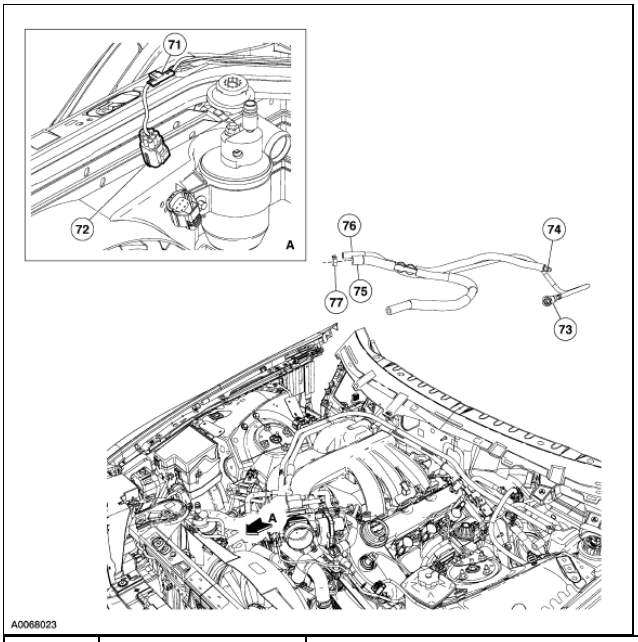
13. Illustration 13 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
61		O-ring seal
62		A/C high pressure tube
63	W520413	A/C high pressure tube mounting nut
64	18C266	Coolant hose

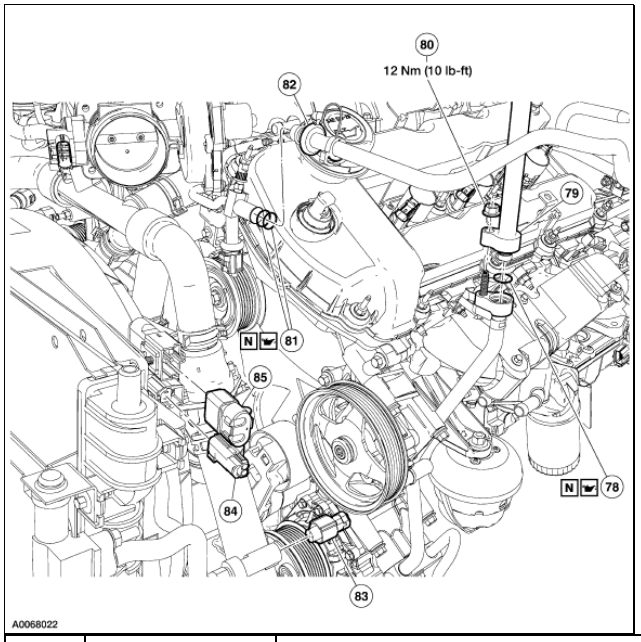
65	18C266	Coolant hose
66	18C266	Coolant hose
67	89066697	Coolant hose
68	15161	Coolant hose clamp
69	89066697	Coolant hose
70	15161	Coolant hose clamp

14. Illustration 14 of 17. Install the components in the order indicated in the following illustration and table.



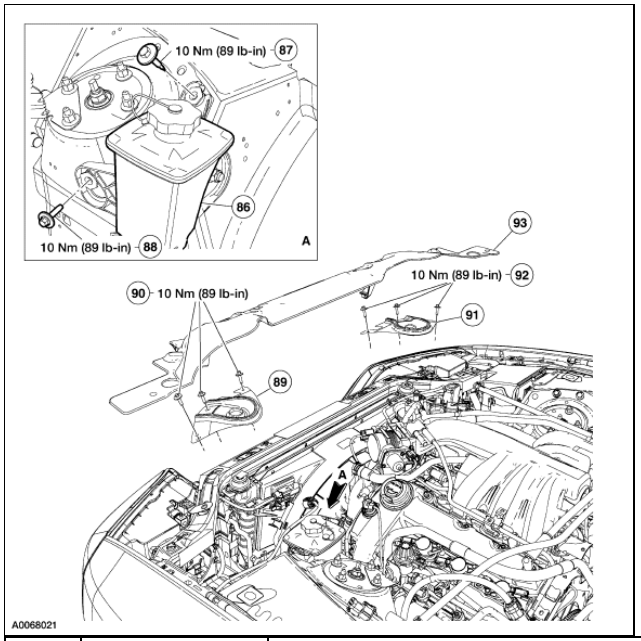
Item	Part Number	Description
71	12A464	Coolant control valve wiring harness
72	14A464	Coolant control valve electrical connector
73	9D289	Vacuum hose quick-connect fitting
74	9C490	Brake booster vacuum hose fitting
75	9C490	Vacuum hose
76	9D289	Vacuum hose
77	382999	Vacuum hose clamp

15. Illustration 15 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
78		O-ring seal
79	190850	A/C manifold tube
80	W520413	A/C manifold nut
81		O-ring seals (2 req'd)
82	9J280	Fuel hose
83	14A464	A/C high pressure switch electrical connector
84	14A464	Electric cooling fan electrical connector
85	14A464	Electric cooling fan electrical connector

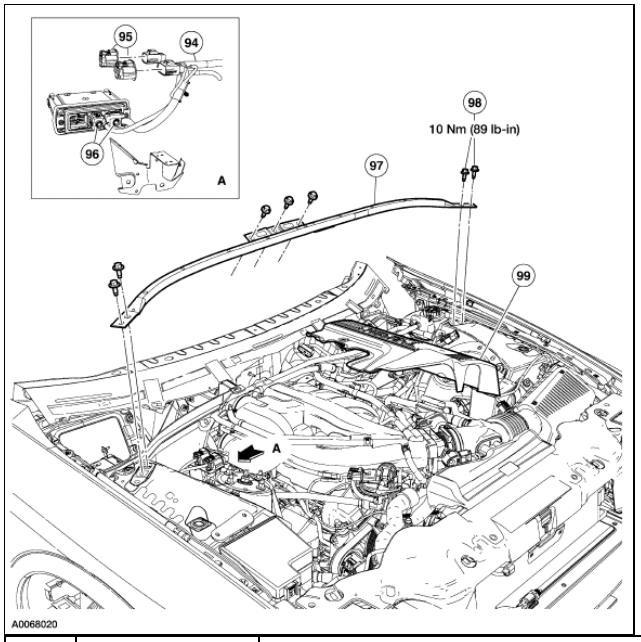
16. Illustration 16 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
86		Power steering reservoir
87		Power steering reservoir mounting bolt

88		Power steering reservoir mounting bolt
89	8226	Radiator upper support bracket (left)
90	N606677	Radiator upper support bracket mounting bolts
91	8226	Radiator upper support bracket (right)
92	N606677	Radiator upper support bracket mounting bolts
93	8C291	Radiator upper sight shield

17. Illustration 17 of 17. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
94	12B637	Engine wiring harness
95	14A464	Engine wiring harness electrical connectors
96	14A464	Powertrain control module electrical connectors
97	3B328	Cross-vehicle support
98	W708009	Cross-vehicle support mounting bolts (7 req'd)
99		Engine appearance cover

18. Install the RH and LH subframe splash shields.

19. Install the front splash shield.

20. Install the RH and LH inner fender splash shields.

21. Install the exhaust system. For additional information, refer to Section 309-00 .

22. Install the drive shaft. For additional information, refer to Section 205-00 .

23. Install the clean air inlet duct. For additional information, refer to Section 412-00 .

24. Charge the A/C system. For additional information, refer to Section 412-00 .

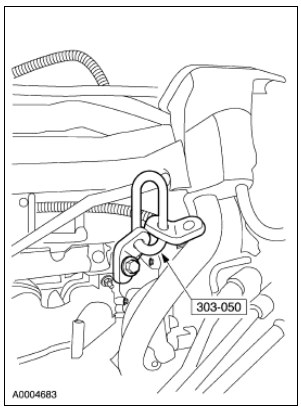
25. Fill and bleed the engine cooling system. For additional information, refer to Section 303-03 .

26. Install the air cleaner assembly. For additional information, refer to Section 303-04A .

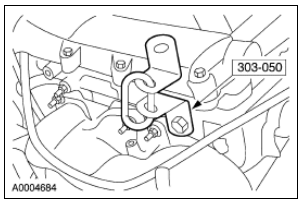
27. Connect the battery ground cable. For additional information, refer to Section 414-00 .

Item 1: Transmission Mounting Bolts Installation Note

1. Install the special tool to the engine as shown.

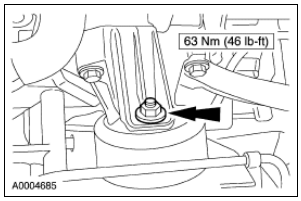


2. Install the special tool to the engine as shown.

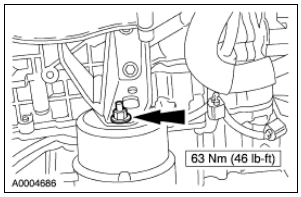


3. Using an engine crane, transfer the engine to the subframe.

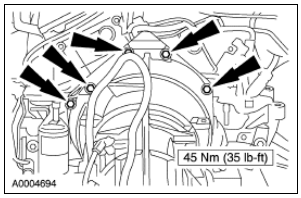
4. Install the LH engine mount nut.



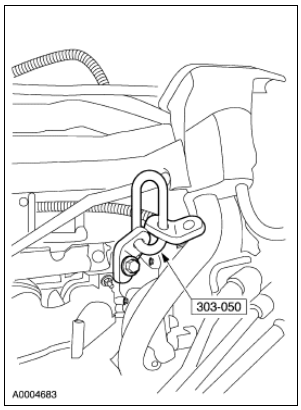
5. Install the RH engine mount nut.



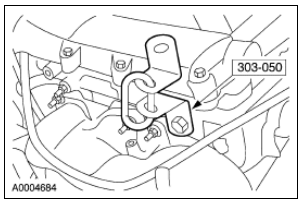
6. Install the transmission to the engine and install the bolts.



7. Remove the special tool.

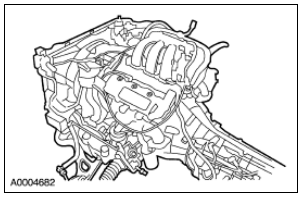


8. Remove the special tool.

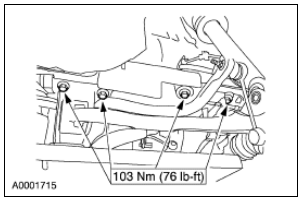


Items 23-29: Subframe and Bolts Installation Note

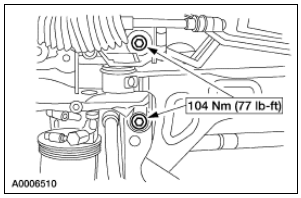
1. Position and carefully raise the entire engine, transmission, cooling and subframe assembly into the vehicle.



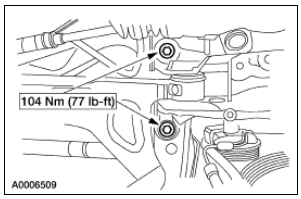
2. Install the crossmember bolts.



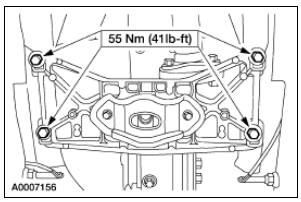
3. Install the RH subframe bolts.



4. Install the LH subframe bolts.



5. Install the transmission support bracket.

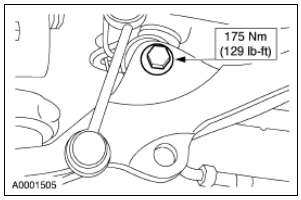


6. Remove the powertrain lift and transmission support bracket.

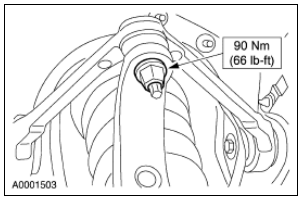
7. Remove the safety stands from the rear of the vehicle.

Items 30-43: Front Suspension and Brake Caliper Installation Note

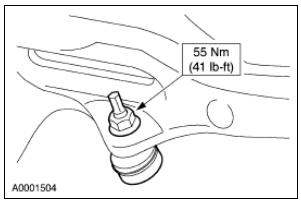
1. Install the lower strut mount bolts.



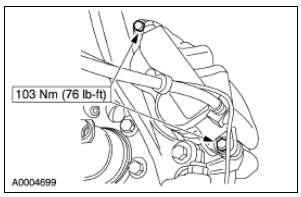
2. Install the upper ball joint nut.



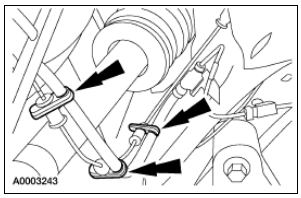
3. Connect the stabilizer link lower mounts and install the nuts.



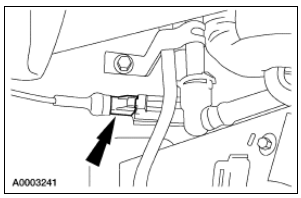
4. Install the front brake calipers.



5. Connect the anti-lock brake sensor harness to the brake hose clips.

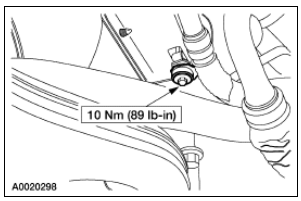


6. Connect the anti-lock brake sensor electrical connector.



Item 44: Power Steering Hose Bracket Installation Note

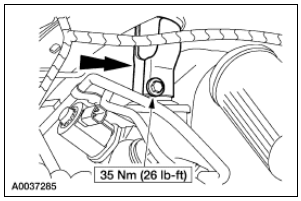
1. Install the power steering hose bracket to the LH frame rail.



Items 45 and 46: Steering Column Intermediate Shaft and Pinch Bolt Installation Note

1. ⚠ **CAUTION: Do not allow the steering wheel to rotate while the steering column intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the wheel has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .**

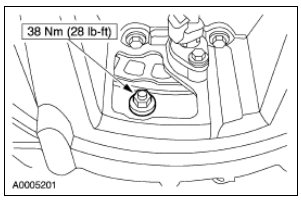
   Connect the intermediate shaft to the steering gear and install the pinch bolt.



Items 53 and 54: Torque Converter Nuts and Access Cover Installation Note

1. **NOTE:** Align the reference marks made during removal.

Install the nuts.



2. Install the access cover.

General Specifications

Item	Specification
Lubricants and Sealants	
SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP	WSS-M2C153-H
Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B)	WSS-M97B51-A1
Metal Surface Cleaner F4AZ-19A536-RA	WSE-M5B392-A
Silicone Gasket and Sealant F7AZ-19554-EA	WSE-M4G323-A4
Engine	
Displacement	3.9L (238 CID)
Number of cylinders	8
Bore	86 mm (3.386 in)
Stroke	85 mm (3.346 in)
Firing order	1-5-4-2-6-3-7-8
Oil pressure minimum at 400 rpm (engine at normal operating temperature)	413-482 kPa (61-73 psi)
Engine oil capacity (with filter change)	6.5 Liters (6.9 Quarts)
Cylinder Head and Valve Train	
Cylinder head gasket surface flatness	0.08 mm (0.003 in) total
Combustion chamber volume	48.73 ± 2.068-2.018 cc
Valve stem diameter intake	4.9763-4.978 mm (0.196-0.197in)
Valve stem diameter exhaust	4.955-4.970 mm (0.195-0.196 in)
Valve stem-to-guide clearance intake	0.022 mm (0.001 in)
Valve stem-to-guide clearance exhaust	0.030 mm (0.001 in)
Valve head diameter intake	34.9 mm (1.728 in)
Valve head diameter exhaust	30.9 mm (1.216 in)
Valve face runout	0.04 mm (0.002 in)
Valve face angle	45 degrees
Valve seat width intake	1 mm (0.0393 in)
Valve seat width exhaust	2 mm (0.0787 in)
Valve seat angle intake	14 degrees
Valve seat angle exhaust	13 degrees
Camshaft	
Lobe lift intake	9 mm (0.354 in)
Lobe lift exhaust	8.4 mm (0.330 in)
End play	0.100-0.125 mm (0.0003-0.007 in)

Accessory Drive Belt	
Drive belt	6 ribs

[a] Refer to procedure for staged torque.
[b] Install oil filter until seal makes contact. Tighten an additional 270 degrees.

Engine Printable View (18 KB)

⚠ WARNING: Do not operate the engine with the hood open until the fan blade has been first examined for possible cracks and separation.

The 3.9L (238 CID) is a V-8 engine with the following features:

- Dual overhead camshafts.
- Four valves per cylinder.
- Sequential multiport fuel injection (SFI).
- Aluminum cylinder heads.
- Cast aluminum, 90-degree V-cylinder block.
- Individually chain-driven camshafts with a hydraulic timing chain tensioner on each timing chain.
- Electronic ignition system with eight ignition coils.

Identification

For quick identification refer to the safety certification decal.

- The decal is located on the LH front door lock face panel.
- Find the engine code (letter or number) on the decal, then refer to the Engine Identification Chart to determine engine type and size. For additional information, refer to Section 100-00 .
- The symbol code on the identification tag identifies each engine for determining parts usage; for example, engine displacement in liters or cubic inch displacement and model year.

Engine Code Information

The engine code information label is located on the valve cover. The label contains, among other information:

- the engine calibration number.
- the engine build date.
- the engine plant code.
- the engine code.

Emission Calibration Label

NOTE: The engine codes and the calibration numbers must be used when making inquiries or ordering parts.

The emission calibration number label is located on the LH side door or LH door post pillar. It identifies:

- the engine calibration number.
- the engine code number.
- the revision level.

These numbers are used to determine if parts are unique to specific engines.

Exhaust Emission Control System

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The air/fuel mixture needed for burning in the cylinders is provided by the multiport fuel injection (MFI) system. Refer to Section 303-04A or Section 303-04B for additional information.

Fuel is:

- supplied from the fuel tank by the fuel pump.
- regulated by the fuel pressure sensor.
- delivered to the injector supply manifold.

A dual damper has been added to reduce pressure fluctuations caused by the fuel injectors.

Crankshaft

The crankshaft is supported on the bottom of the cylinder block by five steel-backed, over-plated, aluminum crankshaft main bearings.

To provide smooth engine operation, the piston crankpins are positioned to provide a power impulse every 90 degrees of crankshaft rotation. The spacing provides smooth and quiet operation.

Camshafts

The camshafts:

- are arranged in pairs, one each (intake and exhaust) on each cylinder head.
- are synchronized through a secondary timing chain.
- depress the direct acting mechanical tappets to actuate the valves.

Valve Train

The valves are actuated by a direct acting mechanical bucket and shim. The direct acting mechanical tappets and shims:

- provide lash adjustment through a shim selected by thickness.
- ride on the camshaft lobes.

Crankcase Ventilation System

The engine is equipped with a closed-type crankcase ventilation system which recycles the crankcase vapors to the throttle body.

Engine Lubrication System

The engine lubrication system is of the force-feed type in which oil is supplied under full pressure to the:

- crankshaft main bearings.
- crankshaft thrust main bearing.
- connecting rod bearings.
- oil galleys.

Oil Pump

The rotary spur oil pump develops the oil pressure.

- The oil pump is bolted to the front of the cylinder block.

- The oil pump is rotated by the crankshaft.
- A full flow oil filter is externally mounted on the upper sump.

If the filter element becomes blocked, a spring-loaded bypass valve opens to allow uninterrupted flow of oil to the engine.

Engine Cooling System

The engine is liquid-cooled:

- by a centrifugal coolant pump driven by the drive belt.
- a thermostat is used to restrict coolant flow until the engine reaches normal operating temperature.

Drive Belt System

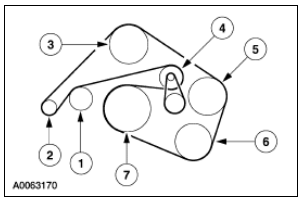
Accessories mounted on the front of the engine are belt-driven by the crankshaft and an automatically tensioned serpentine drive belt is routed over the following components:

- coolant pump.
- A/C compressor.
- generator (GEN).
- drive belt tensioner.
- drive belt idler pulley.
- crankshaft pulley.
- power steering pump.

Accessory Drive

Printable View (23 KB)

Component Locations 3.9L



Item	Part Number	Description
1	19A216	Belt idler pulley unflanged
2	10A352	Generator pulley
3	8509	Water pump pulley
4	6B209	Drive belt tensioner
5	3D673	Power steering pump pulley
6	19D748	A/C clutch pulley
7	6316	Crankshaft vibration damper

The accessory drive:

- has a single serpentine drive belt (six ribs).
- has an automatic tensioner.
- is not adjustable.

Engine Emission Control

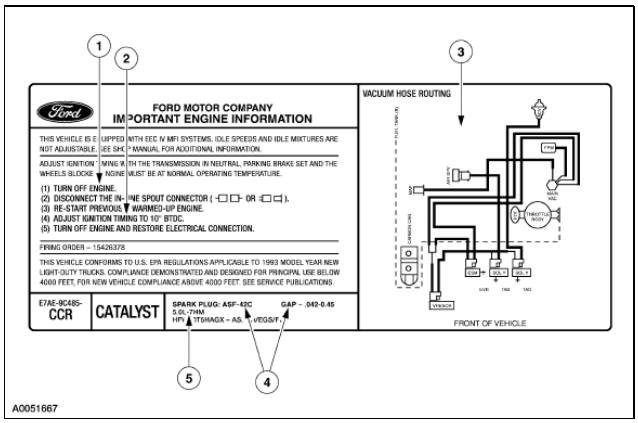
Printable View (62 KB)

⚠ CAUTION: Do not remove any part of the engine emission control system. Operating the engine without the engine emission control system will reduce fuel economy and engine ventilation. This will weaken engine performance and shorten engine life.

The engine emission control consists of the:

- exhaust gas recirculation (EGR) system.

Typical Vehicle Emission Control Information (VECI) Decal



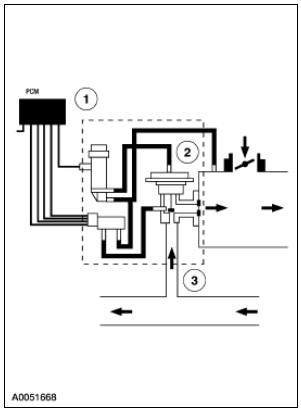
Item	Part Number	Description
1		Adjustment procedure notes
2		Ignition timing specifications
3		Engine vacuum hose routing (typical)
4		Spark plug gap specifications
5		Engine type

The Vehicle Emission Control Information (VECI) decal shows:

- the components of the emission control system.
- the correct vacuum hose routing.

For additional information, refer to Section 100-00 .

EGR System Components



Item	Part Number	Description
1	12A650	Powertrain control module
2	9Y456	EGR system module
3	9D477	EGR valve to exhaust manifold tube

The EGR system returns a portion of the exhaust gas to the intake manifold to reduce the combustion temperature. This results in lower nitrous oxide formation.

The powertrain control module (PCM) controls the EGR vacuum regulator solenoid. The EGR vacuum regulator solenoid controls the vacuum to the EGR valve. When the EGR valve opens, exhaust gas flows to the intake manifold. The EGR transducer measures the flow through the EGR valve to the exhaust manifold tube and sends a signal to the powertrain control module.

The EGR system module to exhaust manifold tube:

- connects the exhaust manifold to the EGR valve.

The EGR system module transducer:

- monitors the EGR system module flow rate through the EGR to exhaust manifold tube.
- sends an EGR system module flow rate signal to the powertrain control module.

The EGR vacuum regulator solenoid uses input from the powertrain control module to change the EGR system module operation.

Engine Printable View (7 KB)

Refer to Section 303-00 .

Accessory Drive

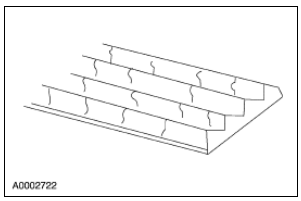
Printable View (47 KB)

Inspection and Verification

1. Verify customer concern by running the engine.
2. Inspect the drive belt for chunking, fraying, wear, and pilling.
3. Check the drive belt for correct routing.

Drive Belt Cracking/Chunking/Wear

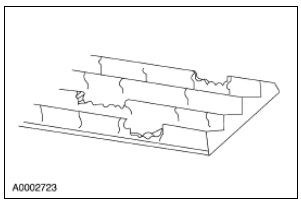
V-Ribbed Serpentine Drive Belt With Cracks Across Ribs



The accessory drive:

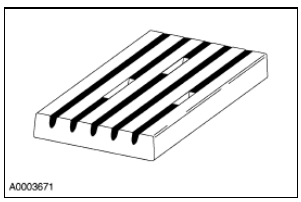
- has a single serpentine drive belt.
- has an automatic drive belt tensioner.
- does not require adjustment.

V- Ribbed Belt With Chunks of Rib Missing



V- Ribbed Belt With Piling

NOTE: Piling is an excessive buildup in the V- grooves of the belt.



Symptom Chart

Symptom Chart

Component Tests

Drive Belt Noise/Flutter

Drive belt chirp occurs due to pulley misalignment or excessive pulley runout. It can be the result of a damaged pulley or an incorrectly aligned pulley.

To correct, determine the area where the noise comes from. Check each of the pulleys in that area with a straightedge to the crankshaft pulley. Look for accessory pulleys out of position in the fore/aft direction or at an angle to the straightedge.

NOTE: Do not apply any fluids or belt dressing to the belt or pulleys.

Drive belt squeal is an intermittent noise that occurs when the drive belt slips on a pulley during certain conditions, such as: engine startup, rapid engine acceleration, A/C clutch engagement, 1-2 shift and power steering loading.

Drive belt squeal can occur under certain conditions:

- if the A/C discharge pressure goes above specifications:
  - ♦ the A/C system is overcharged.
  - ♦ the A/C condenser core airflow is blocked.
- if the A/C OFF equalized pressure (the common discharged and suction pressure that occurs after several minutes) exceeds specifications.
- if any of the accessories are damaged, have a worn or damaged bearing, or internal torsional resistance above normal. All accessories should be rotatable by hand in the unloaded condition. If not, inspect the accessory.
- if fluid gets on the drive belt. This includes power steering fluid, engine coolant, engine oil or air conditioning system lubricant. If excessive fluid does get on the drive belt during repair, install a new drive belt.
- if the drive belt is too long. A drive belt that is too long will allow the drive belt tensioner arm to go all the way to the arm travel stop under certain load conditions, which will release tension to the drive belt. If the drive belt tensioner indicator is outside the normal installation wear range window, install a new drive belt.
- **NOTE:** The drive belt tensioner arm should rotate freely without binding.

  Install a new drive belt tensioner if the drive belt tensioner is worn or damaged.

Belt Tension

NOTE: Drive belt tension is not adjustable.

The drive belt tensioner automatically adjusts drive belt tension.

Belt Tensioner, Automatic

Check the automatic drive belt tensioner:

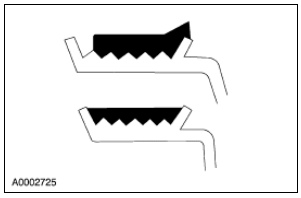
1. With the engine off, check for correct drive belt routing. For additional information, refer to Accessory Drive Belt, Tensioner and Pulley in this section. Repair as necessary.

2. Rotate the drive belt tensioner and check for a binding or frozen condition. Install new components as necessary.

Drive Belt Misalignment

⚠ CAUTION: Incorrect drive belt installation will cause excessive drive belt wear and can cause the drive belt to come off the drive pulleys.

Non-standard drive belts can track differently or incorrectly. If a drive belt tracks incorrectly, install a new drive belt to avoid performance failure or loss of the drive belt.



With the engine running, check drive belt tracking. If the edge of the drive belt rides beyond the edge of the pulleys, noise and premature wear can occur. Make sure the drive belt rides correctly on the pulley. If a drive belt tracking condition exists, proceed with the following:

- Visually check the drive belt tensioner for damage, especially the mounting pad surface. If the drive belt tensioner is not installed correctly, the mounting surface pad will be out of position. This will result in chirp and squeal noises.
- With the engine running, visually observe the grooves in the pulleys (not the pulley flanges or the pulley forward faces) for excessive wobble. Install new components as necessary.
- Check all accessories, mounting brackets and the drive belt tensioner for any interference that would prevent the component from mounting correctly. Correct any interference condition and recheck the drive belt tracking.
- Tighten all accessories, mounting brackets, and drive belt tensioner retaining hardware to specification. Recheck the drive belt tracking.

Engine Emission Control

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Valve Clearance Check

Printable View (34 KB)

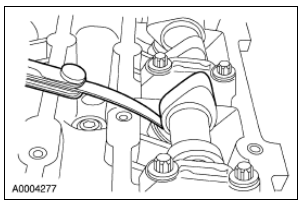
1. Remove the valve covers. For additional information, refer to Valve Cover LH or Valve Cover RH in this section.

2. Remove the spark plugs.

3. **NOTE:** The engine will have to be rotated with the crankshaft pulley bolt to bring each valve to base circle.

   NOTE: The valve clearance must be measured with the camshaft at base circle.

   Measure and record all valve clearances.



4. If the valve clearances are out of specification, refer to Valve Clearance Adjustment in this section.

5. To assemble, reverse the inspection procedure.

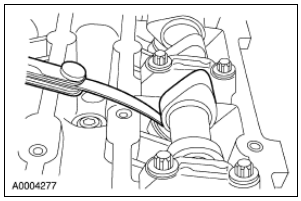
Valve Clearance Adjustment

Printable View (42 KB)

1. Remove the timing chains. For additional information, refer to Timing Drive Components in this section.

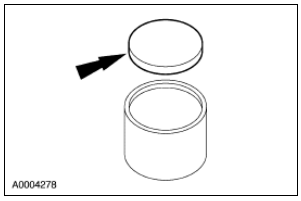
2. **NOTE:** Measure each valve clearance at base circle before removing the camshafts. The shims are not repairable with the camshafts in place. Failure to measure all clearances prior to removing the camshafts will cause unnecessary repetition of the procedure.

   Use a feeler gauge to measure each valve clearance and record its location.



3. Remove the camshafts. For additional information, refer to Camshaft, Valve Springs and Valve Seals in this section.

4. Remove the shims.



5. **NOTE:** The shims are marked for thickness; example: 2.22 mm = 222 on shim.

   NOTE: The corrected shims allow the following valve clearances.

   - Intake valve clearance: 0.18-0.22 mm (0.00709-0.00866 in)
   - Exhaust valve clearance: 0.33-0.38 mm (0.0128-0.0148 in)

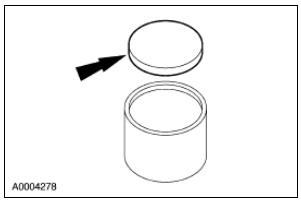
   NOTE: A midrange clearance is the most desirable:

   - Intake: 0.20 mm (0.00787 in)
   - Exhaust: 0.35 mm (0.014 in)

   NOTE: Select shims using this formula: required shim thickness = measured clearance plus the base shim thickness minus most desirable clearance.

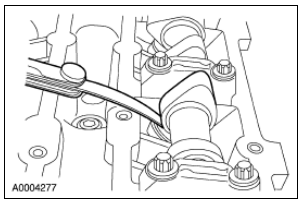
   Select shims and mark the installation location.

6. Install new shims.



7. Install the camshaft. For additional information, refer to Camshaft, Valve Springs and Valve Seals in this section.

8. Measure the new valve clearances.



9. Install the timing chains. For additional information, refer to Timing Drive Components in this section.

Accessory Drive Belt, Tensioner and Pulley

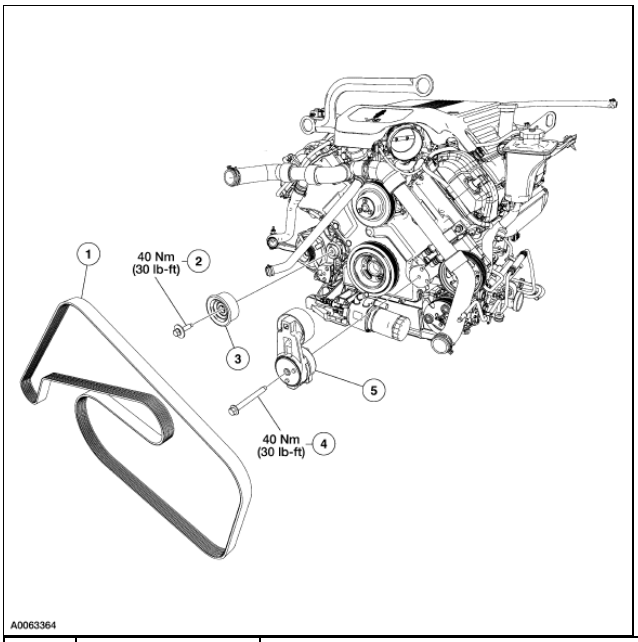
Printable View (132 KB)

1. To remove individual components, carry out only the listed steps.

Component	Steps
Accessory drive belt	1
Accessory drive belt idler pulley	1-3
Accessory drive belt tensioner	1, 4-5

2. Remove the components in the order indicated in the following illustration and table.

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	8620	Accessory drive belt
2	N808102	Accessory drive belt idler pulley mounting bolt
3	8678	Accessory drive belt idler pulley
4	W500329	Accessory drive belt tensioner mounting bolts
5	6B209	Accessory drive belt tensioner

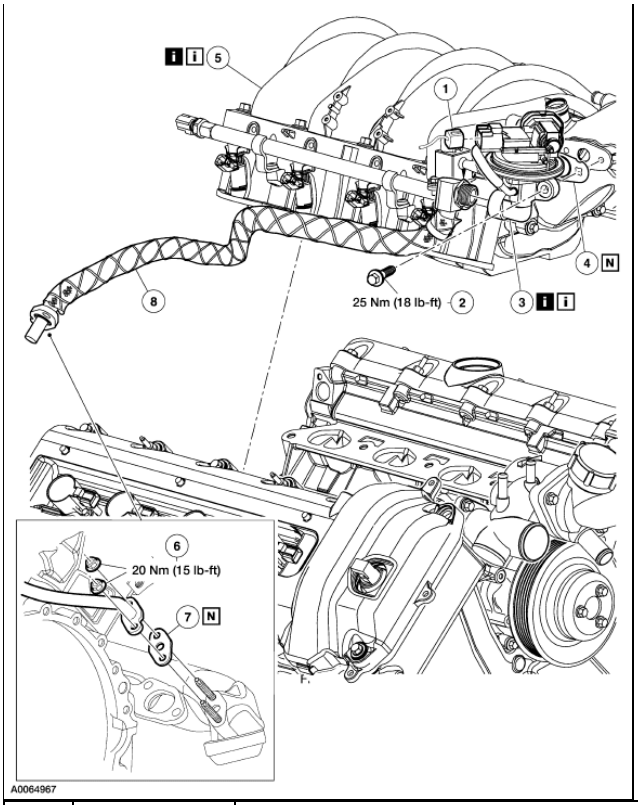
Exhaust Gas Recirculation (EGR) Valve

Printable View (318 KB)

1. Remove the engine appearance cover.
2. To remove individual components, carry out only the individual steps.

Component	Steps
Exhaust gas recirculation (EGR) system module	1-4
Exhaust manifold tube-to-EGR system module	1-8

3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.

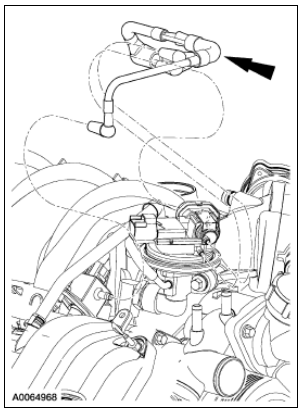


Item	Part Number	Description
1	12B637	EGR system module electrical connector
2	W701232	EGR bolts (2 req'd)
3	9Y456	EGR system module Removal Note
3	9Y456	EGR system module Installation Note
4	9D476	EGR system module gasket
5	9424	Intake manifold assembly Removal Note

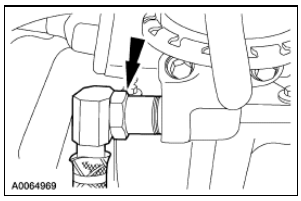
5	9424	Intake manifold assembly Installation Note
6	9D477	EGR system module-to-exhaust manifold tube flange nuts (2 req'd)
7	9D477	EGR system module-to-exhaust manifold tube gasket
8	9D477	EGR system module-to-exhaust manifold tube

Item 3: EGR System Module Removal Note

1. Remove the vacuum harness.



2. Disconnect the EGR system module-to-exhaust manifold tube from the EGR system module.



Item 5: Intake Manifold Removal Note

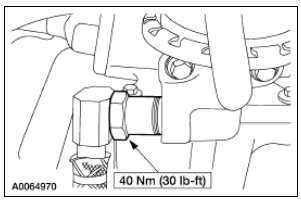
1. Remove the intake manifold. For additional information, refer to Intake Manifold in this section.

Item 5: Intake Manifold Installation Note

1. Install the intake manifold. For additional information, refer to Intake Manifold in this section.

Item 3: EGR System Module Installation Note

1. Connect the EGR system module-to-exhaust manifold tube to the EGR system module.



2. Install the vacuum harness.

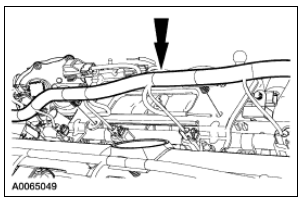
Items 7 and 9: Engine Appearance Cover Support Bracket Removal Note

1. **NOTE:** LH is shown, RH is similar.

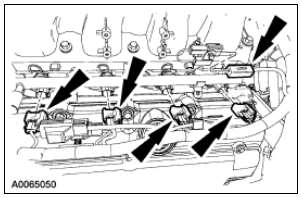
   Disconnect the engine wiring harness retainers from the engine appearance cover support bracket.



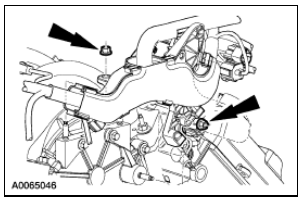
Item 11: Fuel Charge Manifold Removal Note

1. **NOTE:** LH is shown, RH is similar.

   Disconnect the fuel injector and RFI suppressor electrical connectors

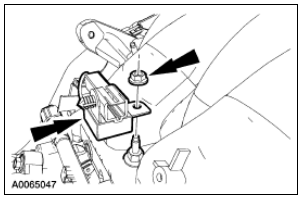


2. Remove the nuts and the engine wiring harness retainer and position aside.



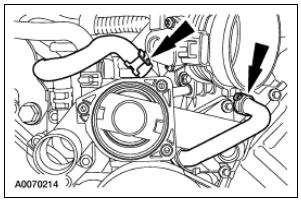
3. **NOTE:** RH is shown, LH is similar.

   Remove the nut and the RFI suppressor.



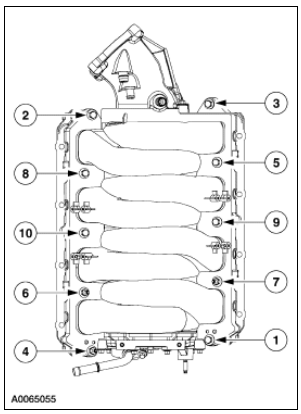
Items 16, 17, and 18: Intake Manifold Removal Note

1. Disconnect the throttle body heater hoses.



2. **NOTE:** The throttle body and adapter are shown removed for clarity. It is not necessary to remove the throttle body and adapter to remove the intake manifold.

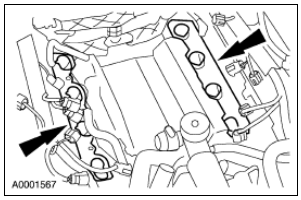
   Remove the bolts and studs in the sequence shown.



3. Remove the intake manifold.

4. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to clean the surfaces.**

   Clean the sealing surfaces.

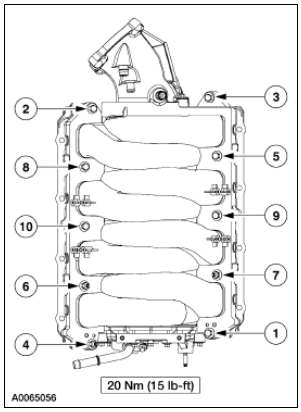


Items 16, 17, and 18: Intake Manifold Installation Note

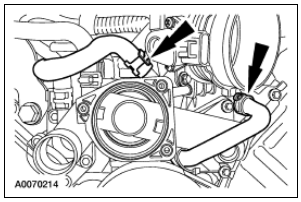
1. Install new intake manifold gaskets.

2. **NOTE:** The throttle body and adapter are shown removed for clarity. It is not necessary to remove the throttle body and adapter to remove the intake manifold.

   Install the intake manifold and tighten the bolts in the sequence shown.



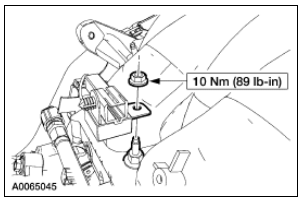
3. Connect the throttle body heater hoses.



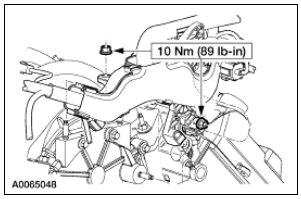
Item 11: Fuel Charge Manifold Installation Note

1. **NOTE:** RH is shown, LH is similar.

   Install the RFI suppressor and the nut.

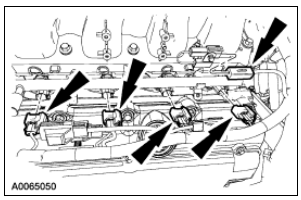


2. Install the engine wiring harness retainer and the nuts.



3. **NOTE:** LH is shown, RH is similar.

   Connect the fuel injector and RFI suppressor electrical connectors



Item 7 and 9: Engine Appearance Cover Support Bracket Installation Note

1. **NOTE:** LH is shown, RH is similar.

   Connect the engine wiring harness retainers to the engine appearance cover support bracket.

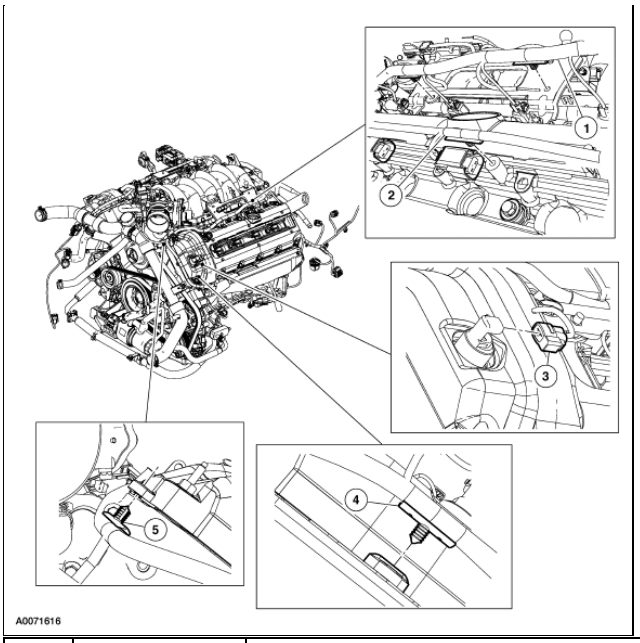
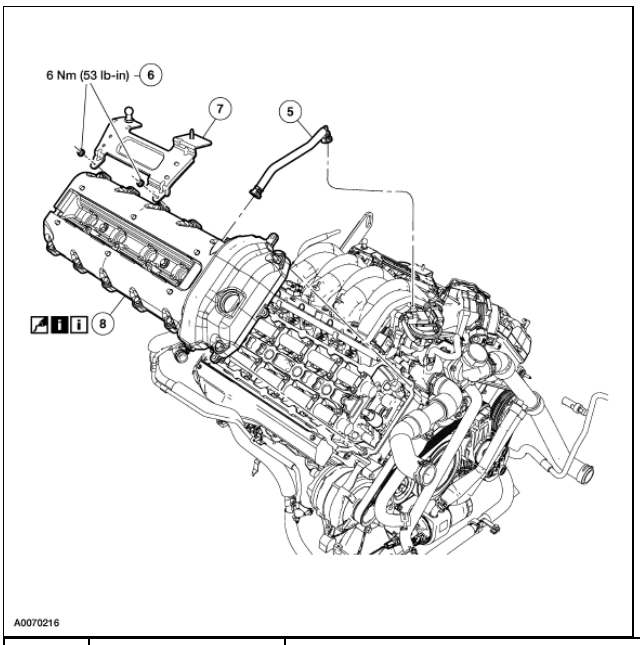
1. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04B .
2. Remove the LH ignition coils. For additional information, refer to Section 303-04B .
3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	6A005	Engine wiring harness retainer
2	6A005	Engine wiring harness retainer
3	6754	Variable cam timing (VCT) sensor electrical connector
4	6A005	Engine wiring harness retainer
5	6A005	Engine wiring harness retainer

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



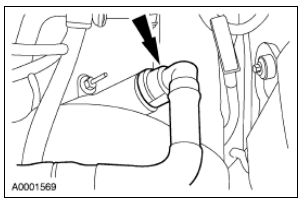
Item	Part Number	Description
6	6A005	Engine wiring harness bracket nuts (2 req'd)
7	6754	Engine wiring harness bracket
8	6582	LH valve cover Removal Note
8	6582	LH valve cover Installation Note

5. To install, reverse the removal procedure.

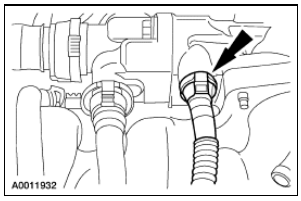
Item 8: LH Valve Cover Removal Note

1. ⚠ **CAUTION: To disconnect the Norma fitting, squeeze the tabs and pull straight out or damage to the fitting can occur.**

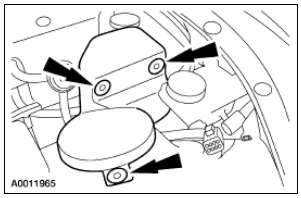
   Disconnect the crankcase ventilation tube.



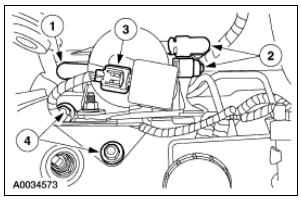
2. Disconnect the evaporative emission canister purge valve hose.



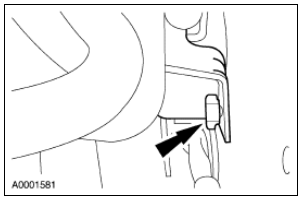
3. Remove the vapor management valve (VMV) cover.



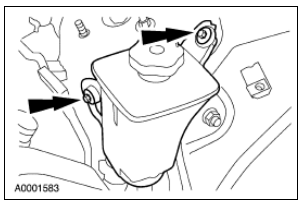
4. Remove the VMV.
    1. Disconnect the vacuum hose.
    2. Disconnect the purge hose.
    3. Disconnect the electrical connector and the push pin.
    4. Remove the nuts and the valve.



5. Remove the fuel hose bracket bolt from the LH shock tower.



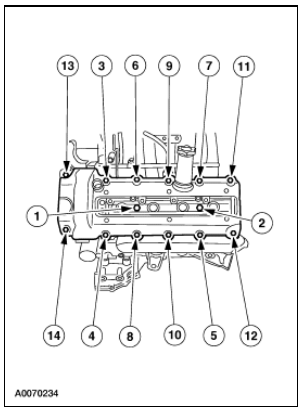
6. Loosen the bolts and position the power steering pump reservoir aside.



7. **NOTE:** The valve cover bolts are not to be removed from the valve cover.

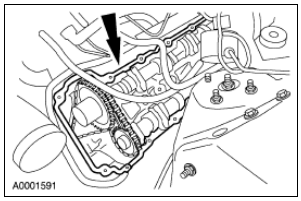
   Remove the LH valve cover.

   - Loosen the bolts in the sequence shown.

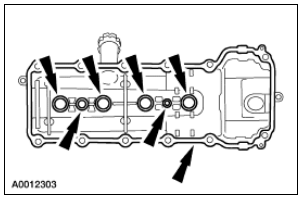


8. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.



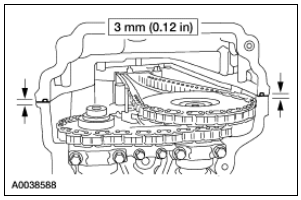
9. Install new gaskets.



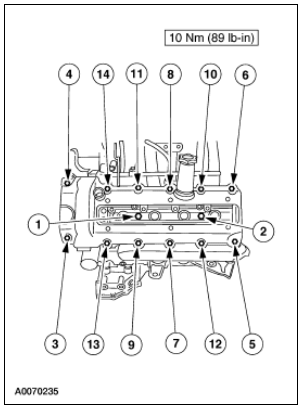
Item 8: LH Valve Cover Installation Note

1. **NOTE:** If the valve cover is not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, which ever is longer. Failure to follow this procedure can cause future oil leakage.

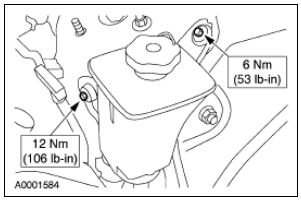
   Apply two beads of silicone gasket and sealant as shown.



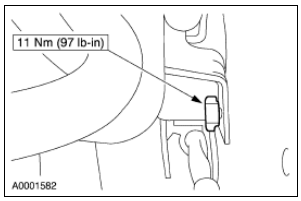
2. Install the LH valve cover.
   - Position the valve cover and tighten the bolts in the sequence shown.



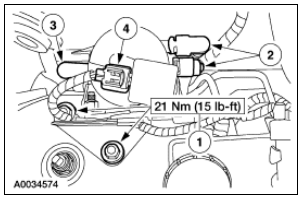
3. Install the power steering pump reservoir.



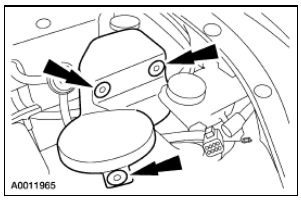
4. Install the fuel hose bracket bolt.



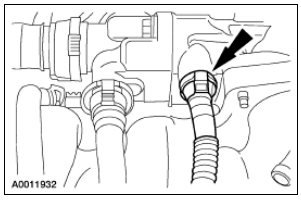
5. Install the VMV.
    1. Install the nuts.
    2. Connect the purge hose.
    3. Connect the vacuum hose.
    4. Connect the electrical connector and wiring harness push pin.



6. Install the VMV cover.



7. Connect the hose.



8. Connect the crankcase ventilation tube.

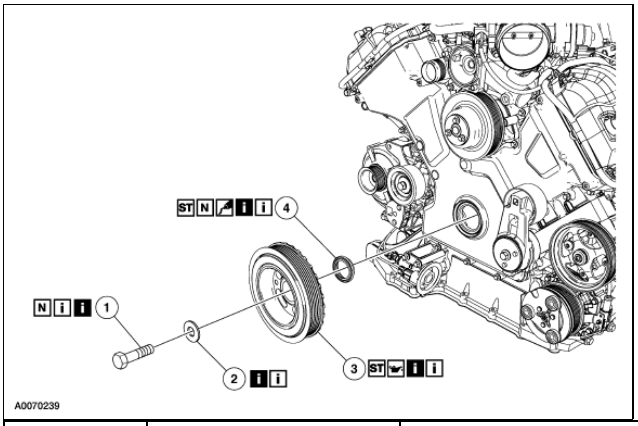
Crankshaft pulley	1-2
Front crankshaft seal	1-3

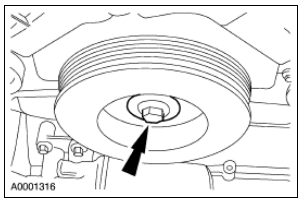
5. To install, reverse the removal procedure.



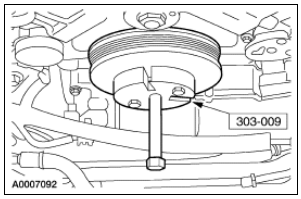
Item	Part Number	Description
1	W705542	Crankshaft pulley bolt Removal Note
1	W705542	Crankshaft pulley bolt Installation Note
2	W704965	Crankshaft pulley bolt washer Removal Note
2	W704965	Crankshaft pulley bolt washer Installation Note
3	6316	Crankshaft pulley Removal Note
3	6316	Crankshaft pulley Installation Note
4		Crankshaft front seal Removal Note
4		Crankshaft front seal Installation Note

Items 1-3: Crankshaft Pulley, Bolt and Washer Removal Note

1. Remove and discard the bolt.

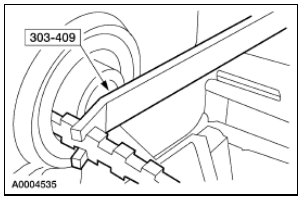


2. Using the special tool, remove the crankshaft pulley.



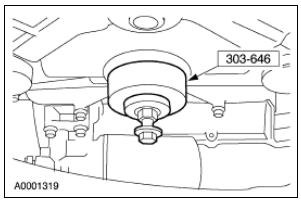
Item 4: Front Crankshaft Seal Removal Note

1. Using the special tool, remove the front crankshaft seal.
    - Discard the seal.



Item 4: Front Crankshaft Seal Installation Note

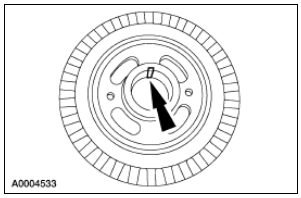
1. Using the special tool, install a new front crankshaft seal.



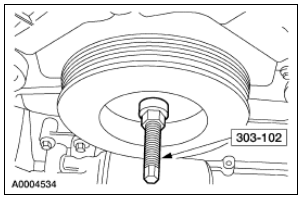
Items 1-3: Crankshaft Pulley, Bolt and Washer Installation Note

1. **NOTE:** If crankshaft pulley is not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

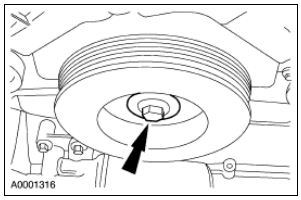
   Apply a bead of silicone gasket and sealant to the keyway.



2. Using the special tool, install the crankshaft pulley.



3. Install a new bolt and tighten in four stages.
   - Stage 1: Tighten to 80 Nm (59 lb-ft).
   - Stage 2: Loosen the bolt two complete turns.
   - Stage 3: Tighten to 50 Nm (37 lb-ft).
   - Stage 4: Tighten an additional 90 degrees.



Engine Front Cover

Printable View (692 KB)

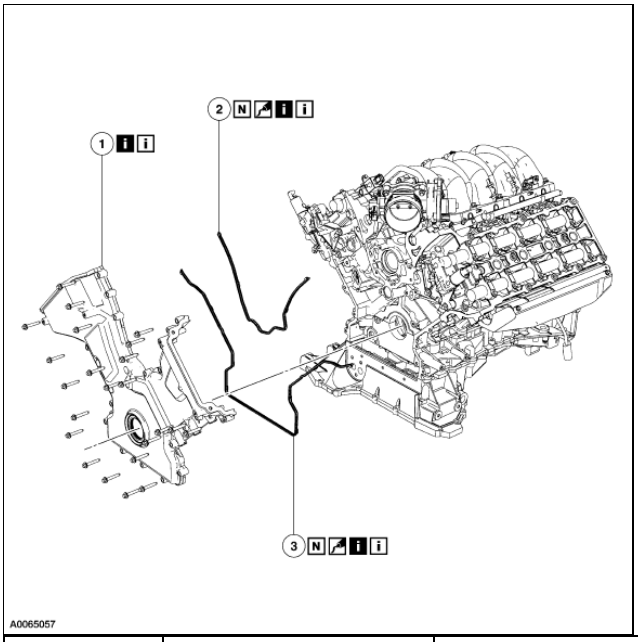
Material

Item	Specification
Metal Surface Cleaner F4AZ-19A536-RA or equivalent	WSE-M5B392-A
Silicone Gasket and Sealant F7AZ-19554-EA (in Canada CXC-111-B) or equivalent	WSE-M4G323-A4

1. **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

   Drain the engine cooling system. For additional information, refer to Section 303-03 .

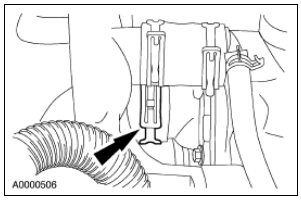
2. Drain the engine oil.
3. Remove the LH valve cover. For additional information, refer to Valve Cover LH in this section.
4. Remove the RH valve cover. For additional information, refer to Valve Cover RH in this section.
5. Remove the engine cooling fan assembly. For additional information, refer to Section 303-03 .
6. Remove the crankshaft pulley and crankshaft seal. For additional information, refer to Crankshaft Pulley and Crankshaft Seal in this section.
7. Remove the A/C compressor. For additional information, refer to Section 412-00 .
8. Remove the coolant pump. For additional information, refer to Section 303-03 .
9. Remove the components in the order indicated in the following illustration and table.
10. To install, reverse the removal procedure.



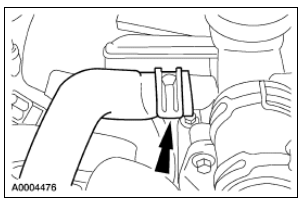
Item	Part Number	Description
1	6059	Engine front cover Removal Note
1	6059	Engine front cover Installation Note
2	6020	Engine front cover gasket Removal Note
2	6020	Engine front cover gasket Installation Note
3	6020	Engine front cover gasket Removal Note
3	6020	Engine front cover gasket Installation Note

Items 1, 2, and 3: Engine Front Cover Removal Note

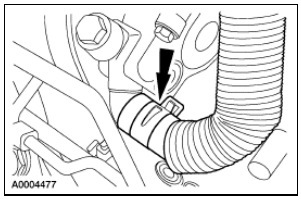
1. Disconnect the lower radiator-to-thermostat housing hose.



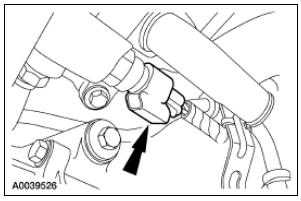
2. Disconnect the heater hose.



3. Disconnect the power steering reservoir hose and drain the reservoir.

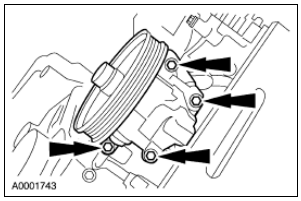


4. Disconnect the power steering pressure (PSP) switch.

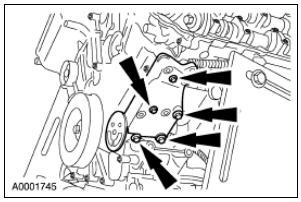


5. **NOTE:** One bolt is blocked by the power steering pressure hose and must be removed with the power steering pump.

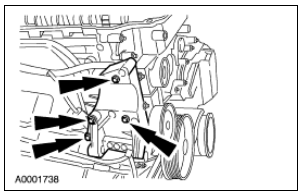
   Remove the bolts and position the power steering pump aside.



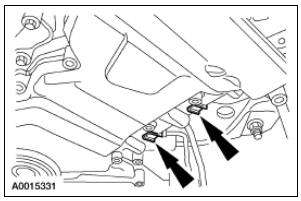
6. Remove the power steering pump bracket.



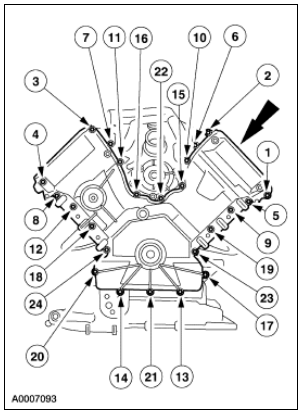
7. Remove the generator bracket.



8. Disconnect the five wiring harness clips.

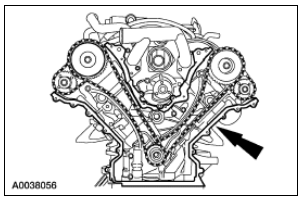


9. Remove the engine front cover.
   - Remove the bolts in the sequence shown.
   - Remove the engine front cover.



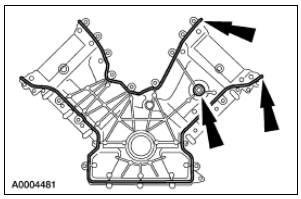
10. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

    Clean the sealing surfaces with metal surface cleaner.



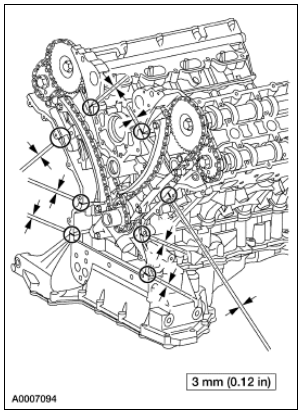
Items 1, 2, and 3: Engine Front Cover Installation Note

1. Install new gaskets.

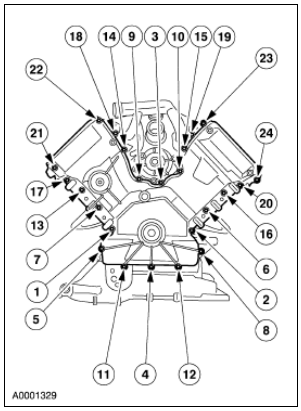


2. **NOTE:** If the front cover is not secured within four minutes of sealant application, the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

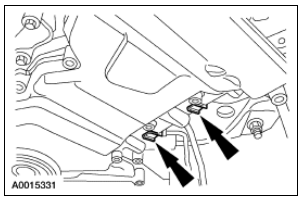
   Apply silicone gasket and sealant in the eight places shown.



3. Install the engine front cover.
    - Position the engine front cover on the cylinder block.
    - Loosely install the bolts.
    - Tighten the bolts in two stages in the sequence shown.
        - ♦ Stage 1: Tighten to 5 Nm (44 lb-in).
        - ♦ Stage 2: Tighten to 10 Nm (89 lb-in).

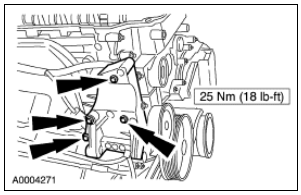


4. Connect the five wiring harness clips.



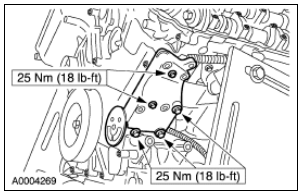
5. **NOTE:** The wiring harness is positioned behind the bracket.

   Install the generator bracket.



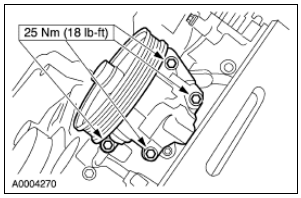
6. **NOTE:** The wiring harness is positioned behind the bracket.

   Install the power steering pump bracket.

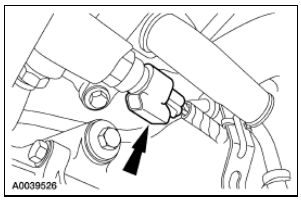


7. **NOTE:** One bolt is blocked by the power steering pressure line and must be installed with the power steering pump.

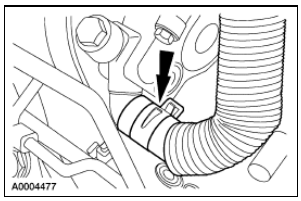
   Install the power steering pump.



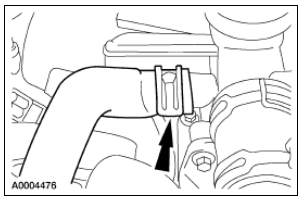
8. Connect the power steering pressure (PSP) switch.



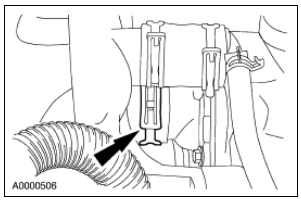
9. Connect the power steering reservoir hose.



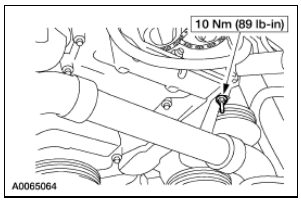
10. Connect the heater hose.



11. Connect the lower radiator hose to the thermostat housing.



12. Install the stud bolt.



Timing Drive Components

Printable View (1884 KB)

Special Tool(s)

 ST2398-B	Aligner, Camshaft 303-530
 ST2399-A	Tensioning Tool, Timing Chain 303-532
 ST2401-A	Alignment Gauge, Crankshaft 303-645

Material

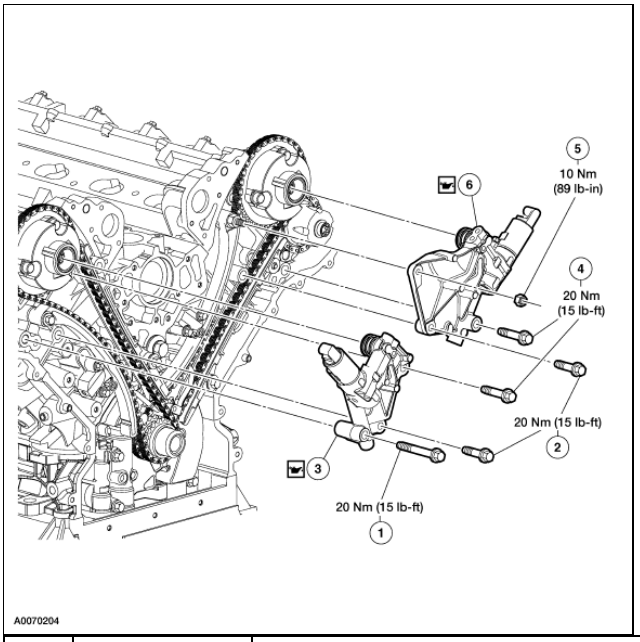
Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Remove the engine front cover. For additional information, refer to Engine Front Cover in this section.

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

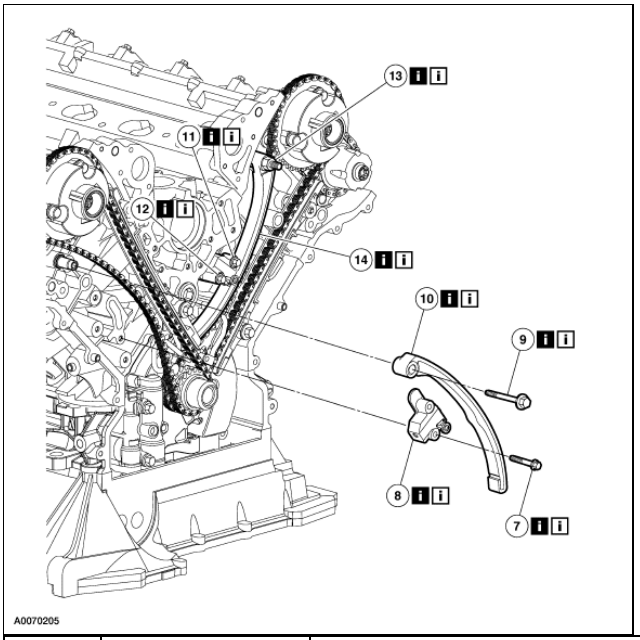
Component	Steps
Timing gears, chain and tensioners	1-20
Variable camshaft timing (VCT) bush carriers	1-9
VCT units, exhaust camshaft sprockets, secondary timing chains and tensioners, and crankshaft sprocket	1-37

3. Illustration 1 of 4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W500316	Variable camshaft timing (VCT) bush carrier bolt
2	W500310	VCT bush carrier bolts (2 req'd)
3	6C260	RH VCT bush carrier
4	W500313	VCT bush carrier bolts (2 req'd)
5	W520412	LH VCT bush carrier nut
6	6C261	LH VCT bush carrier

4. Illustration 2 of 4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
7	W500301	RH timing chain tensioner bolts (2 req'd) Removal Note
7	W500301	RH timing chain tensioner bolts (2 req'd) Installation Note

8	6K254	RH timing chain tensioner Removal Note
8	6K254	RH timing chain tensioner Installation Note
9	W701973	RH timing chain tensioner arm bolt Removal Note

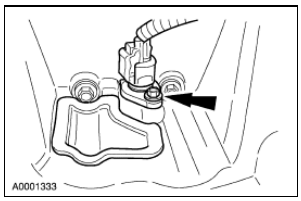
30	6M288	LH VCT unit Removal Note
30	6M288	LH VCT unit Installation Note
31	6268	LH secondary timing chain Removal Note
31	6268	LH secondary timing chain Installation Note
32	6C258	LH exhaust camshaft sprocket Removal Note
32	6C258	LH exhaust camshaft sprocket Installation Note
33	W500301	LH secondary timing chain tensioner bolts (2 req'd)
34	6C271	LH secondary timing chain tensioner Removal Note
34	6C271	LH secondary timing chain tensioner Installation Note

35	6306	Crankshaft sprocket

7. To install, reverse the removal procedure.

Items 7-20: Timing Drive Components Removal Note

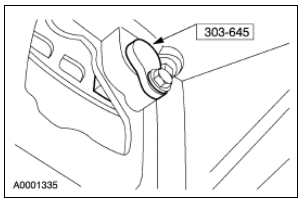
1. Remove the crankshaft position (CKP) sensor and the torque converter cover.



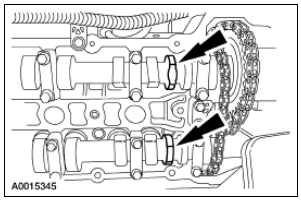
2. **NOTE:** There is one window on the ignition pulse wheel that is unique to accept the special tool.

   Install the special tool.

   - Turn the crankshaft to 45 degrees ATDC. The crankshaft keyway will be in the 6 o'clock position.
   - Install the special tool.

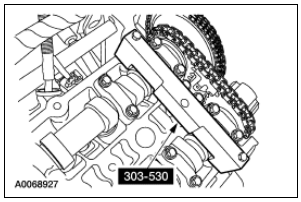


3. Make sure the flats of the camshaft are facing upward. If not, repeat Step 2.



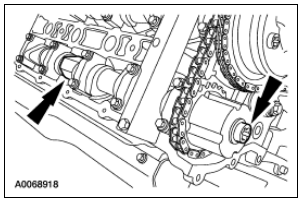
4. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

   Install the special tool on the RH cylinder head.



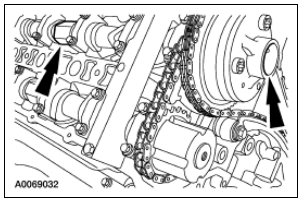
5. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft will occur.**

   Remove and discard the RH exhaust camshaft sprocket bolt.

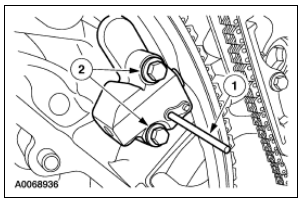


6. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft will occur.**

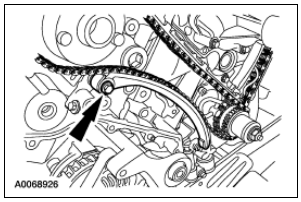
   Remove and discard the RH VCT unit bolt.



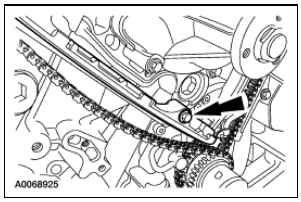
7. Remove the RH timing chain tensioner.
   1. Push the lever down and install a drill rod to lock the piston.
   2. Remove the bolts and the tensioner.



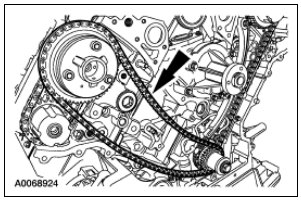
8. Remove the RH tensioner arm.



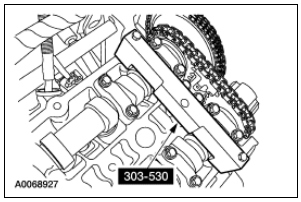
9. Remove the RH timing chain guide.



10. Remove the RH primary timing chain.

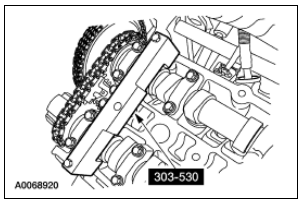


11. Remove the special tool from the RH cylinder head.



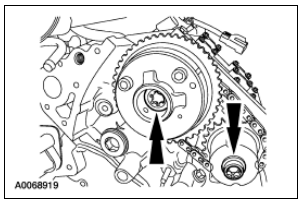
12. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

    Install the special tool on the LH head.

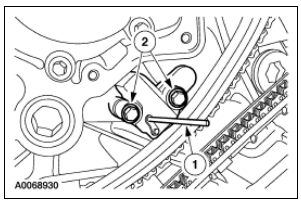


13. ⚠ **CAUTION: An open-end wrench must be used on the flats of the camshaft or damage to the camshaft can occur.**

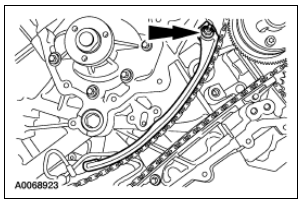
    Remove and discard the LH VCT unit bolt and the exhaust camshaft sprocket bolt.



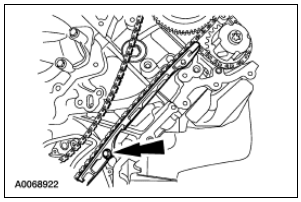
14. Remove the LH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the bolts and the tensioner.



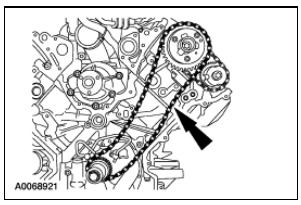
15. Remove the LH tensioner arm.



16. Remove the LH timing chain guide.

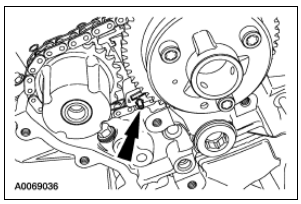


17. Remove the LH primary timing chain.

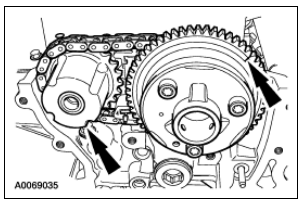


Items 21-25, and 27: RH Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket and Secondary Timing Chain Removal Note

1. Collapse the RH secondary timing chain tensioner and install a pin to lock the piston.

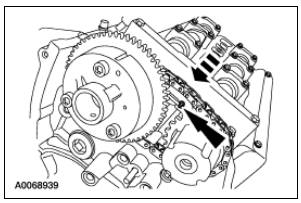


2. Remove the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

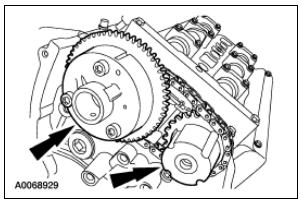


Items 28-32, and 34: LH Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket and Secondary Timing Chain Removal Note

1. Collapse the LH secondary timing chain tensioner and install a pin to lock the piston.

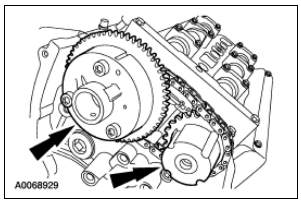


2. Remove the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

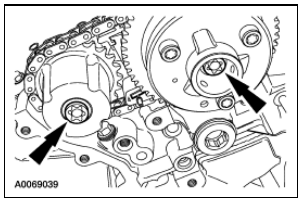


Items 28-32, and 34: LH Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket and Secondary Timing Chain Installation Note

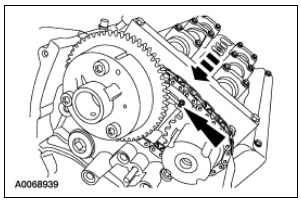
1. Install the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



2. Using new bolts, install the LH VCT unit and exhaust camshaft sprocket bolts finger-tight.

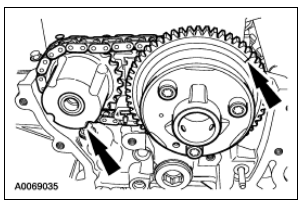


3. Remove the locking pin from the LH secondary timing chain tensioner.

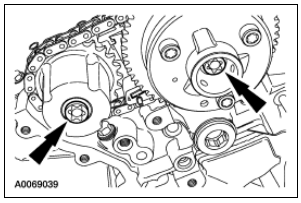


Items 21-25, and 27: RH Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket and Secondary Timing Chain Installation Note

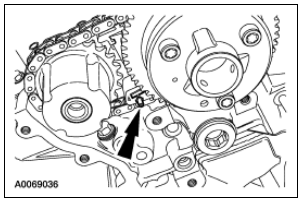
1. Install the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



2. Using new bolts, install the RH VCT unit and exhaust camshaft sprocket bolts finger-tight.

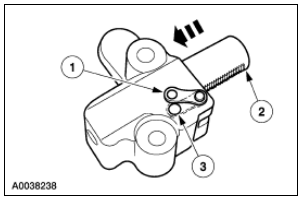


3. Remove the locking pin from the RH secondary timing chain tensioner.



Items 7-20: Timing Drive Components Installation Note

1. Reset the timing chain tensioners.
    1. Hold the lever toward the tensioner piston.
    2. Using finger pressure, compress the tensioner until it is completely collapsed.
    3. Push the lever down and install a drill rod to lock the piston.

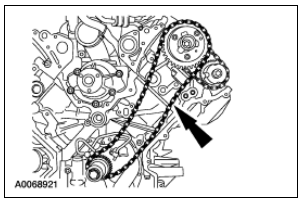


2. ⚠ **CAUTION: The camshaft holding tool should still be installed on the LH cylinder head.**

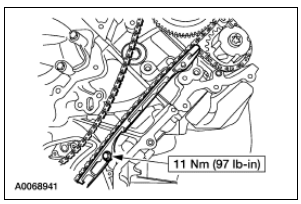
   ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

   Position the LH timing chain and crankshaft gear.

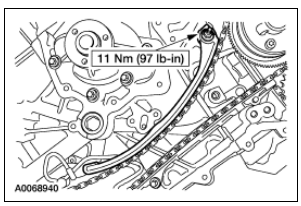
   - Position the timing chain over the LH intake camshaft sprocket.
   - Position the crankshaft gear in the timing chain.



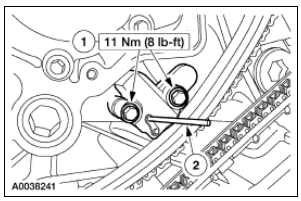
3. Install the LH timing chain guide.



4. Install the LH timing chain tensioner arm.



5. Install the LH timing chain tensioner.
    1. Install the timing chain tensioner and bolts.
    2. Remove the drill rod.

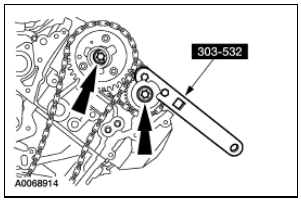


6. **⚠ CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

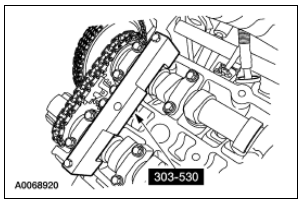
   ⚠ CAUTION: Using the special tool, apply 10Nm(89 lb-in) counterclockwise to the LH exhaust camshaft sprocket.

   Tighten the LH exhaust camshaft sprocket and VCT unit bolts in two stages:

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.

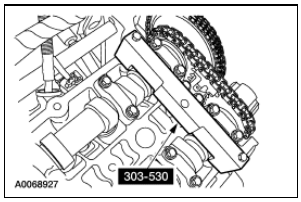


7. Remove the special tool.

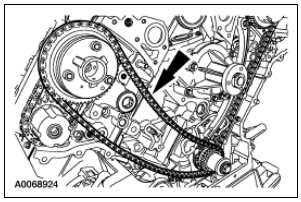


8. **⚠ CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

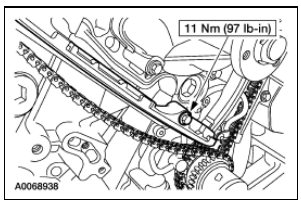
   Install the special tool on the RH cylinder head.



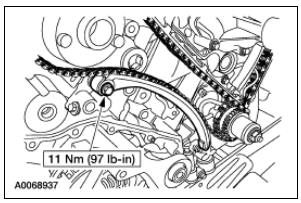
9. Position the RH timing chain over the RH intake camshaft sprocket and over the crankshaft gear.



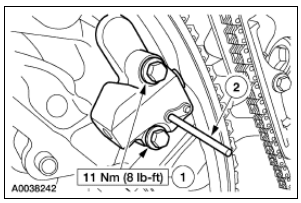
10. Install the RH timing chain guide.



11. Install the RH timing chain tensioner arm.



12. Install the RH timing chain tensioner.
    1. Install the timing chain tensioner and bolts.
    2. Remove the drill rod.

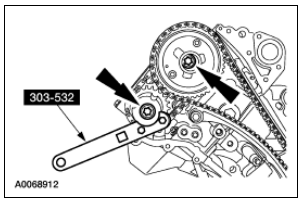


13. **⚠ CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

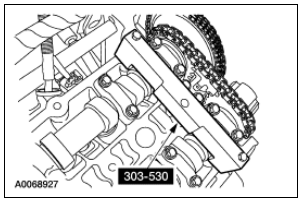
    ⚠ CAUTION: Using the special tool, apply 10 Nm (89 lb-in) counterclockwise to the RH exhaust camshaft sprocket.

    Tighten the RH exhaust camshaft sprocket and VCT unit bolts in two stages:

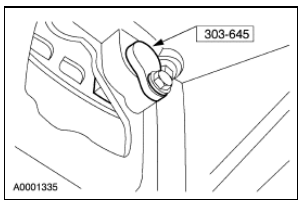
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



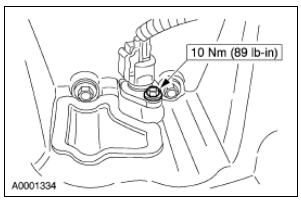
14. Remove the special tool.



15. Remove the special tool.



16. Install the CKP sensor and the torque converter cover.



Camshaft, Valve Springs and Valve Seals

Printable View (534 KB)

Special Tool(s)

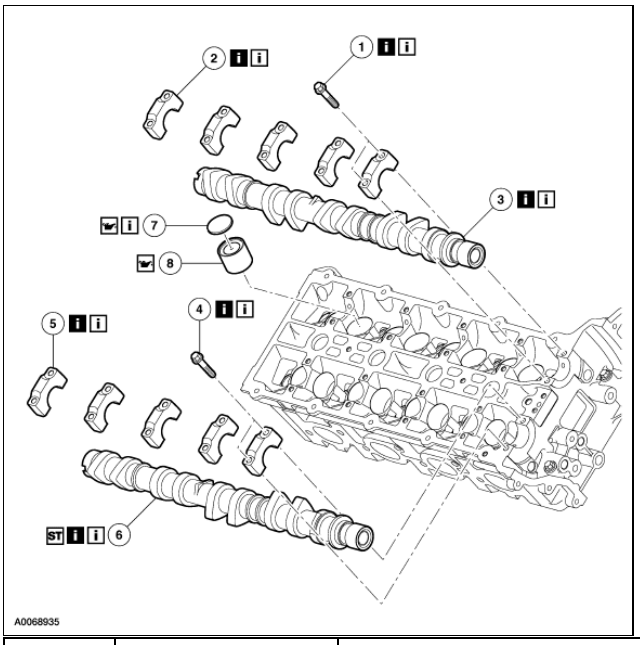
 ST2398-B	Aligner, Camshaft 303-530

Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.

2. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



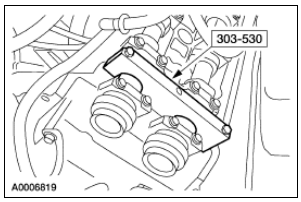
Item	Part Number	Description
1	W701242	Intake camshaft cap bolts (10 req'd) Removal Note
1	W701242	Intake camshaft cap bolts (10 req'd) Installation Note
2	6A258	Intake camshaft caps (5 req'd) Removal Note
2	6A258	Intake camshaft caps (5 req'd) Installation Note

3	6A270	Intake camshaft Removal Note
3	6A270	Intake camshaft Installation Note
4	W701242	Exhaust camshaft cap bolts (10 req'd) Removal Note
4	W701242	Exhaust camshaft cap bolts (10 req'd) Installation Note
5	6A258	Exhaust camshaft caps (5 req'd) Removal Note
5	6A258	Exhaust camshaft caps (5 req'd) Installation Note
6	6A272	Exhaust camshaft Removal Note
6	6A272	Exhaust camshaft Installation Note
7	6K514	Tappet shims (16 req'd) Installation Note
8	6500	Tappets (16 req'd)

3. To install, reverse the removal procedure.

Items 1-6: Camshaft Removal Note

1. Remove the special tool.



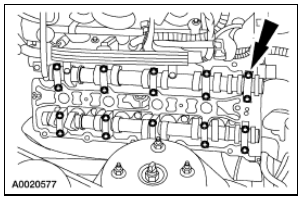
2. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

   ⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.

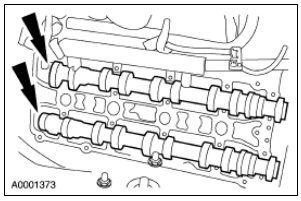
   ⚠ CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

   Remove the RH camshaft bearing caps.

   - Remove the bolts.
   - Remove the RH camshaft bearing caps.



3. Remove the RH camshafts.



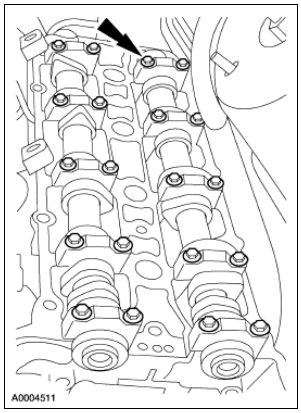
4. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

   ⚠ CAUTION: Do not use any means of marking the shims other than a permanent-type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.

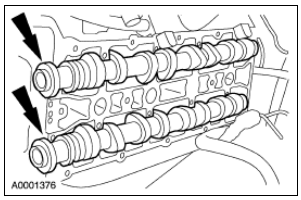
   ⚠ CAUTION: Record the location of the shims and bucket tappets. The bucket tappets and shims are positional and if installed in the incorrect location, engine damage can occur.

   Remove the LH camshaft bearing caps.

   - Remove the bolts.
   - Remove the LH camshaft bearing caps.



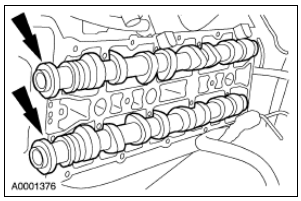
5. Remove the LH camshafts.



Items 1-7: Camshaft Installation Note

1. **NOTE:** Apply clean engine oil to the camshaft journals, the camshaft caps and the camshaft lobes prior to installing the camshafts.

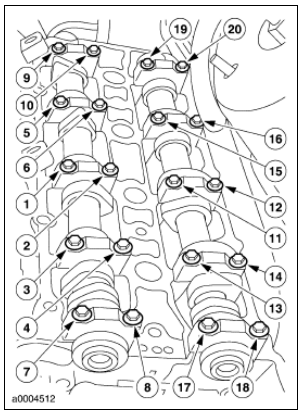
   Position the LH camshafts on the camshaft journals.



2. ⚠ **CAUTION: Install the camshaft bearing caps. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

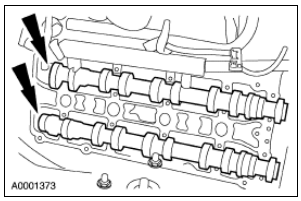
   Install the LH camshaft bearing caps.

   - Position the bearing caps.
   - Install the bearing cap bolts. Tighten the bolts in three stages in the sequence shown.
     - ♦ Stage 1: Hand-tighten.
     - ♦ Stage 2: Tighten to 6 Nm (53 lb-in).
     - ♦ Stage 3: Tighten an additional 90 degrees.



3. **NOTE:** Apply clean engine oil to the camshaft journals, the camshaft caps and the camshaft lobes prior to installing the camshafts.

   Install the RH camshafts.

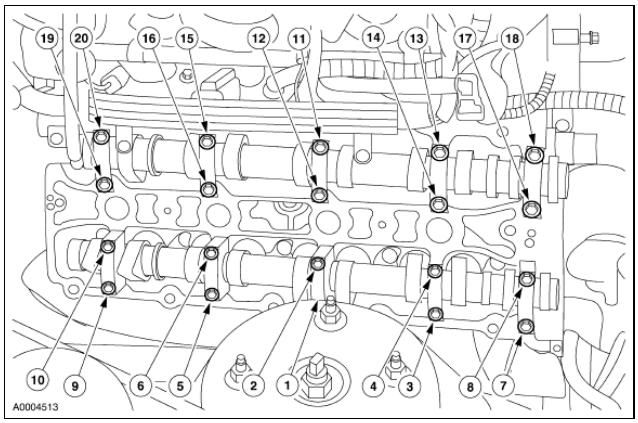


4. ⚠ **CAUTION: Install the camshaft bearing caps. The camshaft bearing caps are positional and must be installed in their original locations and orientation or engine damage can occur.**

   Install the RH camshaft bearing caps.

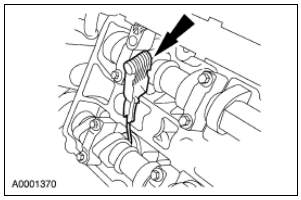
   - Position the bearing caps.
   - Install the bolts. Tighten the bolts in three stages in the sequence shown.
     - ♦ Stage 1: Hand-tighten.

- Stage 2: Tighten to 6 Nm (53 lb-in).
- Stage 3: Tighten an additional 90 degrees.



5. ⚠ **CAUTION: If any components are installed new, the engine must be reshimmed or engine damage can occur.**

   Using a feeler gauge, confirm that the tappet and shim clearances are within specification. For additional information, refer to Valve Clearance Check in this section.



6. If tappet and shim clearances are not within specification, adjust the clearance. For additional information, refer to Valve Clearance Adjustment in this section.

7. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

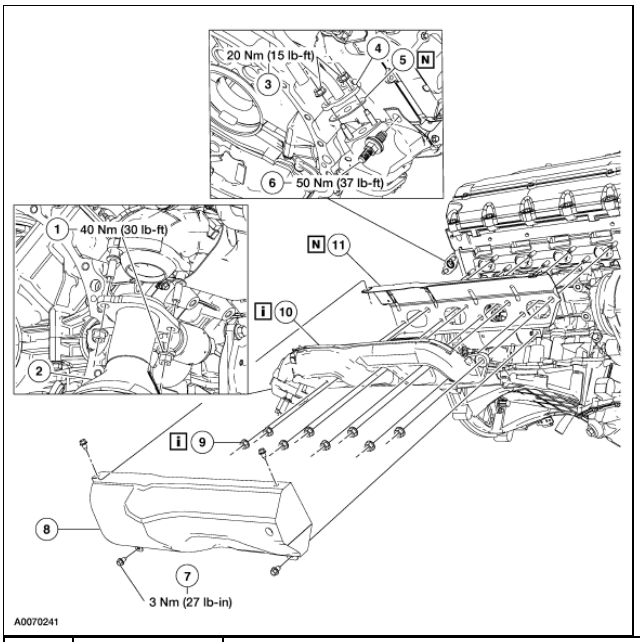
Exhaust Manifold RH

Printable View (192 KB)

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table.

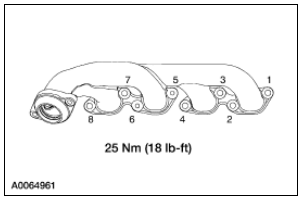
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	W705443	Exhaust Y-pipe flange nuts (2 req'd)
2	5F250	Exhaust Y-pipe
3	W520413	Exhaust gas recirculation (EGR) system module-to-exhaust manifold tube flange nuts (2 req'd)
4	7D477	EGR system module-to-exhaust manifold tube
5	9C435	EGR system module-to-exhaust manifold tube gasket
6	W708246	Stud
7	W504081	Heat shield bolts (4 req'd)
8	9A462	Heat shield
9	W701706	Exhaust manifold nuts (8 req'd) Installation Note
10	9430	Exhaust manifold Installation Note
11	9448	Exhaust manifold gasket

Items 9 and 10: RH Exhaust Manifold Installation Note

1. Install the exhaust manifold.
    - Install a new gasket and the exhaust manifold.
    - Install the exhaust manifold nuts hand tight.
    - Install the exhaust gas recirculation (EGR) system module-to-exhaust manifold tube to the exhaust manifold.
    - Tighten the eight nuts in the sequence shown.



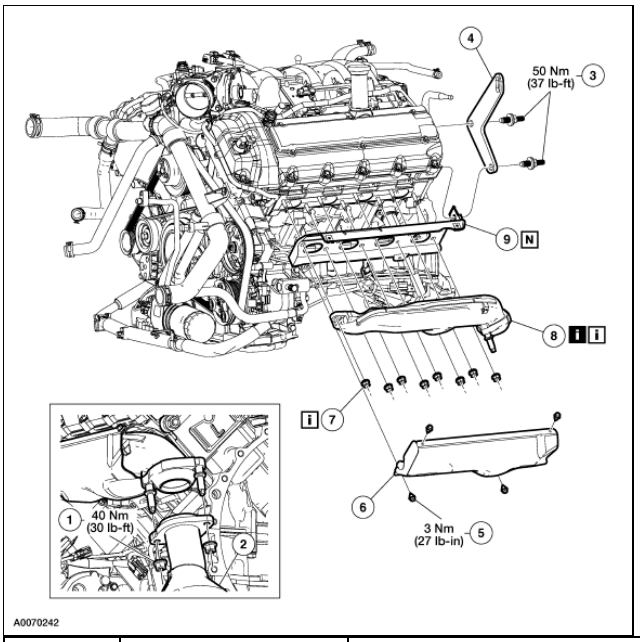
Exhaust Manifold LH

Printable View (253 KB)

1. Remove the oil level indicator tube. For additional information, refer to Oil Level Indicator and Tube in this section.

2. Remove the components in the order indicated in the following illustration and table.

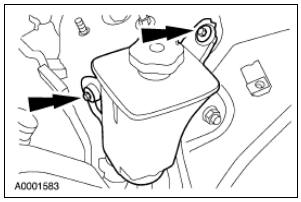
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	W705443	Exhaust Y-pipe flange nuts (2 req'd)
2	5F250	Exhaust Y-pipe
3	W708246	Engine lifting eye studs (2 req'd)
4	17K056	Engine lifting eye
5	W504081	Heat shield bolts (4 req'd)
6	9Y427	Heat shield
7	W701706	Exhaust manifold nuts (8 req'd) Installation Note
8	9431	Exhaust manifold Removal Note
8	9431	Exhaust manifold Installation Note
9	9A457	Exhaust manifold gasket

Item 8: LH Exhaust Manifold Removal Note

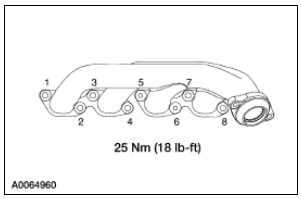
1. Remove the bolts and position the power steering reservoir aside.



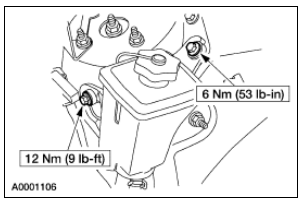
2. Remove the exhaust manifold.
    - Remove the eight nuts.
    - Remove the exhaust manifold and discard the gasket.

Items 7 and 8: LH Exhaust Manifold Installation Note

1. Install the exhaust manifold.
    - Install a new gasket and the exhaust manifold.
    - Tighten the eight nuts in the sequence shown.



2. Position the power steering reservoir and install the bolts.



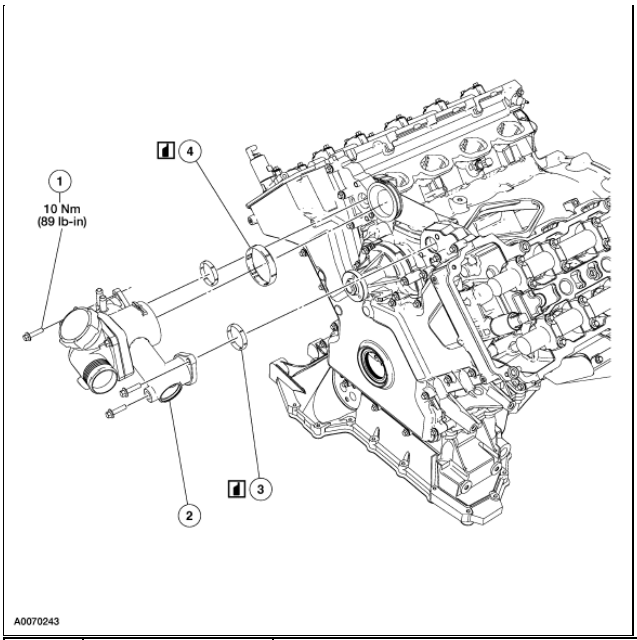
Cylinder Head

Printable View (659 KB)

1. Remove the intake manifold. For additional information, refer to Intake Manifold in this section.
2. Remove the LH or RH exhaust manifold. For additional information, refer to Exhaust Manifold LH , or Valve Cover RH in this section
3. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.
4. To remove individual components, only carry out the listed steps.

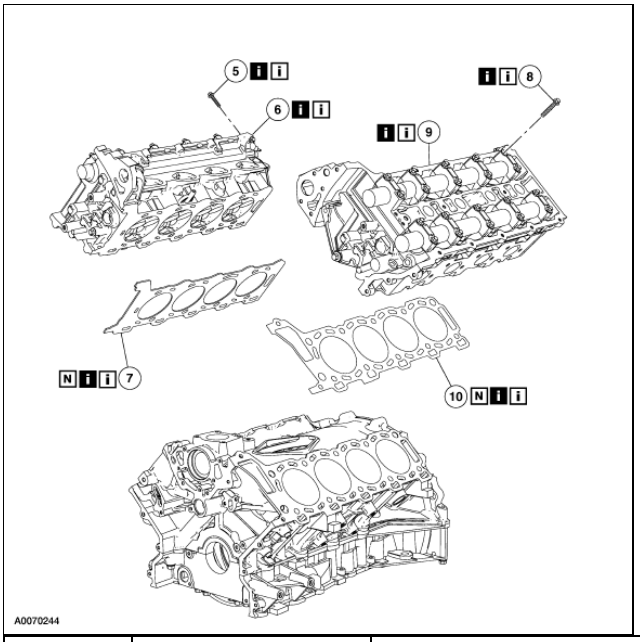
Component	Steps
RH cylinder head	9-11
LH cylinder head	12-14

5. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W500215	Coolant bypass housing bolts
2	8A520	Coolant bypass housing
3		Coolant bypass housing O-ring seals (2 req'd)
4		Coolant inlet housing O-ring seal

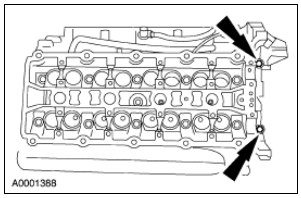
6. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



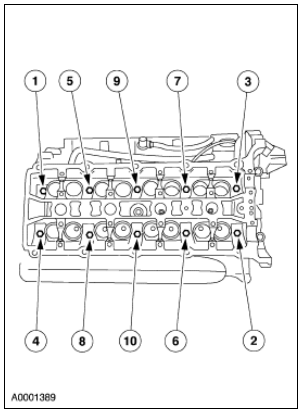
Item	Part Number	Description
5	6065	RH cylinder head bolts (12 req'd) Removal Note
5	6065	RH cylinder head bolts (12 req'd) Installation Note
6	6049	RH cylinder head Removal Note
6	6049	RH cylinder head Installation Note
7	6051	RH cylinder head gasket Removal Note
7	6051	RH cylinder head gasket Installation Note
8	6065	LH cylinder head bolts (12 req'd) Removal Note
8	6065	LH cylinder head bolts (12 req'd) Installation Note
9	6049	LH cylinder head Removal Note
9	6049	LH cylinder head Installation Note
10	6051	LH cylinder head gasket Removal Note
10	6051	LH cylinder head gasket Installation Note

Items 5-10: Cylinder Head Removal Note

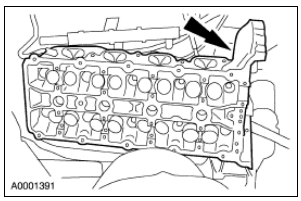
1. Remove and discard the bolts.



2. Remove the RH bolts in the sequence shown.
    - Discard the bolts.

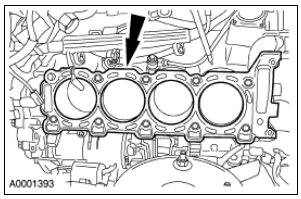


3. Remove the RH cylinder head.
    - Discard the gasket.

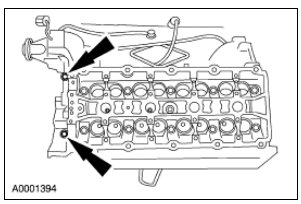


4. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.



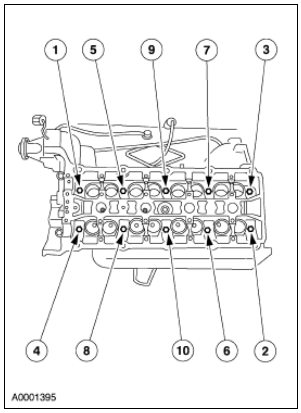
5. Remove and discard the bolts.



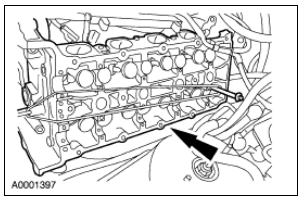
6. **NOTE:** The lower rear bolt cannot be fully removed. This bolt must be retained above the decking surface with a rubber band to remove the LH cylinder head.

Remove the bolts in the sequence shown.

- Discard the bolts.

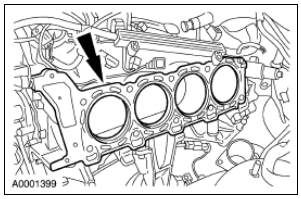


7. Remove the LH cylinder head.
   - Discard the gasket.



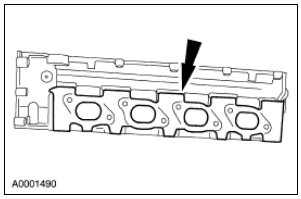
8. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.



9. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.

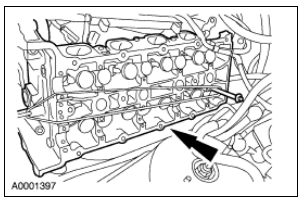


Items 5-10: Cylinder Head Installation Note

1. **NOTE:** The lower rear bolt cannot be installed with the cylinder head in place. Secure the bolt above deck height with a rubber band prior to cylinder head installation.

Position the LH cylinder head.

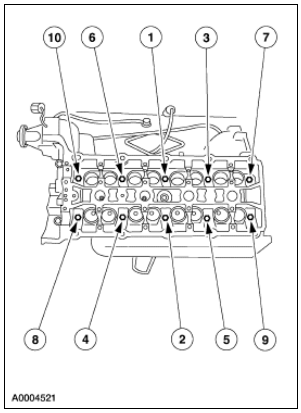
- Install a new gasket.



2. **NOTE:** The cylinder head bolts are a torque-to-yield design and must not be reused. Always install new bolts.

   Install and tighten the bolts in five stages in the sequence shown.

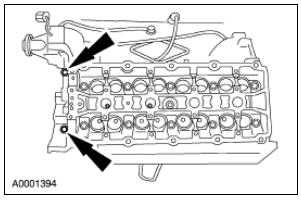
   - Stage 1: Install finger-tight.
   - Stage 2: Tighten to 20 Nm (15 lb-ft).
   - Stage 3: Tighten to 35 Nm (26 lb-ft).
   - Stage 4: Tighten to 45 Nm (33 lb-ft) and an additional 90 degrees.
   - Stage 5: Tighten an additional 90 degrees.



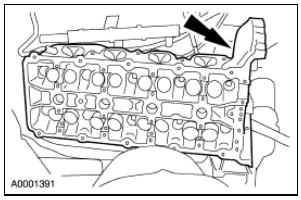
3. **NOTE:** The cylinder head bolts are a torque-to-yield design and must not be reused. Always install new bolts.

   Install and tighten the bolts in two stages.

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.



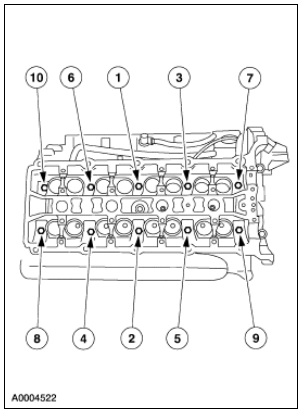
4. Position the RH cylinder head.
   - Install a new gasket.



5. **NOTE:** The cylinder head bolts are a torque-to-yield design and must not be reused. Always install new bolts.

   Install and tighten the bolts in five stages in the sequence shown.

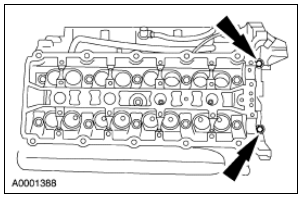
   - Stage 1: Install finger-tight.
   - Stage 2: Tighten to 20 Nm (15 lb-ft).
   - Stage 3: Tighten to 35 Nm (26 lb-ft).
   - Stage 4: Tighten to 45 Nm (33 lb-ft) and an additional 90 degrees.
   - Stage 5: Tighten an additional 90 degrees.



6. **NOTE:** The cylinder head bolts are a torque-to-yield design and must not be reused. Always install new bolts.

   Install and tighten the bolts in two stages.

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.



Oil Cooler

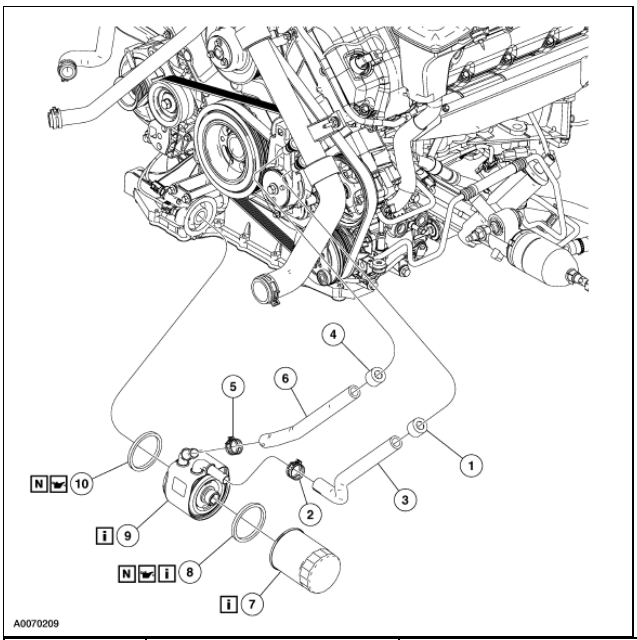
Printable View (219 KB)

Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

   Drain the cooling system. For additional information, refer to Section 303-03 .
3. Drain the engine oil.
4. Remove the lower splash shield.
5. Remove the components in the order indicated in the following illustration and table.
6. To install, reverse the removal procedure.



Item	Part Number	Description
1	15161	Oil cooler coolant hose clamp
2	8A593	Oil cooler coolant hose clamp
3	8286	Oil cooler coolant hose
4	15161	Oil cooler coolant hose clamp

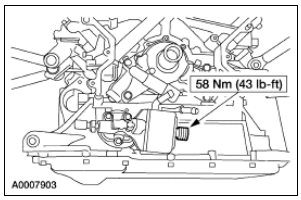
5	8A593	Oil cooler coolant hose clamp
6	8286	Oil cooler coolant hose
7	6714	Oil filter Installation Note
8		Oil filter seal (part of 6714) Installation Note
9	6A642	Oil cooler Installation Note
10	6A636	Oil cooler gasket

Item 9: Oil Cooler Installation Note

1. **NOTE:** Inspect the gasket and surfaces for contamination prior to installation.

   Position the oil cooler and a new gasket and install the bolt.

   - Rotate the cooler clockwise until the locating pin hits the stop.



Items 7 and 8: Oil Filter and Gasket Installation Note

1. Install the oil filter until the seal makes contact. Using an oil filter strap wrench, tighten an additional 270 degrees.

Oil Filter Adapter

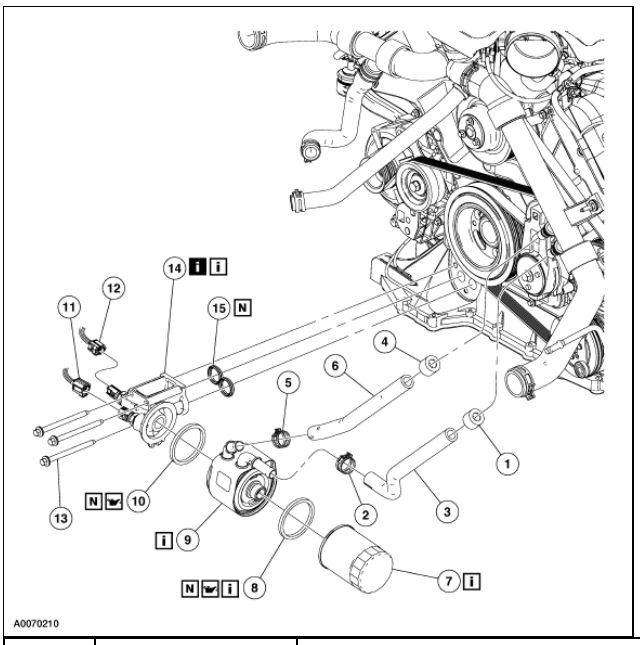
Printable View (226 KB)

Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. **CAUTION: The cooling system filling and bleeding procedure must be followed exactly or damage to the engine can occur.**

   Drain the cooling system. For additional information, refer to Section 303-03 .
3. Drain the engine oil.
4. Remove the lower splash shield.
5. Remove the components in the order indicated in the following illustration and table.
6. To install, reverse the removal procedure.

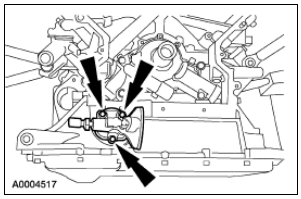


Item	Part Number	Description
1	15161	Oil cooler coolant hose clamp
2	8A593	Oil cooler coolant hose clamp
3	8286	Oil cooler coolant hose
4	15161	Oil cooler coolant hose clamp

5	8A593	Oil cooler coolant hose clamp
6	8286	Oil cooler coolant hose
7	6714	Oil filter Installation Note
8		Oil filter gasket (part of 6714) Installation Note
9	6A642	Oil cooler Installation Note
10	6A636	Oil cooler gasket
11	12B637	Oil temperature sensor electrical connector
12	12B637	Oil pressure sensor electrical connector
13	W70709	Oil filter adapter bolts (3 req'd)
14	6A643	Oil filter adapter Removal Note
14	6A643	Oil filter adapter Installation Note
15	6A636	Oil filter adapter O-ring seals (2 req'd)

Item 14: Oil Filter Adapter Removal Note

1. Remove the oil filter adapter assembly.
   - Discard the seal.

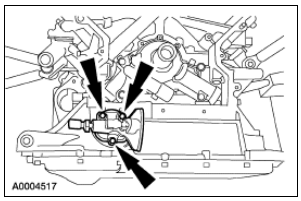


2. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool.**

   Clean the sealing surfaces.

Item 14: Oil Filter Adapter Installation Note

1. Install a new seal and the oil filter adapter. Tighten the bolts in two stages.
   - Stage 1: Tighten to 13 Nm (10 lb-ft).
   - Stage 2: Tighten an additional 90 degrees.

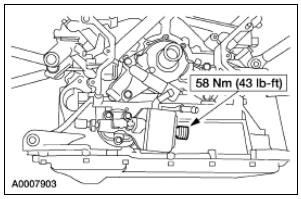


Item 9: Oil Cooler Installation Note

1. **NOTE:** Inspect the gasket and surfaces for contamination prior to installation.

Position the oil cooler and a new gasket and install the bolt.

- Rotate the cooler clockwise until the locating pin hits the stop.



Items 7 and 8: Oil Filter and Gasket Installation Note

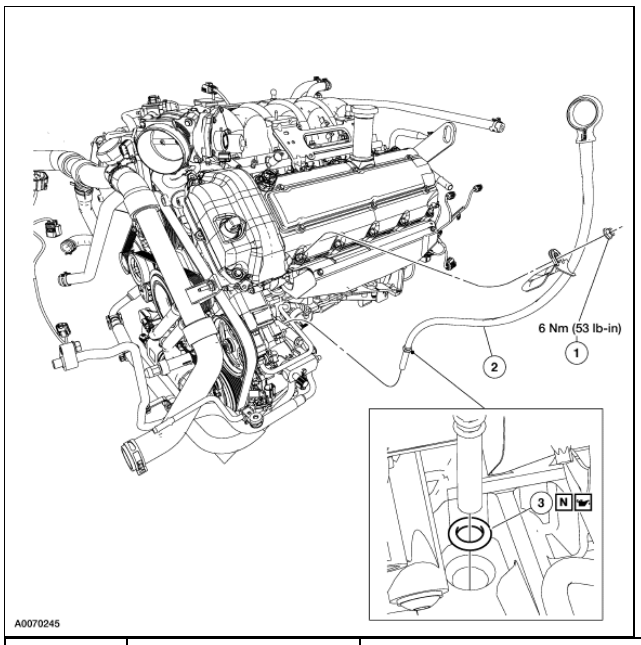
1. Install the oil filter until the seal makes contact. Using an oil filter strap wrench, tighten an additional 270 degrees.

Oil Level Indicator and Tube

Printable View (176 KB)

1. Remove the components in the order indicated in the following illustration and table.

2. To install, reverse the removal procedure.



Item	Part Number	Description
1	W520411	Oil level indicator tube nut
2	6754	Oil level indicator tube
3	6754-B	Oil level indicator tube O-ring seal

Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube

Printable View (463 KB)

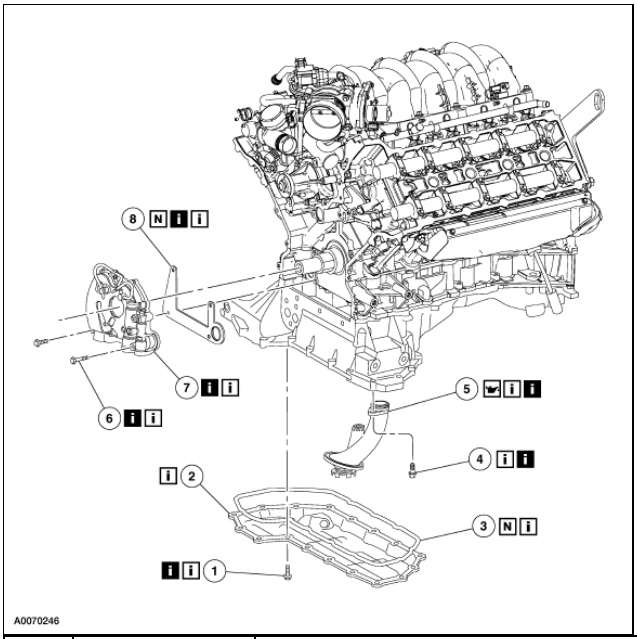
Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H
Metal Surface Cleaner F4AZ-19A536-RA or equivalent	WSE-M5B392-A

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Drain the engine oil.
3. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Oil Pan	1-3
Oil Pump Screen and Pickup Tube	1-5
Oil Pump	1-8

4. To install, reverse the removal procedure.



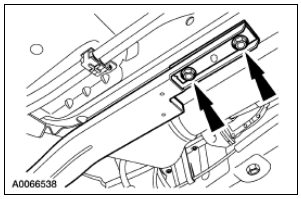
Item	Part Number	Description
1	W701504	Oil pan bolts (17 req'd) Removal Note

1	W701504	Oil pan bolts (17 req'd) Installation Note
2	6695	Oil pan Installation Note
3		Oil pan gasket Installation Note
4	W500214	Oil pump screen and pickup tube bolts (2 req'd) Removal Note
4	W500214	Oil pump screen and pickup tube bolts (2 req'd) Installation Note
5	6617	Oil pump screen and pickup tube Removal Note
5	6617	Oil pump screen and pickup tube Installation Note
6	W701544	Oil pump bolts Removal Note
6	W701544	Oil pump bolts Installation Note
7	6600	Oil pump Removal Note
7	6600	Oil pump Installation Note
8	6659	Oil pump gasket Removal Note
8	6659	Oil pump gasket Installation Note

Item 1: Oil Pan Bolts Removal Note

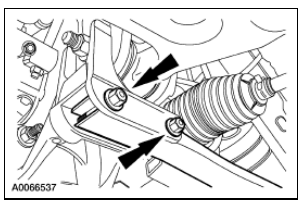
1. **NOTE:** LH is shown, RH is similar.

   Remove the bolts.



2. **NOTE:** LH is shown, RH is similar.

   Remove the bolts and the lateral support bar.

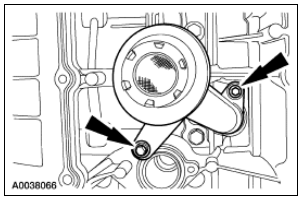


Items 4 and 5: Oil Pump Screen and Pickup Tube Removal Note

1. ⚠ **CAUTION: Only use hand tools to remove the oil pump screen and pickup tube.**

   Remove the bolts and the oil pump screen and pickup tube.

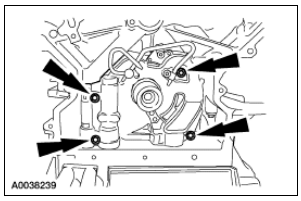
   - Inspect the O-ring seal and install a new one if necessary.



Items 6-8: Oil Pump Removal Note

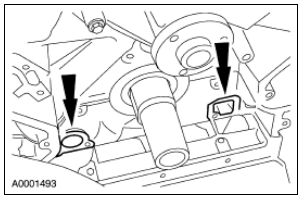
1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.

2. Remove the bolts and the oil pump.
   - Discard the gasket.



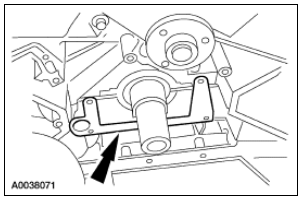
3. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leaks paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.

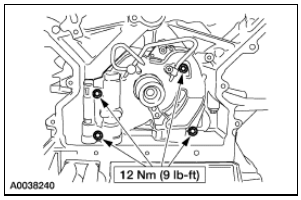


Items 6-8: Oil Pump Installation Note

1. Install a new gasket.



2. Install the oil pump and tighten the bolts in two stages.
   - Stage 1: Tighten to 6 Nm (53 lb-in).
   - Stage 2: Tighten an additional 90 degrees.

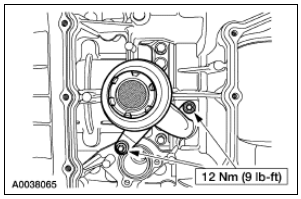


3. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

Items 4 and 5: Oil Pump Screen and Pickup Tube Installation Note

1. **NOTE:** Apply clean engine oil to the O-ring seal prior to installing.

   Install the oil pump screen and pickup tube.

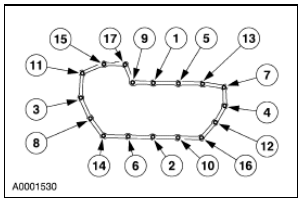


Items 1-3: Oil Pan Installation Note

1. **NOTE:** Make sure all gasket sealing surfaces are clean and dry.

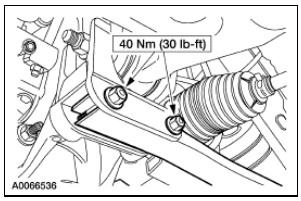
   Install a new oil pan gasket and the oil pan. Tighten the bolts in the sequence shown in two stages.

   - Stage 1: Tighten to 5 Nm (44 lb-in).
   - Stage 2: Tighten to 12 Nm (9 lb-ft).



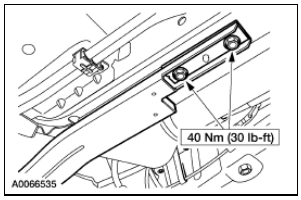
2. **NOTE:** LH is shown, RH is similar.

   Position the lateral support bars and install the bolts.



3. **NOTE:** LH is shown, RH is similar.

   Install the bolts.



4. Fill the crankcase with clean engine oil.

Flexplate or Flywheel and Crankshaft Rear Seal

Printable View (240 KB)

Special Tool(s)

 ST2495-B	Remover/Installer, Crankshaft Rear Oil Seal 303-647
ST2441-A	Adapter for 204-185 204-208 (T95T-5310-AR2)

Material

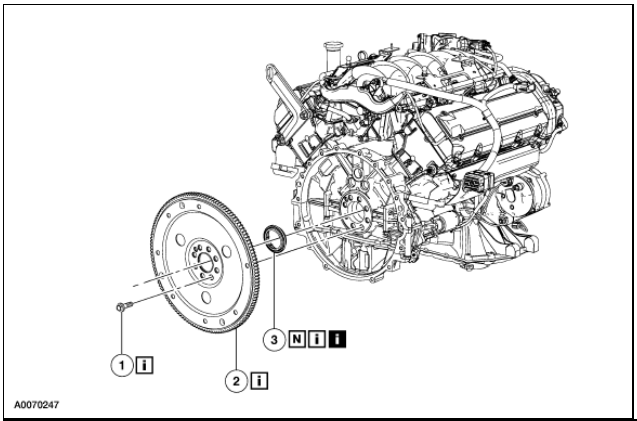
Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Remove the transmission. For additional information, refer to Section 307-01 .

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Flexplate	1-2
Rear Crankshaft Seal	1-3

3. To install, reverse the removal procedure.

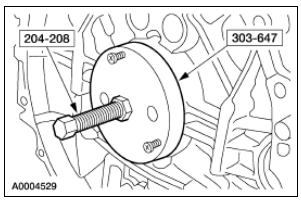


Item	Part Number	Description
1	W704862	Flexplate bolts (8 req'd) Installation Note
2	6K375	Flexplate Installation Note
3	6701	

		Crankshaft rear seal Removal Note
3	6701	Crankshaft rear seal Installation Note

Item 3: Crankshaft Rear Seal Removal Note

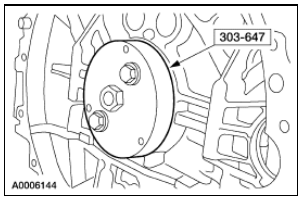
1. Using the special tools, remove the crankshaft rear seal.
   - Discard the seal.



Item 3: Crankshaft Rear Seal Installation Note

1. **NOTE:** Lubricate the crankshaft rear seal with clean engine oil prior to installation.

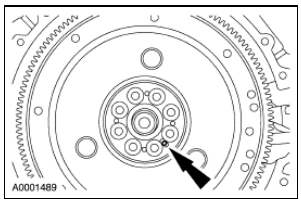
   Using the special tool, install a new crankshaft rear oil seal.



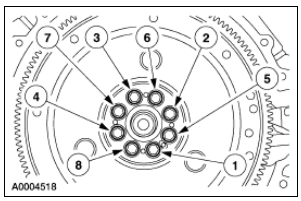
Items 1 and 2: Flexplate Installation Note

1. **NOTE:** The crankshaft dowel must be positioned below the outer face of the flexplate.

   Install the flexplate with the elongated hole over the crankshaft dowel.



2. Install the flexplate bolts and tighten in two stages in the sequence shown.
   - Stage 1: Tighten to 15 Nm (11 lb-ft).
   - Stage 2: Tighten to 110 Nm (81 lb-ft).

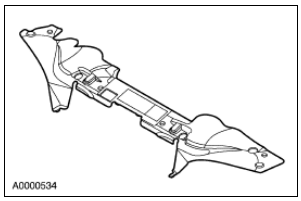


Engine Mount Printable View (280 KB)

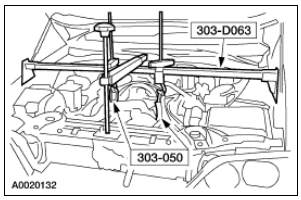
Special Tool(s)

 ST1595-A	Lifting Bracket, Engine 303-050 (T70P-6000)
ST1703-A	Support Bar, Engine 303-D063 (D88L-6000-A)

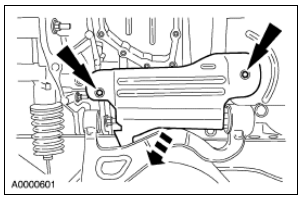
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04A or Section 303-04B .
4. Remove the upper radiator sight shield.



5. Install the special tools and support the engine.



6. Remove the LH and the RH lower splash shield.

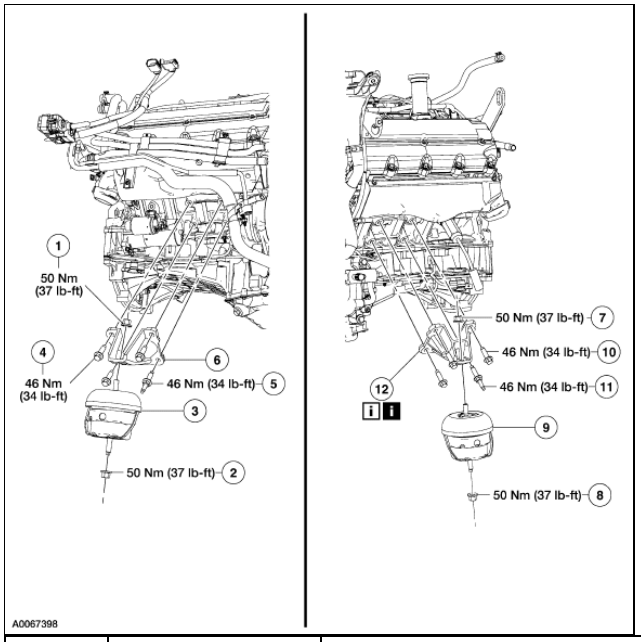


7. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps

RH Motor Mount	1-6
LH Motor Mount	7-12

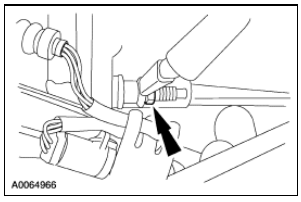
8. To install, reverse the removal procedure.



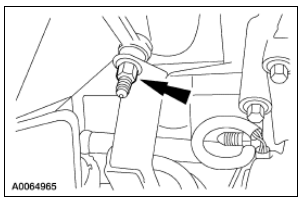
Item	Part Number	Description
1	6A005	LH motor mount upper nut
2	6754	LH motor mount lower nut
3	6754B	LH motor mount
4	W500234	LH motor mount bracket bolts (3 req'd)
5	W705399	LH motor mount bracket stud
6	6061	LH motor mount bracket
7	6A005	RH motor mount upper nut
8	6754	RH motor mount lower nut
9	6754B	RH motor mount
10	W500234	RH motor mount bracket bolts (3 req'd)
11	W705399	RH motor mount bracket stud
12	6057	RH motor mount bracket Removal Note
12	6057	RH motor mount bracket Installation Note

Item 12: RH Motor Mount Bracket Removal Note

1. Remove the nut and disconnect the starter motor ground cable.

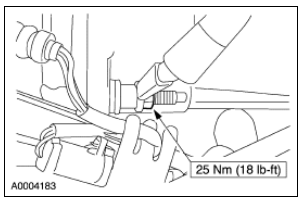


2. Remove the nut and disconnect the wiring harness support bracket from the engine mount bracket.



Item 12: RH Motor Mount Bracket Installation Note

1. Connect the starter motor ground cable and install the nut.



2. Connect the wiring harness support bracket to the engine mount bracket and install the nut.

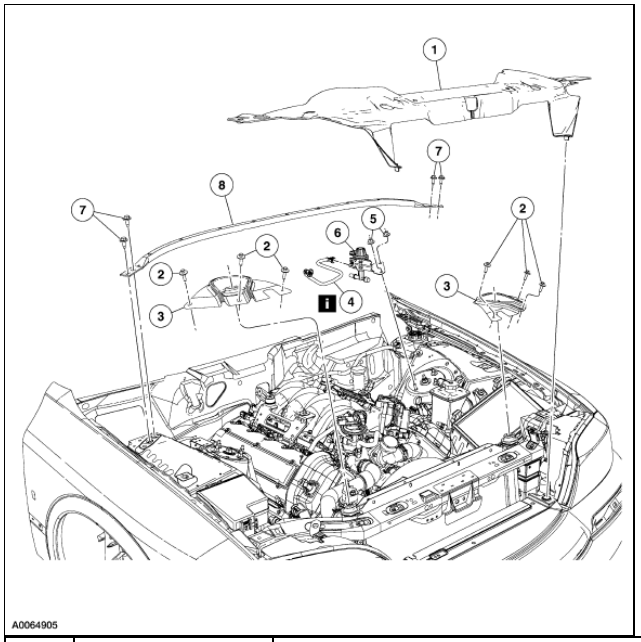
Special Tool(s)

 ST1595-A	Lifting Brackets, Engine 303-050 (T70P-6000)
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3)

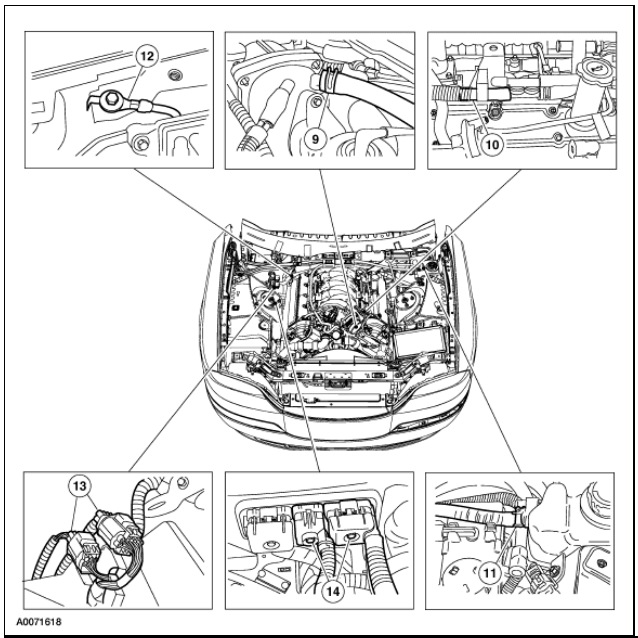
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the air cleaner inlet. For additional information, refer to Section 303-04B .
4. ⚠ **CAUTION: The coolant drain procedure must be followed exactly or damage to the engine can occur.**

   Drain the engine coolant. For additional information, refer to Section 303-03 .
5. Discharge the A/C system. For additional information, refer to Section 412-00 .
6. Remove the power steering pump reservoir bolts. For additional information, refer to Section 205-00 .
7. Remove the cowl vent screens. For additional information, refer to Section 501-00 .
8. Disconnect the fuel hose. For additional information, refer to Section 310-00 .
9. Remove the fresh air filter panel. For additional information, refer to Section 412-00 .
10. Remove the front wheels and tires. For additional information, refer to Section 204-00 .
11. Remove the LH and the RH inner splash shields.
12. Remove the driveshaft. For additional information, refer to Section 205-00 .
13. Remove the three-way catalytic converter (TWC). For additional information, refer to Section 309-00 .
14. Illustration 1 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	8C291	Upper radiator sight shield
2	N606677	Upper radiator support bracket bolts
3	8226-A/8227-A	Upper radiator support bracket
4	9D289A	Vapor management valve (VMV) vacuum hose Removal Note
5		VMV bracket nuts
6	31304	VMV
7	W708009	Strut tower brace bolts
8	3B328A	Strut tower brace

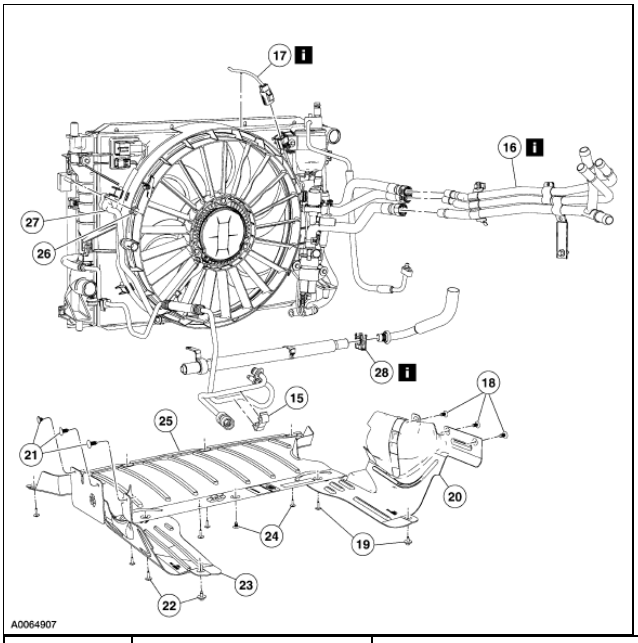
15. Illustration 2 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
9		Vacuum supply hose

10		Vacuum hose
11		Degas bottle hose
12		Ground strap
13		Powertrain bulkhead electrical connectors
14		Powertrain control module electrical connectors

16. Illustration 3 of 13. Remove the components in the order indicated in the illustration and table.



Item	Part Number	Description
15	3A713A	Power steering pressure hose clip
16	18C553A	Heater hoses Removal Note
17	14A624	Water valve electrical connector Removal Note
18	388577	Push pins

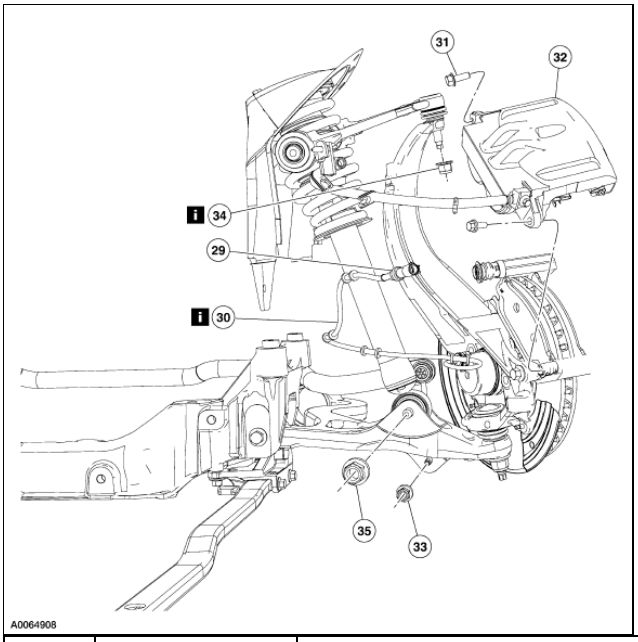
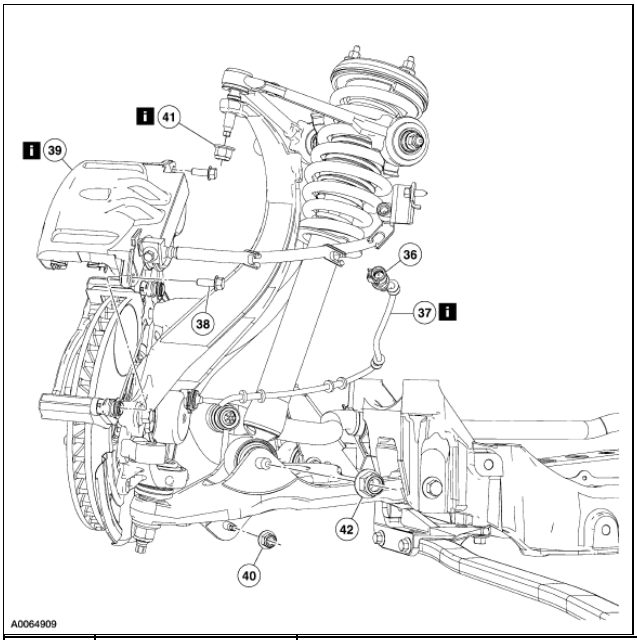
23	8C379	Splash shield
24	N801169	Bolts
25	8C379	Splash shield
26		A/C line nut
27		A/C high pressure hose
28	19A83	A/C low pressure hose Removal Note

17. Illustration 4 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
29	2B663	Anti-lock brake sensor electrical connector
30	2B663	Anti-lock brake sensor harness Removal Note
31	2B118	Brake caliper bolts (2 req'd)
32	2B119	Brake caliper (position aside)
33	W50213	Stabilizer bar nut
34	W520214	Upper ball joint nut Removal Note
35	W50213	Lower strut mount nut and bolt

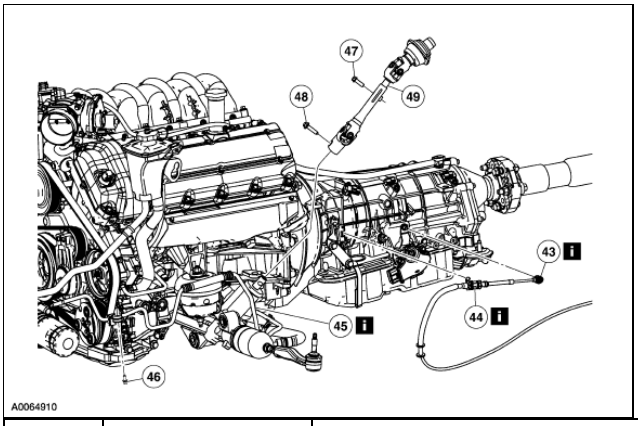
18. Illustration 5 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
36	2B663	Anti-lock brake sensor electrical connector

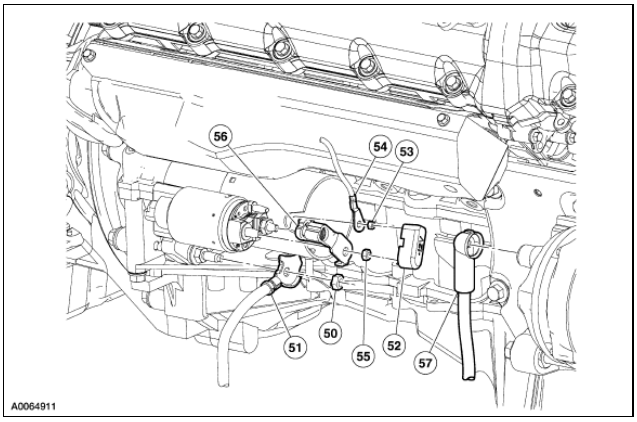
37	2B663	Anti-lock brake sensor harness Removal Note
38	2B118	Brake caliper bolts (2 req'd)
39	2B119	Brake caliper Removal Note
40	W50213	Stabilizer bar nut
41	W520214	Upper ball joint nut Removal Note
42	W50213	Lower strut mount nut and bolt

19. Illustration 6 of 13. Remove the components in the order indicated in the following illustration and table.



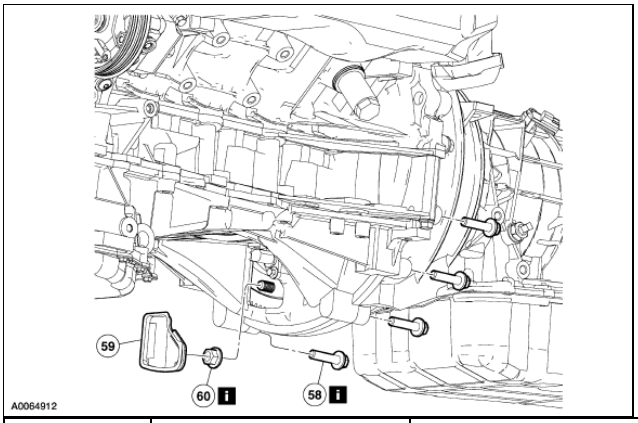
Item	Part Number	Description
43	7A395	Shift cable Removal Note
44	7A395	Shift cable Removal Note
45		Power steering rack electrical connectors Removal Note
46	W500213	Power steering retaining bolt
47	110401	Steering shaft bolt
48	W705113	Steering coupling bolt
49	110400	Steering shaft

20. Illustration 7 of 13. Remove the components in the order indicated in the following illustration and table.



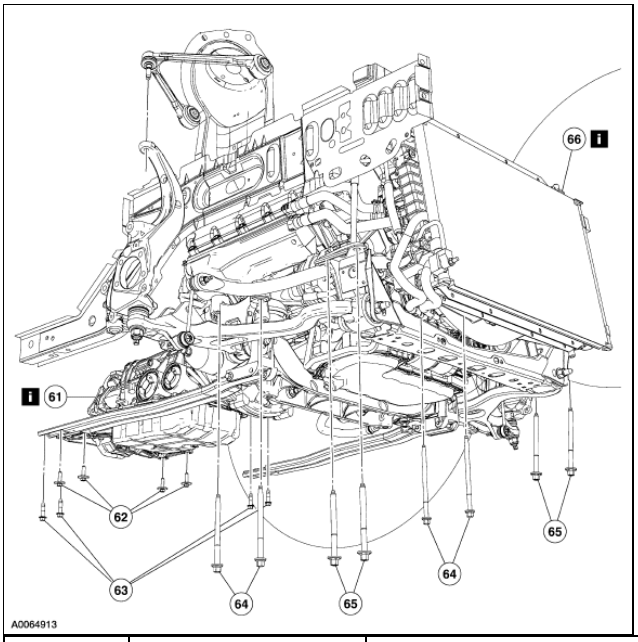
Item	Part Number	Description
50	N500617	Ground cable nut
51	14305	Ground cable
52	11N087	Starter motor terminal cover
53	N800136	Starter motor terminal nut
54		Starter motor electrical connector
55	N800136	Starter motor terminal nut
56		Starter motor electrical connector
57		Generator electrical connector

21. Illustration 8 of 13. Remove the components in the order indicated in the following illustration and table.



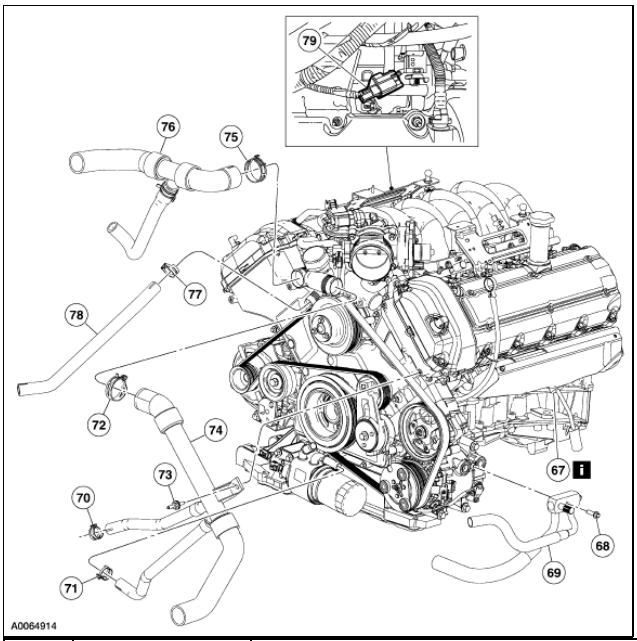
Item	Part Number	Description
58	W500120	Transmission to engine bolts Removal Note
59	7N840	Flexplate bolt cover
60		Torque converter nuts Removal Note

22. Illustration 9 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
61		Engine and transmission assembly Removal Note
62	W704971	Transmission crossmember bolts
63	W707186	Crossmember brace bolts
64	W706329	Center crossmember bolts
65	W708091	Front crossmember bolts
66		Engine and transmission assembly Removal Note

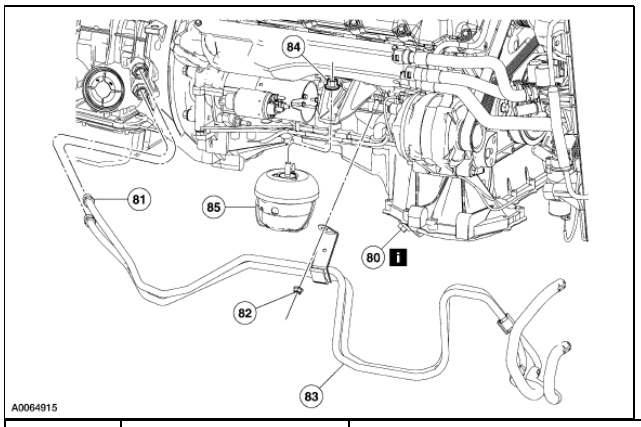
23. Illustration 10 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
67		Block heater electrical connector (part of 12B637)

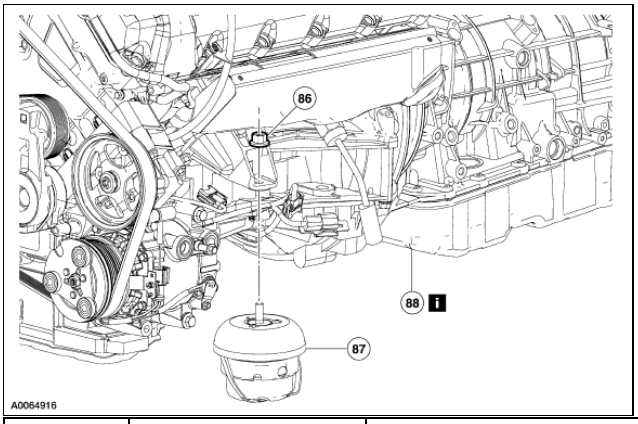
		Removal Note
68		A/C manifold bolt
69	19E559	A/C manifold
70	15161	Oil cooler hose clamp
71	15161	Oil cooler hose clamp
72	15151	Lower radiator hose clamp
73	W701808	Lower radiator hose bolt
74	8B273	Lower radiator hose
75	15151	Upper radiator hose clamp
76	8B274	Upper radiator hose
77	15161	Heater hose clamp
78	18K580	Heater hose
79		Knock sensor electrical connector (part of 12B637)

24. Illustration 11 of 13. Remove the components in the order indicated in the following illustration and table.



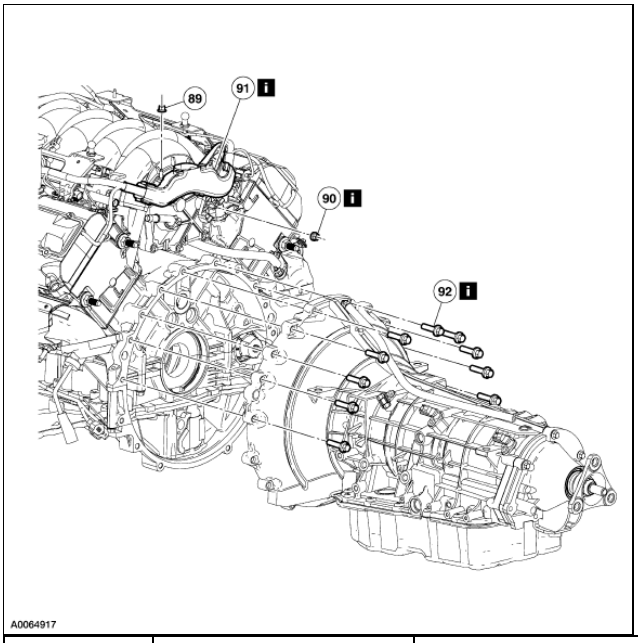
Item	Part Number	Description
80		Engine and transmission assembly Removal Note
81		Transmission cooler line fittings
82		Transmission cooler line bracket nut
83	070200	Transmission cooler lines
84	N621942	Engine mount nut
85	6A003	Engine mount

25. Illustration 12 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
86	N621942	Motor mount nut
87	6A003	Motor mount
88		Engine and transmission assembly Removal Note

26. Illustration 13 of 13. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
89	N520415	Wiring harness retainer nut
90	N520415	Wiring harness retainer nut Removal Note
91	12B637	Engine wiring harness Removal Note
92	W500120	Engine-to-transmission bolts Removal Note

Item 4: Vacuum Hose Removal Note

1. ⚠ **CAUTION: To disconnect the Norma fitting, squeeze the tabs and pull straight out or damage to the fitting can occur.**

Remove the vacuum hose.

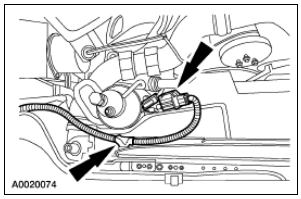
Item 16: Heater Hoses Removal Note

1. **NOTE:** Mark the position of the heater hoses for correct installation.

   Disconnect the heater hoses from the water control valve.

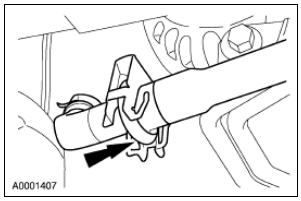
Item 17: Water Valve Electrical Connector Removal Note

1. Disconnect the water valve electrical connector, unclip the harness from the radiator support and position the harness aside.



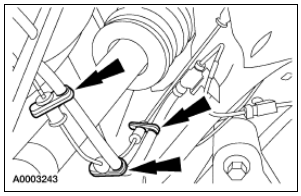
Item 28: A/C Low Pressure Hose Removal Note

1. Disconnect the low pressure A/C hose.



Item 30: Anti-lock Brake Sensor Harness Removal Note

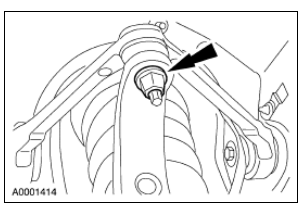
1. Unclip the anti-lock brake harness from the brake hose.



Item 34: Upper Ball Joint Nut Removal Note

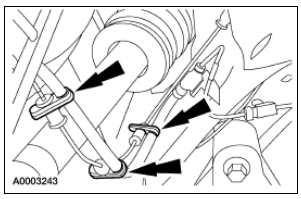
1. **NOTE:** Hold the external hex when removing the ball joint nuts to prevent damage to the ball joint.

   Remove the nut and separate the ball joint from the spindle.



Item 37: Anti-lock Brake Sensor Harness Removal Note

1. Unclip the anti-lock brake harness from the brake hose.



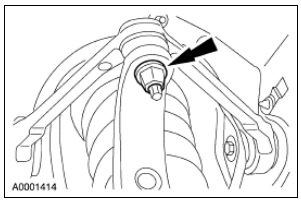
Item 39: Brake Caliper Removal Note

1. Position the brake caliper aside.

Item 41: Upper Ball Joint Nut Removal Note

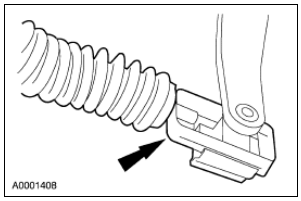
1. **NOTE:** Hold the external hex when removing the ball joint nuts to prevent damage to the ball joint.

   Remove the nut and separate the ball joint from the spindle.



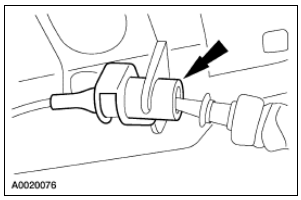
Item 43: Shift Cable Removal Note

1. Disconnect the shift cable from the shifter.



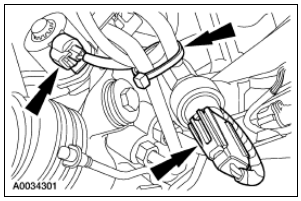
Item 44: Shift Cable Removal Note

1. Unclip the shift cable from the bracket.



Item 45: Power Steering Rack Electrical Connector Removal Note

1. Disconnect the rack and pinion steering unit electrical connectors and remove the tie-strap.



Item 58: Transmission to Engine Bolt Removal Note

1. Remove the lower six transmission-to-engine bolts.

Item 60: Torque Converter Nut Removal Note

1. **NOTE:** Make an identifying mark on the nut, stud, and adapter plate to allow for correct installation.

   Remove the eight torque converter nuts

Item 61: Engine and Transmission Removal Note

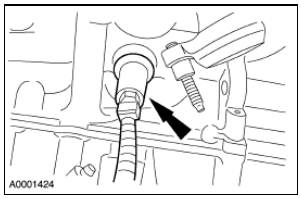
1. Support the rear of the vehicle with suitable safety stands.

Item 66: Engine and Transmission Assembly Removal Note

1. Carefully lower the entire assembly from the vehicle.

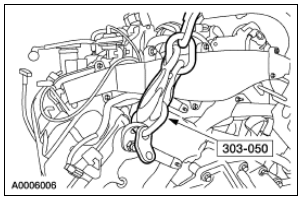
Item 67: Engine Block Heater Removal Note

1. Disconnect the engine block heater electrical connector if equipped.

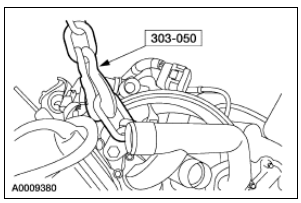


Item 80: Engine and Transmission Assembly Removal Note

1. Install the special tool.



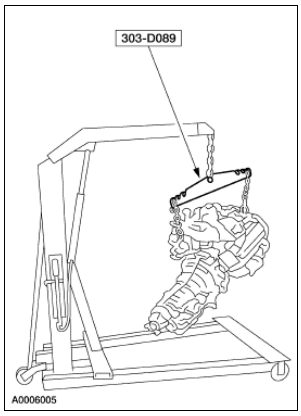
2. Install the special tool.



3. Using the special tool and an engine crane, support the engine and transmission in the front subframe.

Item 88: Engine and Transmission Removal Note

1. Using the special tool and an engine crane, move the engine and transmission from the subframe to rest on the floor or on a bench.



Item 90 and 91: Engine Wiring Harness Removal Note

1. Remove the nuts and position the harness aside.

Item 92: Engine to Transmission Bolt Removal Note

1. Remove the bolts and separate the engine from the transmission.

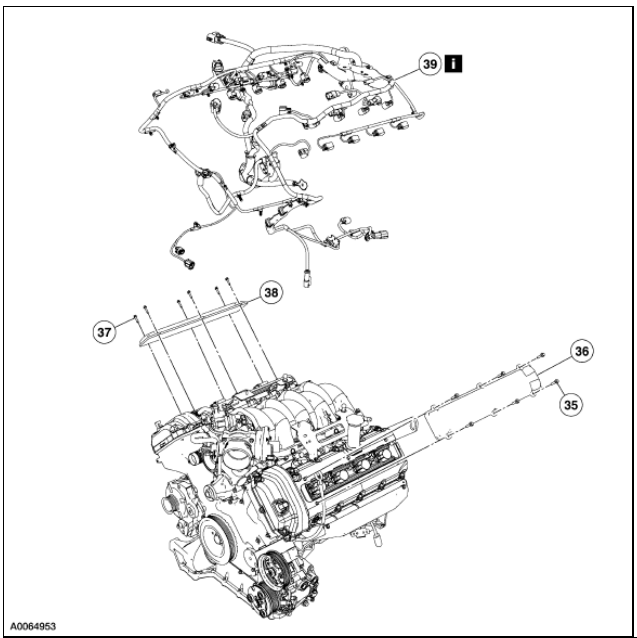
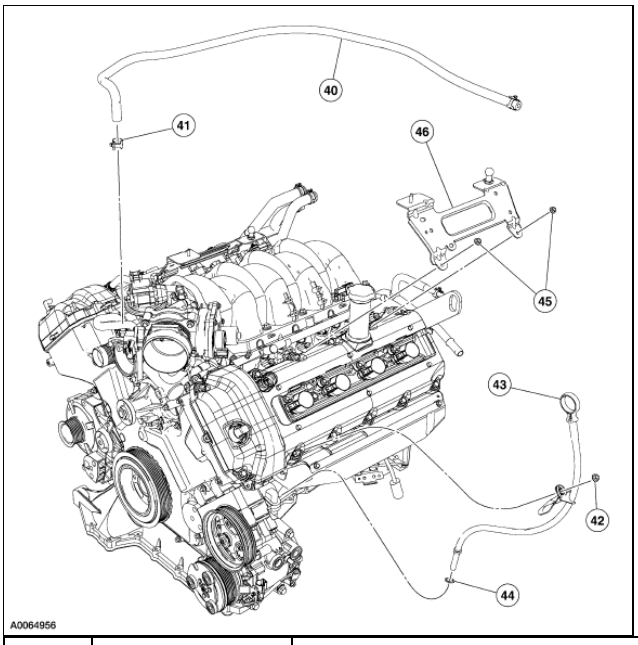
6. Remove the components in the order indicated in the following illustration and table. Illustration 6 of 23.



Item	Part Number	Description
35	W500205	LH coil cover bolts (6 req'd)
36	12065	LH coil cover

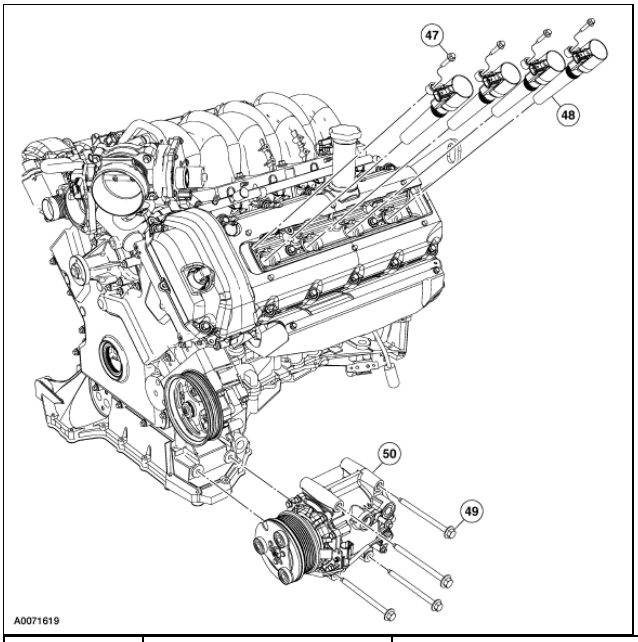
37	W500205	RH coil cover bolts (6 req'd)
38	12065	RH coil cover
39	12B637	Engine wiring harness Disassembly Note

7. Remove the components in the order indicated in the following illustration and table. Illustration 7 of 23.



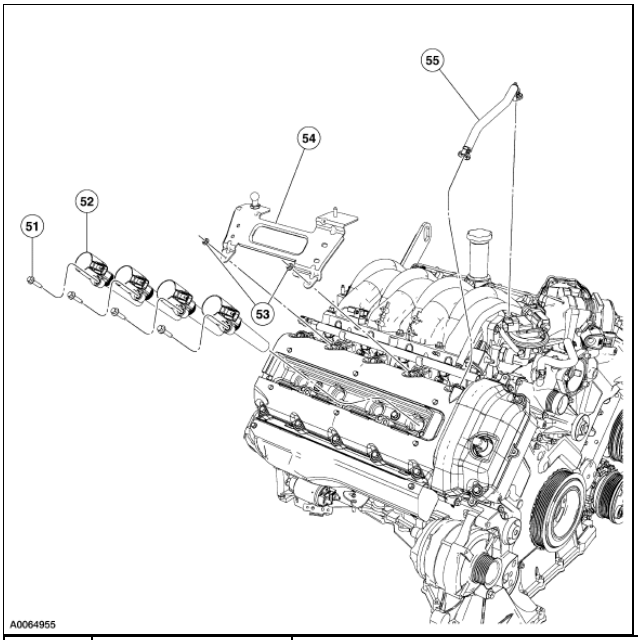
Item	Part Number	Description
40	8276	Vacuum hose
41		Vacuum hose clamp (part of 8276)
42	W520411	Oil level indicator tube bolt
43	6754	Oil level indicator and tube
44	6B033	Oil level indicator tube O-ring seal
45	W520411	Engine cover support bracket nuts (2 req'd)
46	120723	Engine cover support bracket

8. Remove the components in the order indicated in the following illustration and table. Illustration 8 of 23.



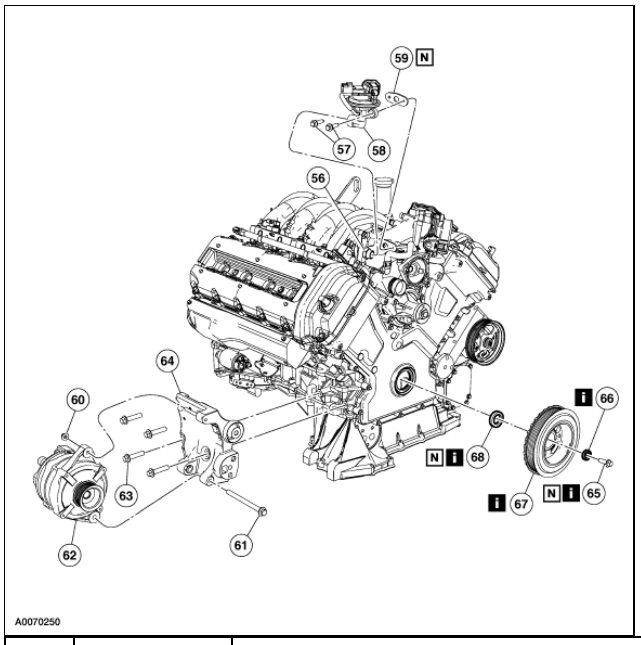
Item	Part Number	Description
47	W500205	LH ignition coil bolts (4 req'd)
48	12A366	LH ignition coils (4 req'd)
49	W705825	A/C compressor bolts (4 req'd)
50	12D629	A/C compressor

9. Remove the components in the order indicated in the following illustration and table. Illustration 9 of 23.



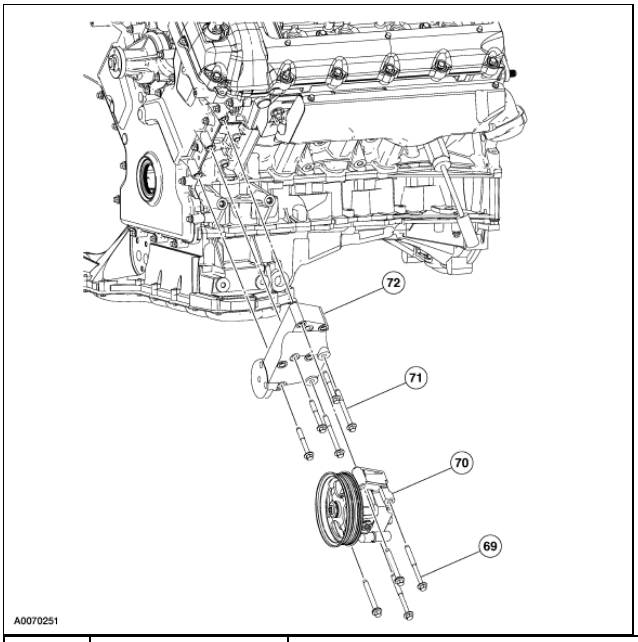
Item	Part Number	Description
51		RH ignition coil bolts (4 req'd)
52	12A366	RH ignition coils (4 req'd)
53		Engine cover support bracket nuts (2 req'd)
54	129723	Engine cover support bracket
55	6C342	Breather hose

10. Remove the components in the order indicated in the following illustration and table. Illustration 10 of 23.



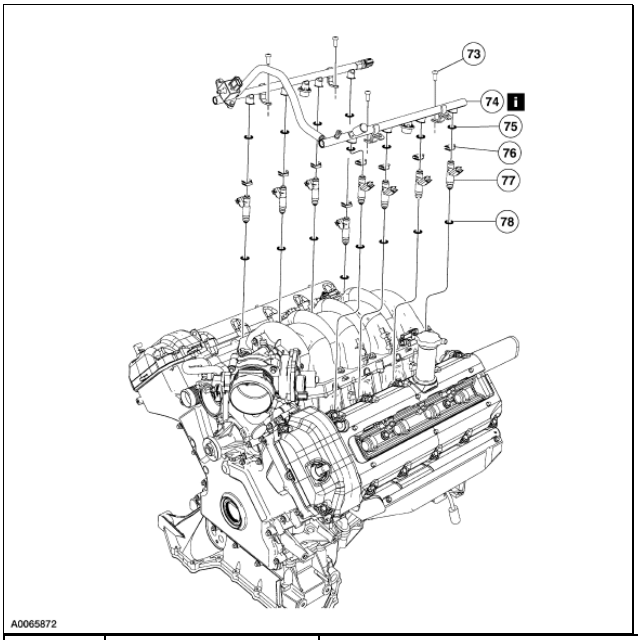
Item	Part Number	Description
56	9D477	Exhaust gas recirculation (EGR) system module-to-exhaust manifold tube
57	W701232	EGR system module bolts (2 req'd)
58	W527351	EGR system module
59	9D476	EGR system module gasket
60		Generator nut
61	W700252	Generator bolt
62		Generator
63	W500321	Generator bracket bolts (4 req'd)
64	10039	Generator bracket
65	W705542	Crankshaft pulley bolt Disassembly Note
66	W704965	Crankshaft pulley washer Disassembly Note
67	6516	Crankshaft pulley Disassembly Note
68	6700	Crankshaft front seal Disassembly Note

11. Remove the components in the order indicated in the following illustration and table. Illustration 11 of 23.



Item	Part Number	Description
69		Power steering pump bolts (4 req'd)
70	3A696	Power steering pump
71		Power steering pump bracket bolts (5 req'd)
72	3K738	Power steering pump bracket

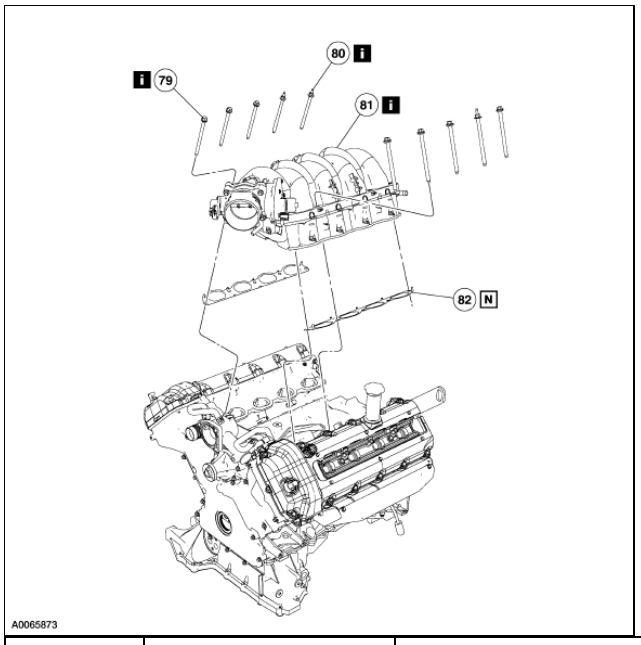
12. Remove the components in the order indicated in the following illustration and table. Illustration 12 of 23.



Item	Part Number	Description
73	N811425	Fuel charge manifold bolts (4 req'd)
74	N811425	Fuel charge manifold Disassembly Note
75		Fuel injector anti-rotation clips (8 req'd)
76		Fuel injector O-ring seals (8 req'd)
77	9F593	Fuel injectors (8 req'd)

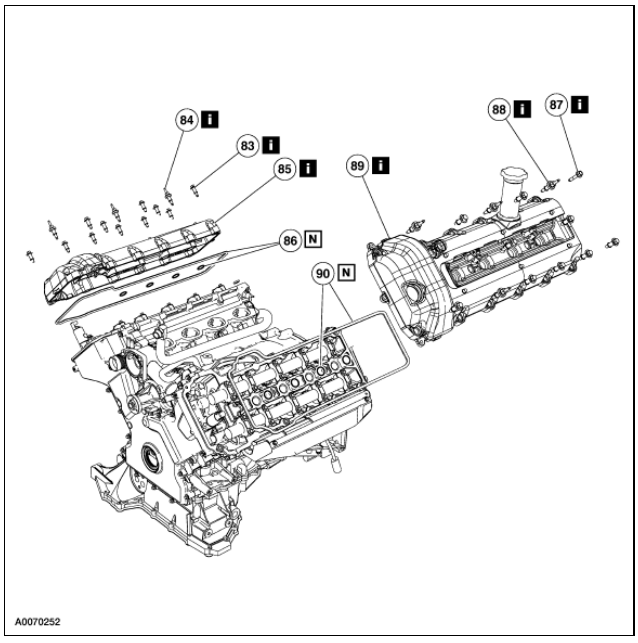
78		Fuel injector O-ring seals (8 req'd)

13. Remove the components in the order indicated in the following illustration and table. Illustration 13 of 23.



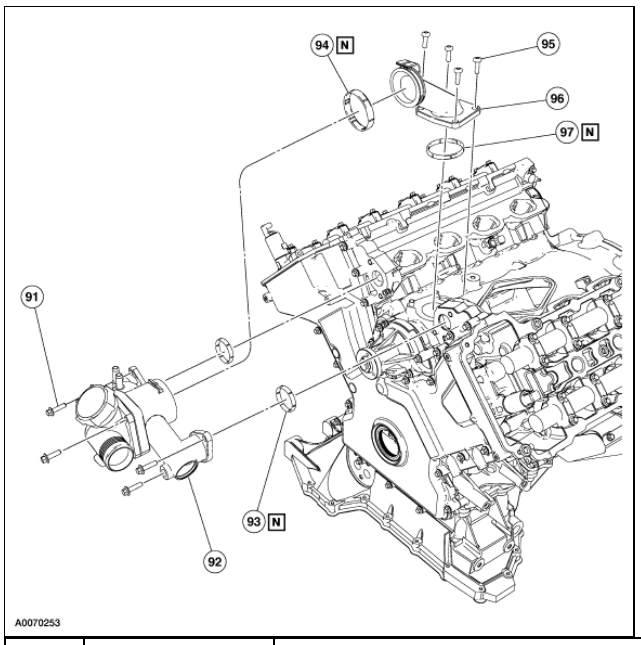
Item	Part Number	Description
79	W704916	Intake manifold bolts (7 req'd) Disassembly Note
80	W708238	Intake manifold studs (3 req'd) Disassembly Note
81	9424	Intake manifold Disassembly Note
82	9P851	Intake manifold gaskets

14. Remove the components in the order indicated in the following illustration and table. Illustration 14 of 23.



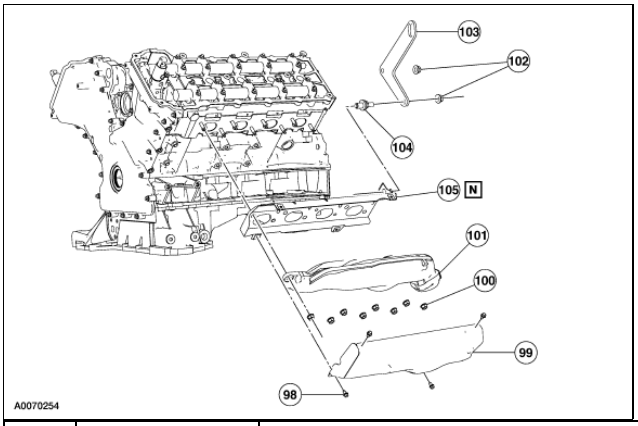
Item	Part Number	Description
83	6065	RH valve cover bolts (11 req'd) Disassembly Note
84	6049	RH valve cover studs (3 req'd) Disassembly Note
85	6051	RH valve cover Disassembly Note
86	6065	RH valve cover gaskets
87	6050	LH valve cover bolts (10 req'd) Disassembly Note
88	6083	LH valve cover studs (4 req'd) Disassembly Note
89	6050	LH valve cover Disassembly Note
90	6083	LH valve cover gaskets

15. Remove the components in the order indicated in the following illustration and table. Illustration 15 of 23.



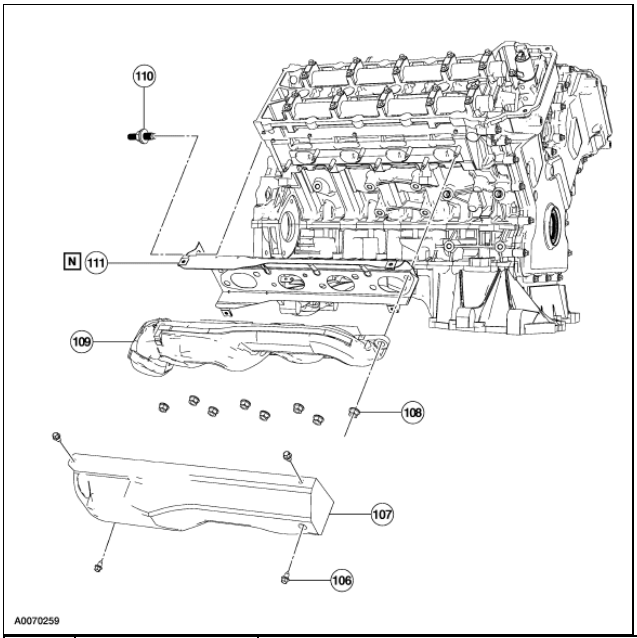
Item	Part Number	Description
91	6050	Coolant bypass housing bolts (4 req'd)
92	6083	Coolant bypass housing
93	6065	Coolant bypass housing O-ring seals (2 req'd)
94	6049	Coolant inlet housing O-ring seal
95	6051	Coolant inlet housing bolts (4 req'd)
96	6065	Coolant inlet housing
97	6050	Coolant inlet housing O-ring seal

16. Remove the components in the order indicated in the following illustration and table. Illustration 16 of 23.



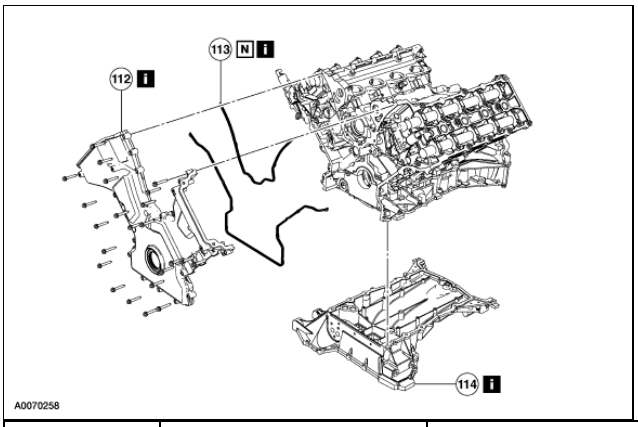
Item	Part Number	Description
98	6065	LH exhaust manifold heat shield bolts (4 req'd)
99	6049	LH exhaust manifold heat shield
100	6051	LH exhaust manifold nuts (8 req'd)
101	6065	LH exhaust manifold
102	6050	Lifting eye nuts (2 req'd)
103	6083	Lifting eye
104	6065	Stud
105	6065	LH exhaust manifold gasket

17. Remove the components in the order indicated in the following illustration and table. Illustration 17 of 23.



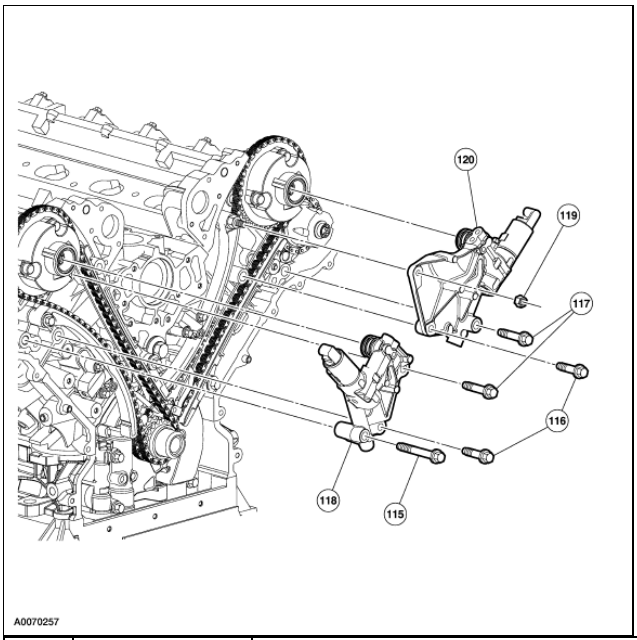
Item	Part Number	Description
106	6065	RH exhaust manifold heat shield bolts (4 req'd)
107	6049	RH exhaust manifold heat shield
108	6051	RH exhaust manifold nuts (8 req'd)
109	6065	RH exhaust manifold
110	6065	Stud
111	6065	RH exhaust manifold gasket

18. Remove the components in the order indicated in the following illustration and table. Illustration 18 of 23.



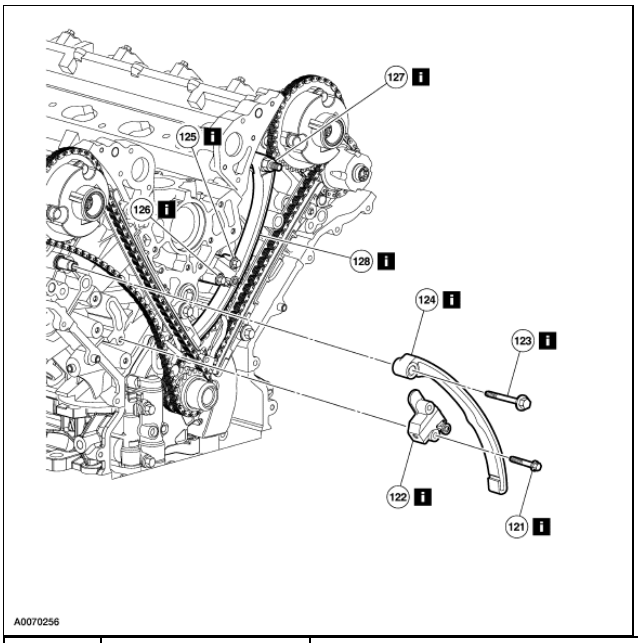
Item	Part Number	Description
112	6059	Engine front cover Disassembly Note
113	6020	Engine front cover gaskets Disassembly Note
114	6675	Sump body assembly Disassembly Note

19. Remove the components in the order indicated in the following illustration and table. Illustration 19 of 23.



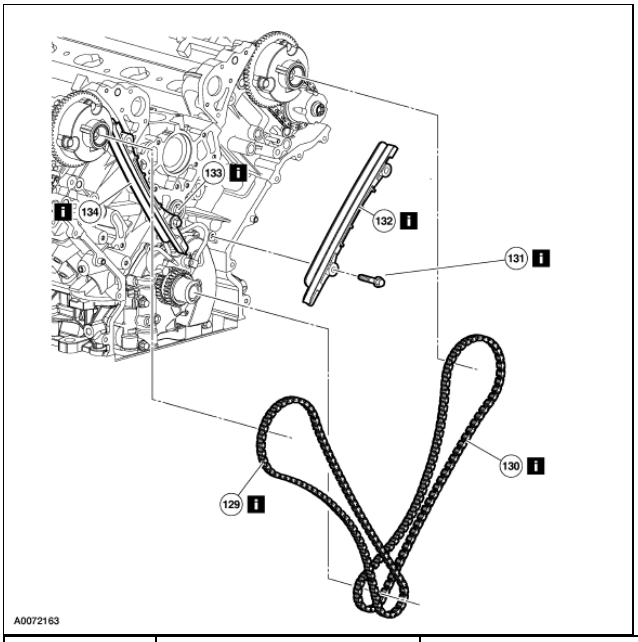
Item	Part Number	Description
115	W500316	RH variable valve timing (VCT) bush carrier bolt
116	W500310	RH VCT bush carrier bolts (2 req'd)
117	W500313	LH VCT bush carrier bolts (2 req'd)
118	6C260	RH VCT bush carrier
119	W520412	LH VCT bush carrier nut
120	6C261	LH VCT bush carrier

20. Remove the components in the order indicated in the following illustration and table. Illustration 20 of 23.



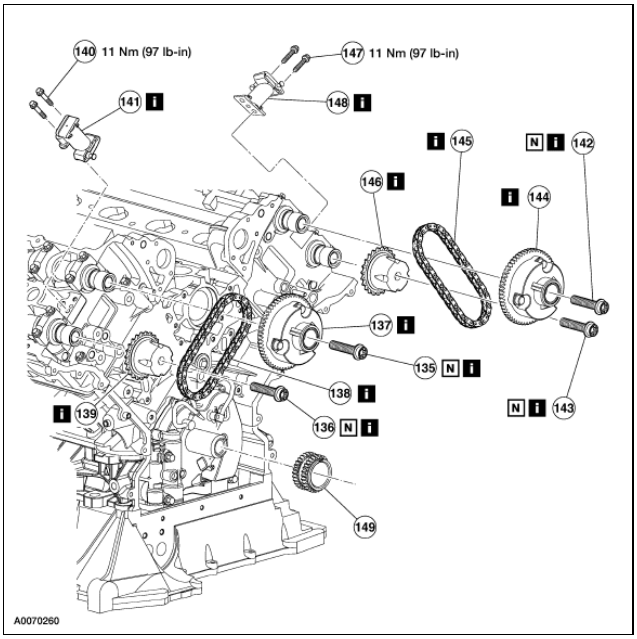
Item	Part Number	Description
121	W500301	RH timing chain tensioner bolts (2 req'd) Disassembly Note
122	6K254	RH timing chain tensioner Disassembly Note
123	W701973	RH timing chain tensioner arm bolt Disassembly Note
124	6L266	RH timing chain tensioner arm Disassembly Note
125	6A005	LH timing chain tensioner bolts (2 req'd) Disassembly Note
126	6K254	LH timing chain tensioner Disassembly Note
127	W500301	LH timing chain tensioner arm bolt Disassembly Note
128	2L266	LH timing chain tensioner arm Disassembly Note

21. Remove the components in the order indicated in the following illustration and table. Illustration 21 of 23.



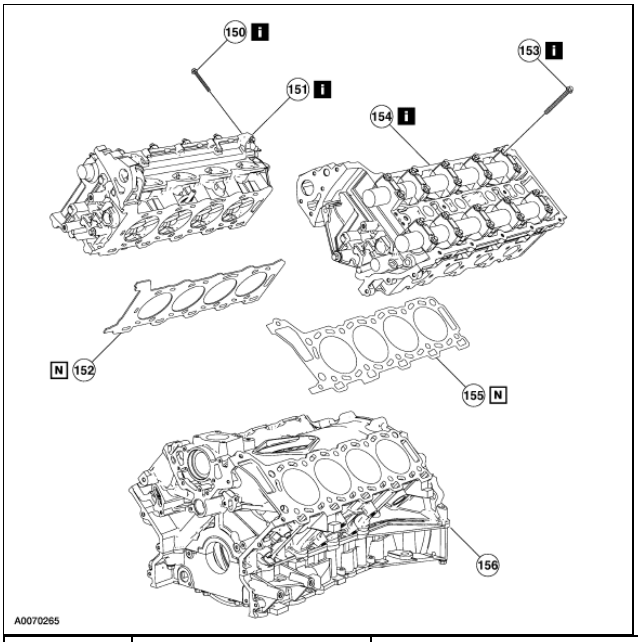
Item	Part Number	Description
129	6A005	RH timing chain Disassembly Note
130	6A005	LH timing chain Disassembly Note
131	6A005	LH timing chain guide bolt Disassembly Note
132	6A005	LH timing chain guide Disassembly Note
133	6A005	RH timing chain guide bolt Disassembly Note
134	6A005	RH timing chain guide Disassembly Note

22. Remove the components in the order indicated in the following illustration and table. Illustration 22 of 23.



Item	Part Number	Description
135	6279	RH VCT unit bolt Disassembly Note
136	6279	RH exhaust camshaft sprocket bolt Disassembly Note
137	6M288	RH VCT unit Disassembly Note
138	6268	RH secondary timing chain Disassembly Note
139	6C258	RH exhaust camshaft sprocket Disassembly Note
140	W500301	RH secondary timing chain tensioner bolts (2 req'd)
141	6C271	RH secondary timing chain tensioner Disassembly Note
142	6279	LH VCT unit bolt Disassembly Note
143	6279	LH exhaust camshaft sprocket bolt Disassembly Note
144	6M288	LH VCT unit Disassembly Note
145	6268	LH secondary timing chain Disassembly Note
146	6C258	LH exhaust camshaft sprocket Disassembly Note
147	W500301	LH secondary timing chain tensioner bolts (2 req'd)
148	6C271	LH secondary timing chain tensioner Disassembly Note
149	6306	Crankshaft sprocket

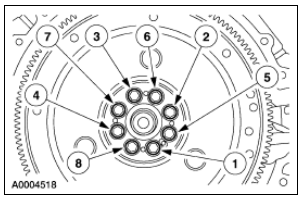
23. Remove the components in the order indicated in the following illustration and table. Illustration 23 of 23.



Item	Part Number	Description
150	6065	RH cylinder head bolts (12 req'd) Disassembly Note
151	6049	RH cylinder head Disassembly Note
152	6051	RH cylinder head gasket
153	6065	LH cylinder head bolts (12 req'd) Disassembly Note
154	6049	LH cylinder head Disassembly Note
155	6051	LH cylinder head gasket
156	6009	Short block assembly

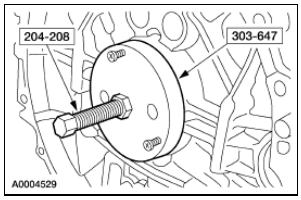
Items 1 and 2: Flexplate Disassembly Note

1. Remove the flexplate.
    - Remove the bolts in the sequence shown.
    - Remove the flexplate.



Item 3: Crankshaft Rear Seal Disassembly Note

1. Using the special tools, remove the rear main seal.
    - Discard the seal.

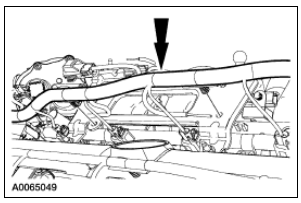


2. Install the engine on a suitable engine stand.

Item 39: Engine Wiring Harness Disassembly Note

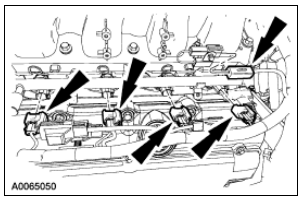
1. **NOTE:** LH is shown, RH is similar.

   Disconnect the engine wiring harness retainers from the engine appearance cover support bracket.

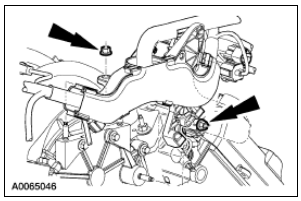


2. **NOTE:** LH is shown, RH is similar.

   Disconnect the fuel injector and radio interference capacitor electrical connectors

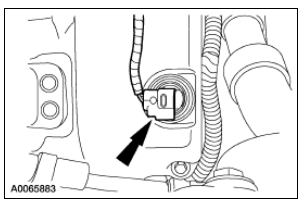


3. Remove the nuts and the engine wiring harness retainer and position aside.

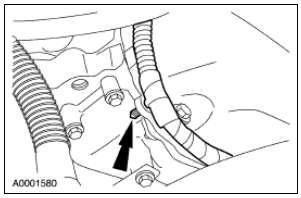


4. **NOTE:** RH is shown, LH is similar.

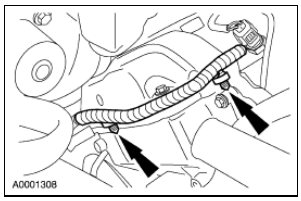
   Disconnect the variable cam timing (VCT) sensor electrical connector.



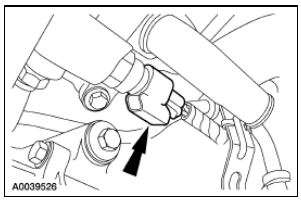
5. Disconnect the wiring harness retainers from the LH valve cover.



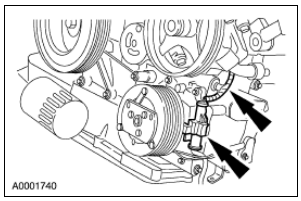
6. Disconnect the three wiring harness retainers from the RH valve cover.



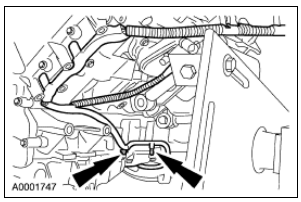
7. Disconnect the power steering pressure (PSP) switch.



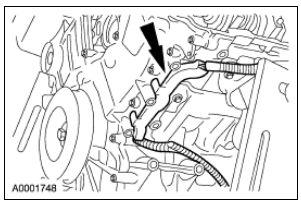
8. Disconnect the A/C electrical connector and the retaining clip.



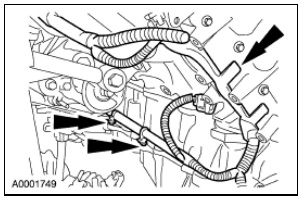
9. Disconnect the two pin-type retainers.



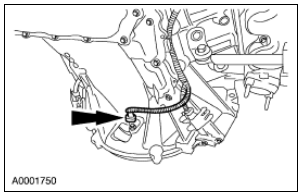
10. Remove the wiring harness from the front cover.



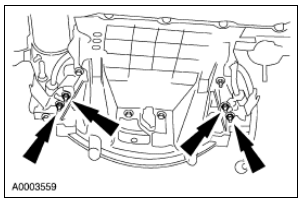
11. Remove the wiring harness from the front cover.



12. Disconnect the crankshaft position (CKP) sensor electrical connector.



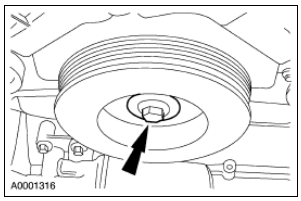
13. Remove the heated oxygen sensor (HO2S) connectors from the brackets.



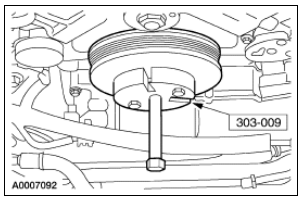
14. Remove the engine wiring harness from the engine.

Items 65-67: Crankshaft Pulley Disassembly Note

1. Remove the bolt and washer.
    - Discard the bolt and washer.

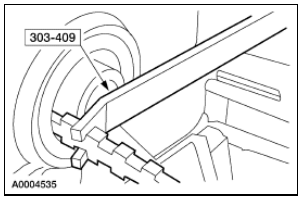


2. Using the special tool, remove the crankshaft damper.



Item 68: Crankshaft Front Seal Disassembly Note

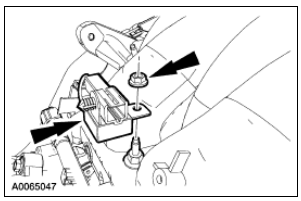
1. Using the special tool, remove the crankshaft front seal.
    - Discard the seal.



Item 74: Fuel Charge Manifold Disassembly Note

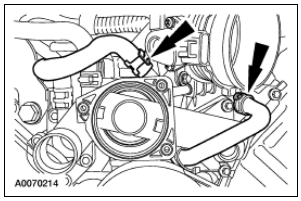
1. **NOTE:** RH is shown, LH is similar.

   Remove the nut and the radio interference capacitor.



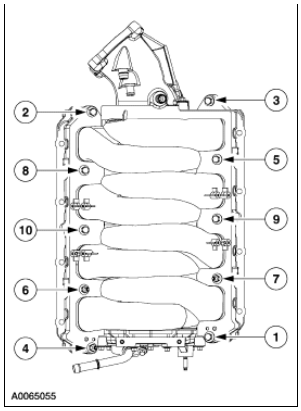
Items 79-81: Intake Manifold Disassembly Note

1. Disconnect and remove the throttle body heater hoses.



2. **NOTE:** The throttle body and adapter are shown removed for clarity. It is not necessary to remove the throttle body and adapter to remove the intake manifold.

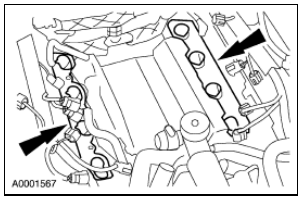
   Remove the bolts and studs in the sequence shown.



3. Remove the intake manifold.

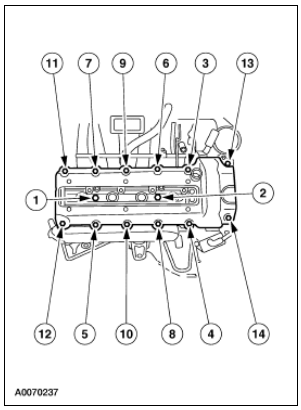
4. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to clean the surfaces.**

   Clean the sealing surfaces.



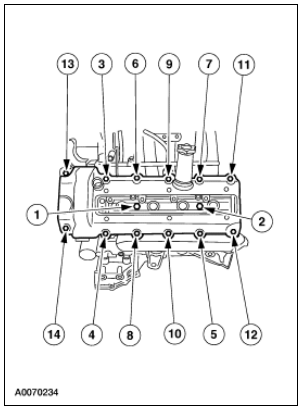
Items 83-85: RH Valve Cover Disassembly Note

1. Remove the bolts in the sequence shown and remove the RH valve cover.



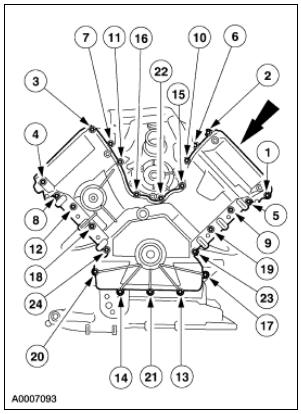
Items 87-89: LH Valve Cover Disassembly Note

1. Remove the bolts in the sequence shown and remove the LH valve cover.



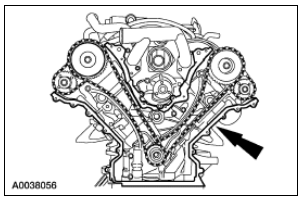
Items 112 and 113: Engine Front Cover Disassembly Note

1. Remove the engine front cover.
    - Remove the bolts in the sequence shown.
    - Remove the engine front cover.



2. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

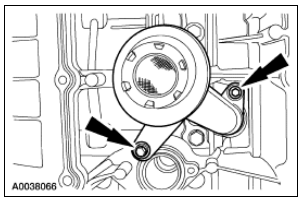
   Clean the sealing surfaces.



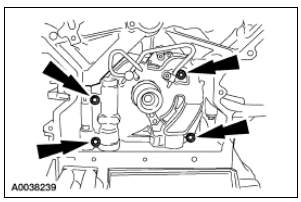
Item 114: Sump Body Assembly Disassembly Note

1. ⚠ **CAUTION: Use only hand tools to remove the oil pump screen and tube.**

   Remove the oil pump screen and tube, and the seal.

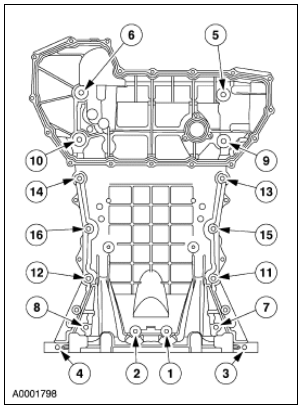


2. Remove the four bolts and the oil pump.
   - Discard the gasket.



3. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of the sealant.**

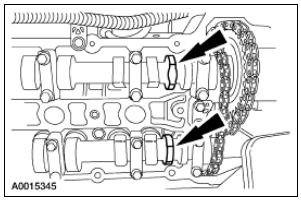
   Remove the bolts in the sequence shown and remove the sump body.



Items 121-139, 141-146, 148: Timing Drive Components Disassembly Note

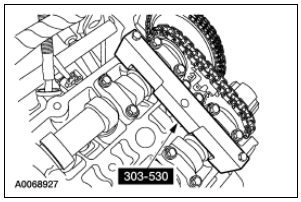
1. Turn the crankshaft to 45 degrees ATDC. The crankshaft keyway will be in the 6 o'clock position.

2. Make sure the flats of the camshaft are facing upward. If not, repeat Step 1.



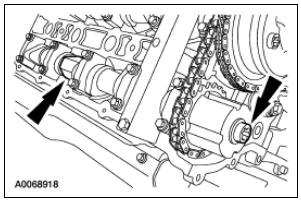
3. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

   Install the special tool on the RH cylinder head.



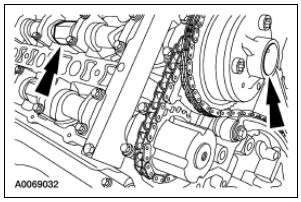
4. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the head will occur.**

   Remove and discard the exhaust camshaft sprocket bolt.

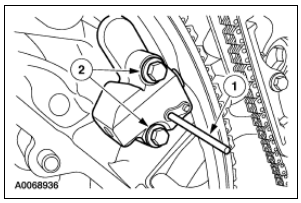


5. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the head will occur.**

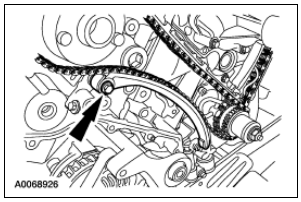
   Remove and discard the variable camshaft timing (VCT) unit bolt.



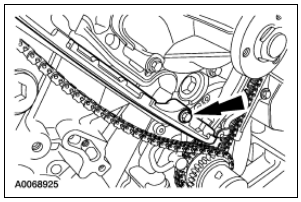
6. Remove the RH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the bolts and the tensioner.



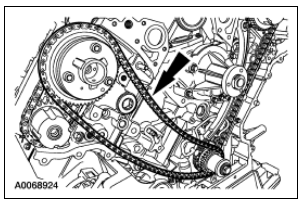
7. Remove the tensioner arm.



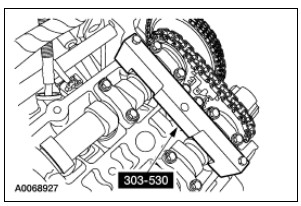
8. Remove the timing chain guide.



9. Remove the RH primary timing chain.

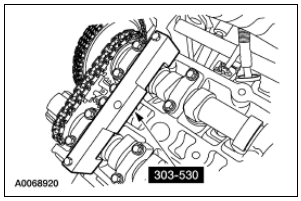


10. Remove the special tool from the RH head.



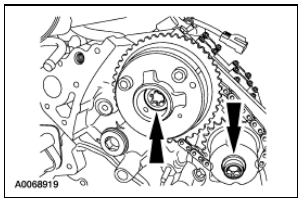
11. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

Install the special tool on the LH head.

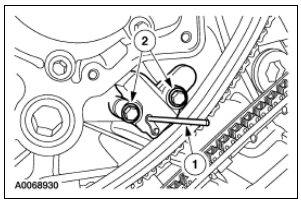


12. ⚠ **CAUTION: An open-end wrench must be used on the hex area of the camshaft or damage to the cylinder head will occur.**

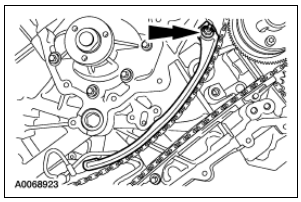
    Remove and discard the LH VCT unit bolt and the exhaust camshaft sprocket bolt.



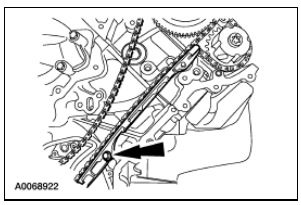
13. Remove the LH timing chain tensioner.
    1. Push the lever down and install a drill rod to lock the piston.
    2. Remove the bolts and the tensioner.



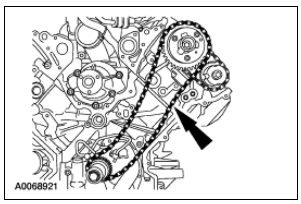
14. Remove the tensioner arm.



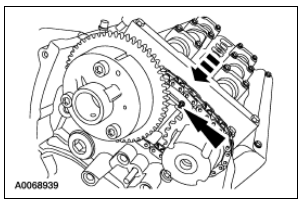
15. Remove the timing chain guide.



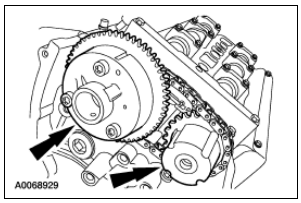
16. Remove the LH primary timing chain.



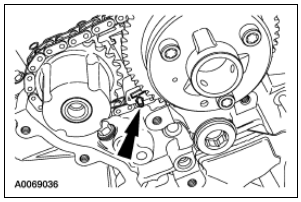
17. Collapse the LH secondary timing chain tensioner and install a pin to lock the piston.



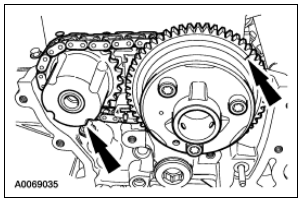
18. Remove the LH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



19. Collapse the RH secondary timing chain tensioner and install a pin to lock the piston.

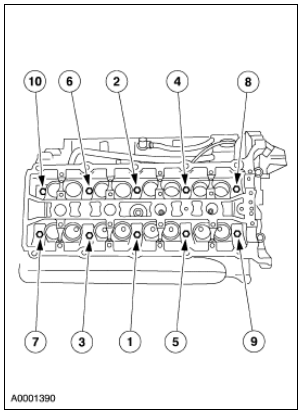


20. Remove the RH VCT unit, exhaust camshaft sprocket and timing chain as an assembly.

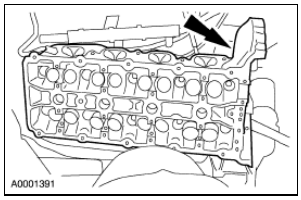


Items 150-151 and 153-154: RH and LH Cylinder Head Disassembly Note

1. Remove the bolts from both cylinder heads in the sequence shown.
    - Discard the bolts.

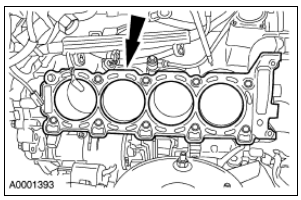


2. Remove the cylinder heads.
    - Discard the gaskets.

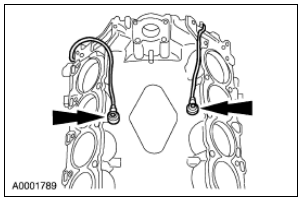


3. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove all traces of sealant.**

   Clean the sealing surfaces.



4. Remove the bolts and the knock sensors.



Cylinder Head

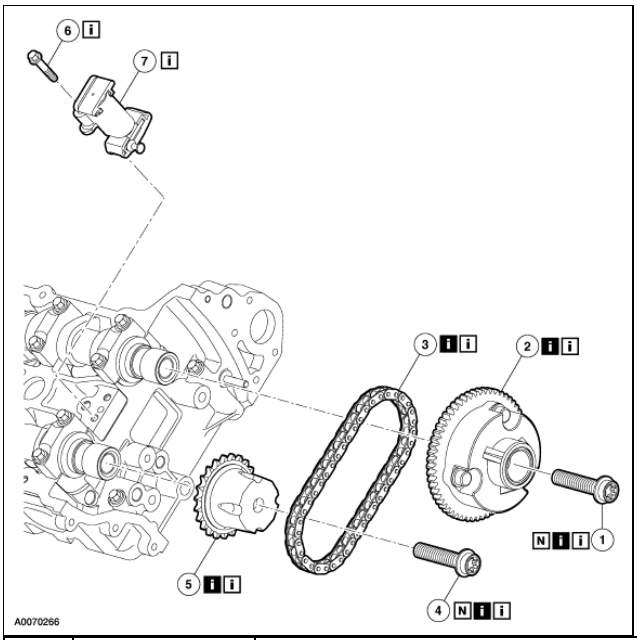
Special Tool(s)

ST2489-A	Compressor, Valve Spring 303-648
 ST2398-B	Aligner, Camshaft 303-530

Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

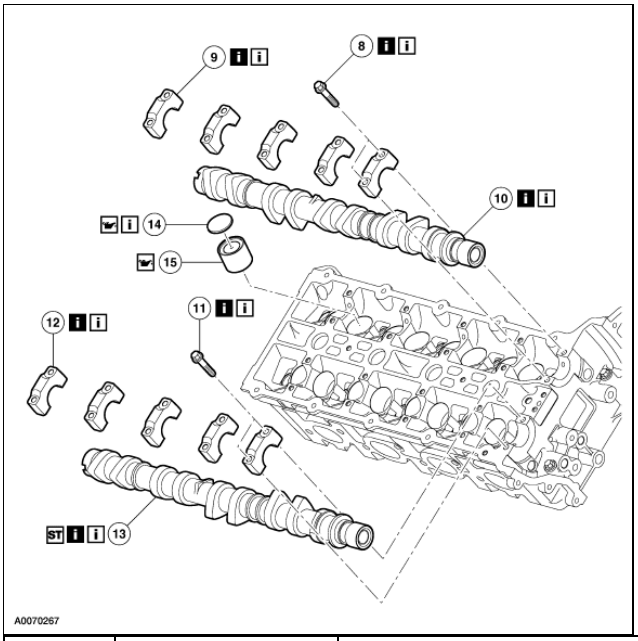
1. Illustration 1 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	6279	Variable camshaft timing (VCT) unit bolt Disassembly Note
1	6279	VCT unit bolt Assembly Note
2	6M288	VCT unit Disassembly Note
2	6M288	VCT unit Assembly Note

3	6268	Secondary timing chain Disassembly Note
3	6268	Secondary timing chain Assembly Note
4	6279	Exhaust camshaft sprocket bolt Disassembly Note
4	6279	Exhaust camshaft sprocket bolt Assembly Note
5	6C258	Exhaust camshaft sprocket Disassembly Note
5	6C258	Exhaust camshaft sprocket Assembly Note
6	W500301	Secondary timing chain tensioner bolts (2 req'd) Assembly Note
7	6C270	Secondary timing chain tensioner Assembly Note

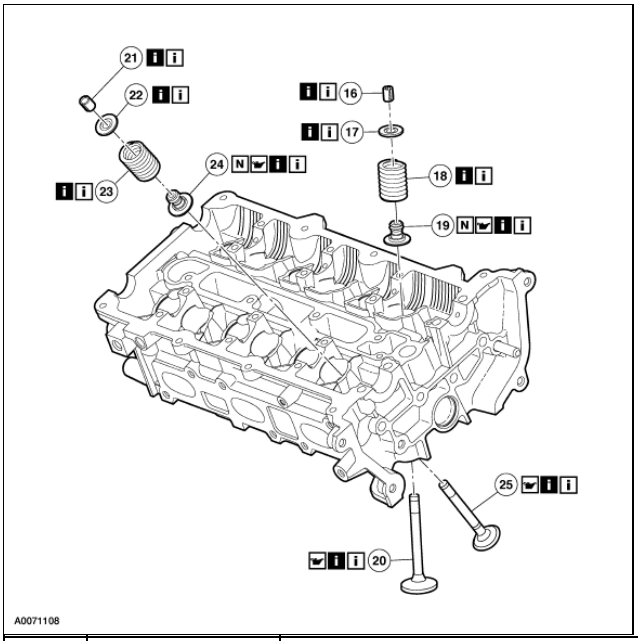
2. Illustration 2 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
8	W701242	Intake camshaft cap bolts (10 req'd) Disassembly Note
8	W701242	Intake camshaft cap bolts (10 req'd) Assembly Note
9	6A258	Intake camshaft caps (5 req'd) Disassembly Note
9	6A258	Intake camshaft caps (5 req'd) Assembly Note
10	6A270	Intake camshaft Disassembly Note
10	6A270	Intake camshaft Assembly Note

11	W701242	Exhaust camshaft cap bolts (10 req'd) Disassembly Note
11	W701242	Exhaust camshaft cap bolts (10 req'd) Assembly Note
12	6A258	Exhaust camshaft caps (5 req'd) Disassembly Note
12	6A258	Exhaust camshaft caps (5 req'd) Assembly Note
13	6A272	Exhaust camshaft Disassembly Note
13	6A272	Exhaust camshaft Assembly Note
14	6K514	Tappet shims (16 req'd) Assembly Note
15	6500	Tappets (16 req'd)

3. Illustration 3 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
16	6518	Intake valve spring retainer keys (16 req'd) Disassembly Note
16	6518	Intake valve spring retainer keys (16 req'd) Assembly Note
17	2762	Intake valve spring retainers (8 req'd) Disassembly Note
17	2762	Intake valve spring retainers (8 req'd) Assembly Note
18	6513	Intake valve springs (8 req'd) Disassembly Note
18	6513	Intake valve springs (8 req'd) Assembly Note
19	6A536	

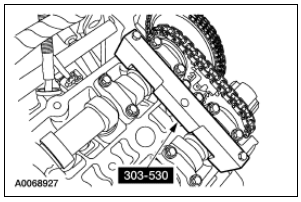
		Intake valve stem seals (8 req'd) Disassembly Note
19	6A536	Intake valve stem seals (8 req'd) Assembly Note
20	6507	Intake valve (8 req'd) Disassembly Note
20	6507	Intake valve (8 req'd) Assembly Note
21	6518	Exhaust valve spring retainer keys (16 req'd) Disassembly Note
21	6518	Exhaust valve spring retainer keys (16 req'd) Assembly Note
22	2762	Exhaust valve spring retainers (8 req'd) Disassembly Note
22	2762	Exhaust valve spring retainers (8 req'd) Assembly Note
23	6513	Exhaust valve springs (8 req'd) Disassembly Note
23	6513	Exhaust valve springs (8 req'd) Assembly Note
24	6A536	Exhaust valve stem seals (8 req'd) Disassembly Note
24	6A536	Exhaust valve stem seals (8 req'd) Assembly Note
25	6505	Exhaust valve (8 req'd) Disassembly Note
25	6505	Exhaust valve (8 req'd) Assembly Note

4. To assemble, reverse the disassembly procedure.

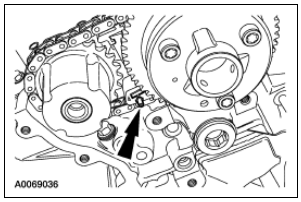
Items 1-5: Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket, and Secondary Timing Chain Disassembly Note

1. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

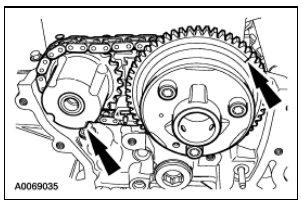
   Install the special tool on the cylinder head.



2. Collapse the secondary timing chain tensioner and install a pin to lock the piston.

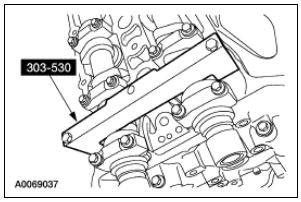


3. Remove the VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



Items 8-13: Camshaft Disassembly Note

1. Remove the special tool.



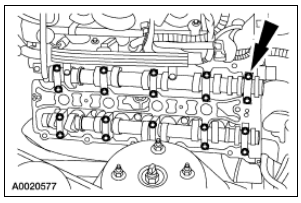
2. **⚠ CAUTION: Record the camshaft bearing cap locations. The camshaft bearing caps are positional and must be installed in their original locations and orientations or engine damage can occur.**

   ⚠ CAUTION: Do not use any means of marking the shims other than a permanent type marker. Any scratches or paint on the shims can result in incorrect lash adjustments and severe engine damage.

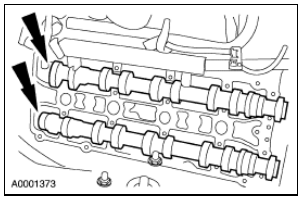
   ⚠ CAUTION: Record the shim and bucket tappet location. The shim and bucket tappet are positional and if installed in the incorrect location, engine damage can occur.

   Remove the camshaft bearing caps.

   - Remove the bolts.
   - Remove the camshaft bearing caps.

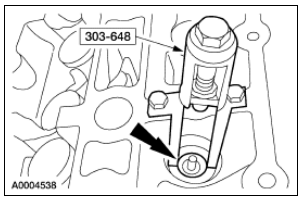


3. Remove the camshafts.

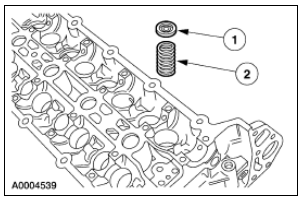


Items 16-25: Retainer Keys, Retainers, Valve Spring, Valve Seals, and Valves Disassembly Note

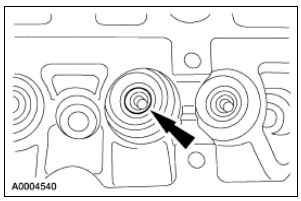
1. Using the special tool, remove the valve spring retainer keys.



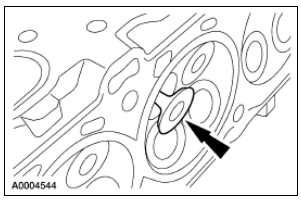
2. Remove the valve spring assembly.
    1. Remove the valve spring retainer.
    2. Remove the valve spring.



3. Remove the valve stem seal.



4. Remove the valve.
    - For component tests for the valve, refer to Section 303-00 .
    - For component tests for the cylinder head, refer to Section 303-00 .

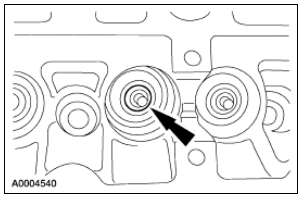


5. Repeat the procedure until all of the valves are removed from the cylinder head.

Items 16-25: Retainer Keys, Retainers, Valve Spring, Valve Seals, and Valves Assembly Note

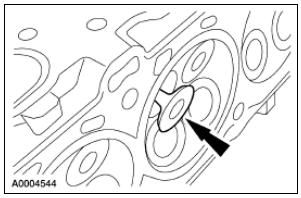
1. **NOTE:** Lubricate the valve stem seal with clean engine oil prior to installation.

   Install the valve stem seal.

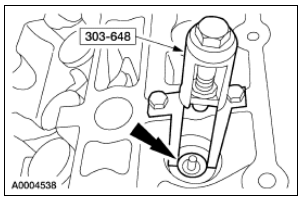


2. **NOTE:** Lubricate the valve stem with clean engine oil prior to installation.

   Install the valve.



3. Using the special tool, install the valve spring, retainer and retainer keys.

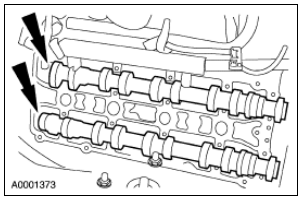


4. Repeat the procedure until all of the valves are installed into the cylinder head.

Items 8-13: Camshaft Assembly Note

1. **NOTE:** Apply clean engine oil to the camshaft journals, the camshaft caps and the camshaft lobes prior to installing the camshafts.

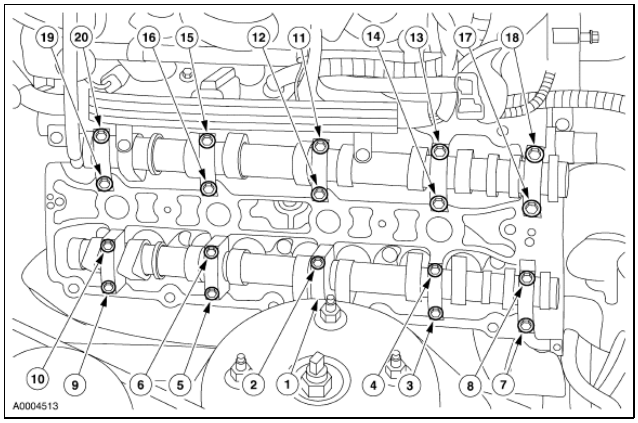
   Install the camshafts.



2. ⚠ **CAUTION: Install the camshaft bearing caps. The camshaft bearing caps are positional and must be installed in their original locations and orientations or engine damage can occur.**

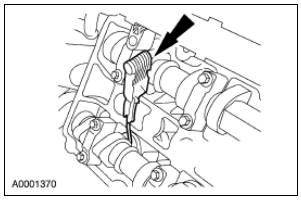
   Install the camshaft bearing caps.

   - Position the bearing caps.
   - Install the bolts. Tighten the bolts in three stages in the sequence shown.
     - ♦ Stage 1: Hand-tighten.
     - ♦ Stage 2: Tighten to 6 Nm (53 lb-in).
     - ♦ Stage 3: Tighten an additional 90 degrees.



3. ⚠ **CAUTION: If any components are installed new, the engine must be reshimmed or engine damage can occur.**

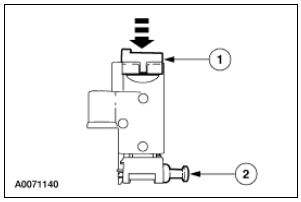
   Using a feeler gauge, confirm that the tappet and shim clearances are within specification. For additional information, refer to Valve Clearance Check in this section.



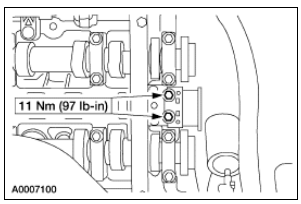
4. Check the tappet and shim clearances. If tappet and shim clearances are not within specification, refer to Valve Clearance Adjustment in this section.

Items 1-7: Variable Camshaft Timing (VCT) Unit, Exhaust Camshaft Sprocket, Secondary Timing Chain and Tensioner Assembly Note

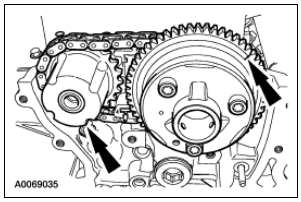
1. Collapse the tensioners.
   1. Apply hand pressure until the tensioner is fully collapsed.
   2. Install a wire in the side to retain the tensioner.



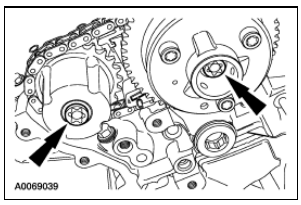
2. Install the timing chain tensioner and bolts.



3. Install the VCT unit, exhaust camshaft sprocket and timing chain as an assembly.



4. Using new bolts, install the VCT unit and exhaust camshaft sprocket bolts finger-tight.



5. Remove the locking pin from the secondary timing chain tensioner.

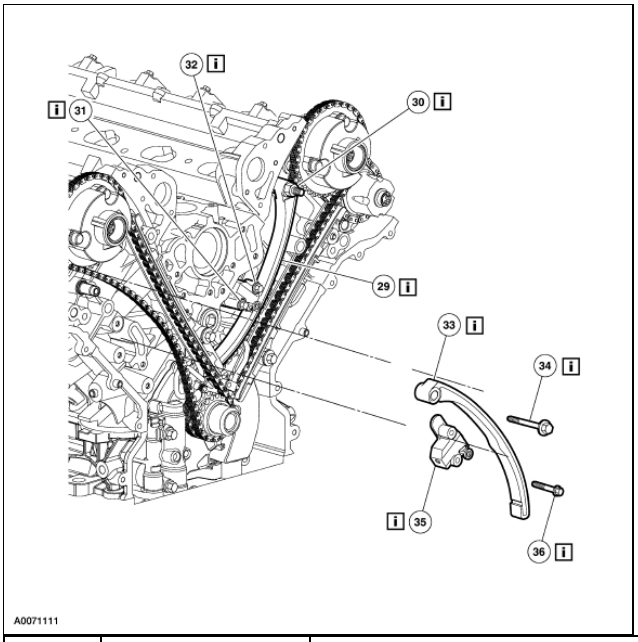
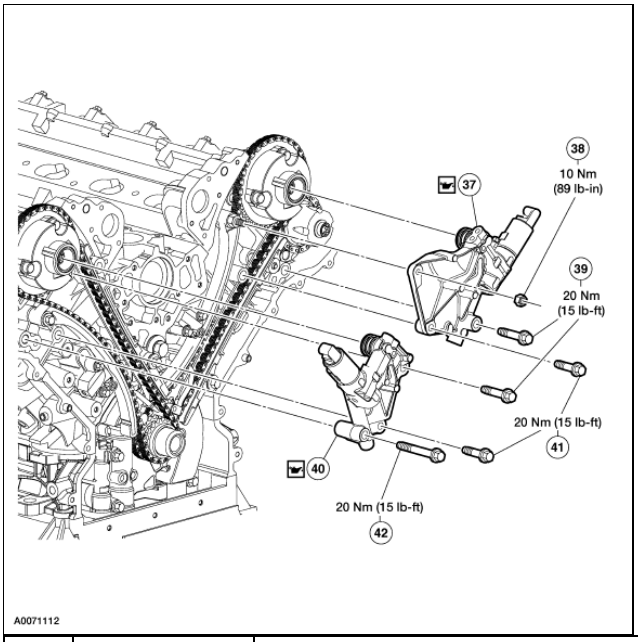
24	W500301	RH timing chain guide bolt Assembly Note
25	6K297	LH timing chain guide Assembly Note
26	W500301	LH timing chain guide bolt Assembly Note
27	6268	LH timing chain Assembly Note
28	6268	RH timing chain Assembly Note

4. Install the components in the order indicated in the following illustration and table. Illustration 4 of 23.



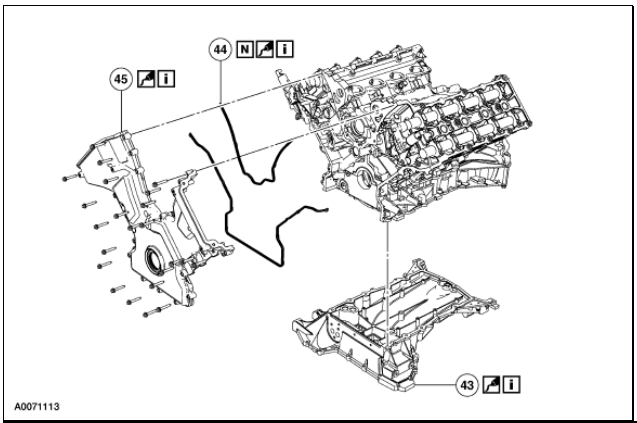
Item	Part Number	Description
29	6L266	LH timing chain tensioner arm Assembly Note
30	W500301	LH timing chain tensioner arm bolt Assembly Note
31	6L266	LH timing chain tensioner Assembly Note
32	W500301	LH timing chain tensioner bolts (2 req'd) Assembly Note
33	6L266	RH timing chain tensioner arm Assembly Note
34	6L266	RH timing chain tensioner arm bolt Assembly Note
35	6L266	RH timing chain tensioner Assembly Note
36	W500301	RH timing chain tensioner bolts (2 req'd) Assembly Note

5. Install the components in the order indicated in the following illustration and table. Illustration 5 of 23.



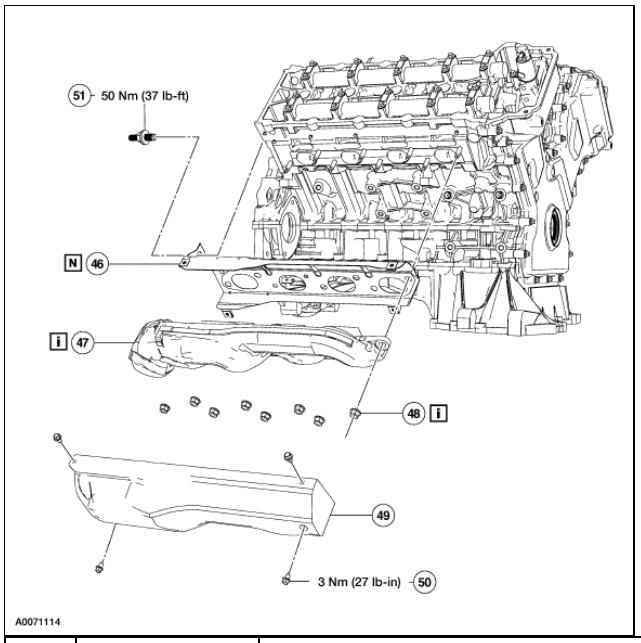
Item	Part Number	Description
37	6C261	LH variable camshaft timing (VCT) bush carrier Assembly Note
38	W520412	LH VCT bush carrier nut
39	W500313	VCT bush carrier bolts (2 req'd)
40	6C260	RH VCT bush carrier Assembly Note
41	W500310	VCT bush carrier bolts (2 req'd)
42	W500316	RH VCT bush carrier bolt

6. Install the components in the order indicated in the following illustration and table. Illustration 6 of 23.



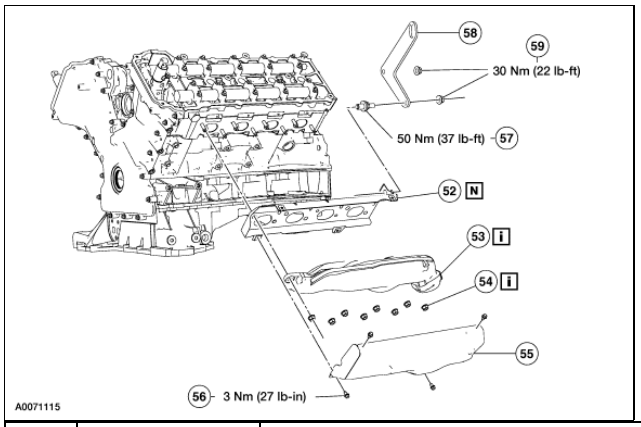
Item	Part Number	Description
43	6675	Sump body assembly Assembly Note
44	6020	Engine front cover gaskets (2 req'd) Assembly Note
45	5059	Engine front cover Assembly Note

7. Install the components in the order indicated in the following illustration and table. Illustration 7 of 23.



Item	Part Number	Description
46	9448	RH exhaust manifold gasket
47	9448	RH exhaust manifold Assembly Note
48	W701706	RH exhaust manifold nuts (8 req'd) Assembly Note
49	9A642	RH exhaust manifold heat shield
50	W504581	RH exhaust manifold heat shield bolts (4 req'd)
51	W708246	Stud

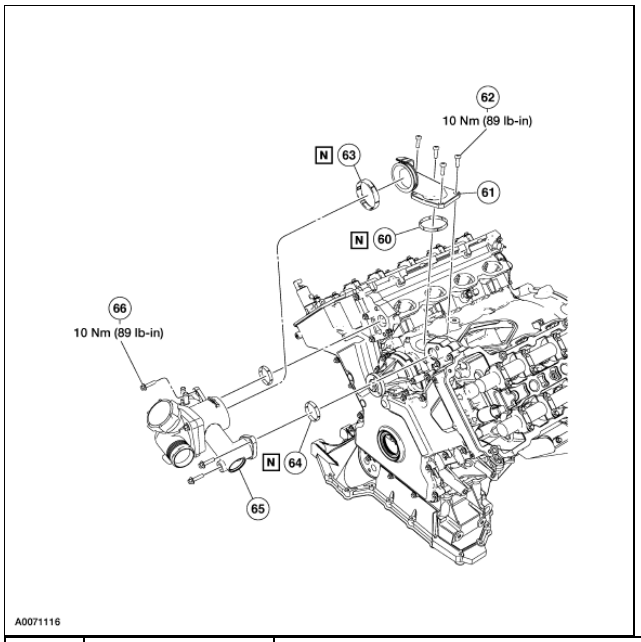
8. Install the components in the order indicated in the following illustration and table. Illustration 8 of 23.



Item	Part Number	Description
52	9A457	LH exhaust manifold gasket
53	9431	LH exhaust manifold Assembly Note
54	W701706	LH exhaust manifold nuts (8 req'd) Assembly Note

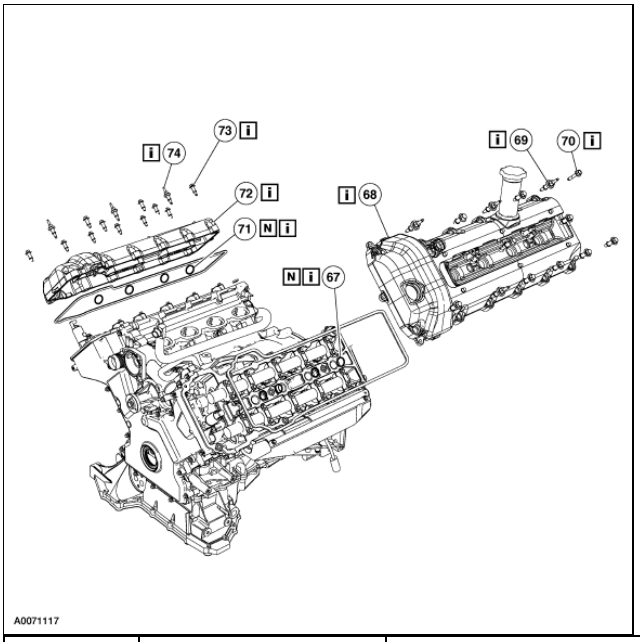
55	9Y427	LH exhaust manifold heat shield
56	W504081	LH exhaust manifold heat shield bolts (4 req'd)
57	6065	Stud
58	6083	Lifting eye
59	6050	Lifting eye nuts (2 req'd)

9. Install the components in the order indicated in the following illustration and table. Illustration 9 of 23.



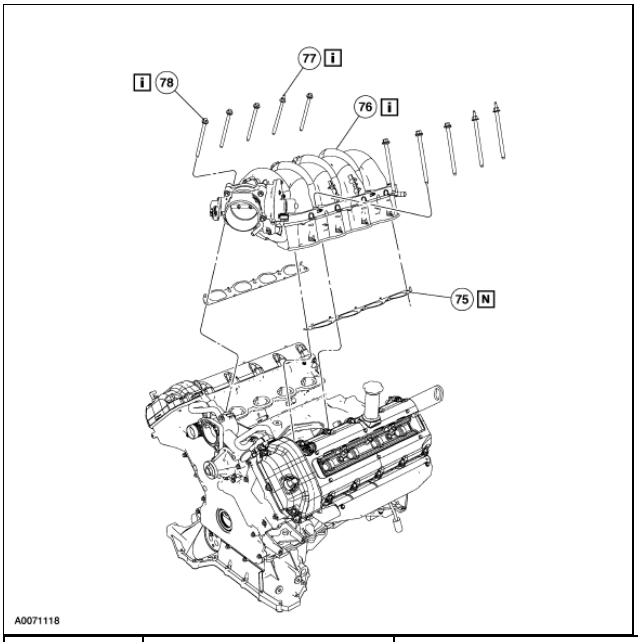
Item	Part Number	Description
60	6050	Coolant inlet housing O-ring seal
61	6065	Coolant inlet housing
62	6051	Coolant inlet housing bolts (4 req'd)
63	6049	Coolant inlet housing O-ring seal
64	6065	Coolant bypass housing O-ring seals (2 req'd)
65	6083	Coolant bypass housing
66	6050	Coolant bypass housing bolts

10. Install the components in the order indicated in the following illustration and table. Illustration 10 of 23.



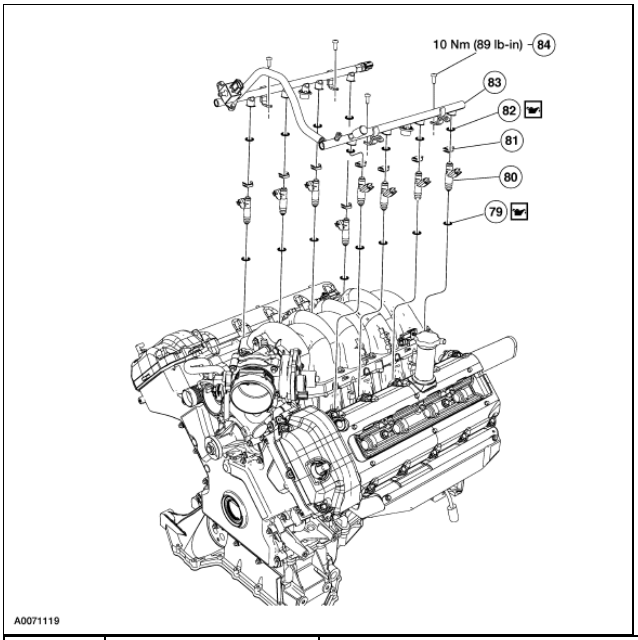
Item	Part Number	Description
67	6083	LH valve cover gasket Assembly Note
68	6050	LH valve cover Assembly Note
69	6083	LH valve cover studs (4 req'd) Assembly Note
70	6050	LH valve cover bolts (10 req'd) Assembly Note
71	6065	RH valve cover gasket Assembly Note
72	6051	RH valve cover Assembly Note
73	6065	RH valve cover bolts (11 req'd) Assembly Note
74	6049	RH valve cover studs (3 req'd) Assembly Note

11. Install the components in the order indicated in the following illustration and table. Illustration 11 of 23.



Item	Part Number	Description
75	9P851	Intake manifold gaskets
76	9424	Intake manifold Assembly Note
77	W708238	Intake manifold studs (3 req'd) Assembly Note
78	W704916	Intake manifold bolts (7 req'd) Assembly Note

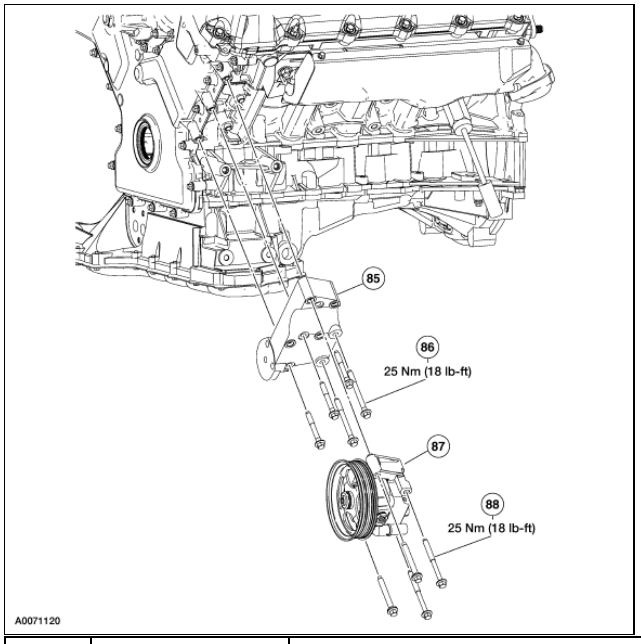
12. Install the components in the order indicated in the following illustration and table. Illustration 12 of 23.



Item	Part Number	Description
79		Fuel injector O-ring seals (8 req'd)
80	9F593	Fuel injectors (8 req'd)
81		Fuel injector O-ring seals (8 req'd)

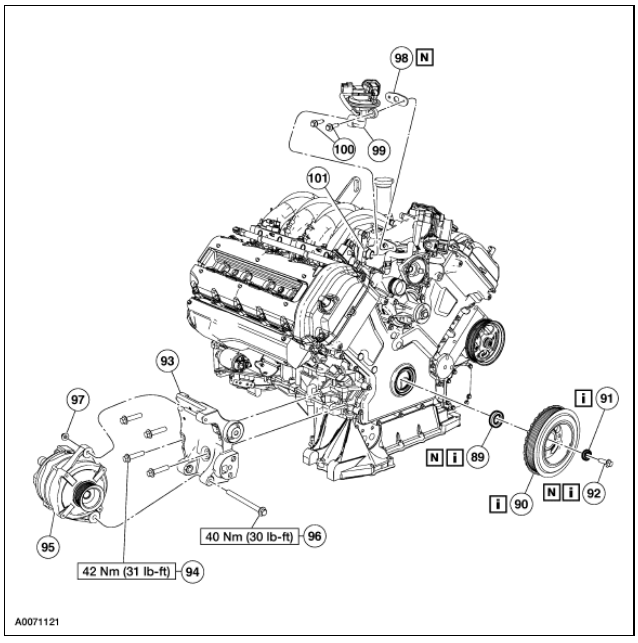
82		Fuel injector anti-rotation clips (8 req'd)
83	9F752	Fuel charge manifold
84	N811425	Fuel charge manifold bolts (4 req'd)

13. Install the components in the order indicated in the following illustration and table. Illustration 13 of 23.



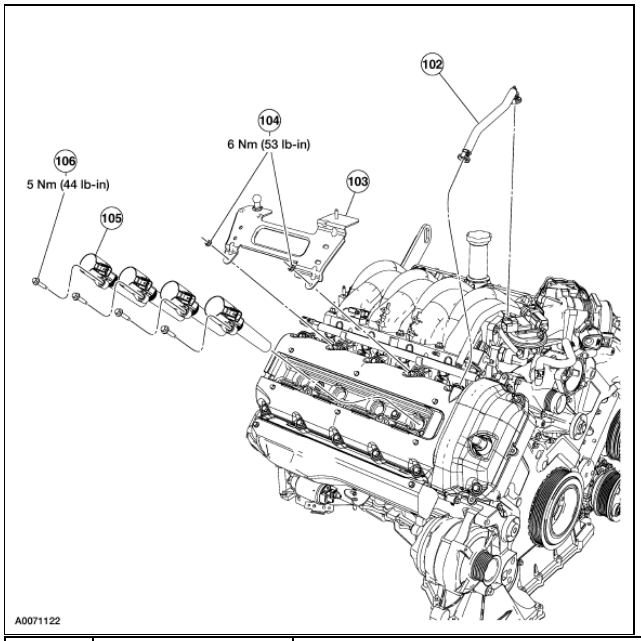
Item	Part Number	Description
85	9Y427	Power steering pump bracket
86	W500211	Power steering pump bracket bolts (5 req'd)
87	120301	Power steering pump
88	N808199	Power steering pump bolts (4 req'd)

14. Install the components in the order indicated in the following illustration and table. Illustration 14 of 23.



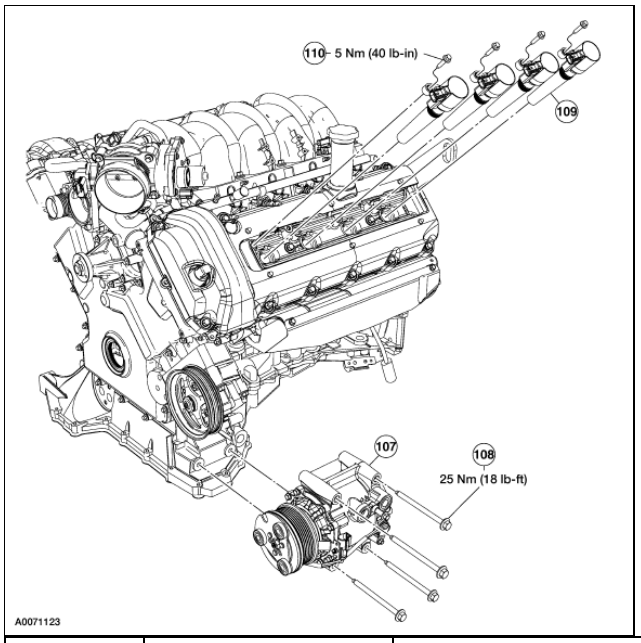
Item	Part Number	Description
89	9424	Front crankshaft seal Assembly Note
90	N806154	Crankshaft pulley Assembly Note
91	W704683	Crankshaft pulley washer Assembly Note
92	W704683	Crankshaft pulley bolt Assembly Note
93	9D477	Generator bracket
94	18801	Generator bracket bolts (4 req'd)
95	W520412	Generator
96	9G609	Generator bolt
97	W520412	Generator nut
98	18465	EGR system module gasket
99	W527351	EGR system module
100	W527351	Exhaust gas recirculation (EGR) system module bolts (2 req'd)
101	W527351	Exhaust gas recirculation (EGR) system module to exhaust manifold tube

15. Install the components in the order indicated in the following illustration and table. Illustration 15 of 23.



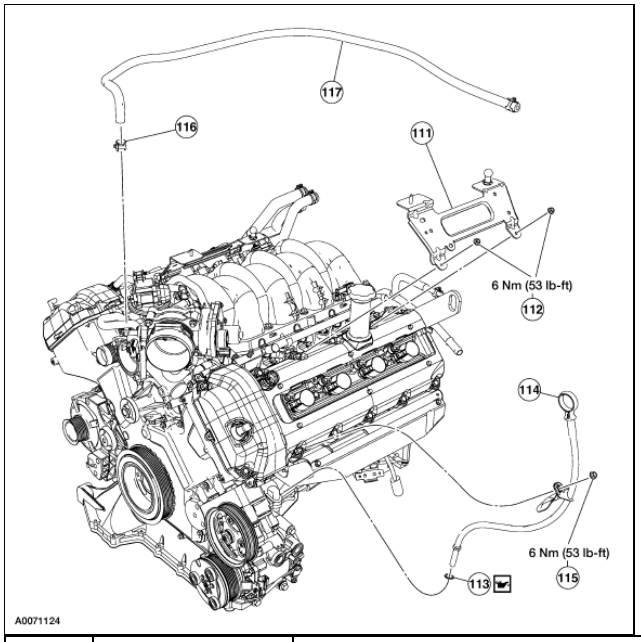
Item	Part Number	Description
102	6881	Breather hose
103	6881	Engine cover support bracket
104		Engine cover support bracket nuts (2 req'd)
105	8A586	RH ignition coils (4 req'd)
106		RH ignition coil bolts (4 req'd)

16. Install the components in the order indicated in the following illustration and table. Illustration 16 of 23.



Item	Part Number	Description
107	W707288	A/C compressor
108	6714	A/C compressor bolts (4 req'd)
109	3A696	LH ignition coils (4 req'd)
110	N806176	LH ignition coil bolts (4 req'd)

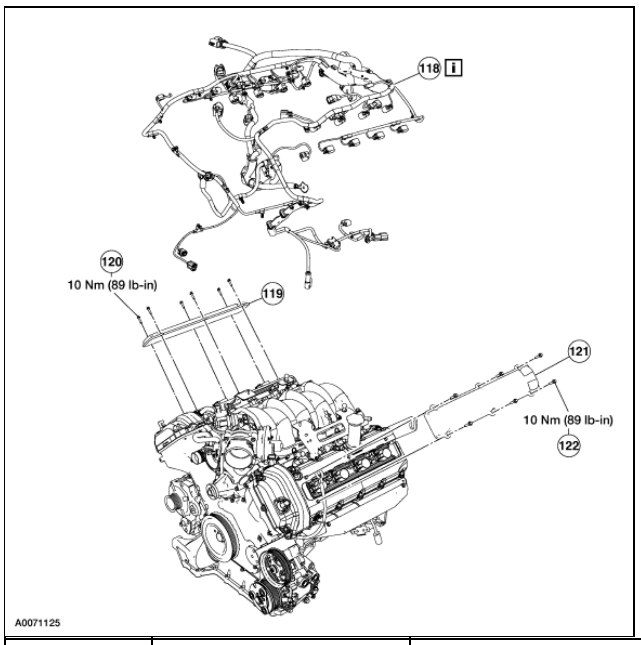
17. Install the components in the order indicated in the following illustration and table. Illustration 17 of 23.



Item	Part Number	Description
111	6046	Engine cover support bracket
112	W705751	Engine cover support bracket nuts (2 req'd)
113	6B033	Oil level indicator tube O-ring seal

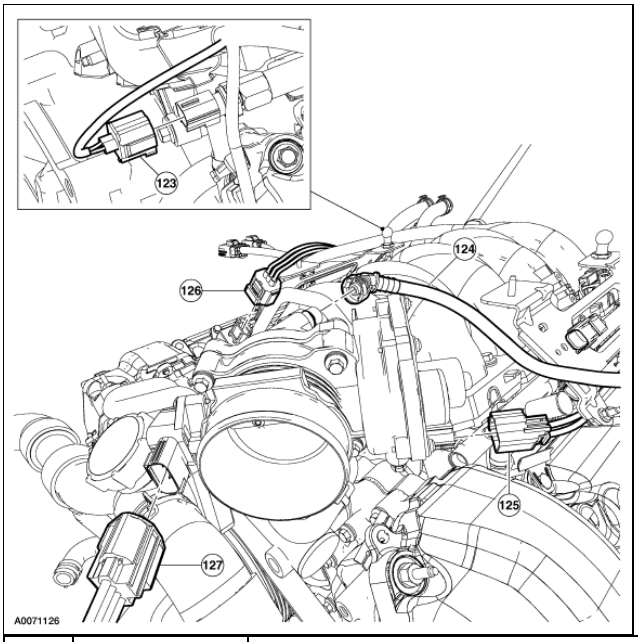
114	6B033	Oil level indicator tube
115	W705751	Oil level indicator tube bolt
116	N808198	Vacuum hose clamp
117	N808198	Vacuum hose

18. Install the components in the order indicated in the following illustration and table. Illustration 18 of 23.



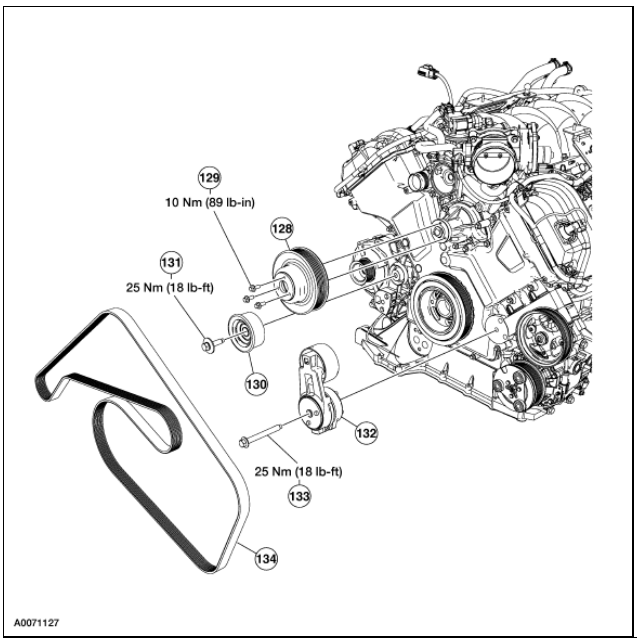
Item	Part Number	Description
118	N807131	Engine wiring harness Assembly Note
119	N807309	RH coil cover
120	14A280	RH coil cover bolts (6 req'd)
121	14A280	LH coil cover
122	8620	LH coil cover bolts (6 req'd)

19. Install the components in the order indicated in the following illustration and table. Illustration 19 of 23.



Item	Part Number	Description
123	12B637	Fuel temperature sensor electrical connector
124	6D289	Vapor management valve (VMV) purge hose
125	12B637	Electronic throttle control (ETC) electrical connector
126	12B637	Fuel pressure sensor electrical connector
127	12B637	Throttle position sensor (TPS) electrical connector

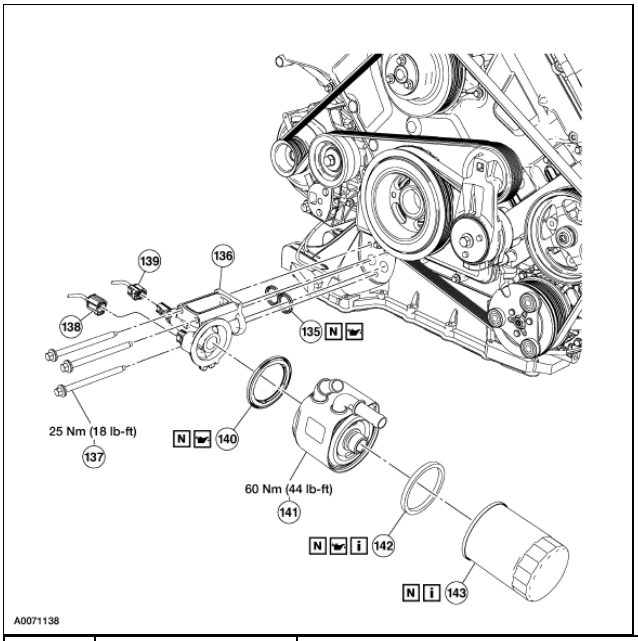
20. Install the components in the order indicated in the following illustration and table. Illustration 20 of 23.



Item	Part Number	Description
128	8509	Coolant pump pulley
129	W705629	Coolant pump pulley bolts (3 req'd)

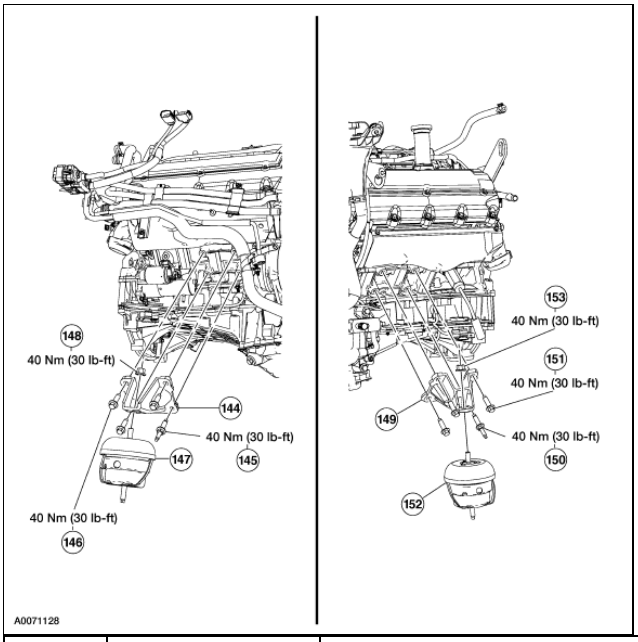
130	10C399	Accessory drive belt idler pulley
131	W500321	Accessory drive belt idler pulley bolt
132	6B209	Accessory drive belt tensioner
133	W500329	Accessory drive belt tensioner bolt
134	8620	Accessory drive belt

21. Install the components in the order indicated in the following illustration and table. Illustration 21 of 23.



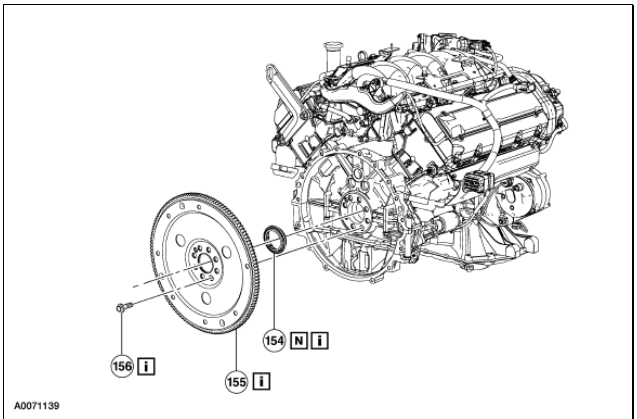
Item	Part Number	Description
135	6A666	Oil filter adapter O-ring seals (2 req'd)
136	14A464	Oil filter adapter
137	8A586	Oil filter adapter bolts (3 req'd)
138	303-D087	Oil temperature sensor electrical connector
139	14A464	Oil pressure sensor electrical connector
140	8A586	Oil cooler O-ring seal
141	6A666	Oil cooler
142	14A464	Oil filter O-ring seal Assembly Note
143	8A586	Oil filter Assembly Note

22. Install the components in the order indicated in the following illustration and table. Illustration 22 of 23.



Item	Part Number	Description
144	6037	RH motor mount bracket
145	W705399	RH motor mount bracket stud
146	W500234	RH motor mount bracket bolts (3 req'd)
147	6754-B	RH motor mount
148	6A005	RH motor mount upper nut
149	6061	LH motor mount bracket
150	W705399	LH motor mount bracket stud
151	W500234	LH motor mount bracket bolts (3 req'd)
152	6754-B	LH motor mount
153	6A005	LH motor mount upper nut

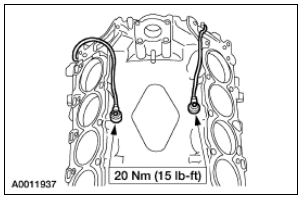
23. Install the components in the order indicated in the following table. Illustration 23 of 23.



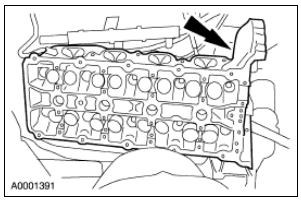
Item	Part Number	Description
154	6701	Crankshaft rear seal Assembly Note
155	6375	Flexplate Assembly Note
156	N806168	Flexplate bolts (6 req'd) Assembly Note

Items 2-7: Cylinder Head Assembly Note

1. Install the knock sensors.



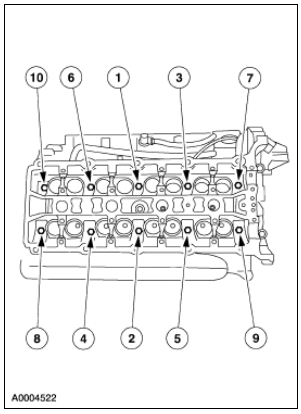
2. Position the cylinder heads.
    - Install new gaskets.



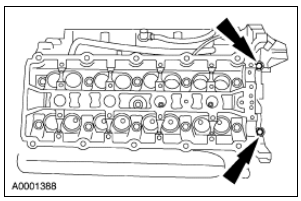
3. **NOTE:** The cylinder head bolts are a torque-to-yield design and must not be reused. Always use new bolts.

   Install and tighten the RH head bolts in six stages in the sequence shown.

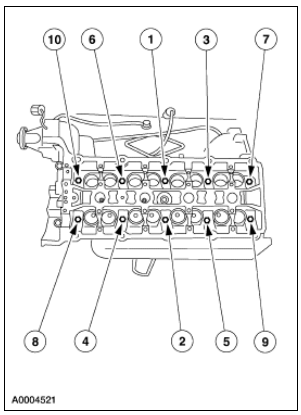
    - Stage 1: Tighten bolts 1 through 10 to 20 Nm (15 lb-ft).
    - Stage 2: Tighten bolts 1 through 10 to 35 Nm (26 lb-ft).
    - Stage 3: Tighten bolts 1 through 10 to 45 Nm (33 lb-ft) and an additional 90 degrees.
    - Stage 4: Tighten bolts 1 through 10 an additional 90 degrees.
    - Stage 5: Tighten bolts 11 and 12 to 20 Nm (15 lb-ft).
    - Stage 6: Tighten bolts 11 and 12 an additional 90 degrees.



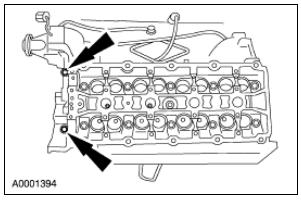
4. Install and tighten the bolts in two stages.
    1. Tighten to 20 Nm (15 lb-ft).
    2. Tighten an additional 90 degrees.



5. Install and tighten the LH head bolts in six stages in the sequence shown.
    - Stage 1: Tighten bolts 1 through 10 to 20 Nm (15 lb-ft).
    - Stage 2: Tighten bolts 1 through 10 to 35 Nm (26 lb-ft).
    - Stage 3: Tighten bolts 1 through 10 to 45 Nm (33 lb-ft) and an additional 90 degrees.
    - Stage 4: Tighten bolts 1 through 10 an additional 90 degrees.
    - Stage 5: Tighten bolts 11 and 12 to 20 Nm (15 lb-ft).
    - Stage 6: Tighten bolts 11 and 12 an additional 90 degrees.



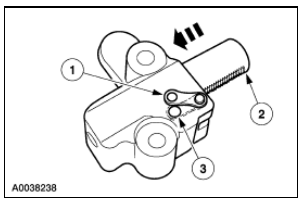
6. Install and tighten the bolts in two stages.
    1. Tighten to 20 Nm (15 lb-ft).
    2. Tighten an additional 90 degrees.



Items 9-36: Timing Drive Components Assembly Note

1. Install the crankshaft sprocket and turn the crankshaft to 45 degrees ATDC. The crankshaft keyway will be in the 6 o'clock position.

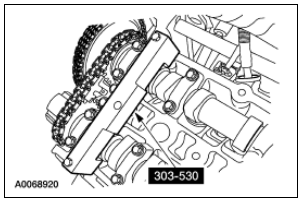
2. Reset the timing chain tensioners.
    1. Hold the lever toward the tensioner piston.
    2. Using finger pressure, compress the tensioner.
    3. Push the lever down and install a drill rod to lock the piston.



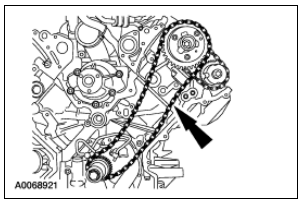
3. ⚠ **CAUTION: The camshaft holding tool should still be installed on the LH cylinder head.**

   ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

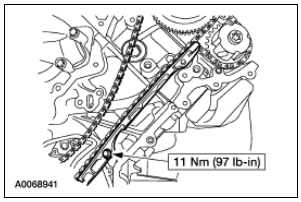
   Install the special tool on the LH head.



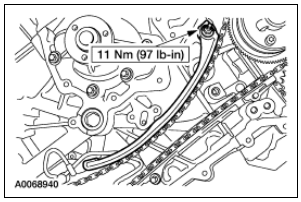
4. Position the LH timing chain and crankshaft gear.
    - Position the timing chain over the LH intake camshaft sprocket.
    - Position the crankshaft gear in the timing chain.



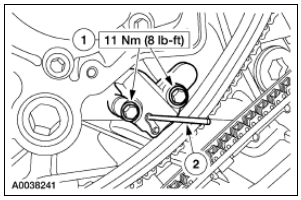
5. Install the LH timing chain guide.



6. Install the LH timing chain tensioner arm.



7. Install the LH timing chain tensioner.
    1. Install the timing chain tensioner and bolts.
    2. Remove the drill rod.



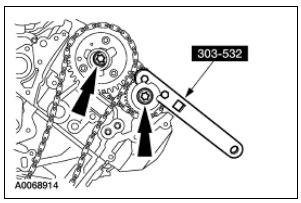
8. **⚠ CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

   ⚠ CAUTION: Using the special tool, apply 10Nm(89 lb-in) counterclockwise to the LH exhaust camshaft sprocket.

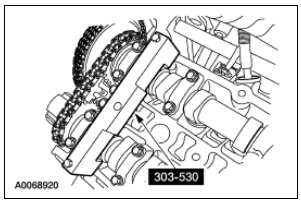
   Tighten the LH exhaust camshaft sprocket and variable camshaft timing (VCT) unit bolts in two stages:

    - Stage 1: Tighten to 35 Nm (26 lb-ft).

- Stage 2: Tighten an additional 90 degrees.

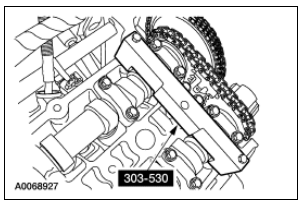


9. Remove the special tool.

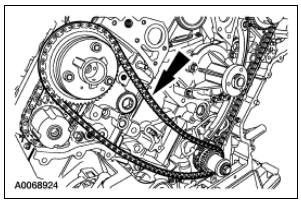


10. ⚠ **CAUTION: The flats on the camshaft must completely contact the special service tool or damage to the camshafts can occur. Slowly draw the special tool down evenly until it is fully seated on the camshaft flats.**

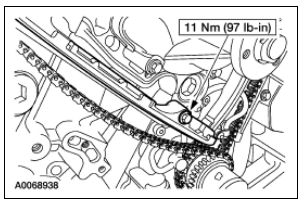
    Install the special tool on the right cylinder head.



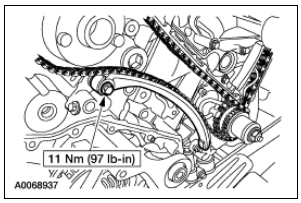
11. Position the RH timing chain over the RH intake camshaft sprocket and over the crankshaft gear.



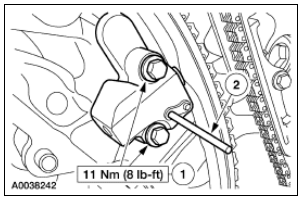
12. Install the RH timing chain guide.



13. Install the RH timing chain tensioner arm.



14. Install the RH timing chain tensioner.
    1. Install the timing chain tensioner and bolts.
    2. Remove the drill rod.

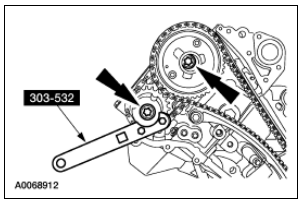


15. **⚠ CAUTION: The exhaust camshaft sprocket bolt must be fully tightened before tightening the intake camshaft sprocket bolt.**

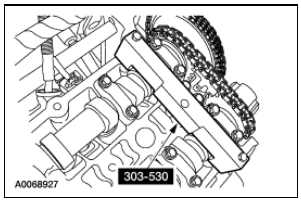
    ⚠ CAUTION: Using the special tool, apply 10 Nm (89 lb-in) counterclockwise to the RH exhaust camshaft sprocket.

    Tighten the RH exhaust camshaft sprocket and VCT unit bolts in two stages:

    - Stage 1: Tighten to 35 Nm (26 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.



16. Remove the special tool.



Items 37 and 40: Variable Cam Timing (VCT) Bush Carrier Assembly Note

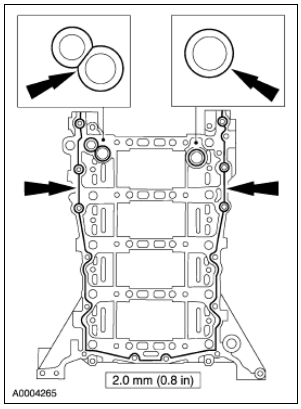
1. Carefully insert the bush into the VCT unit, compress ring seals with fingers as required. Locate the bush carrier and fully seat by hand before fitting bolts.

Item 43: Sump Body Assembly Note

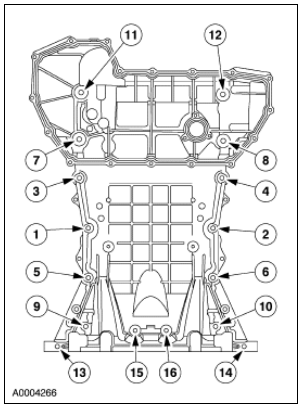
1. **⚠ CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool to remove all traces of old sealant.**

   NOTE: If the sump is not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

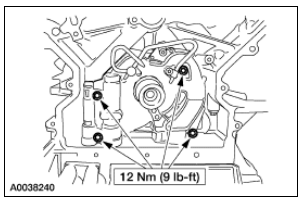
   Apply three continuous beads of silicone gasket and sealant to the areas shown.



2. Install the oil sump. Using a straightedge, align the sump to the lower cylinder block. Tighten the bolts in sequence in two stages.
    - Tighten the bolts to 15 Nm (11 lb-ft).
    - Tighten the bolts to 25 Nm (18 lb-ft).

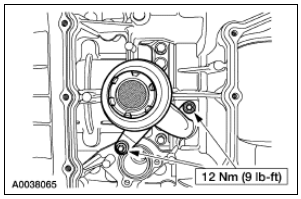


3. Install a new gasket, the oil pump and the bolts.



4. **NOTE:** Inspect the O-ring. Install a new O-ring if necessary. Lubricate the O-ring with clean engine oil.

   Install the oil pump screen cover and tube.

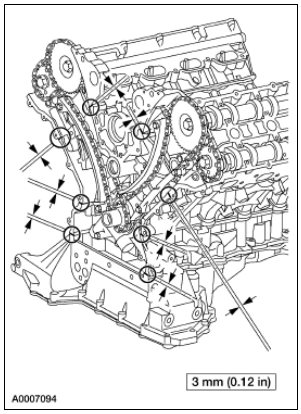


Items 44 and 45: Engine Front Cover Assembly Note

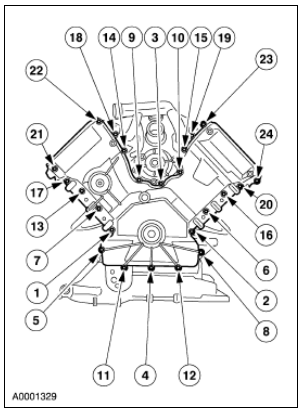
1. **NOTE:** If the front cover is not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil

leakage.

Apply silicone gasket and sealant in eight places.



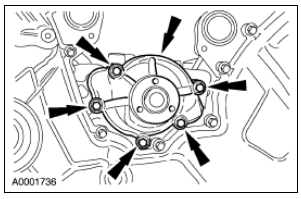
2. Install the engine front cover.
   - Install new gaskets.
   - Position the engine front cover on the cylinder block.
   - Loosely install the bolts.
   - Tighten the bolts in two stages in the sequence shown.
     - Stage 1: Tighten to 5 Nm (44 lb-in).
     - Stage 2: Tighten to 10 Nm (89 lb-in).



3. **NOTE:** Lubricate the coolant pump O-ring seal with engine coolant. Use the same coolant that was drained from the engine.

   Install the coolant pump.

   - Inspect the O-ring seal and install a new O-ring seal as necessary.
   - Position a new coolant pump gasket.
   - Position the coolant pump.
   - Install the bolts and tighten in two stages.
     - Stage 1: Tighten to 8 Nm (71 lb-in).
     - Stage 2: Tighten an additional 90 degrees.

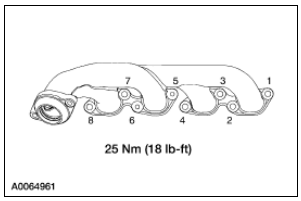


Items 47-48 and 53-54: Exhaust Manifold Assembly Note

1. **NOTE:** RH is shown, LH is similar.

   Install the exhaust manifold.

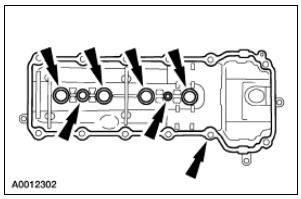
   - Install a new gasket and the exhaust manifold.
   - Tighten the eight nuts in the sequence shown.



Items 67-74: RH and LH Valve Cover Assembly Note

1. **NOTE:** RH is shown, LH is similar.

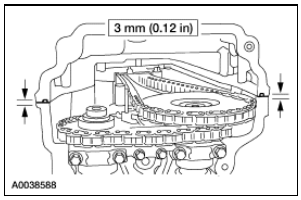
   Inspect and install new gaskets as necessary.



2. **NOTE:** RH is shown, LH is similar.

   NOTE: If the valve covers are not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

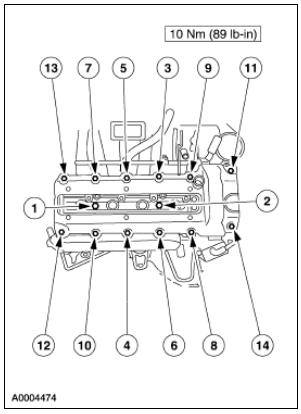
   Apply four beads of silicone gasket and sealant as shown.



3. **NOTE:** RH is shown, LH is similar.

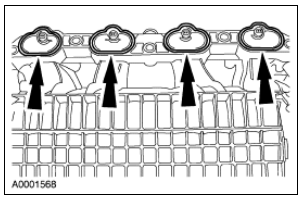
   Install the valve covers.

   - Tighten the bolts in the sequence shown.



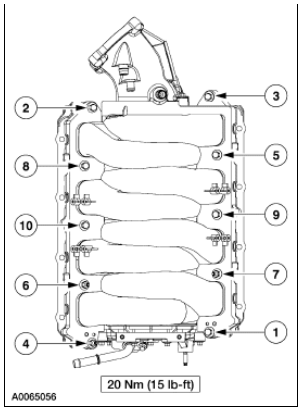
Items 76-78: Intake Manifold Assembly Note

1. Install new intake manifold gaskets.

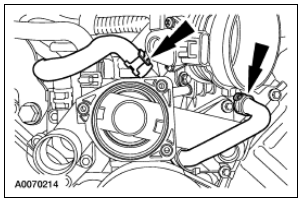


2. **NOTE:** The throttle body and adapter are shown removed for clarity. It is not necessary to remove the throttle body and adapter to remove the intake manifold.

   Install the intake manifold and tighten the bolts in the sequence shown.

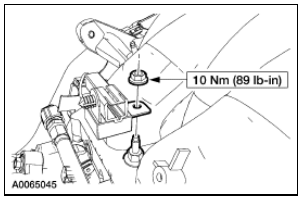


3. Connect the throttle body heater hose.



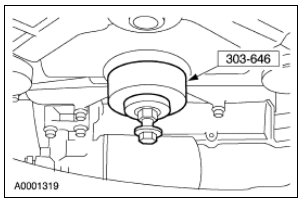
4. **NOTE:** RH is shown, LH is similar.

   Install the radio interference capacitor and the nut.



Item 89: Front Crankshaft Seal Assembly Note

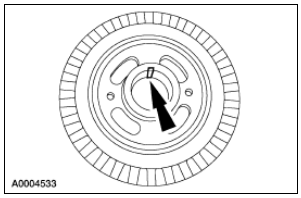
1. Using the special tool, install the front crankshaft seal.



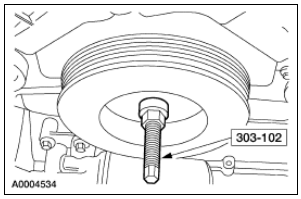
Items 90-92: Crankshaft Pulley Assembly Note

1. **NOTE:** If the crankshaft pulley is not secured within four minutes of sealant application the sealant must be removed and the sealing area cleaned with metal surface cleaner. Allow to dry until there is no sign of wetness, or four minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.

   Apply silicone gasket and sealant to the crankshaft pulley keyway.



2. Using the special tool, install the crankshaft pulley.

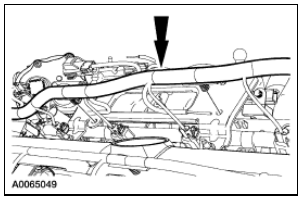


3. Install the washer and a new bolt and tighten in two stages.
   - Stage 1: Tighten to 80 Nm (59 lb-ft).
   - Stage 2: Tighten an additional 80 degrees.
   - Remove the flexplate holding tool.

Item 118: Engine Wiring Harness Assembly Note

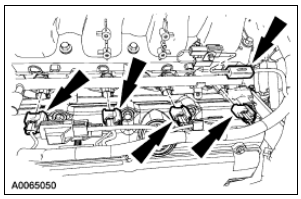
1. **NOTE:** LH is shown, RH is similar.

   Disconnect the engine wiring harness retainers from the engine appearance cover support bracket.

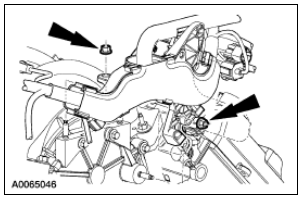


2. **NOTE:** LH is shown, RH is similar.

   Disconnect the fuel injector and radio interference capacitor electrical connectors.

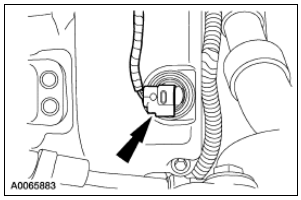


3. Remove the nuts and the engine wiring harness retainer and position aside.

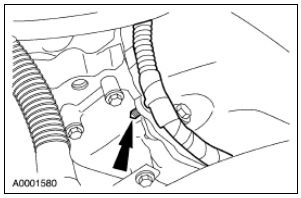


4. **NOTE:** RH is shown, LH is similar.

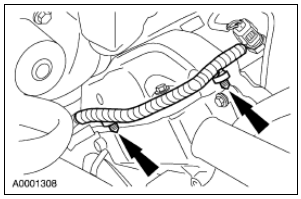
   Disconnect the variable cam timing (VCT) sensor electrical connector.



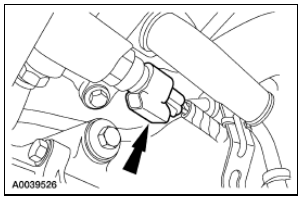
5. Disconnect the wiring harness retainers from the LH valve cover.



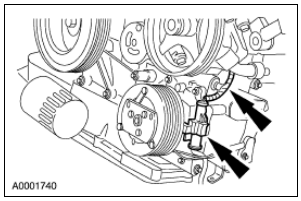
6. Disconnect the three wiring harness retainers from the RH valve cover.



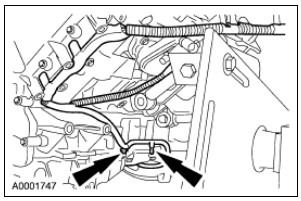
7. Disconnect the power steering pressure (PSP) switch.



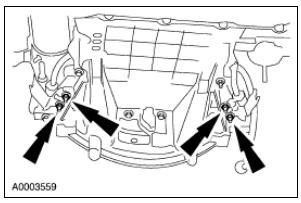
8. Disconnect the A/C electrical connector and the retaining clip.



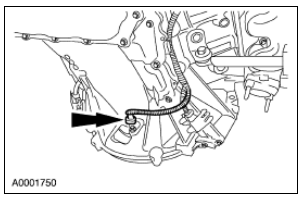
9. Disconnect the two pin-type retainers.



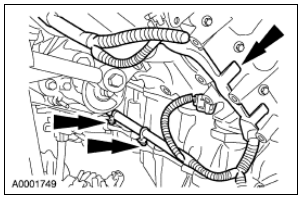
10. Remove the exhaust gas oxygen sensor (HO2S) connectors from the brackets.



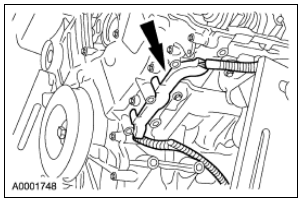
11. Disconnect the crankshaft position (CKP) sensor electrical connector.



12. Remove the wiring harness from the front cover.



13. Remove the wiring harness from the front cover.



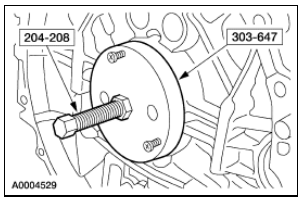
Items 142 and 143: Oil Filter and Seal Assembly Note

1. Install the oil filter until the seal makes contact. Tighten an additional 270 degrees.

154: Crankshaft Rear Seal Assembly Note

1. **NOTE:** Lubricate the outer lips and the inner seal on the crankshaft rear oil seal with clean engine oil.

   Using the special tool, install the rear main seal.



Items 155 and 156: Flexplate Assembly Note

1. Install the flexplate and tighten the bolts in two stages in the sequence shown.
   - Stage 1: Tighten to 15 Nm (11 lb-ft).
   - Stage 2: Tighten to 110 Nm (81 lb-ft).

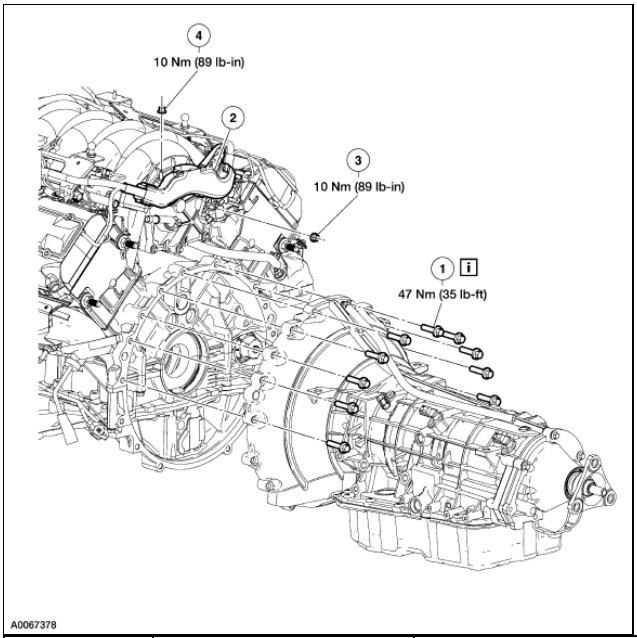
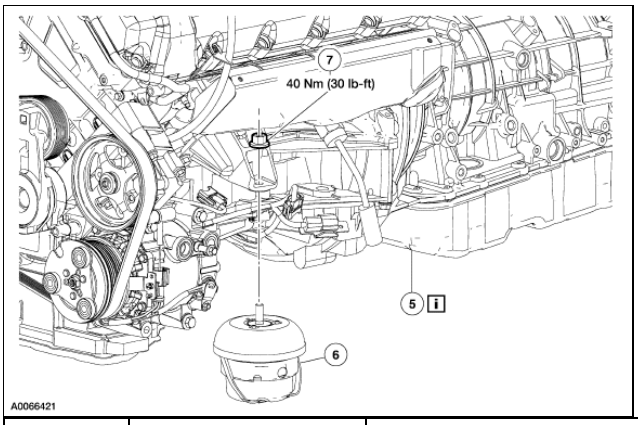
Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Illustration 1 of 13. Install the components in the order indicated in the following illustration and table.



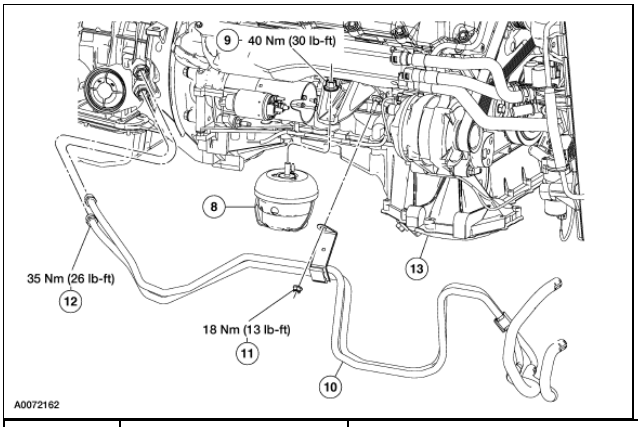
Item	Part Number	Description
1	W500120	Engine-to-transmission bolts Installation Note
2	12B637	Engine wiring harness
3	N520415	Wiring harness retainer nut
4	N520415	Wiring harness retainer nut

2. Illustration 2 of 13. Install the components in the order indicated in the following illustration and table.



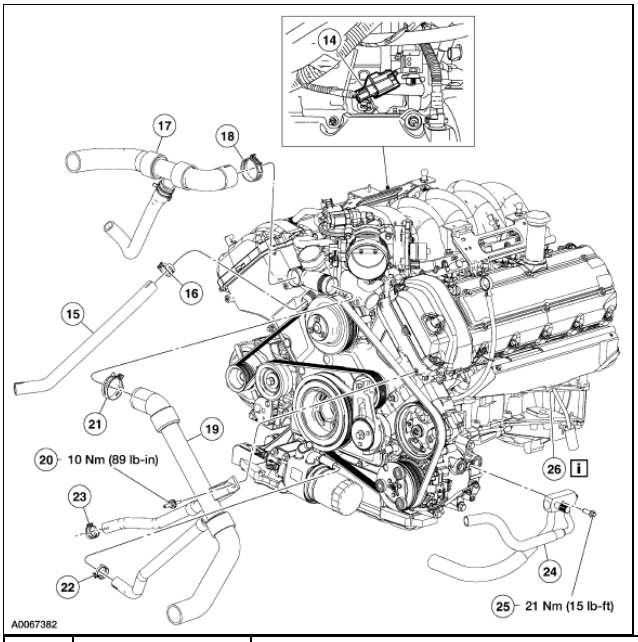
Item	Part Number	Description
5		Engine and transmission assembly Installation Note
6	N621942	Motor mount nut
7	6A003	Motor mount

3. Illustration 3 of 13. Install the components in the order indicated in the following illustration and table.



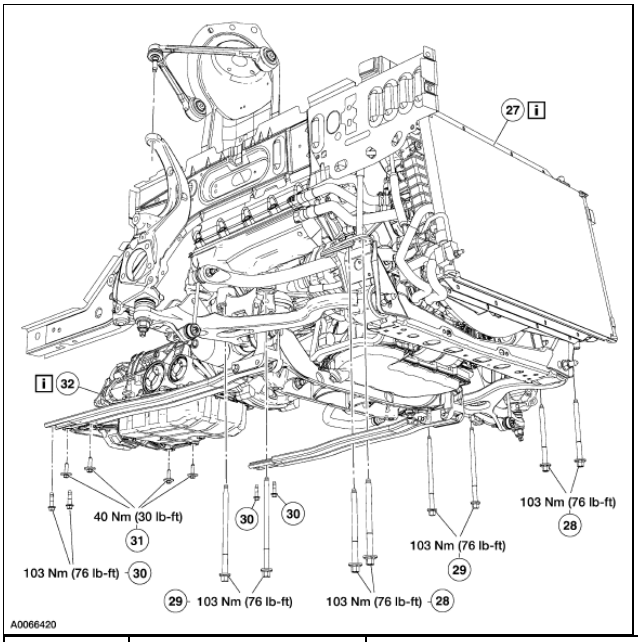
Item	Part Number	Description
8	6A003	Engine mount
9	N621942	Engine mount nut
10	070200	Transmission cooler lines
11		Transmission cooler line bracket nut
12		Transmission cooler line fittings
13		Engine and transmission assembly

4. Illustration 4 of 13. Install the components in the order indicated in the following illustration and table.



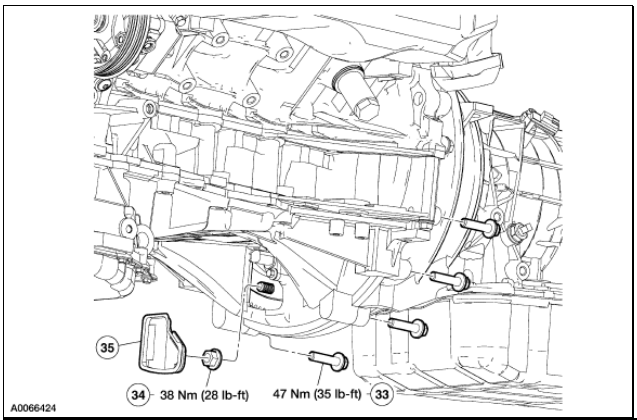
Item	Part Number	Description
14		Knock sensor electrical connector (part of 12B637)
15	18K580	Heater hose
16	15161	Heater hose clamp
17	8B274	Upper radiator hose
18	15151	Upper radiator hose clamp
19	8B273	Lower radiator hose
20	W701808	Lower radiator hose bolt
21	15161	Oil cooler hose clamp
22	15151	Lower radiator hose clamp
23	15161	Oil cooler hose clamp
24	19E559	A/C manifold
25		A/C manifold bolt
26		Block heater electrical connector (part of 12B637) Installation Note

5. Illustration 5 of 13. Install the components in the order indicated in the following illustration and table.



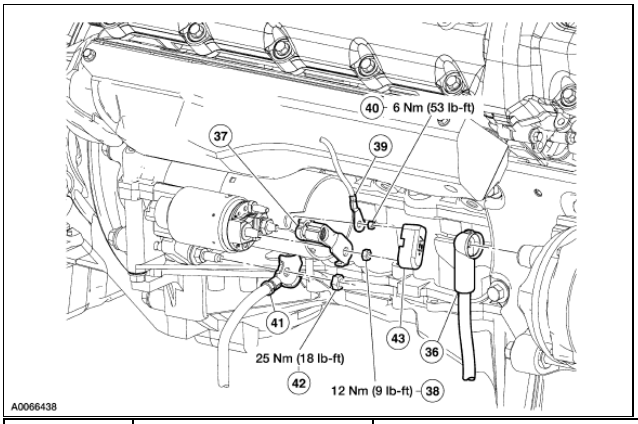
Item	Part Number	Description
27		Engine and transmission assembly Installation Note
28	W708091	Front crossmember bolts
29	W706329	Center crossmember bolts
30	W707186	Crossmember brace bolts
31	W704971	Transmission crossmember bolts
32		Engine and transmission assembly Installation Note

6. Illustration 6 of 13. Install the components in the order indicated in the following illustration and table.



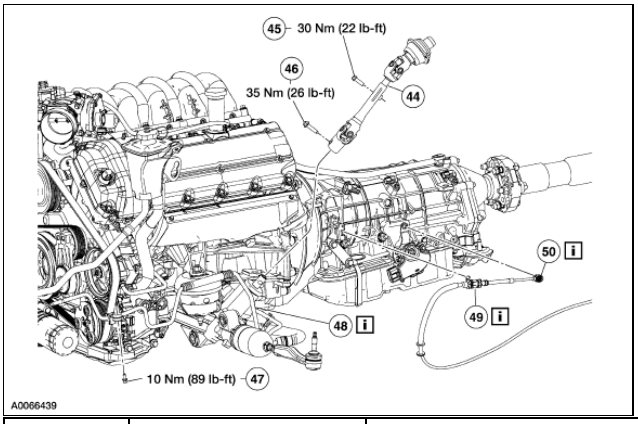
Item	Part Number	Description
33	W500120	Transmission-to-engine bolts
34		Torque converter nuts
35	7N840	Flexplate bolt cover

7. Illustration 7 of 13. Install the components in the order indicated in the following illustration and table.



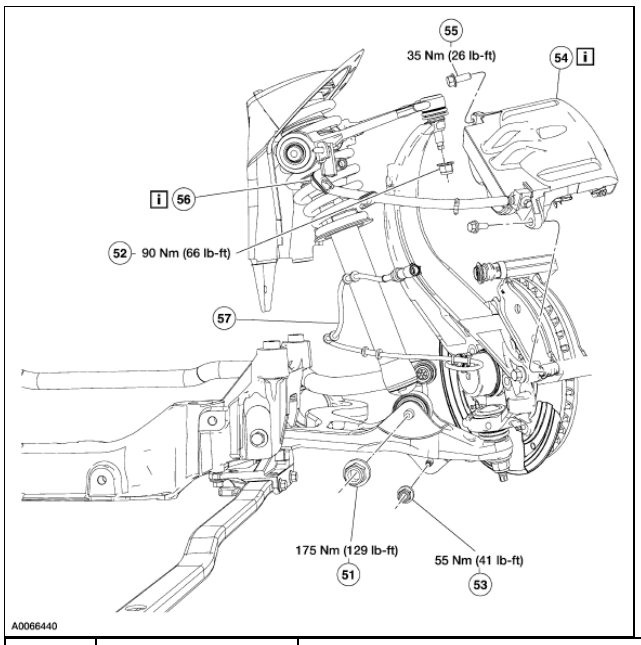
Item	Part Number	Description
36		Generator electrical connector
37		Starter motor electrical connector
38	N800136	Starter motor terminal nut
39		Starter motor electrical connector
40	N800136	Starter motor terminal nut
41	14305	Ground cable
42	N500617	Ground cable nut
43	11N087	Starter motor terminal cover

8. Illustration 8 of 13. Install the components in the order indicated in the following illustration and table.



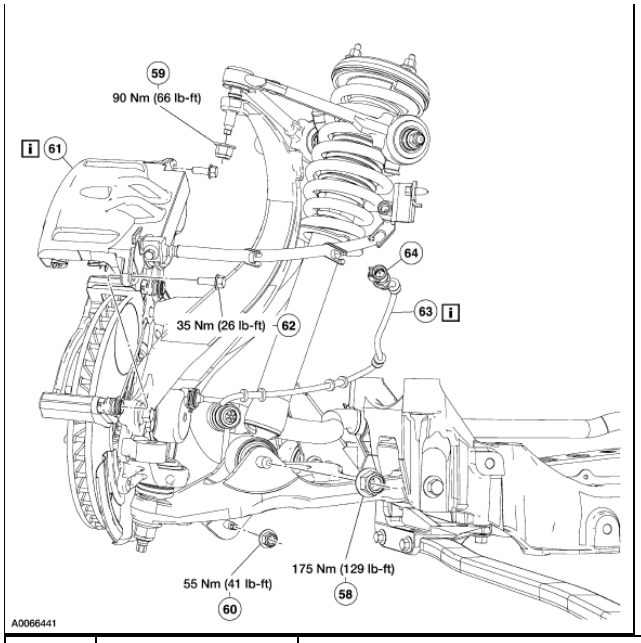
Item	Part Number	Description
44	110400	Steering shaft
45	110401	Steering shaft bolt
46	W705113	Steering coupling bolt
47	W500213	Power steering retaining bolt
48		Steering rack electrical connectors Installation Note
49	7A395	Shift cable Installation Note
50	7A395	Shift cable Installation Note

9. Illustration 9 of 13. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
51	W50213	Lower strut mount nut and bolt
52	W520214	Upper ball joint nut
53	W50213	Stabilizer bar nut
54	2B119	Brake caliper Installation Note
55	2B118	Brake caliper bolts (2 req'd)
56	2B663	Anti-lock brake sensor harness Installation Note
57	2B663	Anti-lock brake sensor electrical connector

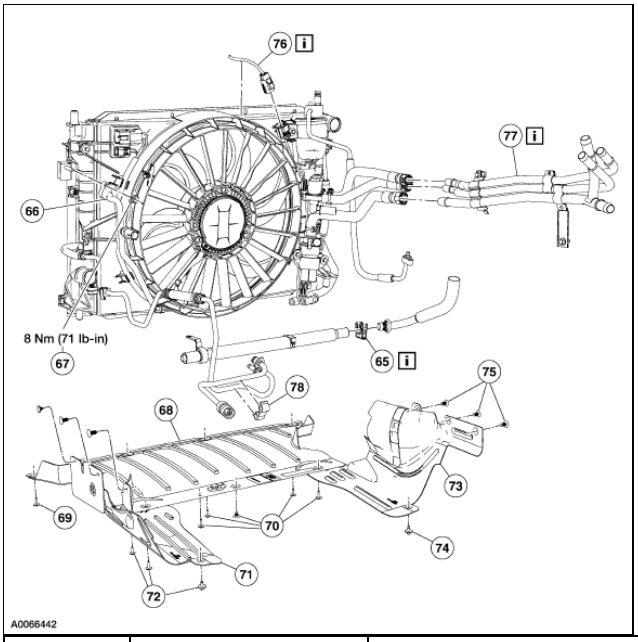
10. Illustration 10 of 13. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description

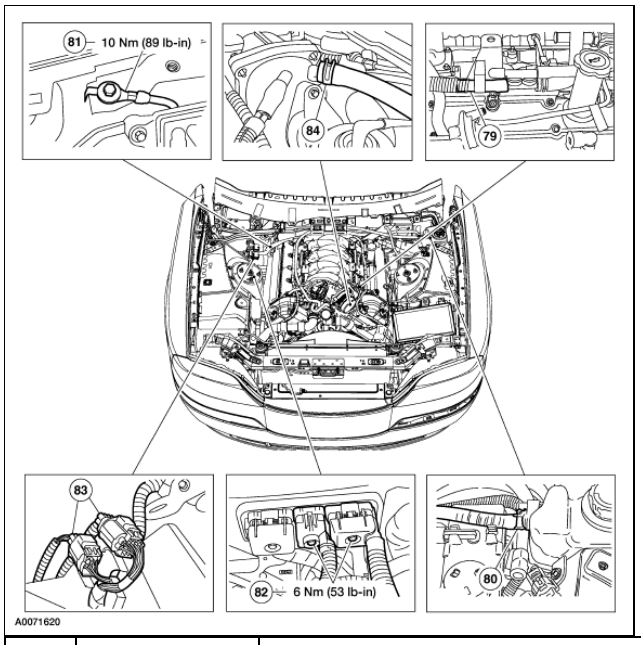
58	W50213	Lower strut mount nut and bolt
59	W520214	Upper ball joint nut
60	W50213	Stabilizer bar nut
61	2B119	Brake caliper Installation Note
62	2B118	Brake caliper bolts (2 req'd)
63	2B663	Anti-lock brake sensor harness Installation Note
64	2B663	Anti-lock brake sensor electrical connector

11. Illustration 11 of 13. Install the components in the order indicated in the illustration and table.



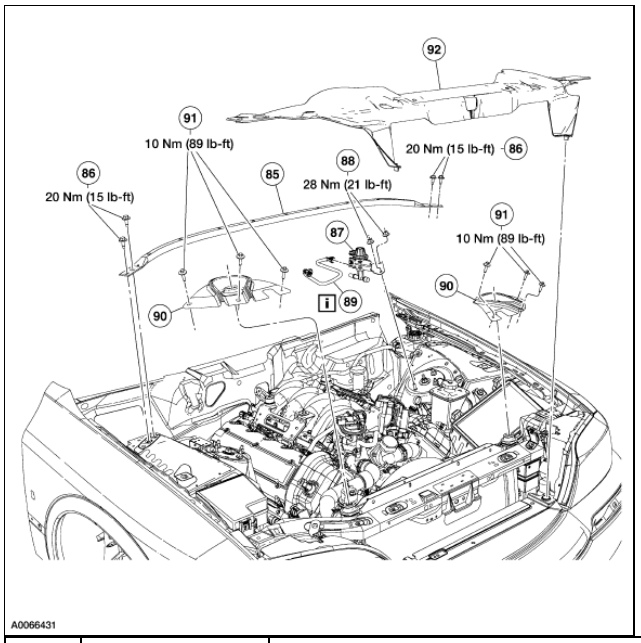
Item	Part Number	Description
65	19A83	Low pressure hose Installation Note
66		A/C high pressure hose
67		A/C line nut
68	8C379	Splash shield
69	N801169	Bolts
70	388577	Push pins
71	8C379	Splash shield
72	N801169	Bolts
73	8C379	Splash shield
74	N801169	Bolts
75	388577	Push pins
76	14A624	Coolant valve electrical connector Installation Note
77	18C553A	Heater hoses Installation Note
78	3A713A	Power steering pressure hose clip

12. Illustration 12 of 13. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
79		Vacuum hose
80		Degas bottle hose
81		Ground strap
82		Powertrain control module electrical connectors
83		Powertrain bulkhead electrical connectors
84		Vacuum supply hose

13. Illustration 13 of 13. Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
85	3B328A	Strut tower brace

86	W708009	Strut tower brace bolts
87	31304	VMV
88		Vapor management valve (VMV) bracket nuts
89	9D289A	VMV vacuum hose Installation Note
90	8226A/8227A	Upper radiator support bracket
91	N606677	Upper radiator support bracket bolts
92	8C291	Upper radiator sight shield

14. Install the air cleaner inlet. For additional information, refer to Section 303-04B .
15. **⚠ CAUTION: The coolant Fill procedure must be followed exactly or damage to the engine can occur.**

    Fill the engine coolant. For additional information, refer to Section 303-03 .
16. Charge the A/C system. For additional information, refer to Section 412-00 .
17. Install the power steering pump reservoir bolts. For additional information, refer to Section 205-00 .
18. Install the cowl vent screens. For additional information, refer to Section 501-00 .
19. Connect the fuel hose. For additional information, refer to Section 310-00 .
20. Install the fresh air filter panel. For additional information, refer to Section 412-00 .
21. Install the front wheels and tires. For additional information, refer to Section 204-00 .
22. Install the LH and the RH inner splash shields.
23. Install the driveshaft. For additional information, refer to Section 205-00 .
24. Install the three-way catalytic converter (TWC). For additional information, refer to Section 309-00 .

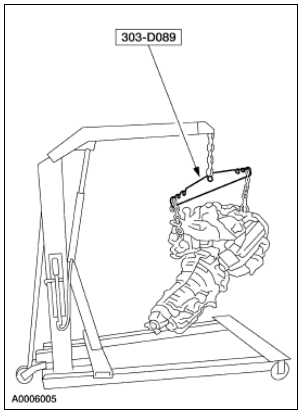
Item 1: Engine-to-Transmission Bolts Installation Note

1. **NOTE:** Align the flexplate to converter marks made during engine removal.

   Install the engine to the transmission and install the bolts.

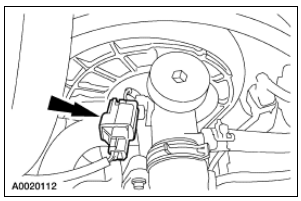
Item 5: Engine and Transmission Assembly Installation Note

1. Using a floor crane and the special tool, install the engine onto the subframe.



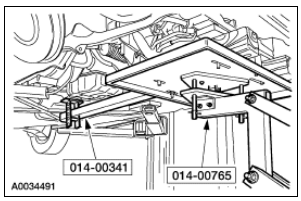
Item 26: Block Heater Electrical Connector Installation Note

1. Connect the knock sensor electrical connector.



Item 27: Engine and Transmission Assembly Installation Note

1. Using the powertrain lift and the transmission support bracket, carefully raise the entire assembly into the vehicle.

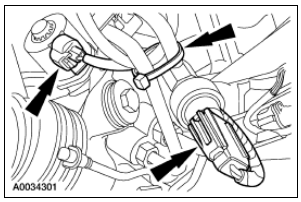


Item 32: Engine and Transmission Assembly Installation Note

1. Install the safety stands from the rear of the vehicle.

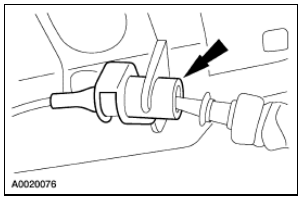
Item 48: Steering Rack Electrical Connectors Installation Note

1. Connect the power steering rack electrical connectors.



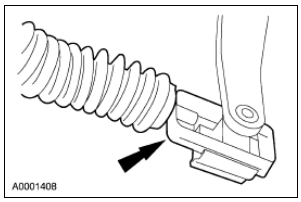
Item 49: Shift Cable Installation Note

1. Reclip the shift cable to the bracket.



Item 50: Shift Cable Installation Note

1. Connect the shift cable to the shifter.

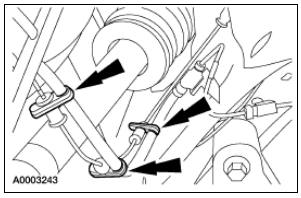


Items 54 and 61: Brake Caliper Installation Note

1. Install the brake caliper.

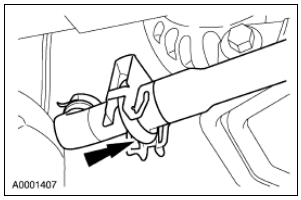
Items 56 and 63: Anti-Lock Brake Sensor Harness Installation Note

1. Position the anti-lock brake sensor harness and clip to the brake hose.



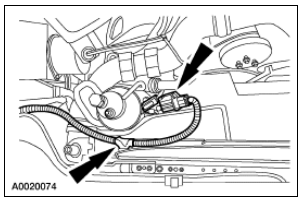
Item 65: Low Pressure Hose Installation Note

1. Connect the A/C low pressure hose.



Item 76: Coolant Valve Electrical Connector Installation Note

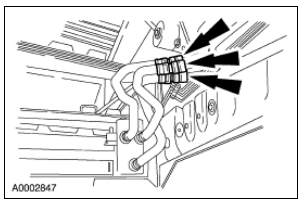
1. Clip the harness to the radiator support and connect the coolant valve electrical connector.



Item 77: Heater Hoses Installation Note

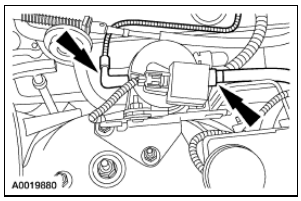
1. **NOTE:** Install the hoses to the marks made during the removal process.

   Connect the hoses to the coolant control valve.



Item 89: Vapor Management Valve Vacuum Hose Installation Note

1. Connect the VMV.
   - Vacuum hose
   - Canister purge valve.



Engine Cooling Component Location Index

3.0L Engine

3.9L Engine

Printable View (12 KB)

General Specifications

Item	Specification
Cooling System Capacity	
3.0L	10.6L (2.8 gallons)
3.9L	11.3L (3.0 gallons)
Coolant Type	
Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent [a]	WSS-M97B51-A1 (Yellow color)
Other Chemicals	
Motorcraft Premium Cooling System Flush VC-1	ESR-M14P7-A
Premium Long Life Grease XG-1-C	ESA-M1C75-B
Motorcraft Cooling System Stop Leak Pellets VC-6	WSS-M99B37-B6
Cooling System Pressure Test Specifications	
Thermostat Opening Temperatures (3.0L)	
Starts to open	88-92°C (190-198°F)
Fully open	103°C (217°F)
Thermostat Opening Temperatures (3.9L)	
Starts to open	86-90°C (197-194°F)
Fully open	104°C (219°F)

[a] The addition of Motorcraft Cooling System Stop Leak Pellets, VC-6, darkens Motorcraft Premium Gold Engine Coolant from yellow to golden tan.

Torque Specifications

Description	Nm	lb-ft	lb-in
Thermostat housing bolts (3.0L)	11	8	
Thermostat housing bolts (3.9L)	10		89
Upper radiator hose retaining bracket bolts (3.9L)	10		89
Coolant pump bolts (3.0L)	25	18	
Intake manifold support bracket (3.0L)	10		89
Coolant pump bolts (3.9L) [a]			
Engine fill cap (3.9L) [a]			
Coolant pump pulley bolts (3.9L) [a]			
Coolant inlet pipe bolts (3.0L)	25	18	
Coolant outlet pipe bolts (3.0L)	10		89
Coolant outlet pipe bolts (3.9L)	10		89
Receiver/drier bracket bolt	11	8	
Coolant control valve bracket bolt	6		53
Auxiliary coolant pump bolts (3.9L)	9		80

Upper radiator support bracket bolts	10		89
Fan shroud bolts	10		89
Condenser-to-radiator bolts	10		89
Condenser support bracket bolts	10		89
Transmission oil cooler bolts	10		89
Degas bottle bolts	6		53
Cross vehicle support bolts	20	15	

[a] Refer to the procedure in this section.

Engine Cooling

Printable View (287 KB)

⚠ CAUTION: Vehicle cooling systems are filled with Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-M97B51-A1 (yellow color). Always fill the cooling system with the same coolant that is present in the system. Do not mix coolant types.

The cooling system components include the:

- block heater (optional).
- cylinder head temperature sensor.
- fan blade, fan motor and fan shroud assembly.
- radiator.
- pressure relief cap.
- degas bottle.
- radiator draincock.
- coolant pump.
- oil cooler (optional).
- thermostat.

The thermostat:

- controls the engine coolant temperature.
- allows quicker engine warm-up.

The degas bottle:

- provides a location for system fill.
- contains coolant expansion and system pressurization.
- provides air separation during operation.
- replenishes the engine coolant to the system.

The fan blade draws air through the radiator to help cool the engine coolant.

The fan motor:

- operates only when the engine is running.

The engine coolant flows:

- from the lower radiator hose to the coolant pump.
- from the coolant pump to the engine block and the cylinder heads.

A closed thermostat returns the engine coolant to the coolant pump. An open thermostat allows the engine coolant to flow to the radiator.

Engine coolant provides freeze protection, boil protection, cooling efficiency and corrosion protection to the engine and cooling components. In order to obtain these protections, the engine coolant must be maintained at the correct concentration and fluid level in the degas bottle.

When adding engine coolant, use a 50/50 mixture of engine coolant and clean, distilled water.

To maintain the integrity of the cooling system:

- Add Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-97B51-A1 (yellow color). Do not mix coolant types.
- Do not add/mix Motorcraft Speciality Orange Engine Coolant VC-2 or equivalent meeting Ford specification WSS-M97B44-D (orange color). Mixing coolants can degrade the coolant's corrosion protection.
- Do not add alcohol, methanol, brine or any engine coolants mixed with alcohol or methanol antifreeze. These can cause engine damage from overheating or freezing.
- Do not mix with recycled coolant unless it meets the requirements of Ford specification WSS-M97B51-A1. Not all coolant recycling processes meet these Ford specifications. Use of such coolants can harm the engine and cooling system components. Do not mix coolant types.

The cylinder head temperature sensor provides a signal to the temperature gauge and will invoke fail-safe cooling.

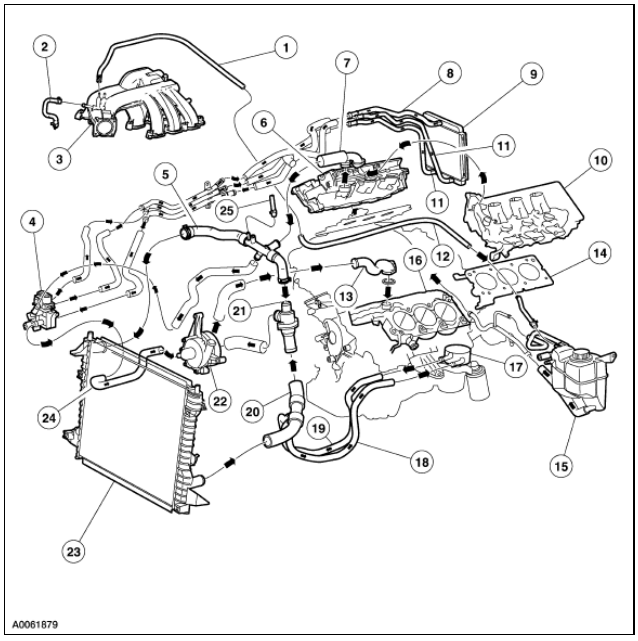
The optional block heater:

- electrical heating element is installed in the block cooling jacket.
    - ♦ uses a standard 110V (220V in Europe) electrical supply.
- keeps the engine coolant warm during cold weather.

The auxiliary coolant pump (3.9L only):

- provides heater coolant flow boost.
- has a secondary function of providing engine-off cooling.

Coolant Flow 3.0L



Item	Part Number	Description
1	8276	From degas vent
2	8B274	Coolant crossover-to-upper intake manifold
3	9424	Upper intake manifold

Inspection and Verification

⚠ WARNING: Never remove the pressure relief cap under any conditions while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, remove the pressure relief cap (still with a cloth).

⚠ CAUTION: Check the coolant level and engine oil, top off the coolant if needed. If there is engine coolant in the engine oil, the cause must be corrected and oil changed or major component damage can occur.

⚠ CAUTION: Vehicle cooling systems are filled with Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-M97B51-A1 (yellow color). Always fill the cooling system with the same coolant that is present in the system. Do not mix coolant types.

1. **NOTE:** The addition of Motorcraft Cooling System Stop Leak Pellets VC-6, darkens Motorcraft Premium Gold Engine Coolant from yellow to golden tan.

   Verify the customer concern by operating the engine to duplicate the condition.

2. Inspect to determine if any of the following mechanical or electrical concerns apply.

Visual Inspection Chart

Mechanical	Electrical
• Leaks • Restricted airflow through the condenser/radiator • Damaged hoses • Loose/damaged hose clamps • Damaged coolant gasket • Damaged head gaskets • Damaged coolant pump • Damaged radiator • Damaged degas bottle • Damaged heater core • Damaged or obstructed electric cooling fan	• Damaged cylinder head temperature sensor • Damaged wiring • Fuse • Damaged circuitry

⚠ CAUTION: The cylinder head temperature sensor is not reusable after removal. For electrical concern testing, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

3. If the inspection reveals an obvious concern that can be readily identified, repair it as necessary.

4. Inspect the coolant condition:
    1. Inspect the coolant color.
        - ♦ If Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-M97B51-A1 (yellow color) has a clear or pale yellow color, this indicates higher water content than required.
        - ♦ Dark brown could indicate unauthorized stop leak may have been used. Use Motorcraft Cooling System Stop Leak Pellets VC-6 or equivalent meeting Ford specification ESE-M99B37-B5 except as noted in ES-F6SE-19A511-AA.
        - ♦ A light or reddish brown color indicates that rust may be present in the cooling system. Flush the system and refill with the correct mixture of water and Premium Gold Engine Coolant.
        - ♦ An iridescent sheen on the surface of the coolant could indicate a trace of oil is entering the system. For additional information on engine diagnosis, refer to Section 303-00 .
        - ♦ A milky brown color may indicate that engine oil is entering the cooling system. If oil is suspected, the cause of the leak may be internal to the engine. For additional information on engine diagnosis, refer to Section 303-00 .
        - ♦ A milky brown color in the engine oil may indicate that coolant is entering the oil. If coolant is suspected, the cause of the leak may be internal to the engine. For additional information on engine diagnosis, refer to Section 303-00 .
    2. If the engine coolant appearance is acceptable, test the engine coolant freezing point range with the Battery/Antifreeze tester. The freezing point should be in the range -50°F to -10°F. If the vehicle is driven in cold climates less than -34°F, it may be necessary to increase the coolant concentration to get adequate freeze protection.
        - ♦ Maximum coolant concentration is 60/40.
        - ♦ Minimum coolant concentration is 40/60.
    3. Adjust coolant range and level if necessary:

- If the coolant is low, add specified coolant mixture only.
- If the coolant tests weak, add straight engine coolant until the readings are within acceptable levels.
- If the coolant tests strong, remove some of the engine coolant and add water until the readings are within acceptable levels.

5. If the concern remains after the inspection, determine the symptom(s). GO to the Symptom Chart .

6. Verify the cooling system is correctly filled and bled. For additional information, refer to Cooling System Draining, Filling and Bleeding in this section.

Symptom Chart

Symptom Chart

Pinpoint Tests

PINPOINT TEST A: LOSS OF COOLANT

Test Step	Result / Action to Take
A1 CHECK THE ENGINE COOLANT LEVEL	
NOTE: Allow the engine to cool before checking the engine coolant level. • Key in OFF position. • Visually check the engine coolant level at the degas bottle. • **Is the engine coolant level within specification?**	**Yes** GO to A2 . **No** FILL the engine coolant as necessary. GO to A6 .
A2 CHECK THE DEGAS BOTTLE PRESSURE RELIEF CAP	
⚠ WARNING: To avoid personal injury, do not unscrew the coolant pressure relief cap while the engine is operating or hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly. • Inspect the pressure relief cap for foreign material between the sealing gasket and the diaphragm. • **Is the pressure relief cap OK?**	**Yes** GO to A5 . **No** CLEAN or INSTALL a new pressure relief cap. TEST the system for normal operation. GO to A3 .
A3 CHECK THE ENGINE COOLANT FOR INTERNAL LEAK	
⚠ WARNING: To avoid personal injury, do not unscrew the coolant pressure relief cap while the engine is operating or hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly. • Key in OFF position.	**Yes** If engine oil is evident, REFER to Section 303-00 . **No** GO to A4 .

• Inspect the engine coolant in the degas bottle for signs of engine oil. • **Is oil evident in the coolant?**	
A4 CHECK THE ENGINE OIL FOR COOLANT	
• Remove the oil level indicator from the engine. • **Is coolant evident in the oil?**	**Yes** If coolant is in the engine, REFER to Section 303-00 . **No** GO to A5 .
A5 PRESSURE TEST THE ENGINE COOLING SYSTEM	
• Pressure test the engine cooling system. Refer to the Component Tests in this section. • **Does the engine cooling system leak?**	**Yes** REPAIR or INSTALL new components. TEST the system for normal operation. **No** The cooling system is operational. GO to the Symptom Chart .
A6 CHECK THE DEGAS BOTTLE	
• ⚠ **WARNING: To avoid personal injury, do not unscrew the coolant pressure relief cap while the engine is operating or hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly.** • **NOTE:** The engine must be cool when coolant is added to the degas bottle. • Add coolant to the degas bottle until fluid is between the coolant fill level marks. • **Does the degas bottle leak?**	**Yes** INSTALL a new degas bottle. TEST the system for normal operation. **No** CARRY OUT the cooling system pressure test. REFER to the Component Tests in this section. REPAIR as necessary. TEST the system for normal operation.

PINPOINT TEST B: THE ENGINE OVERHEATS

Test Step	Result / Action to Take
B1 CHECK THE ENGINE COOLANT LEVEL	
⚠ **WARNING: Never remove the pressure relief cap under any conditions while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, remove the pressure relief cap (still with a cloth).** • Key in OFF position. • Check the engine coolant level at the degas bottle.	**Yes** GO to B2 . **No** FILL the engine coolant at the degas bottle. Go To Pinpoint Test A .

• **Is the engine coolant OK?**	
B2 CHECK THE COOLANT CONDITION	
• Check the coolant for contaminants such as rust, corrosion, or discoloration. • **Is the coolant condition OK?**	**Yes** GO to B3 . **No** FLUSH the engine cooling system. REFER to Engine and Radiator Flushing in this section. TEST the system for normal operation.
B3 CHECK FOR AN AIRFLOW OBSTRUCTION	
• Inspect the A/C condenser core and radiator for obstructions such as leaves or dirt. • **Is there an obstruction?**	**Yes** REMOVE the obstruction. CLEAN the A/C condenser core and radiator. TEST the system for normal operation. **No** GO to B4 .
B4 CHECK THE THERMOSTAT OPERATION	
• Key in START position. • Start the engine and allow the engine to run for 10 minutes. • Key in OFF position. • Feel the upper and lower radiator hoses. • **Are the upper and lower radiator hoses cold?**	**Yes** INSTALL a new thermostat. TEST the system for normal operation. **No** GO to B5 .
B5 CHECK THE COOLING FAN OPERATION	
• Carry out the cooling fan diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to diagnose the cooling fan system. • **Is the cooling fan operation OK?**	**Yes** GO to B6 . **No** REPAIR the cooling fan system. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. TEST the system for normal operation.
B6 CHECK COOLANT PUMP OPERATION	
• Visually inspect coolant pump for rotation and damage. • **Is coolant pump OK?**	**Yes** REFER to Section 303-00 for diagnosis and testing of the engine.

	No INSTALL a new coolant pump.

PINPOINT TEST C: THE ENGINE DOES NOT REACH NORMAL OPERATING TEMPERATURE

Test Step	Result / Action to Take
C1 CHECK THE ENGINE TEMPERATURE	
• Key in START position. • Start the engine and allow the engine to idle for 10 minutes. • Key in OFF position. • Feel the upper and lower radiator hoses. • **Are the upper and lower radiator hoses cold?**	**Yes** INSTALL a new thermostat. TEST the system for normal operation. **No** REFER to Section 413-00 for diagnosis and testing of the engine coolant temperature gauge.

Component Tests

Pressure Test

1. Turn the engine OFF.

2. Remove the cowl vent screen. Refer to Section 501-00 .

3. ⚠ **WARNING: Never remove the pressure relief cap under any conditions while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, never remove the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, remove the pressure relief cap (still with a cloth).**

   Check the engine coolant level. Refer to Cooling System Draining, Filling and Bleeding in this section.

4. Connect the Radiator/Heater Core Pressure Tester to the degas bottle nipple and overflow hose. Install a pressure test pump to the quick-connect fitting of the test adapter.

5. **NOTE:** If the plunger of the pump is depressed too fast, an erroneous pressure reading will result.

   Slowly depress the plunger of the pressure test pump until the pressure gauge reading stops increasing and note the highest pressure reading obtained.

6. If the pressure relief cap does not hold pressure, remove and wash the pressure relief cap in clean water to dislodge all foreign particles from the gaskets. Check the sealing surface in the filler neck.

7. If 8-9 kPa (13 psi) cannot be reached, carry out the pressure relief cap component test. If more than 12 kPa (18 psi) shows on the gauge, install a new pressure relief cap.

8. ⚠ **CAUTION: If the pressure drops, check for leaks at the engine to heater core hoses, engine-to-radiator hoses, coolant valve hose (if applicable), oil cooler return tube gasket,**

radiator and heater core or other system components and connections. Any leaks which are found must be corrected and the system rechecked.

Pressurize the engine cooling system as described in Step 4 (using a pressure relief cap that operates within the specified upper and lower pressure limits). Observe the gauge reading for approximately two minutes; refer to General Specifications. Pressure should not drop during this time.

9. Release the system pressure by loosening the pressure relief cap. Check the engine coolant level and replenish, if necessary, with the correct engine coolant mixture. Refer to Cooling System Draining, Filling and Bleeding in this section.

Cap

⚠ WARNING: Never remove the pressure relief cap under any conditions while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, remove the pressure relief cap (still with a cloth).

1. Remove the pressure relief cap from the degas bottle.
2. Immerse the pressure relief cap in water and install it on the shallow filler neck of the Radiator/Heater Core Pressure Tester and the Radiator Cap Adapter, part of the Radiator/Heater Core Pressure Tester.
3. Immerse the filler neck seal in water and install it in the filler neck adapter.
4. Install the filler neck adapter with the filler neck seal to the Radiator Cap Adapter.
5. Connect the female quick-connect fitting of the pressure test pump to the male quick-connect fitting of the filler neck adapter.
6. **NOTE:** If the plunger of the pump is depressed too fast, an erroneous pressure reading will result.

   Slowly depress the plunger of the pressure test pump until the pressure gauge reading stops increasing and note the highest pressure reading obtained.
7. Release the pressure by turning the relief screw counterclockwise. Then tighten the pressure relief screw and repeat Step 6 (at least twice) to make sure the reading is repeatable within the specifications of the pressure relief cap.
8. If the pressure test gauge readings are not within specifications, install a new pressure relief cap. If the pressure test gauge readings are within specifications, carry out the cooling system Pressure Test.

Thermostat

A new thermostat should be installed only after the following electrical and mechanical tests have been carried out.

Thermostat Electrical Test

NOTE: The electrical thermostat test is most accurate if carried out indoors at less than 37.8°C (100°F) ambient air. This test can be carried out with or without the hood open and with the engine warm or cold.

1. Check the engine coolant level. Fill as needed.

2. With the ignition OFF, attach the Rotunda 73 Digital Multimeter to the cylinder head temperature (CHT) sensor. It may be used to monitor sensor voltage values between 0-5 volts.

3. **NOTE:** Running this test with the vehicle in gear or with the A/C compressor clutch engaged (running) will cause incorrect diagnosis.

   Place the transmission in PARK (P) or NEUTRAL (N).

4. Start the engine and allow the engine to idle throughout this test. Allow the engine to run for two minutes, then record the CHT voltage. Record the CHT voltage every 60 seconds. When the CHT voltage trend changes direction or only changes slightly (0.03 volt or less) from the previous reading, record this as the thermostat opening voltage. Use the voltage and corresponding coolant temperature chart listed below.

Coolant Temp °C (°F)	CHT Min (Volts)	CHT Nom (Volts)	CHT Max (Volts)
0 (32)	4.7714	4.8032	4.8723
25 (77)	4.3428	4.4148	4.4727
50 (122)	3.5354	3.6495	3.7473
80 (176)	2.3049	2.4201	2.5260
110 (230)	1.3021	1.3808	1.4562
140 (284)	0.6960	0.7414	0.7857
170 (338)	0.3784	0.4024	0.4261

5. If the thermostat opening temperatures are not between 89°C (192°F) and 104°C (219°F) or the corresponding voltages shown on the chart, install a new thermostat.

6. If the thermostat opening temperatures and voltages are within the specified range, the thermostat is good and a new thermostat is not required. GO to the Sympton Chart.

Thermostat Mechanical Test

1. Remove the thermostat housing.

2. Immerse the thermostat housing and thermostat in a boiling antifreeze and water mixture.

3. See the General Specifications chart for thermostat opening temperatures.

Radiator Leak Test, Removed From the Vehicle

⚠ CAUTION: Never leak test an aluminum radiator in the same water that copper/brass radiators are tested in. Flux and caustic cleaners can be present in the cleaning tank and they will damage aluminum radiators.

NOTE: Always install plugs in the oil cooler fittings before leak testing or cleaning any radiator.

NOTE: Clean the radiator before leak testing to avoid contamination of tank.

1. Leak test the radiator in clean water with 138 kPa (20 psi) air pressure.

Cooling Fan Motor and Shroud

1. Inspect the fan blade and shroud for any foreign materials. Clear the obstruction and continue the test procedure.

2. Rotate the fan to see if any contact between the shroud and blade exists. If contact is observed, install a new fan shroud assembly.

3. Rotate the fan by hand. The fan should rotate freely (no resistance should be felt, the fan will free wheel with minimum effort). If any resistance is present, install a new fan assembly.

Cooling System Draining, Filling and Bleeding

Printable View (109 KB)

Draining

⚠ WARNING: Never remove the pressure relief cap while the engine is operating or when the cooling system is hot. Failure to follow these instructions can result in damage to the cooling system or engine or personal injury. To avoid having scalding hot coolant or steam blow out of the degas bottle when removing the pressure relief cap, wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly. Step back while the pressure is released from the cooling system. When you are sure all the pressure has been released, (still with a cloth) turn and remove the pressure relief cap.

⚠ CAUTION: The coolant must be recovered in a suitable, clean container for reuse. If the coolant is contaminated it must be recycled or disposed of correctly.

⚠ CAUTION: Care must be taken to make sure the accessory drive belt does not become contaminated with engine coolant.

⚠ CAUTION: Vehicle cooling systems are filled with Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-M97B51-A1 (yellow color). Always fill the cooling system with the same coolant that is present in the system. Do not mix coolant types.

1. Wrap a thick cloth around the coolant pressure relief cap on the degas bottle. Slowly turn the cap counterclockwise (left) until the pressure begins to release. When the pressure is released, remove the pressure relief cap.

2. **NOTE:** Less than 80% of coolant can be recovered with the engine in the vehicle. Dirty, rusty or contaminated coolant requires replacement.

   Place a suitable container below the radiator draincock. If equipped, disconnect the coolant return hose at the oil cooler.

   - Close the radiator draincock when finished.

Filling Bleeding

⚠ WARNING: Do not open the cooling system while it is hot or the engine is running. Failure to follow these instructions can result in personal injury.

⚠ CAUTION: Engine coolant provides freeze protection, boil protection, cooling efficiency and corrosion protection to the engine and cooling components. In order to obtain these protections, the engine coolant must be maintained at the correct concentration and fluid level in the degas bottle.

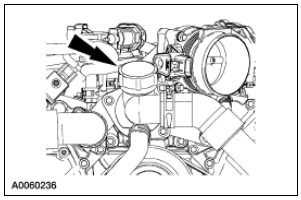
When adding engine coolant, use a 50/50 mixture of engine coolant and clean, drinkable water.

To maintain the integrity of the coolant and the cooling system:

- Add Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent meeting Ford specification WSS-M97B51-A1 (yellow color). Use the same coolant that was drained from the cooling system. Do not mix coolant types.
- Do not add Motorcraft Speciality Orange Engine Coolant VC-2 meeting Ford specification WSS-M97B44-D (orange color). Mixing coolants can degrade the coolant's corrosion protection.
- Do not add alcohol, methanol, brine or any engine coolants mixed with alcohol or methanol antifreeze. These can cause engine damage from overheating or freezing.
- Do not mix recycled coolant unless it meets the requirements of Ford specification WSS-M97B51-A1. Not all coolant recycling processes meet these Ford specifications. Use of such coolants can harm the engine and cooling system components.

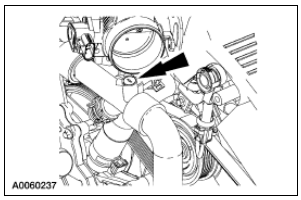
3.9L engines

1. Remove the engine fill cap.



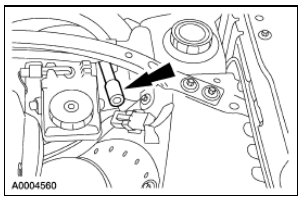
3.0L engines

2. Open the engine air bleed.



All engines

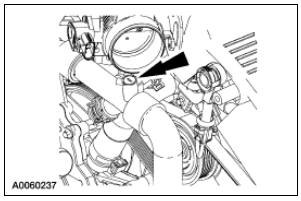
3. Open the heater air bleed.



4. Add coolant to the degas bottle allowing the system to equalize until no more coolant can be added.

3.0L engines

5. Close the engine air bleed when coolant begins to escape.



All engines

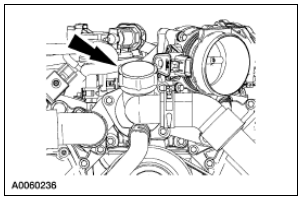
6. Install the degas bottle cap.

3.9L engines

⚠ CAUTION: Care must be taken to make sure the accessory drive belt does not become contaminated with engine coolant.

7. Add as much coolant as possible to the engine fill. The heater air bleed will remain open.

8. Install the engine fill cap.
   - Install the engine fill cap until contact is made, then tighten an additional 45 degrees (1/8 turn).

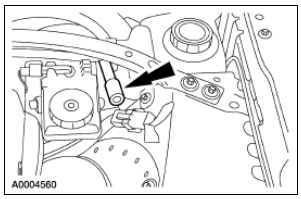


All engines

9. **NOTE:** The heater air bleed remains open.

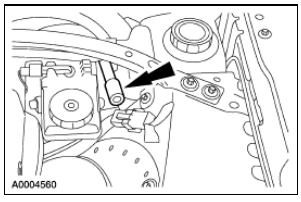
   Start the engine and turn the heater to the MAX position.

10. Close the heater air bleed when a steady stream of coolant escapes during engine idle.



11. Allow the engine to idle for five minutes, add coolant to the degas bottle as needed to maintain the cold fill MAX mark.

12. Open the heater air bleed to release any trapped air and close again.



3.9L engines

13. Maintain engine speed of 2,000 rpm for 3-5 minutes or until hot air comes from the heater.

14. Return to idle and verify hot air is still coming from the heater.

3.0L engines

15. Maintain engine speed of 1,500 rpm for 3-5 minutes or until hot air comes from the heater.
16. Return to idle and verify hot air is still coming from the heater.

All engines

17. Set the heater temperature setting to 24°C (75°F) and allow the vehicle to idle for two minutes.
18. Shut the engine off and allow to cool.
19. After the engine has cooled, add coolant to the degas bottle to bring the level to the cold fill MAX mark.

Material

Item	Specification
Motorcraft Premium Cooling System Flush VC-1	ESR-M14P7-A

1. ⚠ **WARNING: Never remove the pressure relief cap while the engine is operating or when the cooling system is hot. Failure to follow these instructions can result in damage to the cooling system or engine or personal injury. To avoid having scalding hot coolant or steam blow out of the degas bottle when removing the pressure relief cap, wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly. Step back while the pressure is released from the cooling system. When you are sure all the pressure has been released, (still with a cloth) turn and remove the pressure relief cap.**

   Once pressure is released, remove the pressure relief cap.

2. Drain the cooling system. For additional information, refer to Cooling System Draining, Filling and Bleeding .

3. Remove the thermostat. For additional information, refer to Thermostat and Thermostat Housing - 3.0L (4V) , or Thermostat Housing - 3.9L in this section.

4. Install the water hose connection without the thermostat.

5. **NOTE:** Refer to the cooling system Pro Flush and Fill operating instructions for specific vehicle hook-up.

   Use cooling system Pro Flush and Fill, Coolant Flush Kit and Drain Kit to flush the engine and radiator.

6. Install the thermostat.

7. Backflush the heater core. For additional information, refer to Heater Core Backflushing .

8. Fill the cooling system. For additional information, refer to Cooling System Draining, Filling and Bleeding in this section.

1. Drain the cooling system. For additional information, refer to Cooling System Draining, Filling and Bleeding in this section.
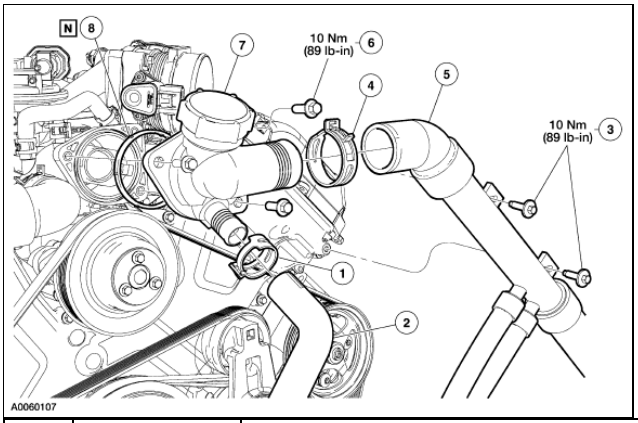
2. Remove the engine appearance cover.
3. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04A .
4. To remove individual components, only carry out the listed steps.

Component	Steps
Thermostat housing and thermostat	1-8
Thermostat	1-12

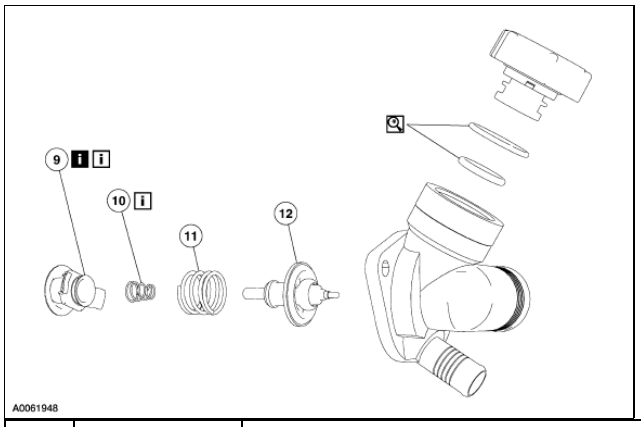
5. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	15161	Auxiliary coolant pump-to-thermostat housing hose clamp
2	18K580	Auxiliary coolant pump-to-thermostat housing hose
3	W503925	Lower radiator hose support bracket bolts (2 req'd)

4	15161	Lower radiator-to-thermostat housing hose clamp
5	8B273	Lower radiator-to-thermostat housing hose
6	W500014	Thermostat housing bolts (3 req'd)
7	8594	Thermostat housing
8	8A571	Thermostat housing O-ring seal

6. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
9		Thermostat-to-thermostat housing retainer (part of 8575) Removal Note
9		Thermostat-to-thermostat housing retainer (part of 8575) Installation Note
10		Thermostat spring (part of 8575) Installation Note
11		Thermostat main spring (part of 8575)
12		Thermostat element (part of 8575)

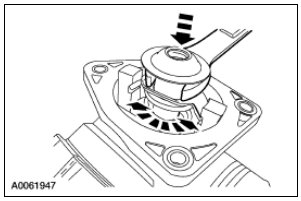
7. To install, reverse the removal procedure.

8. Fill and bleed the cooling system. For additional information, refer to Cooling System Draining, Filling and Bleeding in this section.

Item 9: Thermostat-to-Thermostat Housing Retainer Removal Note

1. **NOTE:** Thermostat can be rotated in either direction to release it from the thermostat housing.

   Using an 18 mm open-end wrench, simultaneously push down and turn the thermostat retainer to release the thermostat from the housing.



Item 10: Thermostat Spring Installation Note

1. Be sure to install the small end of the thermostat spring towards the thermostat housing.

Item 9: Thermostat-to-Thermostat Housing Retainer Installation Note

1. ⚠ **CAUTION: When installing the thermostat into the thermostat housing, make sure to align the thermostat pin with the hole in the housing.**

   ⚠ **CAUTION: After installing the thermostat into the thermostat housing, make sure that the tabs on the thermostat retainer are locked into the tabs on the thermostat housing.**

   NOTE: Thermostat can be rotated in either direction to install it in the thermostat housing.

   Using an 18 mm open-end wrench, simultaneously push down and turn the thermostat retainer to install the thermostat in the housing.

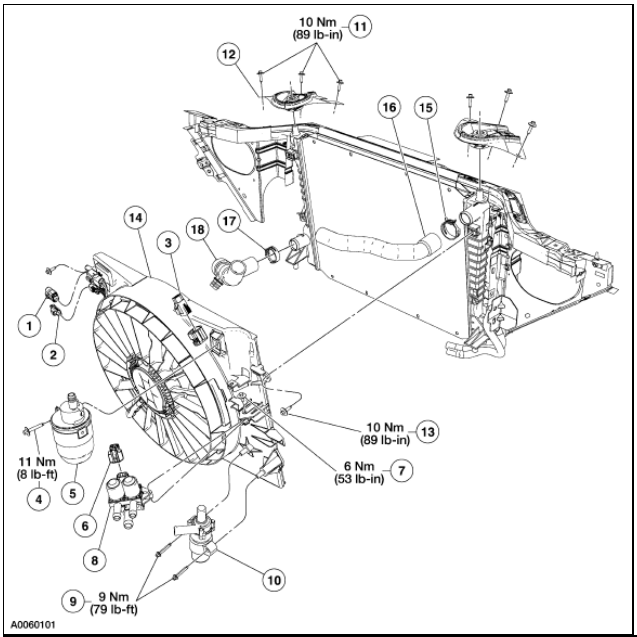
2. Remove the engine appearance cover.

3. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04A .

4. To remove individual components, only carry out the listed steps.

Component	Steps
Electric cooling fan and shroud	1-14
Radiator	1-25

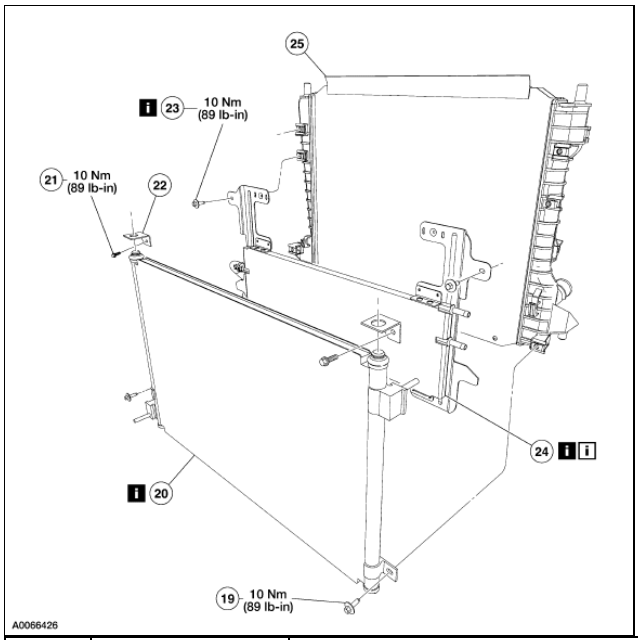
5. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	Electric cooling fan electrical connector

2	14A464-YB	Electric cooling fan electrical connector
3	14A464-AE	Coolant control valve jumper harness electrical connector
4	N606679	Receiver/dryer bolt
5	19959	Receiver/dryer and bracket (position aside)
6	14A464-AE	Coolant control valve electrical connector
7	W707845	Coolant control valve bolt
8	18495	Coolant control valve (position aside)
9	W702706	Auxiliary coolant pump bolts (2 req'd)
10	18D474	Auxiliary coolant pump
11	N606677	Upper radiator support bracket bolts (6 req'd)
12	8226	Upper radiator support brackets (2 req'd)
13	N606676	Electric cooling fan and shroud bolts (2 req'd)
14	8C607	Electric cooling fan and shroud
15	15161	Upper radiator hose clamp
16	8260	Upper radiator hose
17	15161	Lower radiator hose clamp
18	8B273	Lower radiator hose

6. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
19	N606676	A/C condenser bolts (2 req'd)
20	19710	A/C condenser (position aside) Removal Note
21	N606676	A/C condenser upper bracket bolts (2 req'd)
22		A/C condenser upper brackets (2 req'd)
23	N606676	Combination cooler bolts (2 req'd) Removal Note
24	3F749	

		Combination cooler (position aside) Removal Note
24	3F749	Combination cooler Installation Note
25	8005	Radiator

7. To install, reverse the removal procedure.

8. Fill and bleed the cooling system. For additional information, refer to Cooling System Draining, Filling and Bleeding in this section.

Item 20: A/C Condenser Removal Note

1. Lower the A/C condenser to gain access to the A/C condenser-to-radiator bolts.

Item 23: Combination Cooler Bolts Removal Note

1. It may be necessary to lean the radiator forward to gain access to the combination cooler bolts.

Item 24: Combination Cooler Removal Note

1. Lift the combination cooler up and forward to release it from the radiator retaining clips.

Item 24: Combination Cooler Installation Note

1. Make sure that the combination cooler is seated in the radiator retaining clips.

Intake Air

Printable View (7 KB)

The air intake system consists of the:

- air cleaner (ACL) inlet.
- air cleaner element.
- mass air flow (MAF) sensor.
- air cleaner outlet tube.

The air intake system:

- cleans intake air with a replaceable, dry-type air cleaner element.
- measures airflow and air temperature with the MAF sensor.

Fuel Charging and Controls

Printable View (51 KB)

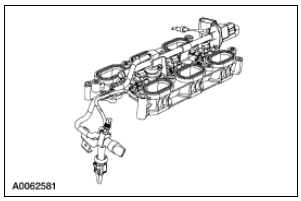
The fuel charging and controls system consists of the:

- electronic throttle body.
- fuel injectors.
- fuel charging wiring.
- fuel supply manifold.
- fuel pressure sensor
- fuel pressure relief (Schrader) valve.

The fuel charging and controls system is:

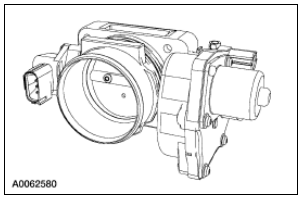
- a sequential multiport fuel injection (SFI) system.
- pulse-width modulated.
- mass airflow-controlled.

The powertrain control module (PCM) controls the fuel injection system. Injector pulse-width is varied to control the amount of fuel flow. Varying fuel pump output controls fuel pressure. The PCM commands the fuel pump driver module, which directly controls the fuel pump. The throttle body is electronically controlled by the engine management system (EMS). Throttle plate angle is changed electronically in response to throttle pedal movements initiated by the driver.



The fuel supply manifold:

- delivers fuel to the individual fuel injectors.
- receives fuel from the fuel supply line.
- is serviced as a lower intake manifold assembly only. For additional information, refer to Section 303-01A .



The electronic throttle body:

- controls air supply to the upper intake manifold by electronically positioning the throttle plate.
- is not adjustable.
- must not be cleaned.
- is serviced as an complete assembly only. For additional information, refer to Throttle Body in this section.

The fuel pressure relief valve:

- is used as a test port and to release fuel pressure.

The fuel injectors:

- are electronically controlled by the powertrain control module (PCM).
- atomize the fuel as the fuel is delivered.
- are deposit resistant.
- have an internal solenoid that opens a needle valve to inject fuel into the lower intake manifold.

The fuel pressure sensor:

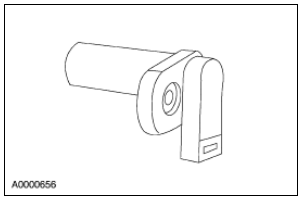
- maintains constant fuel pressure to the fuel injectors and throughout the fuel system.
- is spring-loaded and operated by intake manifold vacuum.

Engine Ignition

Printable View (31 KB)

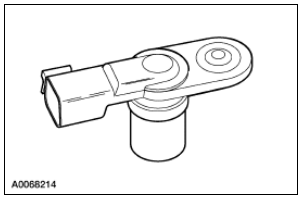
The electronic ignition (EI) system is a coil-on-plug (COP) ignition system. The COP ignition system consists of the following components:

- crankshaft position (CKP) sensor.
- camshaft position (CMP) sensor.
- ignition coils.
- spark plugs.



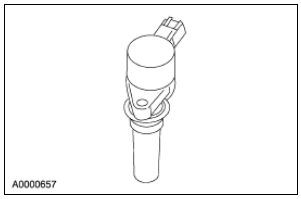
The crankshaft position sensor:

- is a variable reluctance sensor.
- is triggered by a 36-minus-1 tooth trigger wheel mounted on the crankshaft.
- provides base timing and crankshaft speed (rpm) to the powertrain control module (PCM).



The camshaft position sensor:

- sends the powertrain control module (PCM) a signal indicating camshaft position used for fuel and spark synchronization.



The six separate ignition coils:

- convert low voltage signals from the powertrain control module to high voltage pulses.
- produce the high voltage pulses for the spark plugs.
- are connected directly to each spark plug.

The spark plugs:

- convert a high voltage pulse into a spark which ignites the fuel and air mixture.
- originally equipped on the vehicle have a platinum-enhanced active electrode for long life.

Starting System

Printable View (7 KB)

The starting system consists of the following components:

- starter motor.
- ignition switch.
- digital transmission range (TR) sensor.
- starter relay.
- battery.

The function of the starting system is to crank the engine at a speed fast enough to permit the engine to start.

Electronic Engine Controls

Printable View (12 KB)

The electronic engine controls consist of the following:

- powertrain control module (PCM).
- two throttle position (TP) sensors.
- two camshaft position (CMP) sensors.
- crankshaft position (CKP) sensor.
- mass air flow (MAF) sensor.
- heated oxygen sensors (HO2S).
- catalyst monitor sensors.
- knock sensor (KS).
- cylinder head temperature (CHT) sensor.
- power steering pressure (PSP) switch.
- fuel pressure sensor.
- fuel temperature sensor.
- two intake manifold tuning (IMT) valves.

The PCM carries out the following functions:

- accepts inputs from various engine sensors to compute the fuel flow rate necessary to maintain a prescribed air/fuel ratio and spark synchronization throughout the entire engine operating range.
- outputs a command to the fuel injectors to meter the appropriate quantity of fuel.

The TP sensors:

- send the PCM a signal indicating the throttle plate angle.
- are the main input to the PCM from the driver.

The CMP sensors:

- send the PCM a signal indicating camshaft position used for fuel and spark synchronization.

The CKP sensor:

- sends the PCM a signal indicating crankshaft position.
- is essential for calculating spark timing.

The MAF sensor:

- sends the PCM a signal indicating mass airflow rate of air entering the engine.

The front HO2S:

- create a voltage signal dependent on exhaust oxygen content.
- provide feedback information to the PCM used to calculate fuel delivery.

The catalyst monitor sensors:

- monitor oxygen content after it flows through the catalytic converter.

- provide a voltage signal to the PCM used to calculate catalytic converter integrity.

The KS:

- is used to detect engine detonation.
- sends a voltage signal to the PCM.
- is able to provide a signal which retards the ignition timing, if necessary.

The cylinder head temperature sensor:

- is mounted into the wall of the cylinder head and is not connected to any coolant passages.
- sends a signal to the PCM indicating the cylinder head temperature.

- ♦ If the temperature exceeds approximately 121°C (250°F), the PCM disables half the fuel injectors at a time. The PCM will alternate which fuel injectors are disabled every 32 engine cycles. The cylinders that are not being fuel injected act as air pumps to aid in engine cooling.
- ♦ If the temperature exceeds approximately 166°C (330°F), the PCM disables all of the fuel injectors until the engine temperature drops below approximately 154°C (310°F).
- ♦ The coolant temperature gauge pointer will read fully hot.
- ♦ The check gauge warning indicator will illuminate and DTC's are set.

The PSP switch:

- monitors the outlet pressure of the power steering pump and is calibrated to both an actuation and release pressure setting.
- increases the outlet pressure to match the severity of the turn maneuver.

The fuel pressure sensor:

- sends the PCM a signal indicating fuel pressure.
  - ♦ The PCM uses the fuel pressure sensor signal to maintain the fuel liquid pressure in the fuel line which reduces the fuel vapor pressure in the fuel line.

The fuel temperature sensor:

- sends the PCM a signal indicating fuel temperature.
  - ♦ The PCM uses the fuel temperature sensor signal to help maintain a prescribed air/fuel ratio and spark synchronization throughout the entire engine operating range.

The IMT valves:

- connect the plenums to improve upper rpm power.

Intake Air Distribution and Filtering

Starting System

Printable View (245 KB)

Refer to Wiring Diagrams Cell 20 , Starting System for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

Anti-Theft Intervention

The starting system is electronically controlled by the passive anti-theft system (PATS). The PATS recognizes the correct electronically coded ignition key and signals the instrument cluster to provide a ground for the starter relay. The energized relay provides voltage to the starter solenoid, thereby allowing the starter motor to activate.

Inspection and Verification

⚠ WARNING: When carrying out underhood work in the vicinity of the starter motor, be aware that the heavy gauge battery input lead at the starter solenoid is "electrically hot" at all times. A protective cap or boot is provided over the terminal of this lead and must be installed after the repair procedure is completed. Failure to follow these instructions may result in personal injury.

⚠ WARNING: When working in the area of the starter motor, be careful to avoid touching hot exhaust components. Failure to follow these instructions can result in personal injury.

NOTE: When working on the starter system, make sure the anti-theft system is deactivated.

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Starter motor • Brackets	• Battery • Auxiliary junction box (AJB) fuse F121 (30A) • Battery junction box (BJB) fuse F22

	(20A) • Central junction box (CJB) fuse F201 (5A) • Starter relay • Loose or corroded connectors • Damaged wiring

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

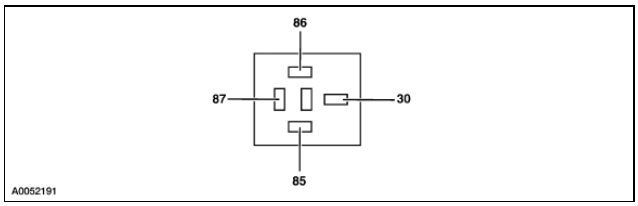
4. If the concern remains after the inspection, determine the symptom(s). GO to Symptom Chart .

Symptom Chart

Symptom Chart

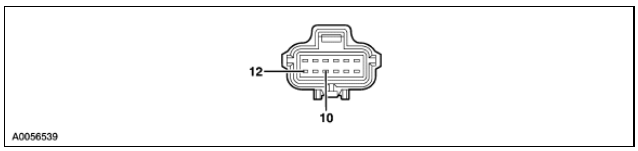
Connector Circuit Reference

Starter Motor Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
85	CKT 31S-BB12 (BK/YE) starter motor relay to instrument cluster	10,000 ohms or greater to chassis ground and 0 volts.
87	CKT 50-BB10 (GY/BK) starter motor relay to starter motor S terminal	Greater than 10 volts with ignition in the START position.
86	CKT 50S-BB12 (GY) starter motor relay to transmission range (TR) sensor	Greater than 10 volts with ignition in START position.
30	CKT 30-BB13 (RD) starter motor relay to power distribution box (PDB).	Greater than 10 volts with ignition in START position.

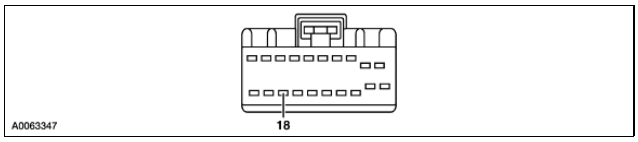
(TR) Sensor



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

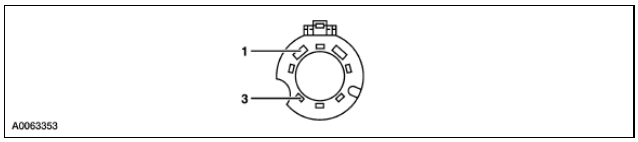
12	CKT 50S-BB12 (GY) TR sensor to starter relay pin 86	10 volts or greater in START position.
10	CKT 50-BB15 (GY/OG) TR sensor to CJB fuse 201 (5A)	10 volts or greater in START position.

Instrument Cluster



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
18	CKT 31S-BB12 (BK/YE) instrument cluster to starter motor relay	10,000 ohms or greater to chassis ground and 0 volts.

Ignition Switch



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30-BB9 (RD) ignition switch to PDB fuse 22 (20A)	10 volts or greater at all times.
3	CKT 50-DD5 (GY/BK) ignition switch to CJB fuse 201 (5A)	10 volts or greater in START position.

Normal Operation

Under normal operation the PDB supplies constant power to the starter relay on circuit 30-BB13 (RD) through fuse 121 (30A). When the key is placed in the START position, with the vehicle in PARK or NEUTRAL, the TR sensor provides power on circuit 50S-BB12 (GY) and the instrument cluster provides ground on circuit 31S-BB12 (BK/YE). The coil of the relay is energized and sends power to the starter motor on circuit 50-BB10 (GY/BK).

Pinpoint Tests

Possible Causes

An engine that does not crank can be caused by the following:

- Battery.
- Central junction box (CJB) fuse 201 (5A).
- Auxiliary junction box (AJB) fuse 121 (30A).

- Battery junction box (BJB) fuse 422 (20A).
- Ignition switch.
- Starter relay.
- Anti-theft system.
- Circuitry.

PINPOINT TEST A: THE ENGINE DOES NOT CRANK

Test Step	Result / Action to Take
A1 CHECK FOR INSTRUMENT CLUSTER DIAGNOSTIC TEST CODES	
• **NOTE:** The instrument cluster PATS DTCs are the only DTCs of concern in this step. Only repair retrieved non-PATS DTCs if a customer concern is reported. • Carry out the instrument cluster self-test. Refer to Section 413-00 . • **Were any PATS DTCs retrieved from the instrument cluster?**	**Yes** GO to Section 419-01 to diagnose the PATS DTCs. **No** GO to A2 .
A2 CHECK THE BATTERY	
• Check the battery condition and charge. Refer to Section 414-00 . • **Is the battery OK?**	**Yes** GO to A3 . **No** CHARGE or INSTALL a new battery as necessary. REFER to Section 414-00 . TEST the system for normal operation.
A3 CHECK THE BATTERY GROUND CABLE	
• Measure the voltage between the positive battery post and the battery ground cable connection on the engine.  • **Is the voltage greater than 10 volts?**	**Yes** GO to A4 . **No** INSTALL a new battery ground cable. REFER to Section 414-00 . TEST the system for normal operation.
A4 CHECK THE STARTER MOTOR GROUND	
• Measure the voltage between the battery positive post and the starter motor case.	**Yes** GO to A5 . **No** CLEAN the starter motor mounting flange and make sure the starter motor is correctly mounted. TEST the system for normal operation.

 A0002697 • **Is the voltage greater than 10 volts?**	
A5 CHECK THE POWER SUPPLY TO THE STARTER MOTOR	
• Measure the voltage between starter motor B-terminal and ground.  A0002698 • **Is the voltage greater than 10 volts?**	**Yes** GO to A6 . **No** REPAIR circuit 30 BB10 (RD). TEST the system for normal operation.
A6 CHECK THE STARTER MOTOR B-TERMINAL	
• Connect a fused jumper wire to the B-terminal of the starter motor. Momentarily connect the other lead of the jumper wire to the starter motor S-terminal.  A0002699 • **Did the starter motor engage and the engine crank?**	**Yes** GO to A7 . **No** INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation.
A7 CHECK THE START INPUT TO THE STARTER MOTOR	
• Disconnect: Starter Motor C197. • Measure the voltage between starter motor C197, circuit 50 BB10 (GY/BK), harness side and ground while holding the ignition switch in the START position.  A0002700 • Key in START position. • **Is the voltage greater than 10 volts in START?**	**Yes** CLEAN the starter motor S-terminal and connector. CHECK the wiring and the starter motor for a loose or intermittent connection. TEST the system for normal operation. **No** GO to A8 .
A8 CHECK THE START INPUT TO THE STARTER RELAY	

• Disconnect: Starter Relay. • Make sure the vehicle is in PARK or NEUTRAL. • Turn the ignition switch to START and hold. • Measure the voltage between starter relay pin 86, circuit 50S-BB12 (GY), harness side and ground.  A0003577 • **Is the voltage greater than 10 volts?**	**Yes** GO to A9 . **No** GO to A14 .
A9 CHECK THE GROUND SUPPLY TO THE STARTER RELAY	
• Make sure the vehicle is in PARK or NEUTRAL. • Turn the ignition switch to START and hold. • Measure the resistance between the starter relay pin 85, circuit 31S-BB12 (BK/YE), harness side and ground.  A0002728 • **Is the resistance less than 5 ohms?**	**Yes** GO to A11 . **No** GO to A10 .
A10 CHECK THE CIRCUIT 31S-BB12 (BK/YE) FOR AN OPEN	
• Disconnect: Instrument Cluster C220b. • Measure the resistance between starter relay pin 85, circuit 31S-BB12 (BK/YE), harness side and instrument cluster C220b pin 18, circuit 31S-BB12 (BK/YE), harness side.	**Yes** INSTALL a new instrument cluster. REFER to Section 413-00 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0003472 • **Is the resistance less than 5 ohms?**	
A11 CHECK THE BATTERY SUPPLY TO THE STARTER RELAY	
• Measure the voltage between starter relay pin 30, circuit 30-BB13 (RD), harness side and ground.  A0003474 • **Is the voltage greater than 10 volts?**	**Yes** GO to A12 . **No** REPAIR the circuit. TEST the system for normal operation.
A12 CHECK CIRCUIT 50-BB10 (GY/BK) AND 50S-BB12 (GY) FOR AN OPEN	
• Disconnect the eyelet from the starter S-terminal. • Measure the resistance between starter relay pin 87, circuit 50-BB10 (GY/BK), harness side and the S-terminal eyelet C197, circuit 50-BB10 (GY/BK), harness side.  A0000706	**Yes** GO to A13 . **No** REPAIR the circuit(s). TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
A13 CHECK CIRCUIT 50-BB10 (GY/BK) AND 50S-BB12 (GY) FOR A SHORT TO GROUND	
• Measure the resistance between starter relay pin 87, circuit 50-BB10 (GY/BK), harness side and S-terminal eyelet C197, circuit 50-BB10 (GY/BK), harness side.  A0000706 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new starter relay. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A14 CHECK FUSE 201 (5A)	
• Check fuse: CJB Fuse 201 (5A). • **Is CJB fuse 201 (5A) open?**	**Yes** GO to A21 . **No** GO to A15 .
A15 CHECK THE START INPUT TO FUSE 201 (5A)	
• Disconnect: CJB Fuse 201 (5A). • Turn the ignition switch to the START position and hold. • Measure the voltage between CJB fuse 201 (5A) input terminal and ground.  A0000670 • **Is the voltage greater than 10 volts?**	**Yes** GO to A19 . **No** GO to A16 .
A16 CHECK THE BATTERY INPUT TO THE IGNITION SWITCH	

• Disconnect: Ignition Switch C250. • Measure the voltage between ignition switch C250 pin 1, circuit 30-BB9 (RD), harness side and ground.  A0000685 • **Is the voltage greater than 10 volts?**	**Yes** GO to A17 . **No** REPAIR the circuit. TEST the system for normal operation.
A17 CHECK CIRCUIT 50-DD5 (GY/BK) FOR AN OPEN	
• Measure the resistance between ignition switch C250 pin 3, circuit 50-DD5 (GY/BK), harness side and CJB fuse 201 (5A) input terminal, circuit 50-DD5 (GY/BK), harness side.  A0004195 • **Is the resistance less than 5 ohms?**	**Yes** GO to A18 . **No** REPAIR the circuit. TEST the system for normal operation.
A18 CHECK CIRCUIT 50-DD5 (GY/BK) FOR A SHORT TO GROUND	
• Measure the resistance between ignition switch C250 pin 3, circuit 50-DD5 (GY/BK), harness side and CJB fuse 201 (5A) input terminal, circuit 50-DD5 (GY/BK), harness side.  A0002692 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new ignition switch. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

A19 CHECK CIRCUIT 50-BB15 (GY/OG) FOR AN OPEN	
• Connect: CJB Fuse 201 (5A). • Disconnect: Digital TR Sensor C167. • Turn the ignition switch to the START position and hold. • Measure the voltage between digital TR sensor C167 pin 10, circuit 50-BB15 (GY/OG), harness side and ground.  A0002693 • **Is the voltage greater than 10 volts?**	**Yes** GO to A20 . **No** REPAIR the circuit. TEST the system for normal operation.
A20 CHECK CIRCUIT 50S-BB12 (GY) FOR AN OPEN	
• Measure the resistance between digital TR sensor C167 pin 12, circuit 50S-BB12 (GY), harness side and starter relay pin 86, circuit 50S-BB12 (GY), harness side.  A0002694 • **Is the resistance less than 5 ohms?**	**Yes** ADJUST the digital TR sensor. REFER to Section 307-01 . **No** REPAIR the circuit. TEST the system for normal operation.
A21 CHECK CIRCUIT 50-BB15 (GY/OG) FOR A SHORT TO GROUND	
• Measure the resistance between digital TR sensor C167 pin 10, circuit 50-BB15 (GY/OG), harness side and CJB fuse 201 (5A) output terminal C270b pin 3, circuit 50-BB15 (GY/OG), harness side.	**Yes** GO to A22 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0009036 • **Is the resistance greater than 10,000 ohms?**	
A22 CHECK CIRCUIT 50S-BB12 (GY) FOR A SHORT TO GROUND	
• Measure the resistance between digital TR sensor C167 pin 12, circuit 50S-BB12 (GY), harness side and starter relay pin 86, circuit 50S-BB12 (GY), harness side.  A0002694 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A23 . **No** REPAIR the circuit. TEST the system for normal operation.
A23 INSTALL A NEW FUSE 201 (5A)	
• Connect: Digital TR Sensor Switch C167. • Install a new CJB fuse 201 (5A). Retest the system. • **Does the fuse open?**	**Yes** ADJUST the digital TR sensor. REFER to Section 307-01 . **No** RETEST for normal operation. VERIFY the symptom.

Possible causes

Unusual starter noise can be caused by the following:

- Loose starter motor mounting bolts or brackets.
- Worn or damaged flywheel ring gear.
- Worn or damaged starter motor drive gear.

PINPOINT TEST B: UNUSUAL STARTER NOISE

Test Step	Result / Action to Take
B1 CHECK THE STARTER MOUNTING	
• Inspect the starter motor mounting bolts and brackets for looseness. • **Is the starter motor mounted correctly?**	**Yes** GO to B2 . **No** INSTALL the starter motor correctly. REFER to Starter Motor in this section. TEST the system for normal operation.
B2 CHECK FOR ENGINE NOISE	
• Turn the ignition switch to the OFF position. • Connect a fused jumper wire from the B-terminal to the S-terminal of the starter motor. Engage the starter motor and verify the noise is due to the starter operation. • **Is the noise due to the starter motor engagement?**	**Yes** GO to B3 . **No** REFER to Section 303-01B or Section 303-01B to continue the diagnosis.
B3 CHECK FOR UNUSUAL WEAR	
• Remove the starter motor. Refer to Starter Motor in this section. • Inspect the ring gear for damaged or worn teeth. • **Is the noise due to flywheel ring gear tooth damage?**	**Yes** INSTALL a new flywheel ring gear. EXAMINE the starter pinion teeth. If damaged, INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation. **No** INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation.

Component Tests

⚠ WARNING: When repairing the starter motor or carrying out other underhood work in the vicinity of the starter motor, be aware that the heavy gauge battery input lead at the starter solenoid is "electrically hot" at all times. Failure to follow these instructions can result in personal injury.

⚠ CAUTION: A protective cap or boot is provided over the battery input terminal on all vehicle lines and must be installed after repairing. Be sure to disconnect the battery ground cable before repairing the starter motor.

Connect the 73III Automotive Meter at the component terminal rather than at the wiring end connector. Making a connection at the wiring end connector could result in false readings because the meter will not pick up a high resistance between the wiring connector and the component.

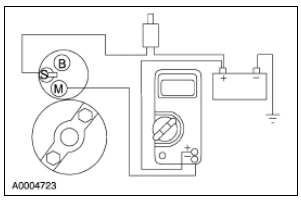
Starter Motor Motor Feed Circuit

1. Make sure the battery is fully charged. Carry out a battery load test. For additional information, refer to Section 414-00 .

2. Disconnect the inertia fuel shutoff (IFS) switch (9341).

3. Connect a remote starter switch between the starter solenoid S-terminal and the battery positive (+) terminal.

4. Connect the 73III Automotive Meter positive lead to the battery positive (+) post. Connect negative lead to the M-terminal.



5. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.8 volt or less.

6. If the voltage reading is 0.8 volt or less, go to the Starter Motor Ground Circuit Component Test.

7. If the voltage reading is greater than 0.8 volt, this is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Move the 73III Automotive Meter negative lead to the starter solenoid B-terminal and repeat the test. If the voltage reading at the B-terminal is lower than 0.8 volt, the concern is either in the connections at the starter solenoid or in the solenoid contacts.

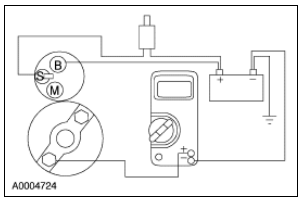
8. Remove the cables from solenoid B-, S- and M-terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6. If the voltage drop reading is still greater than 0.8 volt when checked at the M-terminal and less than 0.8 volt when checked at the B-terminal, the concern is in the solenoid contacts. Install a new starter motor.

9. If the voltage reading taken at the solenoid B-terminal is still greater than 0.8 volt after cleaning the cables and the connections at the solenoid, the concern is either in the positive (+) battery cable connection or in the positive battery cable itself. Clean the positive (+) battery cable connection. If this does not solve the problem, install a new positive battery cable. For additional information, refer to Section 414-00 .

Starter Motor Ground Circuit

A slow cranking condition can be caused by resistance in the ground or return portion of the cranking circuit. Check the voltage drop in the ground circuit as follows:

1. Connect the 73III Automotive Meter positive lead to the starter motor housing (the connection must be clean and free of rust or grease). Connect the negative lead to the negative (-) battery terminal.



2. Engage the remote starter switch and crank the engine. Read and record the voltage reading. The reading should be 0.5 volt or less.

3. If the voltage is more than 0.5 volt, clean the negative cable connections at the battery, the body ground connections, and the starter ground connections. Retest.

4. If the voltage is more than 0.5 volt, install a new cable. If the voltage reading is less than 0.5 volt and the engine still cranks slowly, install a new starter motor.

Engine Ignition

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Electronic Engine Controls

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Air Cleaner Assembly

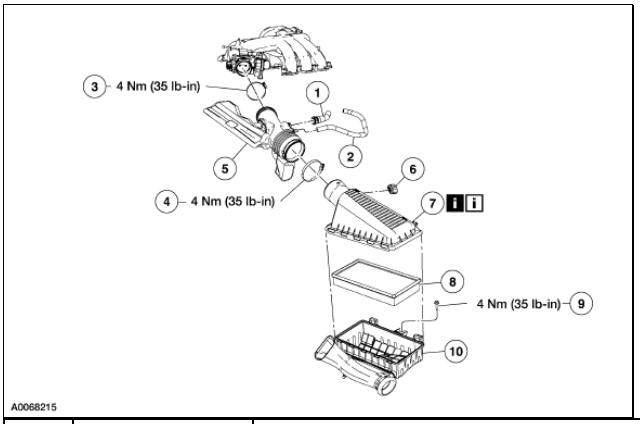
Printable View (57 KB)

1. Remove the engine appearance cover.

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the listed steps.

Component	Steps
Air cleaner outlet pipe	1-5
Air cleaner element	6-8
Air cleaner outlet tube and cover assembly	1-7
Air cleaner assembly	4-6 and 9-10

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	6758	Crankcase vent tube
2	9C490	Fuel vapor tube
3	9C632	Air cleaner outlet tube clamp
4	9C632	Air cleaner outlet tube-to-air cleaner cover clamp
5	9F805	Air intake resonator and tube assembly
6	14A464	Mass air flow (MAF) electrical connector
7	9643	Air cleaner cover Removal Note
7	9643	Air cleaner cover Installation Note
8	9601	Air cleaner element
9	W503926	Air cleaner tray bolt
10	9A612	Air cleaner tray

Item 7: Air Cleaner Cover Removal Note

1. **NOTE:** No tools are needed to remove the air cleaner cover. Removal should be carried out using hands only.

   Release the snaps and separate the air cleaner cover from the air cleaner tray.

Item 7: Air Cleaner Cover Installation Note

1. **NOTE:** No tools are needed to install the air cleaner cover. Installation should be carried out using hands only.

   Use the alignment notches to correctly align the air cleaner cover to the air cleaner tray.

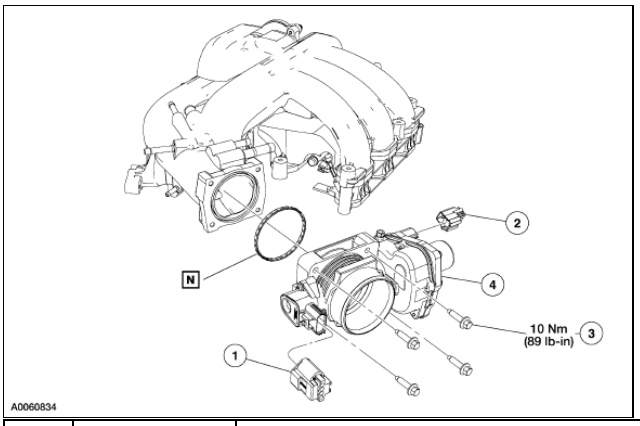
Throttle Body

Printable View (77 KB)

⚠ CAUTION: The electronic throttle body is serviced as a complete assembly. Individual components cannot be serviced.

⚠ CAUTION: Throttle body bore and plate area have a special coating and cannot be cleaned, or possible damage to the throttle body can occur.

1. Remove the engine appearance cover.
2. Remove the air cleaner outlet tube. For additional information, refer to Air Cleaner Assembly in this section.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1		Throttle position (TP) sensor electrical connector (part of 14A464)
2		Electronic throttle body motor electrical connector (part of 14A464))
3	W701242	Electronic throttle body bolts
4	9F991	Electronic throttle body

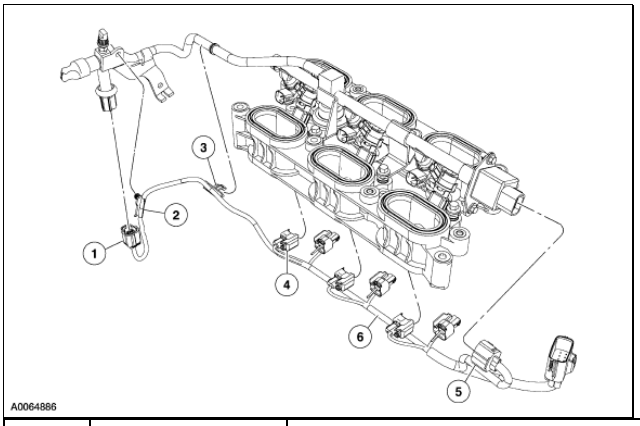
Fuel Charging Wiring Harness

Printable View (97 KB)

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components the fuel system pressure must be relieved. Failure to do so can result in personal injury.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the lower intake manifold. For additional information, refer to Section 303-01A .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	14A464	Fuel temperature sensor electrical connector
2	14A163	Fuel charging wiring harness retaining pin
3	13A506	Fuel charging wiring harness retaining clip
4	98AG	Fuel injector electrical connector (6 req'd)
5	14A464	Fuel pressure sensor electrical connector
6	9D930	Fuel charging wiring harness

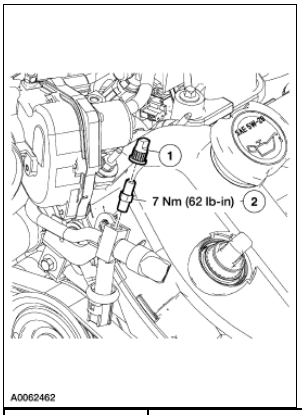
Fuel Pressure Relief Valve

Printable View (67 KB)

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited. Failure to follow these instructions can result in personal injury.

⚠ WARNING: Fuel in the system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components, the fuel system must be relieved. Failure to follow these instructions can result in personal injury.

1. Remove the engine appearance cover.
2. Release the fuel pressure. For additional information, refer to Section 310-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



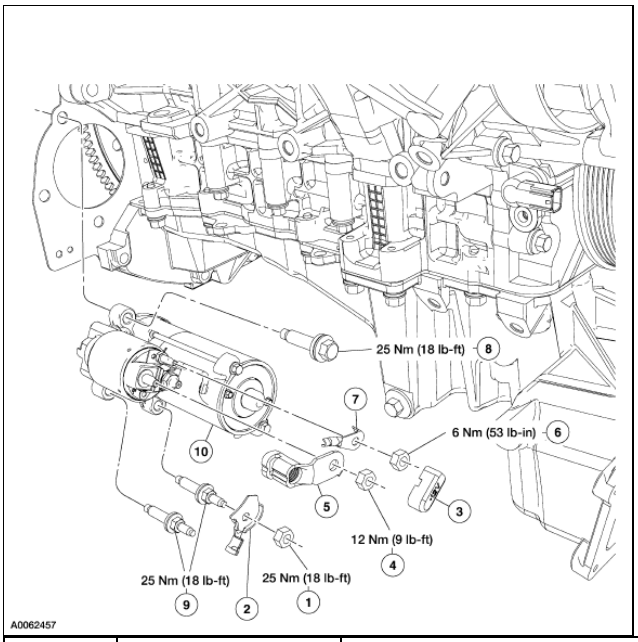
Item	Part Number	Description
1	4522	Fuel pressure relief valve cap
2	4522B	Fuel pressure relief valve

Starter Motor

Printable View (175 KB)

⚠ WARNING: When carrying out maintenance on the starting system be aware that the heavy gauge leads are connected directly to the battery. Make sure the protective caps are in place when maintenance is completed.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	N500617	Ground strap nut
2	14463	Ground strap
3	11N087	Starter motor solenoid terminal cover
4	N800136	Starter solenoid battery cable nut
5	14463	Starter solenoid battery cable
6	N800156	Starter solenoid wire nut
7	14463	Starter solenoid wire
8	W704666	Starter motor bolt
9	W705359	Starter motor stud bolts (2 req'd)
10	11000	Starter motor

Ignition Coil-On-Plug and Spark Plug RH

Printable View (60 KB)

Material

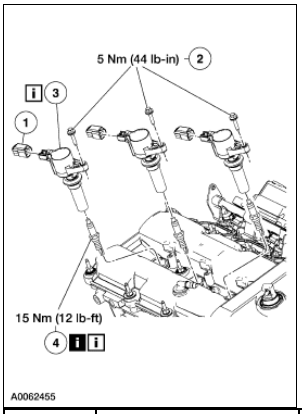
Item	Specification
Silicone Brake Caliper Grease and Dielectric Compound D7AZ-19A331-A (Motorcraft XG-3) or equivalent	ESE-M1C171-A

1. Remove the upper intake manifold. For additional information, refer to Section 303-01A .

2. Remove the components in the order indicated in the following illustration and table. To remove individual components only carry out the listed steps.

Component	Steps
Ignition coil	1-3
Spark plug	1-4

3. To install, reverse the removal procedure.



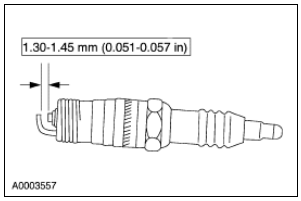
Item	Part Number	Description
1	14A464	Ignition coil electrical connectors (3 req'd)
2	W701663	Ignition coil bolts (3 req'd)
3	12A366	Ignition coils (3 req'd) Installation Note
4	12405	Spark plugs (3 req'd) Removal Note
4	12405	Spark plugs (3 req'd) Installation Note

Item 4: Spark Plug Removal Note

1. Use compressed air to remove any foreign material from the spark plug well before removing the spark plugs.

Item 4: Spark Plug Installation Note

1. Inspect the spark plugs and adjust the spark plug gap as necessary.



Item 3: Ignition Coil Installation Note

1. Apply silicone dielectric compound to the inside of the ignition coil boots before installing.

Ignition Coil-On-Plug and Spark Plug LH

Printable View (61 KB)

Material

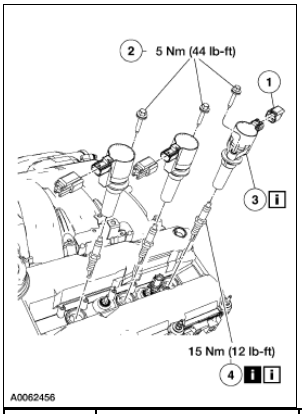
Item	Specification
Silicone Brake Caliper Grease and Dielectric Compound D7AZ-19A331-A (Motorcraft XG-3) or equivalent	ESE-M1C171-A

1. Remove the engine appearance cover.

2. Remove the components in the order indicated in the following illustration and table. To remove individual components only carry out the listed steps.

Component	Steps
Ignition coils	1-3
Spark plugs	1-4

3. To install, reverse the removal procedure.



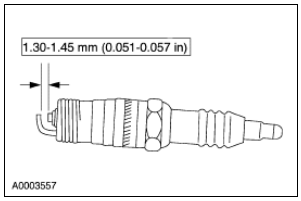
Item	Part Number	Description
1	14A464	Ignition coil electrical connectors (3 req'd)
2	W701663	Ignition coil bolts (3 req'd)
3	12A366	Ignition coils (3 req'd) Installation Note
4	12405	Spark plugs (3 req'd) Removal Note
4	12405	Spark plugs (3 req'd) Installation Note

Item 4: Spark Plug Removal Note

1. Use compressed air to remove any foreign material from the spark plug well before removing the spark plugs.

Item 4: Spark Plug Installation Note

1. Inspect the spark plugs and adjust the spark plug gap as necessary.



Item 3: Ignition Coil Installation Note

1. Apply silicone dielectric compound to the inside of the ignition coil boots before installing.

Camshaft Position (CMP) Sensor

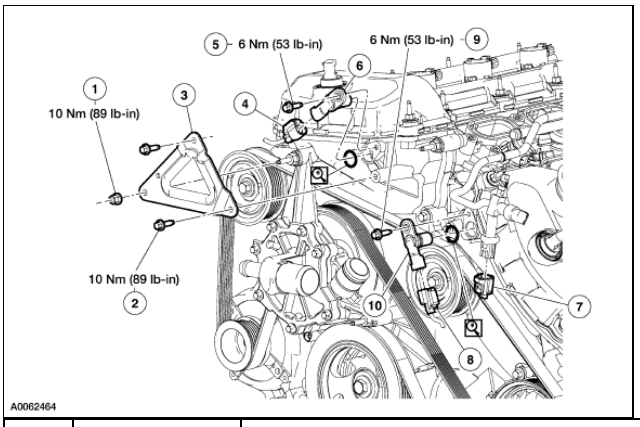
Printable View (150 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the listed steps.

Component	Steps
RH camshaft position (CMP) sensor	1-6
LH CMP sensor	7-10

3. To install, reverse the removal procedure.

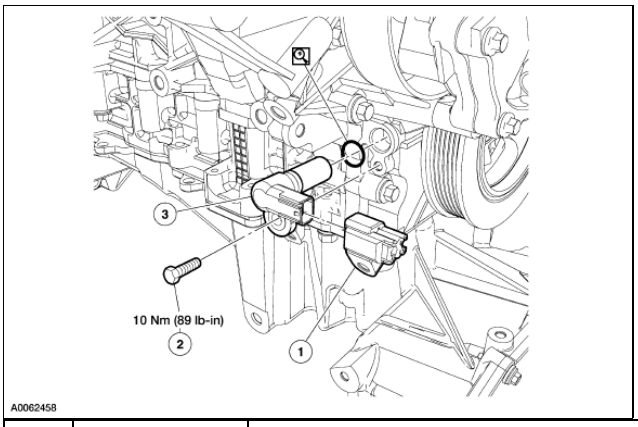


Item	Part Number	Description
1	701542	Upper intake support bracket nut
2	W701719	Upper intake support bracket bolt (2 req'd)
3	9J444	Upper intake support bracket
4	14A464	RH CMP electrical connector
5	500214	RH CMP bolt
6	6B288	RH CMP
7		Fuel temperature sensor electrical connector (part of 14A464)
8	14A464	LH CMP electrical connector
9	500214	LH CMP bolt
10	6B288	LH CMP

Crankshaft Position (CKP) Sensor

Printable View (116 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.

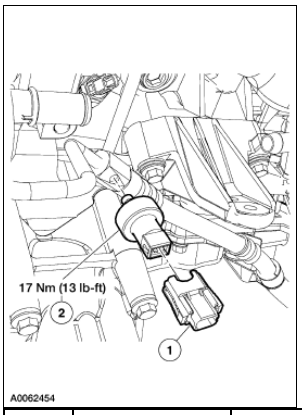


Item	Part Number	Description
1	14A464	Crankshaft position (CKP) sensor electrical connector
2	500212	CKP sensor bolt
3	6C315	CKP sensor

Power Steering Position (PSP) Switch

Printable View (61 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



Item	Part Number	Description
1		Power steering pressure (PSP) switch electrical connector (part of 12B637)
2		PSP switch

Powertrain Control Module (PCM)

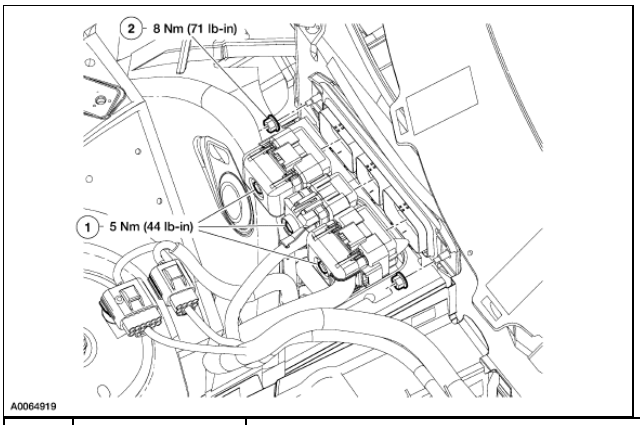
Special Tool(s)

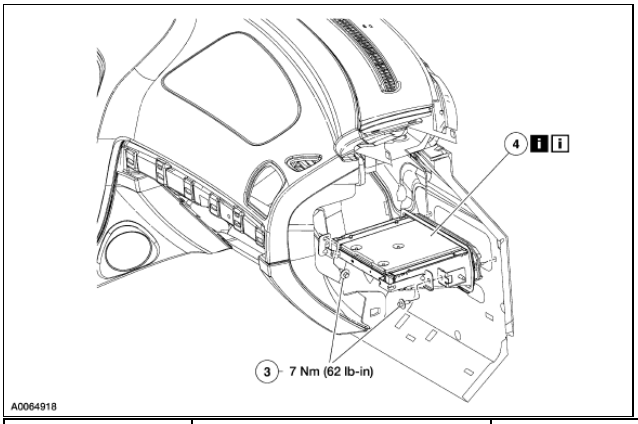
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the cabin air filter plenum. For additional information, refer to Section 412-00 .
3. Remove the glove compartment. For additional information, refer to Section 501-01 .
4. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	Powertrain control module (PCM) electrical connectors
2	N621927	PCM retaining nuts

5. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
3	606625	PCM bracket bolts
4	031400	PCM and bracket Removal Note
4	031400	PCM and bracket Installation Note

6. To install, reverse the removal procedure.
7. Connect the scan tool.
8. Select ignition control module (ICM).
9. Select ENTER SECURITY ACCESS. Wait 10 minutes for security access to be granted.
10. Select PARAMETER RESET.
11. Disconnect the scan tool.
12. Place the ignition key in the OFF position.
13. Place the ignition key in the RUN position.
14. Remove the ignition key.

Item 4: PCM and Bracket Removal Note

1. Remove the PCM and bracket as an assembly through the glove compartment opening.

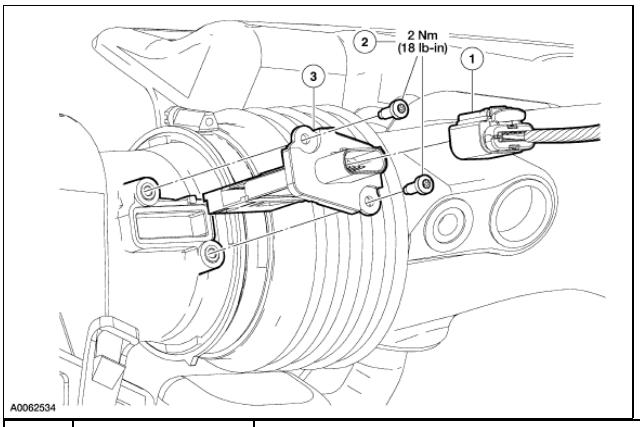
Item 4: PCM and Bracket Installation Note

1. Install the PCM and bracket as an assembly through the glove compartment opening.

Mass Air Flow (MAF) Sensor

Printable View (90 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	12B637	Mass air flow (MAF) sensor electrical connector
2		MAF sensor bolts
3	12B605	MAF sensor

Heated Oxygen Sensor (HO2S) and Catalyst Monitor Sensor

Printable View (86 KB)

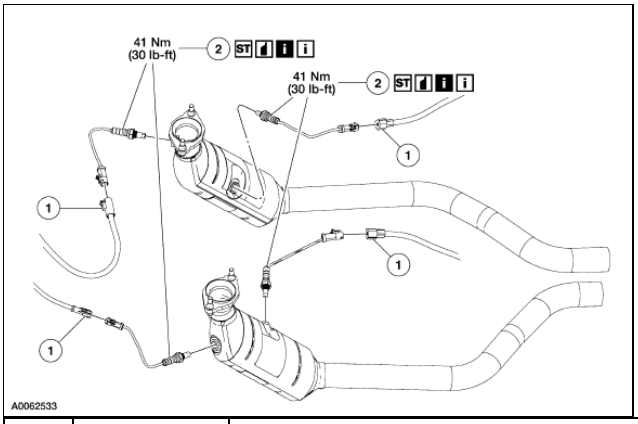
Special Tool(s)

ST1448-A	Socket, Exhaust Gas Oxygen Sensor 303-476 (T94P-9472-A)

Material

Item	Specification
Nickel Anti-Seize Lubricant XL-2 (in Canada CXG-2) or equivalent	ESE-M12A4-A

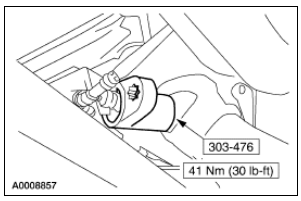
1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	14A464	Heated oxygen sensor (HO2S) and catalyst monitor sensor electrical connectors
2	9G472	HO2S and catalyst monitor sensors Removal Note
2	9G472	HO2S and catalyst monitor sensors Installation Note

Item 2: HO2S and Catalyst Monitor Sensors Removal Note

1. Using the special tool, remove the HO2S and the catalyst monitor sensors.



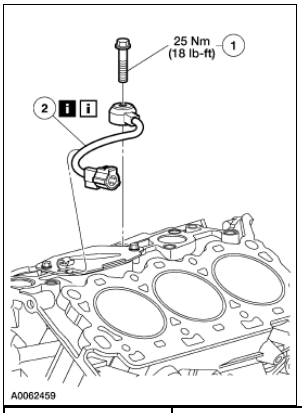
Item 2: HO2S and Catalyst Monitor Sensors Installation Note

1. **NOTE:** Apply a light coat of anti-seize lubricant to the threads of the HO2S and the catalyst monitor sensors.

   Using the special tool, install the HO2S and the catalyst monitor sensors.

Knock Sensor (KS) Printable View (46 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the lower intake manifold. For additional information, refer to Section 303-01A .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	W500310	Knock sensor (KS) bolt
2	12A699	KS Removal Note
2	12A699	KS Installation Note

Item 2: KS Removal Note

1. Release the KS harness from the retaining clip before removing the KS.

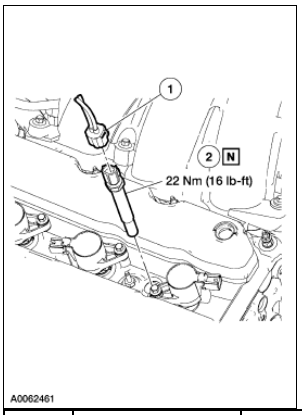
Item 2: KS Installation Note

1. Attach the KS harness to the retaining clip after installing KS.

Cylinder Head Temperature (CHT) Sensor

Printable View (43 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	14A464	Cylinder head temperature (CHT) sensor electrical connector
2	6G004	CHT sensor

Fuel Pressure Sensor

Printable View (172 KB)

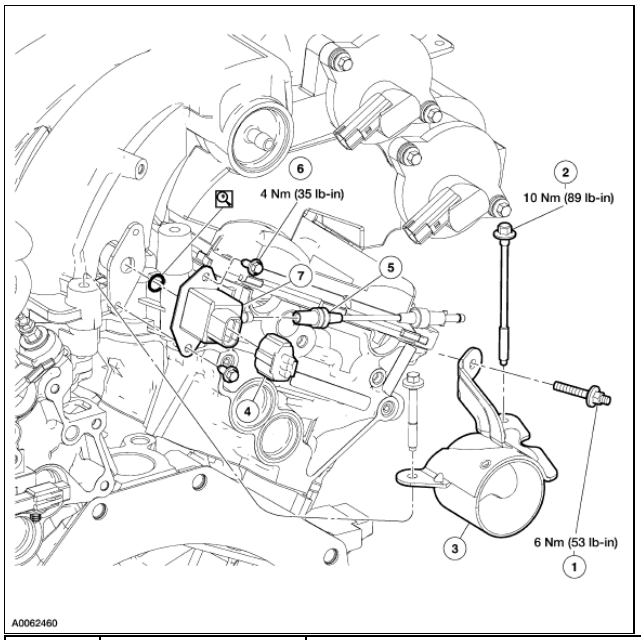
Material

Item	Specification
Super Premium SAE 5W-20 XO-5W20-QSP or equivalent	WSS-M2C153-H

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components the fuel system pressure must be relieved. Failure to do so can result in personal injury.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Remove the cowl vent screen. For additional information, refer to Section 501-00 .
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	W705779	Fuel pressure sensor shield stud bolt
2	W701724	Fuel pressure sensor shield bolts (2 req'd)
3	9G609	Fuel pressure sensor shield

4	14A464	Fuel pressure sensor electrical connector
5	9E499	Fuel pressure sensor vacuum hose
6	4674	Fuel pressure sensor bolts (2 req'd)
7	4682	Fuel pressure sensor

Fuel Temperature Sensor

Printable View (84 KB)

Special Tool(s)

ST1147-A	Disconnect Tool, Spring Lock Coupling (1/2 inch) 310-D004 (D87L-9280-B) or equivalent

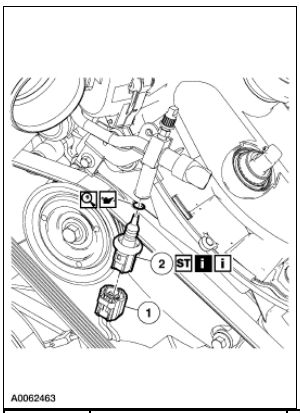
Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components the fuel system pressure must be relieved. Failure to do so can result in personal injury.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Remove the air cleaner outlet tube. For additional information, refer to Air Cleaner Assembly in this section.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.

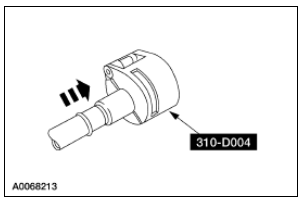


Item	Part Number	Description
1	14A464	Fuel temperature sensor electrical connector

2	4702	Fuel temperature sensor Removal Note
2	4702	Fuel temperature sensor Installation Note

Item 2: Fuel Temperature Sensor Removal Note

1. Using the special tool, remove the fuel temperature sensor. For additional information, refer to Section 310-00 .



Item 2: Fuel Temperature Sensor Installation Note

1. **NOTE:** Lubricate the O-rings with clean engine oil.

   Align the fuel temperature sensor with the fuel tube and push together until an audible click is heard. Pull on the fittings to make sure they are fully engaged.

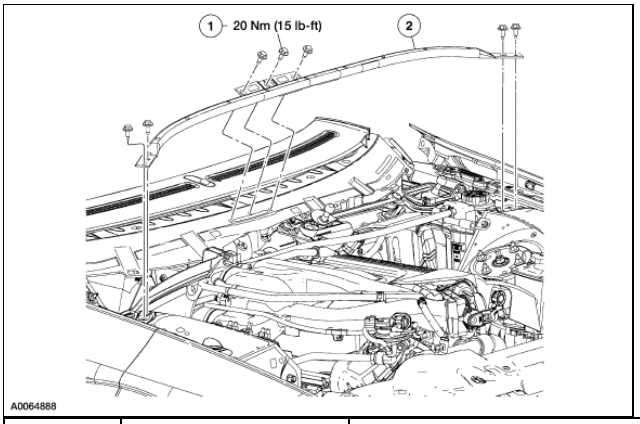
Intake Manifold Tuning (IMT) Valve

Printable View (201 KB)

Material

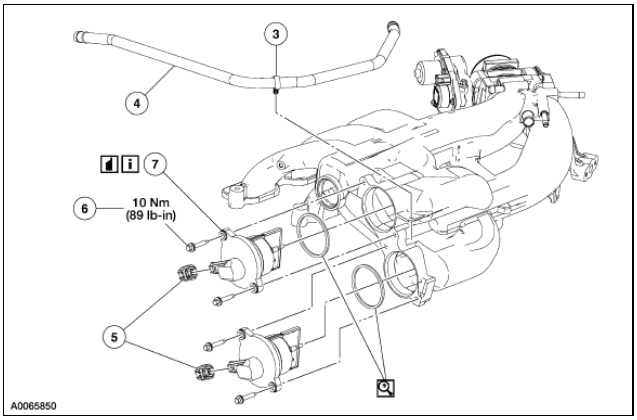
Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the cowl vent screen. For additional information, refer to Section 501-00 .
3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	708009	Cross-vehicle support bolts (7 req'd)
2	3B328	Cross-vehicle support

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
3	13A506	Crankcase vent hose retaining clip
4	6758	Crankcase vent hose
5	14A464	Intake manifold tuning (IMT) valve electrical connectors
6	701519	IMT valve bolts (4 req'd)
7	9L490	IMT valve (2 req'd) Installation Note

5. To install, reverse the removal procedure.

Item 7: IMT Valve Installation Note

⚠ CAUTION: The IMT valve must be fully seated in the intake manifold prior to installing the bolts, or damage to the IMT valve can occur.

1. Coat the IMT valve with clean engine oil before installing it in the intake manifold.

Intake Air

Printable View (7 KB)

The air intake system consists of the:

- air cleaner (ACL) inlet.
- air cleaner element.
- mass air flow (MAF) sensor.
- air cleaner outlet tube.

The air intake system:

- cleans intake air with a replaceable, dry-type air cleaner element.
- measures airflow and air temperature with the MAF sensor.

Fuel Charging and Controls

Printable View (51 KB)

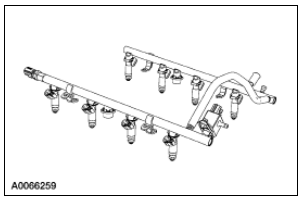
The fuel charging and controls system consists of the:

- electronic throttle body.
- fuel injectors.
- fuel charging wiring harness.
- fuel injection supply manifold.

The fuel charging and controls system is:

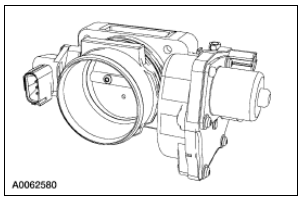
- a sequential multiport fuel injection (SFI) system.
- pulse-width modulated.
- mass airflow controlled.

The powertrain control module (PCM) controls the fuel injection system. Injector pulse-width is varied to control the amount of fuel flow. Varying fuel pump output controls fuel pressure. The PCM commands the fuel pump driver module, which directly controls the fuel pump. The throttle body is electronically controlled by the engine management system (EMS). Throttle plate angle is changed electronically in response to throttle pedal movements initiated by the driver.



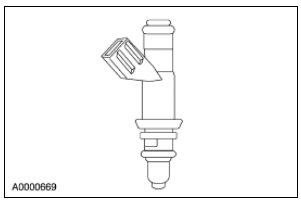
The fuel injection supply manifold:

- delivers fuel to the individual fuel injectors.
- receives fuel from the fuel supply line.



The electronic throttle body:

- controls air supply to the intake manifold by electronically positioning the throttle plate.
- is not adjustable.
- must not be cleaned.



The fuel injectors:

- are electronically operated by the powertrain control module (PCM).
- atomize the fuel as the fuel is delivered.
- each have an internal solenoid which opens a needle valve to inject fuel into the lower intake manifold.
- are deposit-resistant.

The fuel pressure sensor:

- maintains constant fuel pressure to the fuel injectors and throughout the fuel system.
- is spring-loaded and operated by intake manifold vacuum.

The engine wiring harness:

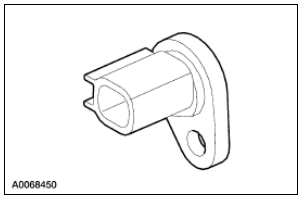
- connects the fuel injectors and other electronic engine controls, such as the throttle position (TP) sensor, to the powertrain control module.
- receives fuel injector signals from the powertrain control module and transfers the signals to the fuel injectors.

Engine Ignition

Printable View (32 KB)

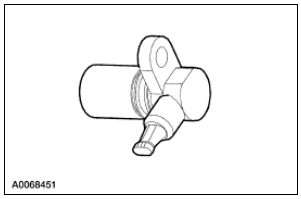
The electronic ignition (EI) system is a coil-on-plug (COP) ignition system. The COP ignition system consists of the following components:

- crankshaft position (CKP) sensor.
- camshaft position (CMP) sensor.
- ignition coils.
- spark plugs.



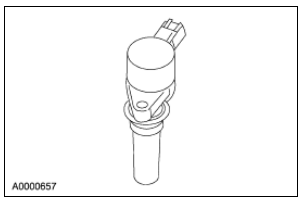
The crankshaft position sensor:

- is a variable reluctance sensors.
- is mounted to the engine sump body.
- is triggered by a 36-minus-1 tooth trigger wheel mounted on the crankshaft.
- provides base timing and crankshaft speed (rpm) to the powertrain control module (PCM).



The two camshaft position sensors:

- are mounted on the rear of each cylinder head.
- send the powertrain control module (PCM) a signal indicating camshaft position used for fuel and spark synchronization.



The eight separate ignition coils:

- convert low voltage signals from the PCM to high voltage pulses.
- produce the high voltage pulses for the spark plugs.
- are connected directly to each spark plug.

The spark plugs:

- convert a high voltage pulse into a spark which ignites the fuel and air mixture.
- originally installed on the vehicle have a platinum-enhanced active electrode for long life.

Starting System

Printable View (7 KB)

The starting system consists of the following components:

- starter motor.
- ignition switch.
- digital transmission range (TR) sensor.
- starter relay.
- battery.

The function of the starting system is to crank the engine at a speed fast enough to permit the engine to start.

Electronic Engine Controls

Printable View (11 KB)

The electronic engine controls consist of the following:

- powertrain control module (PCM).
- two throttle position (TP) sensors.
- two camshaft position (CMP) sensors.
- crankshaft position (CKP) sensor.
- mass air flow (MAF) sensor.
- heated oxygen sensors (HO2S).
- catalyst monitor sensors.
- two knock sensors (KS).
- cylinder head temperature (CHT) sensor.
- power steering pressure (PSP) switch.
- fuel pressure sensor.

The PCM carries out the following functions:

- accepts inputs from various engine sensors to compute the fuel flow rate necessary to maintain a prescribed air/fuel ratio and spark synchronization throughout the entire engine operating range.
- outputs a command to the fuel injectors to meter the appropriate amount of fuel.

The TP sensors:

- send the PCM a signal indicating the throttle plate angle.
- are the main input to the PCM from the driver.

The CMP sensors:

- send the PCM a signal indicating camshaft position used for fuel and spark synchronization.

The PSP switch:

- monitors the outlet pressure of the power steering pump and is calibrated to both an actuation and release pressure setting.
- increases the outlet pressure to match the severity of the turn maneuver.

The CKP sensor:

- sends the PCM a signal indicating crankshaft position.
- is essential for calculating spark timing.

The MAF sensor:

- sends the PCM a signal indicating mass air flow rate of air entering the engine.

The front HO2S:

- create a voltage signal dependant on exhaust oxygen content.
- provide feedback information to the PCM used to calculate fuel delivery.

The catalyst monitor sensors:

- monitor oxygen content after it flows through the catalytic converter.
- provide a voltage to the PCM used to calculate catalytic converter integrity.

The KS:

- are located in the intake valley.
- sends a voltage signal to the PCM indicating engine detonation. (If detonation is occurring, the PCM then changes spark timing.)

The CHT sensor:

- is mounted into the wall of the cylinder head and is not connected to any coolant passages.
- sends a signal to the PCM indicating the cylinder head temperature.
- If the temperature exceeds approximately 121°C (250°F), the PCM disables half the fuel injectors at a time. The PCM will alternate which fuel injectors are disabled every 32 engine cycles. The cylinders that are not being fuel injected act as air pumps to aid in cooling the engine.
- If the temperature exceeds approximately 166°C (330°F), the PCM disables all of the fuel injectors until the engine temperature drops below approximately 154°C (310°F).
- The coolant temperature gauge pointer will read fully hot.
- The check gauge warning indicator will illuminate and DTCs are set.

The fuel pressure sensor:

- sends the PCM a signal indicating fuel pressure.
    - ♦ The PCM uses the fuel pressure sensor signal to maintain the fuel liquid pressure in the fuel line which reduces the fuel vapor pressure in the fuel line.

Intake Air Distribution and Filtering

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Fuel Charging and Controls

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Starting System

Printable View (245 KB)

Refer to Wiring Diagrams Cell 20 , Starting System for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

Anti-Theft Intervention

The starting system is electronically controlled by the passive anti-theft system (PATS). The PATS recognizes the correct electronically coded ignition key and signals the instrument cluster to provide a ground for the starter relay. The energized relay provides voltage to the starter solenoid, thereby allowing the starter motor to activate.

Inspection and Verification

⚠ WARNING: When carrying out underhood work in the vicinity of the starter motor, be aware that the heavy gauge battery input lead at the starter solenoid is "electrically hot" at all times. A protective cap or boot is provided over the terminal of this lead and must be installed after the repair procedure is completed. Failure to follow these instructions may result in personal injury.

⚠ WARNING: When working in the area of the starter motor, be careful to avoid touching hot exhaust components. Failure to follow these instructions can result in personal injury.

NOTE: When working on the starter system, make sure the anti-theft system is deactivated.

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Starter motor • Brackets	• Battery • Auxiliary junction box (AJB) fuse F121 (30A) • Battery junction box (BJB) fuse F22

	(20A) • Central junction box (CJB) fuse F201 (5A) • Starter relay • Loose or corroded connectors • Damaged wiring

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

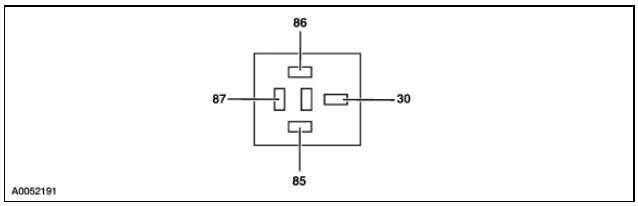
4. If the concern remains after the inspection, determine the symptom(s). GO to Symptom Chart .

Symptom Chart

Symptom Chart

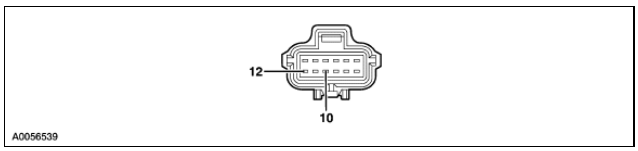
Connector Circuit Reference

Starter Motor Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
85	CKT 31S-BB12 (BK/YE) starter motor relay to instrument cluster	10,000 ohms or greater to chassis ground and 0 volts.
87	CKT 50-BB10 (GY/BK) starter motor relay to starter motor S terminal	Greater than 10 volts with ignition in the START position.
86	CKT 50S-BB12 (GY) starter motor relay to transmission range (TR) sensor	Greater than 10 volts with ignition in START position.
30	CKT 30-BB13 (RD) starter motor relay to power distribution box (PDB).	Greater than 10 volts with ignition in START position.

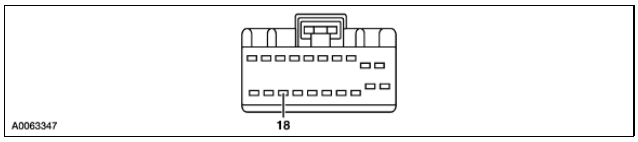
(TR) Sensor



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

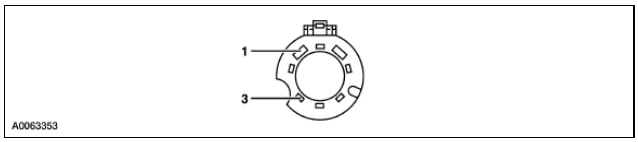
12	CKT 50S-BB12 (GY) TR sensor to starter relay pin 86	10 volts or greater in START position.
10	CKT 50-BB15 (GY/OG) TR sensor to CJB fuse 201 (5A)	10 volts or greater in START position.

Instrument Cluster



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
18	CKT 31S-BB12 (BK/YE) instrument cluster to starter motor relay	10,000 ohms or greater to chassis ground and 0 volts.

Ignition Switch



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30-BB9 (RD) ignition switch to PDB fuse 22 (20A)	10 volts or greater at all times.
3	CKT 50-DD5 (GY/BK) ignition switch to CJB fuse 201 (5A)	10 volts or greater in START position.

Normal Operation

Under normal operation the PDB supplies constant power to the starter relay on circuit 30-BB13 (RD) through fuse 121 (30A). When the key is placed in the START position, with the vehicle in PARK or NEUTRAL, the TR sensor provides power on circuit 50S-BB12 (GY) and the instrument cluster provides ground on circuit 31S-BB12 (BK/YE). The coil of the relay is energized and sends power to the starter motor on circuit 50-BB10 (GY/BK).

Pinpoint Tests

Possible Causes

An engine that does not crank can be caused by the following:

- Battery.
- Central junction box (CJB) fuse 201 (5A).
- Auxiliary junction box (AJB) fuse 121 (30A).

- Battery junction box (BJB) fuse 422 (20A).
- Ignition switch.
- Starter relay.
- Anti-theft system.
- Circuitry.

PINPOINT TEST A: THE ENGINE DOES NOT CRANK

Test Step	Result / Action to Take
A1 CHECK FOR INSTRUMENT CLUSTER DIAGNOSTIC TEST CODES	
• **NOTE:** The instrument cluster PATS DTCs are the only DTCs of concern in this step. Only repair retrieved non-PATS DTCs if a customer concern is reported. • Carry out the instrument cluster self-test. Refer to Section 413-00 . • **Were any PATS DTCs retrieved from the instrument cluster?**	**Yes** GO to Section 419-01 to diagnose the PATS DTCs. **No** GO to A2 .
A2 CHECK THE BATTERY	
• Check the battery condition and charge. Refer to Section 414-00 . • **Is the battery OK?**	**Yes** GO to A3 . **No** CHARGE or INSTALL a new battery as necessary. REFER to Section 414-00 . TEST the system for normal operation.
A3 CHECK THE BATTERY GROUND CABLE	
• Measure the voltage between the positive battery post and the battery ground cable connection on the engine.  • **Is the voltage greater than 10 volts?**	**Yes** GO to A4 . **No** INSTALL a new battery ground cable. REFER to Section 414-00 . TEST the system for normal operation.
A4 CHECK THE STARTER MOTOR GROUND	
• Measure the voltage between the battery positive post and the starter motor case.	**Yes** GO to A5 . **No** CLEAN the starter motor mounting flange and make sure the starter motor is correctly mounted. TEST the system for normal operation.

 A0002697 • **Is the voltage greater than 10 volts?**	
A5 CHECK THE POWER SUPPLY TO THE STARTER MOTOR	
• Measure the voltage between starter motor B-terminal and ground.  A0002698 • **Is the voltage greater than 10 volts?**	**Yes** GO to A6 . **No** REPAIR circuit 30 BB10 (RD). TEST the system for normal operation.
A6 CHECK THE STARTER MOTOR B-TERMINAL	
• Connect a fused jumper wire to the B-terminal of the starter motor. Momentarily connect the other lead of the jumper wire to the starter motor S-terminal.  A0002699 • **Did the starter motor engage and the engine crank?**	**Yes** GO to A7 . **No** INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation.
A7 CHECK THE START INPUT TO THE STARTER MOTOR	
• Disconnect: Starter Motor C197. • Measure the voltage between starter motor C197, circuit 50 BB10 (GY/BK), harness side and ground while holding the ignition switch in the START position.  A0002700 • Key in START position. • **Is the voltage greater than 10 volts in START?**	**Yes** CLEAN the starter motor S-terminal and connector. CHECK the wiring and the starter motor for a loose or intermittent connection. TEST the system for normal operation. **No** GO to A8 .
A8 CHECK THE START INPUT TO THE STARTER RELAY	

• Disconnect: Starter Relay. • Make sure the vehicle is in PARK or NEUTRAL. • Turn the ignition switch to START and hold. • Measure the voltage between starter relay pin 86, circuit 50S-BB12 (GY), harness side and ground.  A0003577 • **Is the voltage greater than 10 volts?**	**Yes** GO to A9 . **No** GO to A14 .
A9 CHECK THE GROUND SUPPLY TO THE STARTER RELAY	
• Make sure the vehicle is in PARK or NEUTRAL. • Turn the ignition switch to START and hold. • Measure the resistance between the starter relay pin 85, circuit 31S-BB12 (BK/YE), harness side and ground.  A0002728 • **Is the resistance less than 5 ohms?**	**Yes** GO to A11 . **No** GO to A10 .
A10 CHECK THE CIRCUIT 31S-BB12 (BK/YE) FOR AN OPEN	
• Disconnect: Instrument Cluster C220b. • Measure the resistance between starter relay pin 85, circuit 31S-BB12 (BK/YE), harness side and instrument cluster C220b pin 18, circuit 31S-BB12 (BK/YE), harness side.	**Yes** INSTALL a new instrument cluster. REFER to Section 413-00 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0003472 • **Is the resistance less than 5 ohms?**	
A11 CHECK THE BATTERY SUPPLY TO THE STARTER RELAY	
• Measure the voltage between starter relay pin 30, circuit 30-BB13 (RD), harness side and ground.  A0003474 • **Is the voltage greater than 10 volts?**	**Yes** GO to A12 . **No** REPAIR the circuit. TEST the system for normal operation.
A12 CHECK CIRCUIT 50-BB10 (GY/BK) AND 50S-BB12 (GY) FOR AN OPEN	
• Disconnect the eyelet from the starter S-terminal. • Measure the resistance between starter relay pin 87, circuit 50-BB10 (GY/BK), harness side and the S-terminal eyelet C197, circuit 50-BB10 (GY/BK), harness side.  A0000706	**Yes** GO to A13 . **No** REPAIR the circuit(s). TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
A13 CHECK CIRCUIT 50-BB10 (GY/BK) AND 50S-BB12 (GY) FOR A SHORT TO GROUND	
• Measure the resistance between starter relay pin 87, circuit 50-BB10 (GY/BK), harness side and S-terminal eyelet C197, circuit 50-BB10 (GY/BK), harness side.  A0000706 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new starter relay. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
A14 CHECK FUSE 201 (5A)	
• Check fuse: CJB Fuse 201 (5A). • **Is CJB fuse 201 (5A) open?**	**Yes** GO to A21 . **No** GO to A15 .
A15 CHECK THE START INPUT TO FUSE 201 (5A)	
• Disconnect: CJB Fuse 201 (5A). • Turn the ignition switch to the START position and hold. • Measure the voltage between CJB fuse 201 (5A) input terminal and ground.  A0000670 • **Is the voltage greater than 10 volts?**	**Yes** GO to A19 . **No** GO to A16 .
A16 CHECK THE BATTERY INPUT TO THE IGNITION SWITCH	

• Disconnect: Ignition Switch C250. • Measure the voltage between ignition switch C250 pin 1, circuit 30-BB9 (RD), harness side and ground.  A0000685 • **Is the voltage greater than 10 volts?**	**Yes** GO to A17 . **No** REPAIR the circuit. TEST the system for normal operation.
A17 CHECK CIRCUIT 50-DD5 (GY/BK) FOR AN OPEN	
• Measure the resistance between ignition switch C250 pin 3, circuit 50-DD5 (GY/BK), harness side and CJB fuse 201 (5A) input terminal, circuit 50-DD5 (GY/BK), harness side.  A0004195 • **Is the resistance less than 5 ohms?**	**Yes** GO to A18 . **No** REPAIR the circuit. TEST the system for normal operation.
A18 CHECK CIRCUIT 50-DD5 (GY/BK) FOR A SHORT TO GROUND	
• Measure the resistance between ignition switch C250 pin 3, circuit 50-DD5 (GY/BK), harness side and CJB fuse 201 (5A) input terminal, circuit 50-DD5 (GY/BK), harness side.  A0002692 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new ignition switch. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

A19 CHECK CIRCUIT 50-BB15 (GY/OG) FOR AN OPEN	
• Connect: CJB Fuse 201 (5A). • Disconnect: Digital TR Sensor C167. • Turn the ignition switch to the START position and hold. • Measure the voltage between digital TR sensor C167 pin 10, circuit 50-BB15 (GY/OG), harness side and ground.  A0002693 • **Is the voltage greater than 10 volts?**	**Yes** GO to A20 . **No** REPAIR the circuit. TEST the system for normal operation.
A20 CHECK CIRCUIT 50S-BB12 (GY) FOR AN OPEN	
• Measure the resistance between digital TR sensor C167 pin 12, circuit 50S-BB12 (GY), harness side and starter relay pin 86, circuit 50S-BB12 (GY), harness side.  A0002694 • **Is the resistance less than 5 ohms?**	**Yes** ADJUST the digital TR sensor. REFER to Section 307-01 . **No** REPAIR the circuit. TEST the system for normal operation.
A21 CHECK CIRCUIT 50-BB15 (GY/OG) FOR A SHORT TO GROUND	
• Measure the resistance between digital TR sensor C167 pin 10, circuit 50-BB15 (GY/OG), harness side and CJB fuse 201 (5A) output terminal C270b pin 3, circuit 50-BB15 (GY/OG), harness side.	**Yes** GO to A22 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0009036 • **Is the resistance greater than 10,000 ohms?**	
A22 CHECK CIRCUIT 50S-BB12 (GY) FOR A SHORT TO GROUND	
• Measure the resistance between digital TR sensor C167 pin 12, circuit 50S-BB12 (GY), harness side and starter relay pin 86, circuit 50S-BB12 (GY), harness side.  A0002694 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A23 . **No** REPAIR the circuit. TEST the system for normal operation.
A23 INSTALL A NEW FUSE 201 (5A)	
• Connect: Digital TR Sensor Switch C167. • Install a new CJB fuse 201 (5A). Retest the system. • **Does the fuse open?**	**Yes** ADJUST the digital TR sensor. REFER to Section 307-01 . **No** RETEST for normal operation. VERIFY the symptom.

Possible causes

Unusual starter noise can be caused by the following:

- Loose starter motor mounting bolts or brackets.
- Worn or damaged flywheel ring gear.
- Worn or damaged starter motor drive gear.

PINPOINT TEST B: UNUSUAL STARTER NOISE

Test Step	Result / Action to Take
B1 CHECK THE STARTER MOUNTING	
• Inspect the starter motor mounting bolts and brackets for looseness. • **Is the starter motor mounted correctly?**	**Yes** GO to B2 . **No** INSTALL the starter motor correctly. REFER to Starter Motor in this section. TEST the system for normal operation.
B2 CHECK FOR ENGINE NOISE	
• Turn the ignition switch to the OFF position. • Connect a fused jumper wire from the B-terminal to the S-terminal of the starter motor. Engage the starter motor and verify the noise is due to the starter operation. • **Is the noise due to the starter motor engagement?**	**Yes** GO to B3 . **No** REFER to Section 303-01B or Section 303-01B to continue the diagnosis.
B3 CHECK FOR UNUSUAL WEAR	
• Remove the starter motor. Refer to Starter Motor in this section. • Inspect the ring gear for damaged or worn teeth. • **Is the noise due to flywheel ring gear tooth damage?**	**Yes** INSTALL a new flywheel ring gear. EXAMINE the starter pinion teeth. If damaged, INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation. **No** INSTALL a new starter motor. REFER to Starter Motor in this section. TEST the system for normal operation.

Component Tests

⚠ WARNING: When repairing the starter motor or carrying out other underhood work in the vicinity of the starter motor, be aware that the heavy gauge battery input lead at the starter solenoid is "electrically hot" at all times. Failure to follow these instructions can result in personal injury.

⚠ CAUTION: A protective cap or boot is provided over the battery input terminal on all vehicle lines and must be installed after repairing. Be sure to disconnect the battery ground cable before repairing the starter motor.

Connect the 73III Automotive Meter at the component terminal rather than at the wiring end connector. Making a connection at the wiring end connector could result in false readings because the meter will not pick up a high resistance between the wiring connector and the component.

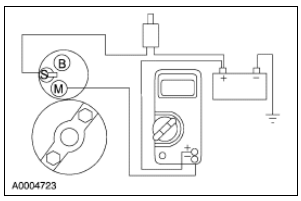
Starter Motor Motor Feed Circuit

1. Make sure the battery is fully charged. Carry out a battery load test. For additional information, refer to Section 414-00 .

2. Disconnect the inertia fuel shutoff (IFS) switch (9341).

3. Connect a remote starter switch between the starter solenoid S-terminal and the battery positive (+) terminal.

4. Connect the 73III Automotive Meter positive lead to the battery positive (+) post. Connect negative lead to the M-terminal.



5. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.8 volt or less.

6. If the voltage reading is 0.8 volt or less, go to the Starter Motor Ground Circuit Component Test.

7. If the voltage reading is greater than 0.8 volt, this is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Move the 73III Automotive Meter negative lead to the starter solenoid B-terminal and repeat the test. If the voltage reading at the B-terminal is lower than 0.8 volt, the concern is either in the connections at the starter solenoid or in the solenoid contacts.

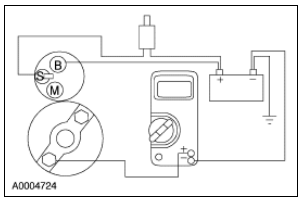
8. Remove the cables from solenoid B-, S- and M-terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6. If the voltage drop reading is still greater than 0.8 volt when checked at the M-terminal and less than 0.8 volt when checked at the B-terminal, the concern is in the solenoid contacts. Install a new starter motor.

9. If the voltage reading taken at the solenoid B-terminal is still greater than 0.8 volt after cleaning the cables and the connections at the solenoid, the concern is either in the positive (+) battery cable connection or in the positive battery cable itself. Clean the positive (+) battery cable connection. If this does not solve the problem, install a new positive battery cable. For additional information, refer to Section 414-00 .

Starter Motor Ground Circuit

A slow cranking condition can be caused by resistance in the ground or return portion of the cranking circuit. Check the voltage drop in the ground circuit as follows:

1. Connect the 73III Automotive Meter positive lead to the starter motor housing (the connection must be clean and free of rust or grease). Connect the negative lead to the negative (-) battery terminal.



2. Engage the remote starter switch and crank the engine. Read and record the voltage reading. The reading should be 0.5 volt or less.

3. If the voltage is more than 0.5 volt, clean the negative cable connections at the battery, the body ground connections, and the starter ground connections. Retest.

4. If the voltage is more than 0.5 volt, install a new cable. If the voltage reading is less than 0.5 volt and the engine still cranks slowly, install a new starter motor.

Engine Ignition

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Electronic Engine Controls

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Air Cleaner Assembly

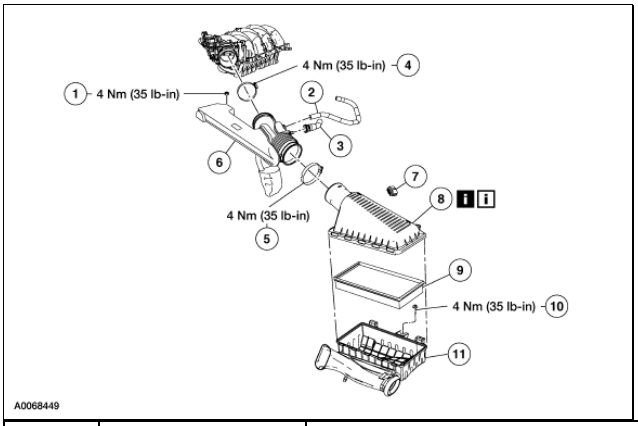
Printable View (60 KB)

1. Remove the engine appearance cover.

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the listed steps

Component	Steps
Air cleaner outlet pipe	1-6
Air cleaner element	7-9
Air cleaner outlet tube and cover assembly	1-4 and 6-8
Air cleaner	5-7 and 10-11

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	W705760	Air cleaner outlet tube retaining nut
2	9C490	Chassis vacuum hose
3	9K617	Crankcase vent tube
4	9C632	Air cleaner outlet tube clamp
5	9C632	Air cleaner outlet tube clamp
6	9F805	Air cleaner outlet tube
7	14A464	Mass air flow (MAF) electrical connector
8	9643	Air cleaner cover Removal Note
8	9643	Air cleaner cover Installation Note
9	9601	Air cleaner element
10	W503926	Air cleaner tray bolt
11	9A612	Air cleaner tray

Item 8: Air Cleaner Cover Removal Note

1. **NOTE:** No tools are needed to remove the air cleaner cover. Removal should be carried out using hands only.

   Release the snaps and separate the air cleaner cover from the air cleaner tray.

Item 8: Air Cleaner Cover Installation Note

1. **NOTE:** No tools are needed to install the air cleaner cover. Installation should be carried out using hands only.

   Use the alignment notches to correctly align the air cleaner cover to the air cleaner tray.

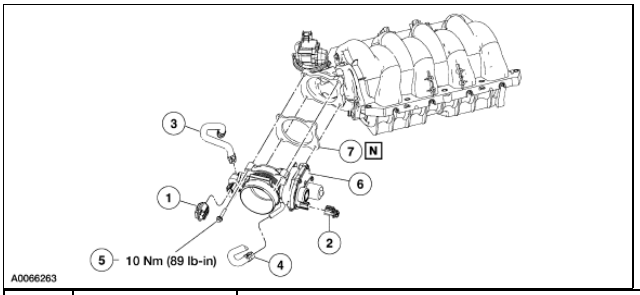
Throttle Body

Printable View (52 KB)

⚠ CAUTION: Throttle body bore and plate area have a special coating and cannot be cleaned, or possible damage to the throttle body can occur.

NOTE: The electronic throttle body is serviced as a complete assembly. Individual components cannot be serviced.

1. Remove the engine appearance cover.
2. Remove the air cleaner outlet tube. For additional information, refer to Air Cleaner Assembly in this section.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1		Throttle position (TP) sensor electrical connector (part of 14A464)
2		Electronic throttle body motor electrical connector (part of 14A464)
3	9F813	Throttle feed hose and clamp assembly
4	9F914	Throttle return hose and clamp assembly
5	W503280	Throttle body bolts (4 req'd)
6	9F991	Electronic throttle body
7	9F809	Electronic throttle body gasket

Fuel Injection Supply Manifold and Fuel Injector

Printable View (196 KB)

Special Tool(s)

ST1147-A	Disconnect Tool, Spring Lock Coupling (1/2 inch) 310-D005 (D87L-9280-B) or equivalent

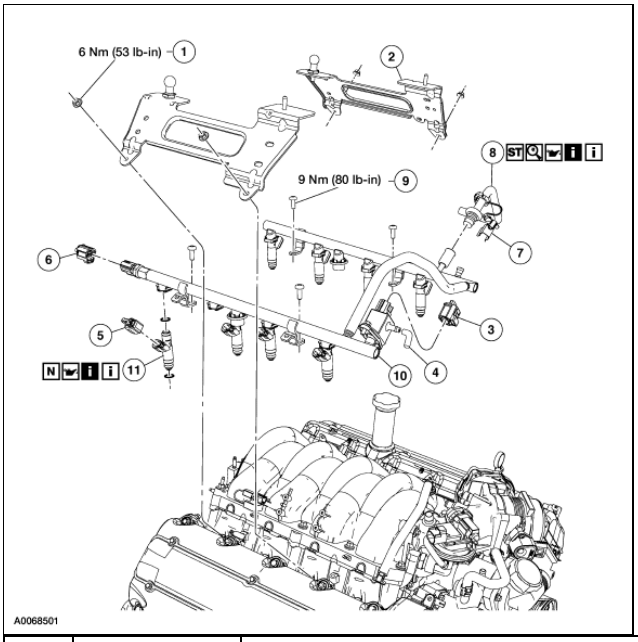
Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP	WSS-M2C153-H

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved. Failure to do so can result in personal injury.

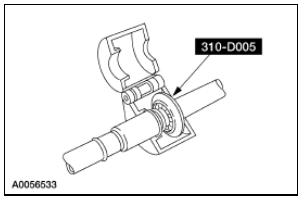
1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the engine appearance cover.
3. Remove the air cleaner outlet tube. For additional information, refer to Air Cleaner Assembly in this section.
4. Release the fuel pressure. For additional information, refer to Section 310-00 .
5. Remove the components in the order indicated in the following illustration and table.
6. To install, reverse the removal procedure.



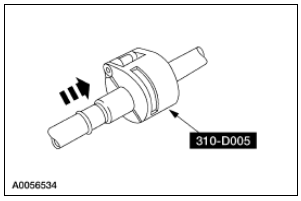
Item	Part Number	Description
1	W520411	Engine appearance cover mounting bracket nuts (4 req'd)
2	129723	Engine appearance cover mounting brackets (position aside)
3		Fuel pressure sensor electrical connector (part of 12B637)
4		Fuel pressure sensor vacuum connector (part of 9E498)
5		Fuel injector electrical connector (part of 12B637) (8 req'd)
6		Fuel temperature sensor electrical connector (part of 12B637)
7		Fuel tube retaining clip
8		Fuel tube spring lock coupling Removal Note
8		Fuel tube spring lock coupling Installation Note
9		Fuel injection supply manifold bolts (4 req'd)
10		Fuel injection supply manifold and fuel injectors
11		Fuel injectors (8 req'd) Removal Note
11		Fuel injectors (8 req'd) Installation Note

Item 8: Fuel Tube Spring Lock Coupling Removal Note

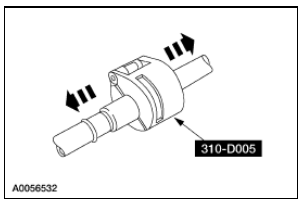
1. Install the special tool.



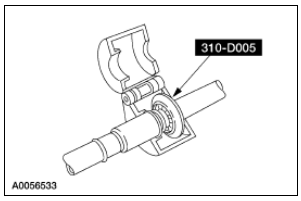
2. Close and push the special tool into the open side of the cage.



3. Separate the fuel tube fitting.



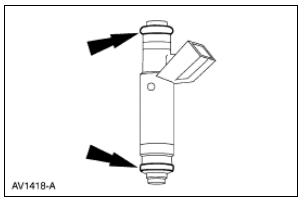
4. Remove the special tool.



Item 11: Fuel Injector Removal Note

⚠ CAUTION: Use O-ring seals that are made of special fuel-resistant material. Use of ordinary O-rings can cause the fuel system to leak. Do not reuse the O-ring seals.

1. Install new O-ring seals.



Item 11: Fuel Injector Installation Note

1. Lubricate the new O-ring seals with clean engine oil before installing.

Item 8: Fuel Tube Spring Lock Coupling Installation Note

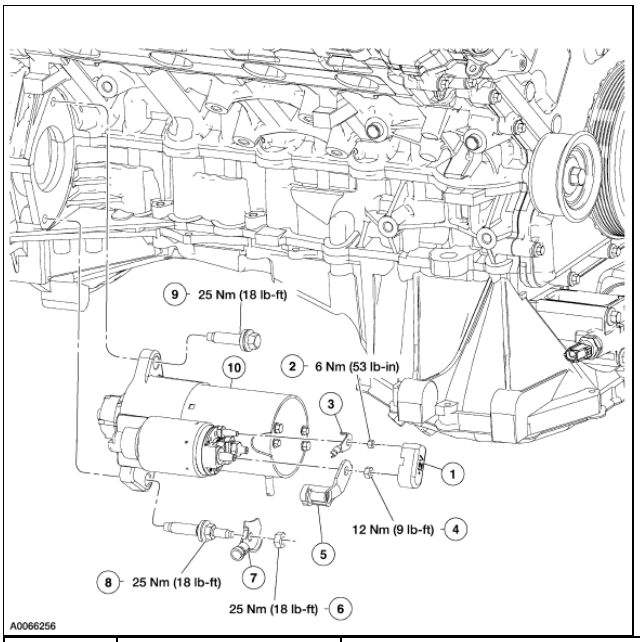
1. Align the fuel tube fittings and press together until an audible click is heard. Then, pull on the fittings to make sure they are fully engaged.

Starter Motor

Printable View (177 KB)

⚠ WARNING: When carrying out maintenance on the starting system be aware that the heavy gauge leads are connected directly to the battery. Make sure the protective caps are in place when maintenance is completed.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	11N087	Starter motor solenoid terminal cover
2	N800156	Starter solenoid wire nut
3	12B637	Starter solenoid wire
4	N800136	Starter solenoid battery cable nut
5	14463	Starter solenoid battery cable
6	N500617	Ground cable nut
7		Ground cable (part of 14463)
8	W705359	Starter motor stud bolt
9	W704666	Starter motor bolt
10	1100	Starter motor

Ignition Coil-On-Plug and Spark Plug

Printable View (167 KB)

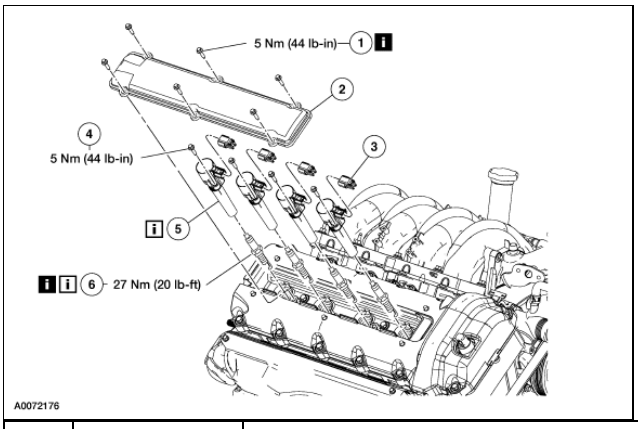
Material

Item	Specification
Silicone Brake Caliper Grease and Dielectric Compound D7AZ-19A331-A (Motorcraft XG-3) or equivalent	ESE-M1C171-A

1. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Ignition coil	1-5
Spark plug	1-6

2. To install, reverse the removal procedure.



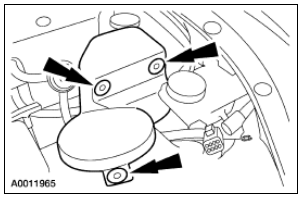
Item	Part Number	Description
1	W500205	Ignition coil cover bolts (6 req'd) Removal Note
2	12025	Ignition coil cover (2 req'd)
3		Ignition coil electrical connector (8 req'd) (part of 12B637)
4	W500205	Ignition coil bolts (8 req'd)
5	12A366	Ignition coils (8 req'd) Installation Note
6	12405	Spark plugs (8 req'd) Removal Note
6	12405	

		Spark plugs (8 req'd) Installation Note

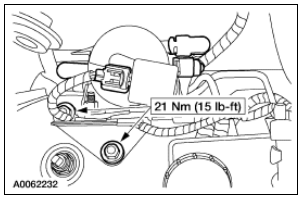
Item 1: Ignition Coil Cover Bolts Removal Note

NOTE: When removing the LH side ignition coil cover bolts, the evaporative emission canister purge valve must be positioned aside as follows.

1. Remove the EVAP canister purge valve cover.



2. Remove the EVAP canister purge valve bracket nuts and position the valve assembly aside.

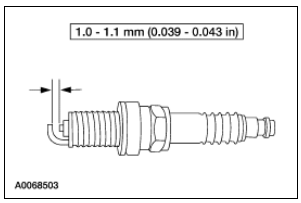


Item 6: Spark Plug Removal Note

1. Use compressed air to remove any foreign material from the spark plug well before removing the spark plugs.

Item 6: Spark Plug Installation Note

1. Inspect the spark plugs and adjust the spark plug gap as necessary.



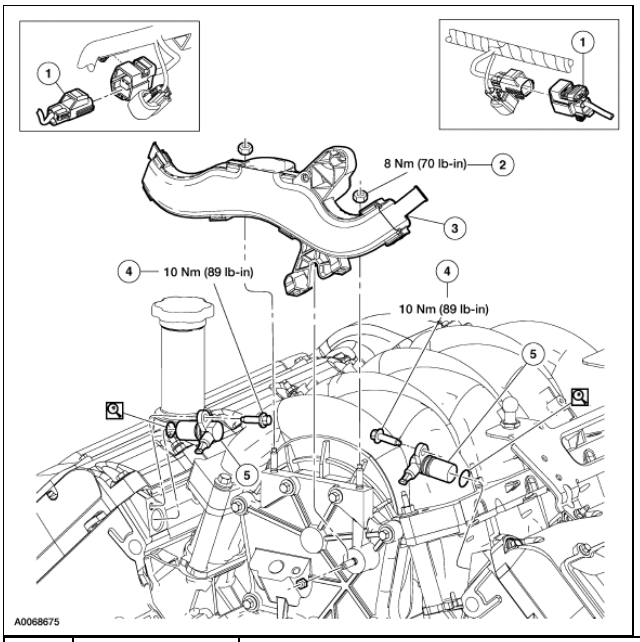
Item 5: Ignition Coil Installation Note

1. Apply silicone dielectric compound to the inside of the ignition coil boots before installing.

Camshaft Position (CMP) Sensor

Printable View (182 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.

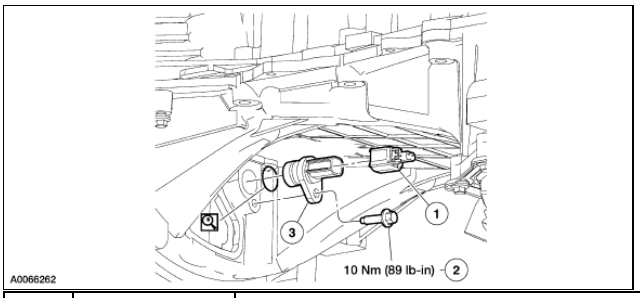


Item	Part Number	Description
1		Camshaft position sensor electrical connectors (part of 6B288)
2	W520101	Engine wiring harness retainer nuts (3 req'd)
3		Engine wiring harness retainer (position aside) (part of 12B637)
4	W500214	CMP sensor bolts
5	6B288	CMP sensors

Crankshaft Position (CKP) Sensor

Printable View (53 KB)

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.

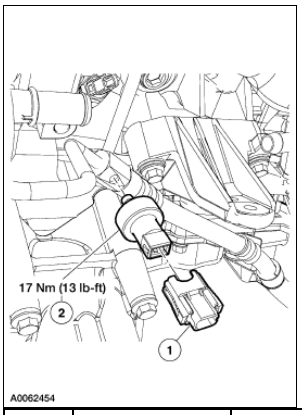


Item	Part Number	Description
1		Crankshaft position (CKP) sensor electrical connector (part of 12B637)
2	W500214	CKP bolt
3	6C315	CKP

Power Steering Position (PSP) Switch

Printable View (61 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



Item	Part Number	Description
1		Power steering pressure (PSP) switch electrical connector (part of 12B637)
2		PSP switch

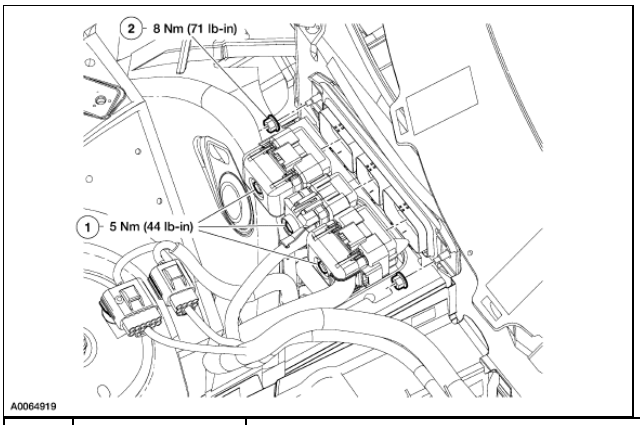
Powertrain Control Module (PCM)

Printable View (225 KB)

Special Tool(s)

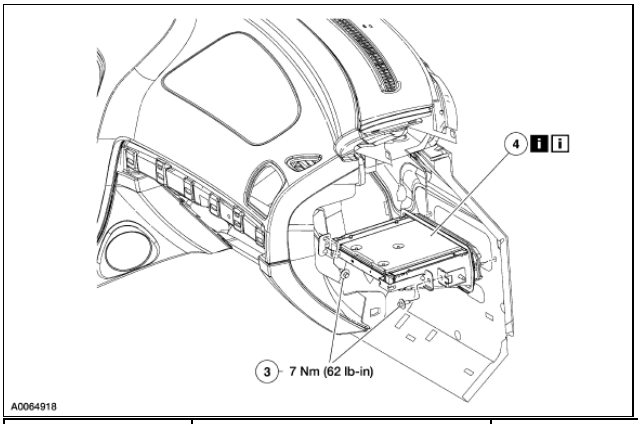
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the cabin air filter plenum. For additional information, refer to Section 412-00 .
3. Remove the glove compartment. For additional information, refer to Section 501-01 .
4. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	Powertrain control module (PCM) electrical connectors
2	N621927	PCM retaining nuts

5. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
3	606625	PCM bracket bolts
4	031400	PCM and bracket Removal Note
4	031400	PCM and bracket Installation Note

6. To install, reverse the removal procedure.
7. Connect the scan tool.
8. Select ignition control module (ICM).
9. Select ENTER SECURITY ACCESS. Wait 10 minutes for security access to be granted.
10. Select PARAMETER RESET.
11. Disconnect the scan tool.
12. Place the ignition key in the OFF position.
13. Place the ignition key in the RUN position.
14. Remove the ignition key.

Item 4: PCM and Bracket Removal Note

1. Remove the PCM and bracket as an assembly through the glove compartment opening.

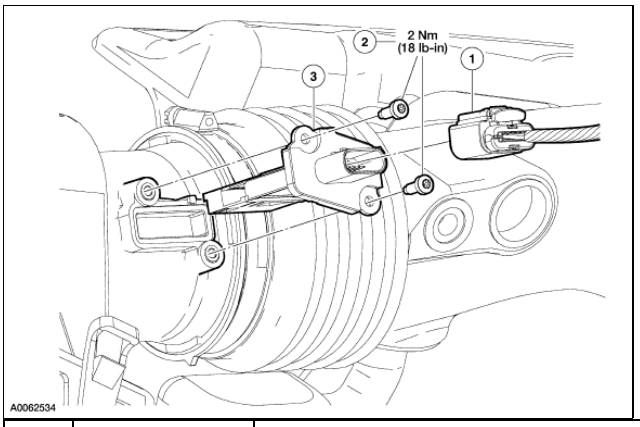
Item 4: PCM and Bracket Installation Note

1. Install the PCM and bracket as an assembly through the glove compartment opening.

Mass Air Flow (MAF) Sensor

Printable View (90 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	12B637	Mass air flow (MAF) sensor electrical connector
2		MAF sensor bolts
3	12B605	MAF sensor

Heated Oxygen Sensor (HO2S) and Catalyst Monitor Sensor

Printable View (86 KB)

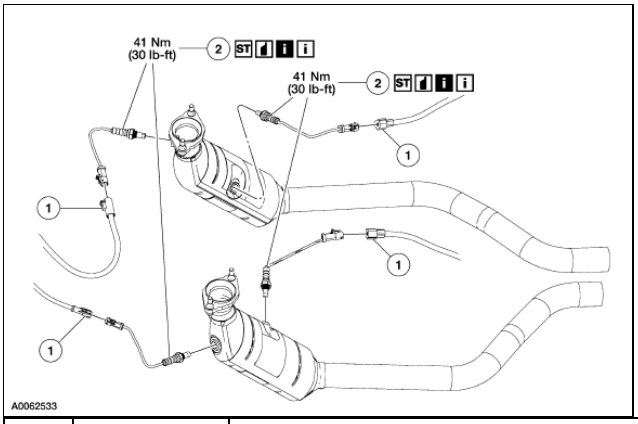
Special Tool(s)

ST1448-A	Socket, Exhaust Gas Oxygen Sensor 303-476 (T94P-9472-A)

Material

Item	Specification
Nickel Anti-Seize Lubricant XL-2 (in Canada CXG-2) or equivalent	ESE-M12A4-A

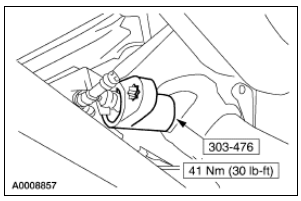
1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	14A464	Heated oxygen sensor (HO2S) and catalyst monitor sensor electrical connectors
2	9G472	HO2S and catalyst monitor sensors Removal Note
2	9G472	HO2S and catalyst monitor sensors Installation Note

Item 2: HO2S and Catalyst Monitor Sensors Removal Note

1. Using the special tool, remove the HO2S and the catalyst monitor sensors.



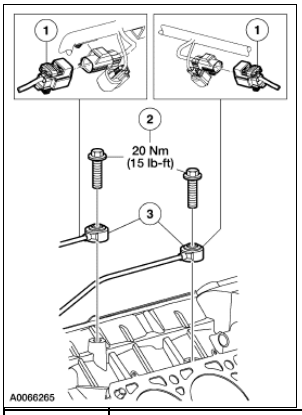
Item 2: HO2S and Catalyst Monitor Sensors Installation Note

1. **NOTE:** Apply a light coat of anti-seize lubricant to the threads of the HO2S and the catalyst monitor sensors.

   Using the special tool, install the HO2S and the catalyst monitor sensors.

Knock Sensor (KS) Printable View (46 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the intake manifold. For additional information, refer to Section 303-01B .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.

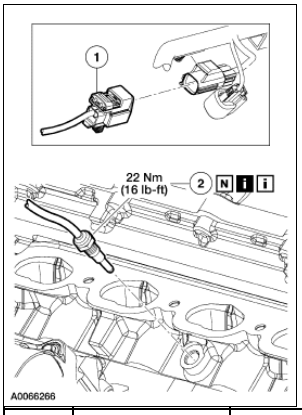


Item	Part Number	Description
1	14A464	Knock sensor (KS) electrical connector
2	W500310	KS bolts
3	12A699	KS

Cylinder Head Temperature (CHT) Sensor

Printable View (62 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the intake manifold. For additional information, refer to Section 303-01B .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1		Cylinder head temperature (CHT) sensor electrical connector (part of 6G004)
2	6G004	CHT sensor Removal Note
2	6G004	CHT sensor Installation Note

Item 2: CHT Sensor Removal Note

1. The tip of the CHT contacts the cylinder head at the bottom of the hole. When removed, it will be slightly crushed. This is a normal condition.

Item 2: CHT Sensor Installation Note

1. The CHT sensor is not to be reused. Always install a new sensor.

Fuel Pressure Sensor

Printable View (101 KB)

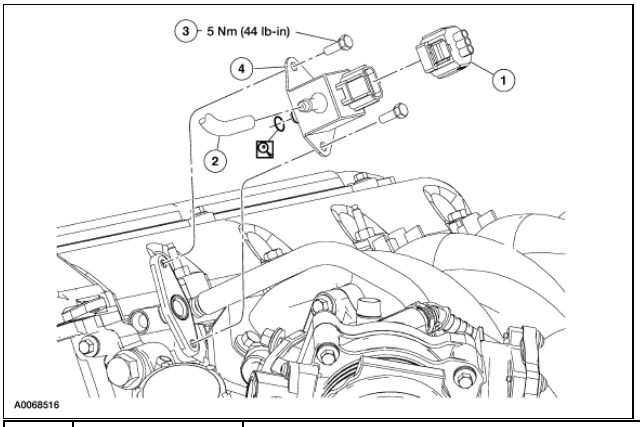
⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related components. Highly flammable mixtures are always present and can be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before working on or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved. Failure to do so can result in personal injury.

1. Remove the engine appearance cover.

2. Remove the components in the order indicated in the following illustration and table.

3. To install, reverse the removal procedure.



Item	Part Number	Description
1		Fuel pressure sensor electrical connector (part of 12B637)
2	9E499	Fuel pressure sensor vacuum hose
3		Fuel pressure sensor bolts (2 req'd)
4	9F972	Fuel pressure sensor

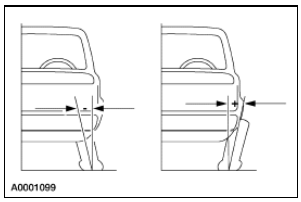
Toe link jam nut	55	41	

Suspension System Printable View (105 KB)

Camber, caster and toe are adjustable on the front suspension system. Only the toe is adjustable on the rear suspension system. Camber and caster are adjusted by means of eccentric cams on the lower control arm mounting bolts. The front toe is adjusted by use of the front wheel spindle tie rod. The rear toe is adjusted by the use of toe link assemblies connecting the knuckles to the rear sub-frame.

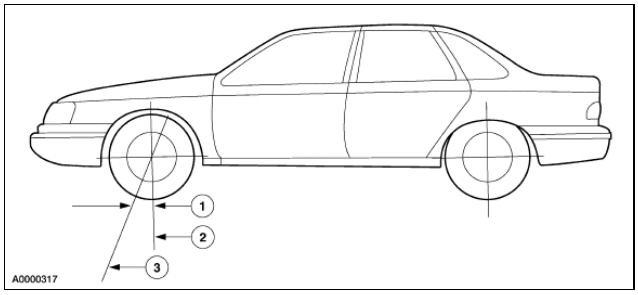
Camber

Negative and Positive Camber



Camber is the vertical tilt of the wheel when viewed from the front. Camber can be positive or negative and has a direct effect on tire wear.

Caster

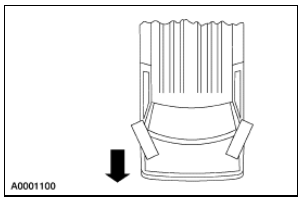


Item	Description
1	Positive caster
2	True vertical
3	Steering axis

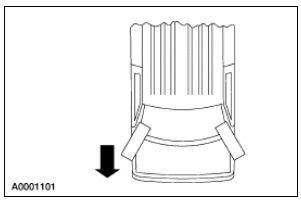
Caster is the deviation from vertical of an imaginary line drawn through the ball joints when viewed from the side. The caster specifications in this section will give the vehicle the best directional stability characteristics when loaded and driven. The caster setting is not related to tire wear.

Toe

Positive Toe (Toe-In)



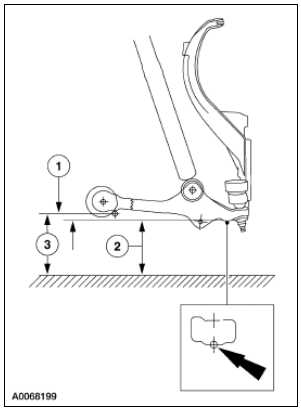
Negative Toe (Toe-Out)



The vehicle toe setting affects tire wear and directional stability.

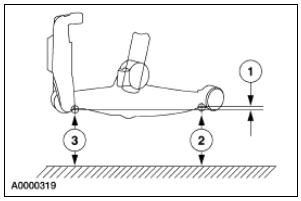
Ride Height

Front Ride Height Measurement



Item	Description
1	Ride height = B-A
2	Measurement A
3	Measurement B

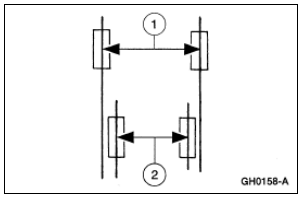
Rear Ride Height Measurement



Item	Description

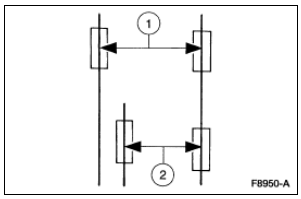
1	Ride height = A-B
2	Measurement A
3	Measurement B

Wheel Track



Item	Part Number	Description
1		Front track
2		Rear track

Dogtracking



Item	Part Number	Description
1		Front track
2		Rear track dogtracking

Dogtracking is the condition in which the independent rear suspension (IRS) system is not square to the chassis. Heavily crowned roads can give the illusion of dogtracking.

Wander

Wander is the tendency of the vehicle to require frequent, random left and right steering wheel corrections to maintain a straight path down a level road.

Shimmy

Shimmy, as observed by the driver, is large, consistent, rotational oscillations of the steering wheel resulting from large, side-to-side (lateral) tire/wheel movements.

Shimmy is usually experienced near 64 km/h (40 mph), and can begin or be amplified when the tire contacts pot holes or irregularities in the road surface.

Nibble

Sometimes confused with shimmy, nibble is a condition resulting from tire interaction with various road surfaces and observed by the driver as small rotational oscillations of the steering wheel.

Poor Returnability/Sticky Steering

Poor returnability and sticky steering is used to describe the poor return of the steering wheel to center after a turn or the steering correction is completed.

Drift/Pull

Pull is a tugging sensation, felt by the hands on the steering wheel, that must be overcome to keep the vehicle going straight.

Drift describes what a vehicle with this condition does with hands off the steering wheel.

- A vehicle-related drift/pull, on a flat road, will cause a consistent deviation from the straight-ahead path and require constant steering input in the opposite direction to counteract the effect.
- Drift/pull may be induced by conditions external to the vehicle (i.e., wind, road camber).

Poor Groove Feel

Poor groove feel is characterized by little or no buildup of turning effort felt in the steering wheel as the wheel is rocked slowly left and right within very small turns around center or straight-ahead (under 20 degrees of steering wheel turn). Efforts may be said to be "flat on center."

- Under 20 degrees of turn, most of the turning effort that builds up comes from the mesh of gear teeth in the steering gear. In this range, the steering wheel is not yet turned enough to feel the effort from the self-aligning forces at the road wheel or tire patch.
- In the diagnosis of a roadability problem, it is important to understand the difference between wander and poor groove feel.

Wheels And Tires Printable View (19 KB)

Inspection and Verification

⚠ WARNING: A vehicle equipped with a Traction-Lok® differential will always have both wheels driving. If, while the vehicle is being serviced, only one wheel is raised off the ground and the rear axle is driven by the engine, the wheel on the ground could drive the vehicle off the stand or jack. Be sure both rear wheels are off the ground.

⚠ WARNING: Do not balance the wheels and tires while they are mounted on the vehicle. Possible tire disintegration or differential failure could result, causing personal injury and extensive component damage. Use off-vehicle wheel and tire balancer only.

Be sure to follow the warnings when carrying out the inspection and verification.

Road Test

Verify the customer concern by carrying out a road test on a smooth road. If any vibrations are apparent, go to Section 100-04 .

To maximize tire performance, inspect for signs of incorrect inflation and uneven wear, which may indicate a need for balancing, rotation, or front suspension alignment.

Correct tire pressure and driving techniques have an important influence on tire life. Heavy cornering, excessively rapid acceleration and unnecessary sharp braking increases tire wear.

Replacement tires must follow the recommended:

- tire sizes.
- speed rating.
- load range.
- tire construction type.

Use of any other tire size or type can seriously affect:

- ride.
- handling.
- speedometer/odometer calibration.
- vehicle ground clearance.
- tire clearance between the body and chassis.
- wheel bearing life.
- brake cooling.

New wheels need to be installed when the vehicle's wheels:

- are bent.
- are cracked.
- are dented.
- are heavily corroded.

- are leaking.
- have elongated wheel hub bolt holes.
- have excessive lateral or radial runout.

It is mandatory to use only the tire sizes recommended on the tire chart attached to the vehicle. Larger or smaller tires can damage the vehicle, affect durability, and require changing the speedometer calibration. Make sure wheel size and offsets match those recommended for the tire in use.

1. Inspect for signs of uneven wear that may indicate a need for balancing, rotation or front suspension alignment, a damaged tie-rod, or damaged steering components.

2. Check tires for:
    - cuts.
    - stone bruises.
    - abrasions
    - blisters.
    - embedded objects.

3. Tread wear indicators are molded into the bottom of the tread grooves. Install a new tire when the indicator bands become visible.

Symptom Chart

Symptom Chart

Suspension System Printable View (62 KB)

Inspection and Verification

1. Road test.
   - Verify the customer's concern by carrying out a road test on a smooth road. If any vibrations are apparent, refer to Section 100-04 .

2. Inspect tires.
   - Check the tire pressure with all normal loads in the vehicle and the tires cold. Refer to the vehicle certification (VC) label.
   - Verify that all tires are sized to specification. Refer to Specifications in this section.
   - Inspect the tires for incorrect wear and damage. Install new tires as necessary.

3. Inspect chassis and underbody.
   - Remove any excessive accumulation of mud, dirt or road deposits from the chassis and underbody.

4. Inspect for aftermarket equipment.
   - Check for aftermarket changes to the steering, suspension, wheel and tire components (such as competition, heavy duty, etc.) The specifications shown in this manual do not apply to vehicles equipped with aftermarket equipment.

Visual Inspection Chart

Mechanical
• Front wheel bearing(s) • Loose or damaged front or rear suspension components • Loose, damaged or missing suspension fastener(s) • Incorrect spring usage • Damaged or sagging spring(s) • Damaged or leaking shock absorber(s) • Worn or damaged suspension bushing(s) • Loose, worn or damaged steering system components • Damaged axle components

5. If an obvious cause for an observed or reported condition is found, correct the cause (if possible) before proceeding to the next step.

6. If the fault is not visually evident, determine the symptom. GO to Symptom Chart .

Symptom Chart

Symptom Chart

Component Tests

Wheel Bearing Inspection

1. Raise the vehicle until the tires are off of the ground. For additional information, refer to Section 100-00 .

2. **NOTE:** Make sure the wheel rotates freely and the brake pads are retracted sufficiently to allow movement of the wheel and tire assembly.

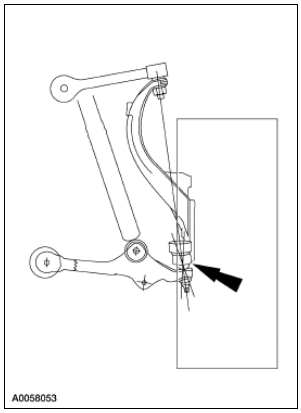
   Grasp the tire at the top and bottom and move the wheel inward and outward while lifting the weight of the tire from the front wheel bearings. If movement exists, a new bearing must be installed. For additional information, refer to Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm - Front or Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm - Rear in this section.

Ball Joint Inspection

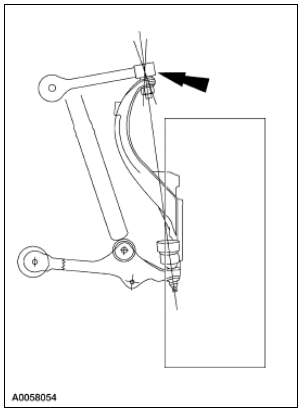
NOTE: The front suspension is shown in the following procedures. The inspection of the rear suspension upper ball joint is similar.

1. Raise and support the vehicle. For additional information, refer to Section 100-00 .

2. Prior to performing any inspection of the ball joints, inspect the front wheel bearings for looseness.



3. While an assistant pulls and pushes the top and bottom of the tire, observe the relative movement between the ball joint and the front suspension lower arm. Any movement indicates a worn or damaged ball joint. Install a new wheel knuckle as necessary. For additional information, refer to Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm - Front in this section.



4. While an assistant pulls and pushes the top and bottom of the tire, observe the relative movement between the ball joint and the front suspension upper arm or rear suspension upper arm. Any movement indicates a worn or damaged ball joint. Install a new front suspension upper arm or rear suspension upper arm as necessary. For additional information, refer to Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm - Front or Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm - Rear in this section.

Wheel Alignment Printable View (419 KB)

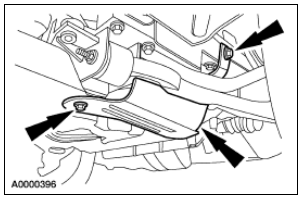
Front Camber and Caster Adjustment

NOTE: If the vehicle is equipped with hex head bolts in the lower control arm, new cam bolts and lock nuts must be installed before adjusting the cast and camber.

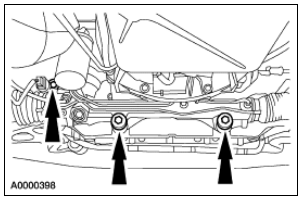
NOTE: The camber and caster adjustment for the LH side is shown. The procedure for adjusting the RH side is similar.

Vehicles without camber and caster adjustment cam bolts

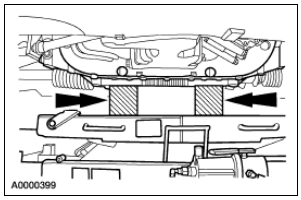
1. Remove two bolts, one pushpin and the splash shield.



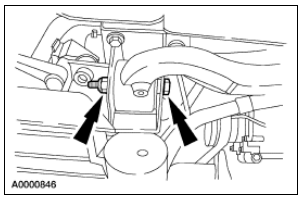
2. Remove and discard the three lock nuts and bolts.



3. Raise and support the front end and the No. 2 crossmember.
   - Position two 4 in. x 4 in. pieces of wood between the No. 2 crossmember and the lifting device.

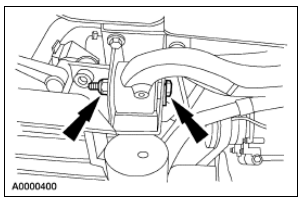


4. Remove and discard the front nut and bolt.



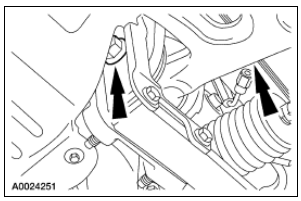
5. Loosely, install the caster adjustment cam bolt and a new lock nut.
   - The bolt must be installed from the rear as shown.
   - Install the bolt with the cam lobe down.

- The cam must be seated between the cam guides on the No. 1 crossmember.

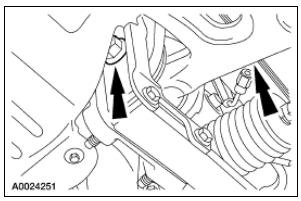


6. Position the steering gear aside.

7. Remove and discard the rear nut and bolt.

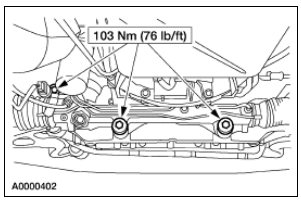


8. Loosely, install the camber adjustment cam bolt, a new lock nut and the I-brace bracket (if equipped).
   - The bolt must be installed from the rear as shown.
   - Install the bolt with the cam lobe down.
   - The cam must be seated in the groove in the No. 2 crossmember.



9. Lower the front end.

10. Install the steering gear, three bolts and new lock nuts.

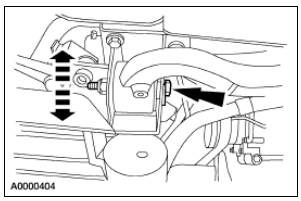


All vehicles

11. Measure the wheel alignment values.

Vehicles requiring caster adjustment

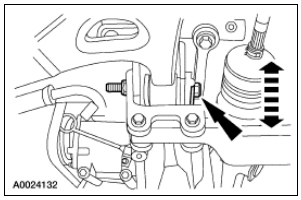
12. Rotate the caster adjustment cam bolt (front) to adjust the caster.



13. Recheck the alignment settings. Readjust as necessary.

Vehicles requiring camber adjustment

14. Rotate the camber adjustment cam bolt (rear) to adjust the camber.

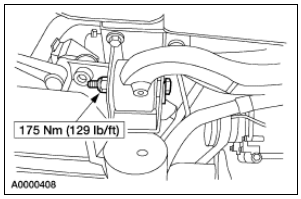


15. Repeat the above camber adjustment steps until the correct camber measurements are achieved.

All vehicles

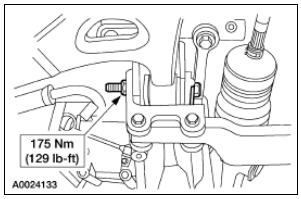
16. **⚠ CAUTION: Do not tighten until the weight if the vehicle is resting on the wheel and tire assemblies.**

    Tighten the nut.

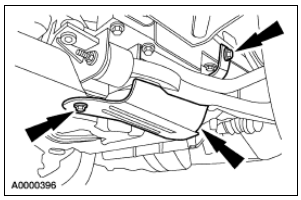


17. **⚠ CAUTION: Do not tighten until the weight if the vehicle is resting on the wheel and tire assemblies.**

    Tighten the nut.



18. Install the splash shield, one pushpin, and two bolts.



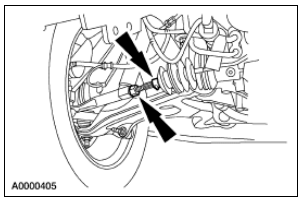
19. Check and, if necessary, adjust the front toe.

Front Toe Adjustment

1. Start the engine and center the steering wheel.

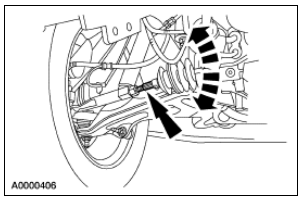
2. Turn the engine off, and hold the steering wheel in the "straight forward" position using a suitable holding device.

3. Loosen the nuts and remove the clamps.

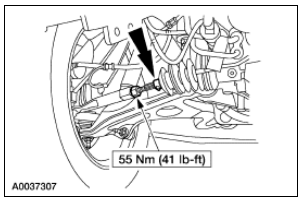


4. **NOTE:** Do not allow the steering gear bellows to twist when the front wheel spindle tie-rod is rotated.

   Rotate the front wheel spindle tie-rods.



5. Tighten the nuts. Install the clamps.



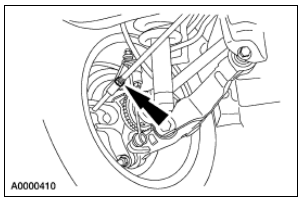
6. Start the engine and recenter the steering wheel.
   - Recheck the toe settings and adjust if necessary.

Rear Toe Adjustment

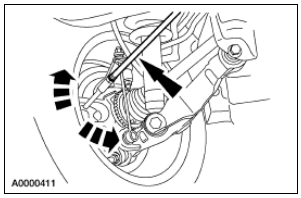
1. Start the engine and center the steering wheel.

2. Turn the engine off, and hold the steering wheel in the "straight forward" position using a suitable holding device.

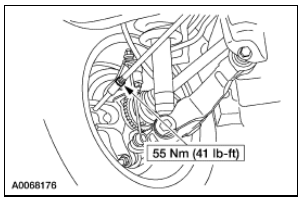
3. Loosen the nut.
   - Clean the nut and toe link threads.



4. Rotate the toe link to adjust the toe.



5. Tighten the nut.



6. Recheck the toe settings and adjust if necessary.

Wheel and Tire Front Printable View (131 KB)

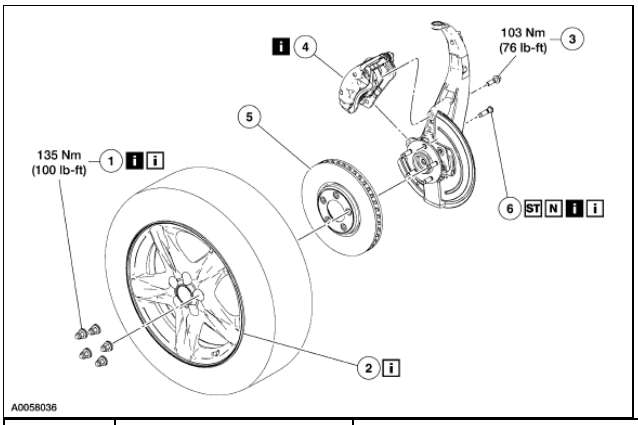
Special Tool(s)

ST1494-A	C-Frame and Screw 211-023 (T74P-3044-A1)

1. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Wheel and tire assembly	1-2
Wheel stud	1-6

2. To install, reverse the removal procedure.



Item	Part Number	Description
1	1012	Wheel nuts Removal Note
1	1012	Wheel nuts Installation Note
2	1007	Wheel and tire assembly Installation Note
3	W705593-S426	Brake caliper anchor plate bolts
4		Brake caliper, pads and anchor plate Removal Note
5	1125	Brake disc
6	1107	Wheel stud Removal Note
6	1107	Wheel stud Installation Note

Item 1: Wheel Nuts Removal Note

1. ⚠ **CAUTION: Do not use heat to loosen a seized wheel nut or damage to the wheel and wheel bearing can occur.**

   With the weight of the vehicle on the wheels, loosen the wheel nuts.

2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

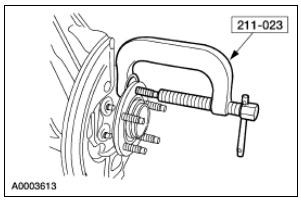
Item 4: Brake Caliper, Pads and Anchor Plate Removal Note

1. ⚠ **CAUTION: Do not allow the brake caliper to hang from the hose or damage to the hose may result.**

   Position the caliper, pads and anchor plate aside.

Item 6: Wheel Stud Removal Note

1. Using the special tool, remove the wheel stud.



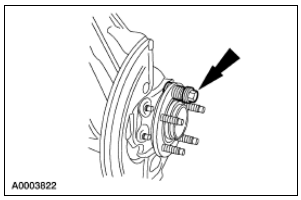
Item 6: Wheel Stud Installation Note

1. ⚠ **CAUTION: Do not use power tools to install the wheel stud. The serrations on the stud can be stripped.**

   NOTE: Do not use the wheel nut that came with the vehicle.

   Install washers and a new wheel nut on the wheel stud and tighten the nut until the stud seats against the flange.

   - Discard the wheel nut and washers.



Item 2: Wheel and Tire Installation Note

1. ⚠ **WARNING: When installing a wheel and tire, make sure to remove any corrosion, dirt or foreign material present on the mounting surfaces of the wheel and brake disc. Installing a wheel without correct metal-to-metal contact at the mounting surfaces can cause the wheel nuts to loosen and the wheel to come off while the vehicle is in motion, causing loss of control.**

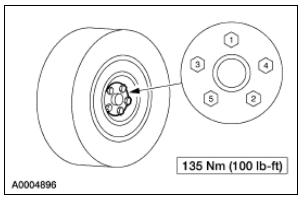
   Clean the wheel mounting surfaces.

Item 1: Wheel Nuts Installation Note

1. **⚠ WARNING: Retighten at 800 km (500 miles) after any wheel change or any time the wheel nuts are loosened. Failure to retighten the wheel nuts at the mileage specified could allow the wheels to come off while the vehicle is in motion, possibly causing loss of control.**

   ⚠ CAUTION: Failure to tighten the wheel nuts in a star pattern can result in high brake disc runout, which will speed up the development of brake roughness, shudder and vibration.

   Tighten the wheel nuts.



Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm Front

Printable View (221 KB)

Material

Item	Specification
High Temperature Nickel Anti-Seize Lubricant XL-2	ESE-M12A4-A

NOTE: Use the hex holding feature to prevent the stud from turning while removing the nut from ball joints and stabilizer bar links.

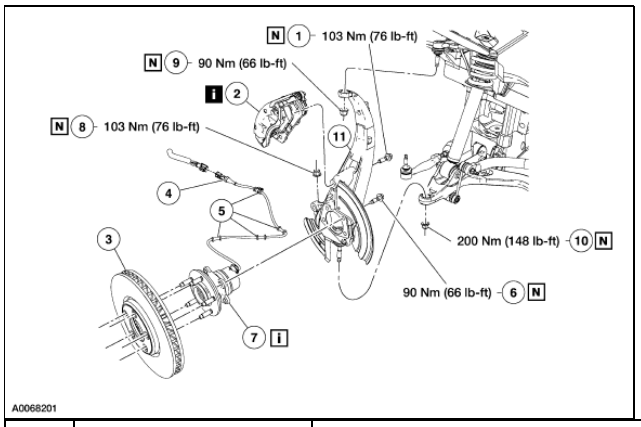
1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. If removing an upper arm, remove the shock absorber and spring assembly. For additional information, refer to Shock Absorber and Spring Assembly Front in this section.

3. To remove individual suspension components, only carry out the listed steps.

Component	Steps
Wheel bearing and hub assembly	1-7
Wheel knuckle	1-11
Upper arm	12-14
Lower arm	19-22

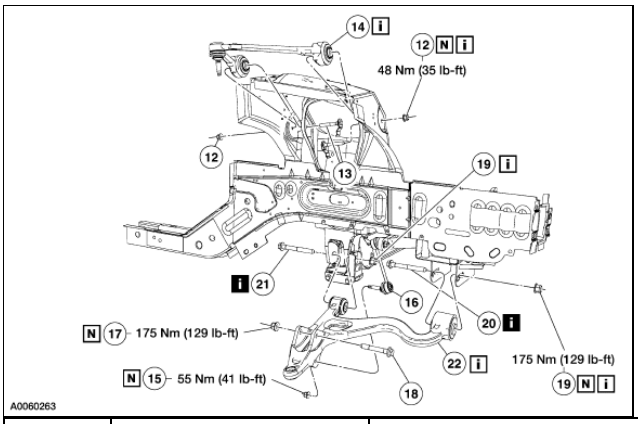
4. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W705593-S426	Anchor plate bolt (2 required)
2		Brake caliper, pads and anchor plate Removal Note
3	1125	Brake disc
4		

		Speed sensor electrical connector (part of 2C204) (disconnect)
5		Speed sensor harness retainers (part of 2C204) (detach)
6	W705539-S426	Wheel hub-to-wheel knuckle bolt (4 required)
7	1104	Wheel bearing and hub assembly Installation Note
8	W520214-S60	Tie-rod end-to-wheel knuckle nut
9	N807144-S60	Upper ball joint-to-wheel knuckle nut
10	W708553-S901	Lower ball joint-to-wheel knuckle nut
11	3K185/3K186 (3.0L)	Wheel knuckle RH/LH

5. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
12	W520213-S427	Upper arm-to-body nuts (2 req'd) Installation Note
13	3C203	Upper arm-to-body bolts (2 req'd)
14	3084/3085	Upper arm RH/LH Installation Note
15	W520213-S427	Stabilizer bar link-to-lower arm nut
16	5K484	Stabilizer bar link (detach only)
17	W520215-S427	Shock absorber-to-lower arm nut
18	W705552-S426	Shock absorber-to-lower arm bolt
19	W705518-S427	Lower arm-to-frame nuts (2 req'd) Installation Note
20	3B236	Lower arm-to-frame bolt Removal Note
21	3B236	Lower arm-to-frame bolt Removal Note
22	3078/3079 (3.0L)	Lower arm RH/LH Installation Note

6. To install, reverse the removal procedure.

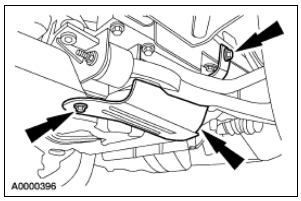
Item 2: Brake Caliper, Pads, and Anchor Plate Removal Note

1. ⚠ **CAUTION: Do not allow the brake caliper to hang from the hose or damage to the hose can occur.**

   Position the caliper, pads and anchor plate aside.

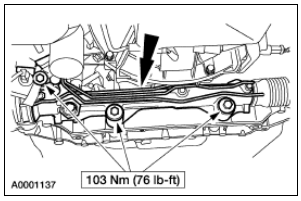
Item 20: Lower Arm-to-Frame Bolt Removal Note

1. Remove the screws, pushpins and shield to gain access to the bolt.



Item 21: Lower Arm-to-Frame Bolt Removal Note

1. Remove the nuts and bolts, position the steering gear aside, and then remove the lower arm bolt.



Item 22: Lower Arm RH/LH Installation Note

1. Check and, if necessary, align the front end. For additional information, refer to Wheel Alignment in this section.

Item 19: Lower Arm-to-Frame Nuts Installation Note

1. Do not tighten until the installation procedure is complete and the weight of the vehicle is resting on the wheel and tire assemblies.

Item 14: Upper Arm RH/LH Installation Note

1. Check and, if necessary, align the front end. For additional information, refer to Wheel Alignment in this section.

Item 12: Upper Arm-to-Body Nuts Installation Note

1. Do not tighten until the installation procedure is complete and the weight of the vehicle is resting on the wheel and tire assemblies.

Item 7: Wheel Bearing and Hub Assembly Installation Note

1. Apply a light coat of lubricant to the bearing/knuckle mating surfaces.

Shock Absorber and Spring Assembly Front

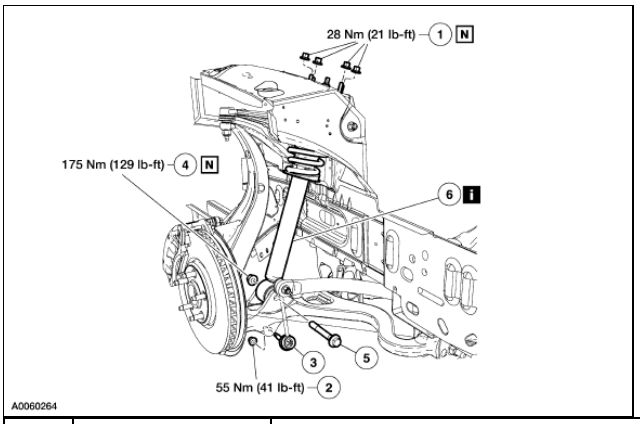
Printable View (84 KB)

NOTE: Use the hex holding feature to prevent the stud from turning while removing or installing the stabilizer bar link nut.

1. With the vehicle in NEUTRAL, position on a hoist. For additional information refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table.

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	W704790-S427	Shock absorber upper mount-to-body nuts
2	W520213-S426	Stabilizer bar link-to-lower arm nut (part of 5K483)
3	5K483	Stabilizer bar link (detach only)
4	W520215-S427	Shock absorber-to-lower arm nut
5	W705552-S426	Shock absorber-to-lower arm bolt
6		Shock absorber and spring assembly Removal Note

Item 6: Shock Absorber and Spring Assembly Removal Note

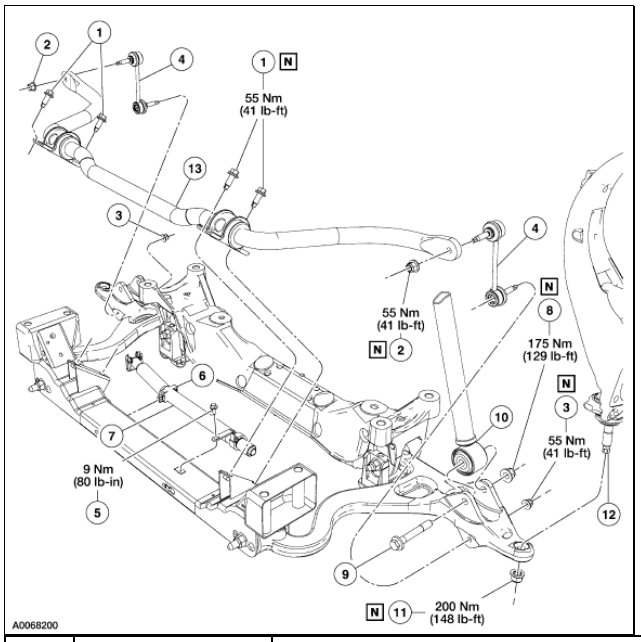
1. For additional information on the disassembly and assembly, of the shock absorber and spring assembly, refer to Shock Absorber and Spring Assembly in this section.

Stabilizer Bar and Link Front Printable View (144 KB)

⚠ CAUTION: Make sure that the stabilizer bar and brackets do not make contact with the radiator or damage to the radiator can occur.

NOTE: Use the hex holding feature to prevent the studs from turning while removing or installing the stabilizer bar link nuts.

1. Remove the engine cooling fan. For additional information, refer to Section 303-03 .
2. With the vehicle in NEUTRAL, position on a hoist.
3. Remove the front and left side deflector shields.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	W705551-S426	Stabilizer bar bracket-to-crossmember bolts
2	N807144-S436	Stabilizer bar link-to-stabilizer bar nuts
3	5K483	Stabilizer bar link-to-lower arm nuts
4	W707472-S426	Stabilizer bar links
5	W705968-S426	Air conditioning line bracket-to-crossmember bolt
6	19D850	Air conditioning line retainer
7	19B632	Air conditioning line
8	W520215-S427	Shock absorber-to-lower arm nut
9	W705552-S426	Shock absorber-to-lower arm bolt
10	18124	LH shock absorber (detach only)

11	W708553-S901	LH lower ball joint-to-lower arm nut
12		LH lower ball joint (part of 3K185) (detach only)
13	5482	Stabilizer bar, bushing and bracket assembly

Wheel and Tire Rear Printable View (166 KB)

Special Tool(s)

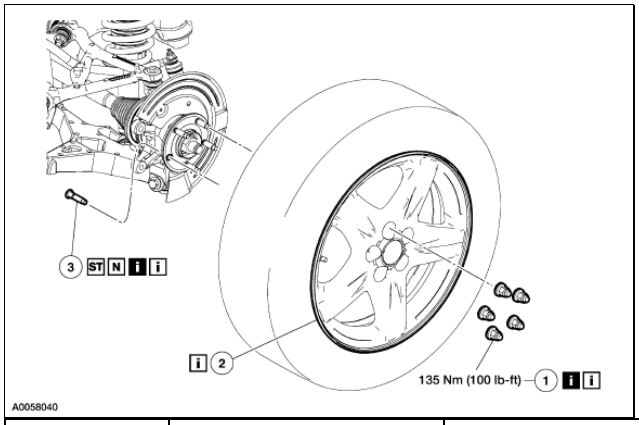
ST1494-A	C-Frame and Screw 211-023 (T74P-3044-A1)

1. If installing a new wheel stud, remove the rear brake disc. For additional information, refer to Section 206-00 .

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Wheel and tire assembly	1,2
Wheel stud	1-3

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	1012	Wheel nuts Removal Note
1	1012	Wheel nuts Installation Note
2	1007	Wheel and tire assembly Installation Note
3	1107	Wheel stud Removal Note
3	1107	Wheel stud Installation Note

Item 1: Wheel Nuts Removal Note

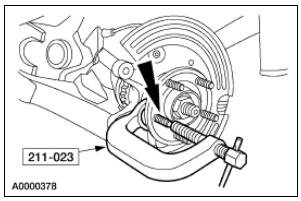
1. ⚠ **CAUTION: Do not use heat to loosen a seized wheel nut or damage to the wheel and wheel bearing can occur.**

   With the weight of the vehicle on the wheels, loosen the wheel nuts.

2. With vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

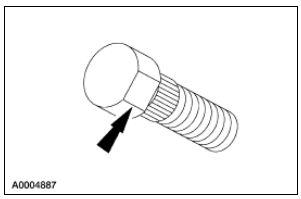
Item 3: Wheel Stud Removal Note

1. Using the special tool, separate the wheel stud from the wheel hub flange.



Item 3: Wheel Stud Installation Note

1. If necessary, grind the head of the new wheel stud to a "D" shape to ease installation.

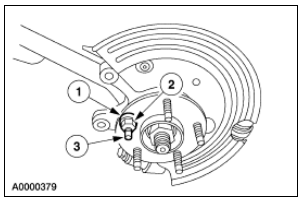


2. ⚠ **CAUTION: Do not use power tools to install the wheel stud. The serrations on the stud can be stripped.**

   NOTE: Do not use the wheel nut that came with the vehicle.

   Install the wheel stud.

   1. Place four flat washers on the wheel stud.
   2. Thread a wheel nut onto the wheel stud with the flat side against the washers.
   3. Tighten the wheel nut until the wheel stud seats against the flange.
      - ♦ Discard the nut and washers.



Item 2: Wheel and Tire Assembly Installation Note

1. ⚠ **WARNING: When installing a wheel and tire, make sure to remove any corrosion, dirt or foreign material present on the mounting surfaces of the wheel and brake disc. Installing a wheel without correct metal-to-metal contact at the mounting surfaces can cause the wheel nuts to loosen and the wheel to come off while the vehicle is in motion, causing loss of control.**

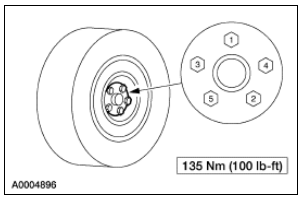
   Clean the wheel mounting surfaces.

Item 1: Wheel Nuts Installation Note

1. **⚠ WARNING: Retighten at 800 km (500 miles) after any wheel change or any time the wheel nuts are loosened. Failure to retighten the wheel nuts at the mileage specified could allow the wheels to come off while the vehicle is in motion, possibly causing loss of control.**

   ⚠ CAUTION: Failure to tighten the wheel nuts in a star pattern can result in high brake disc runout, which will speed up the development of brake roughness, shudder and vibration.

   Tighten the wheel nuts.



Wheel Bearing, Hub, Knuckle, Upper Arm and Lower Arm Rear

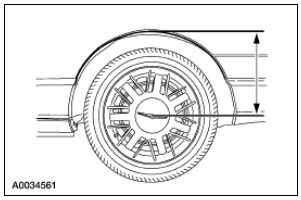
Printable View (256 KB)

Special Tool(s)

ST1516-A	Remover/Installer, Front Wheel Hub 204-069 (T81P-1104-C)
 ST1517-A	Adapter, Wheel Hub 205-237 (T86P-1104-A1)
 ST1518-A	Remover, Wheel Stud (Metric) 204-085 (T83P-1104-BH)

⚠ **CAUTION: Use the hex holding feature to prevent the ball studs from turning when removing the ball stud nuts.**

1. For reference during the installation of an upper or lower arm, measure the distance between the center of the wheel hub and the lip of the fender with the weight of the vehicle resting on the wheel and tire assemblies.



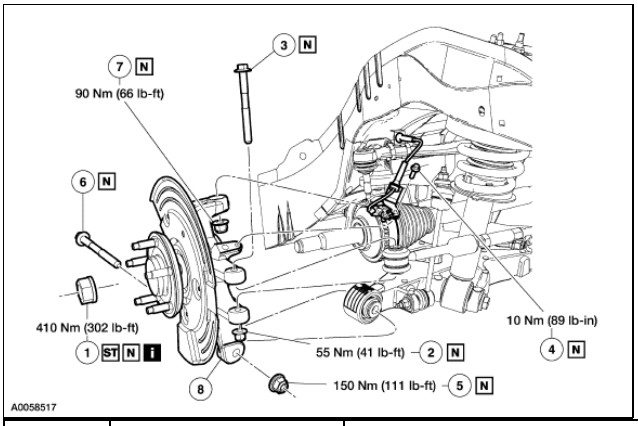
2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

3. If removing the wheel knuckle or wheel hub and bearing, remove the brake disc. For additional information, refer to Section 206-00 .

4. To remove individual components, only carry out the listed steps.

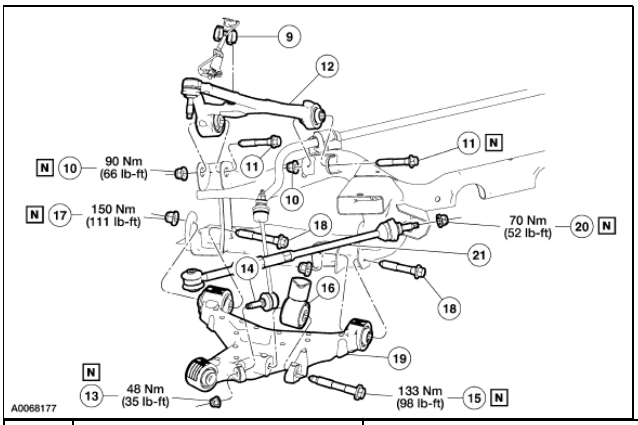
Component	Steps
Wheel knuckle	1-8
Wheel bearing	1-13
Lower arm	5, 6, 18-24
Upper arm	7, 14-17
Toe link	2, 3, 25, 26

5. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	4B477	Axle nut Removal Note
2	W520213-S427	Toe link-to-wheel knuckle nut
3	W705517-S426	Toe link-to-wheel knuckle bolt
4	W500014-S426	Speed sensor-to-wheel knuckle bolt
5	W705518-S427	Lower arm-to-wheel knuckle nut
6	W705516-S426	Lower arm-to-wheel knuckle bolt
7	W520214-S427	Upper ball joint-to-wheel knuckle nut
8	5A968	Wheel knuckle

6. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.

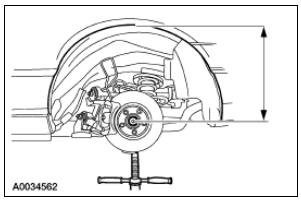


Item	Part Number	Description
9		Speed sensor retainer clip (part of 2C190)
10	W520213-S427	Upper arm-to-frame nuts (2 req'd)
11	W704887-S426	Upper arm-to-frame bolts (2 req'd)
12	5500	Upper arm
13	W520213-S427	Stabilizer bar link-to-lower arm nut
14	5C486	Stabilizer bar link (detach only)
15	W704884-S426	Shock absorber-to-lower arm bolt
16	18125	Shock absorber (detach only)
17	W520215-S427	Lower arm-to-frame nuts (2 req'd)
18		Lower arm-to-frame bolts (2 req'd)

	W704886/ 704888-S426	
19	5A649	Lower arm
20	W520213-S427	Toe link-to-frame nut
21	5B551	Toe link

7. To install, reverse the removal procedure.

8. Before tightening the upper or lower arm-to-frame fasteners, position a jack under the lower arm and raise the vehicle until the distance between the center of the hub and the lip of fender is equal to the measurement taken during the removal procedure.

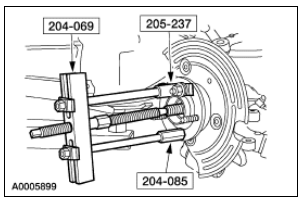


9. Check and, if necessary, align the rear end. For additional information, refer to Wheel Alignment in this section.

Item 1: Axle Nut Removal Note

1. ⚠ **CAUTION: Do not use a hammer to separate the outboard CV joint from the hub. Damage to the threads and internal CV joint components can result.**

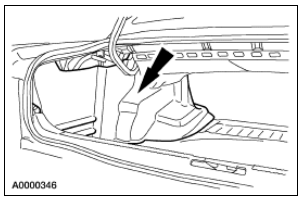
   Using the special tools, press the outboard CV joint until it is loose from the hub.



Shock Absorber and Spring Assembly Rear Printable View (113 KB)

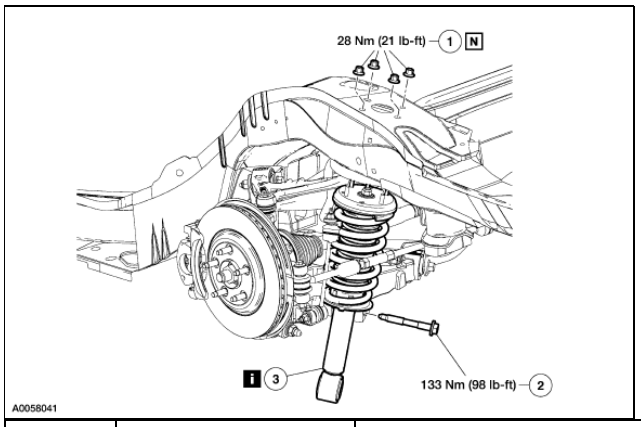
1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. Position the luggage compartment trim panel aside.



3. Remove the components in the order indicated in the following illustration and table.

4. To install, reverse the removal procedure.



Item	Part Number	Description
1	W704790-S427	Nuts
2	W704884-S426	Shock absorber-to-lower arm bolt
3		Shock absorber and spring assembly Removal Note

Item 3: Shock Absorber and Spring Assembly Removal Note

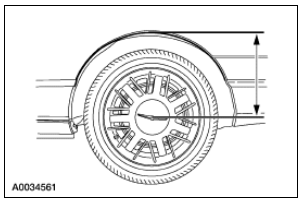
1. For additional information on the disassembly and assembly of the shock absorber and spring assembly refer to Shock Absorber and Spring Assembly in this section.

Stabilizer Bar and Link Rear

Printable View (212 KB)

⚠ CAUTION: Use the hex holding feature to prevent the ball studs from turning when removing the ball stud nuts.

1. For reference during the installation of the upper arm-to-frame fasteners, measure the distance between the center of the wheel hub and the lip of the fender with the weight of the vehicle resting on the wheel and tire assemblies.



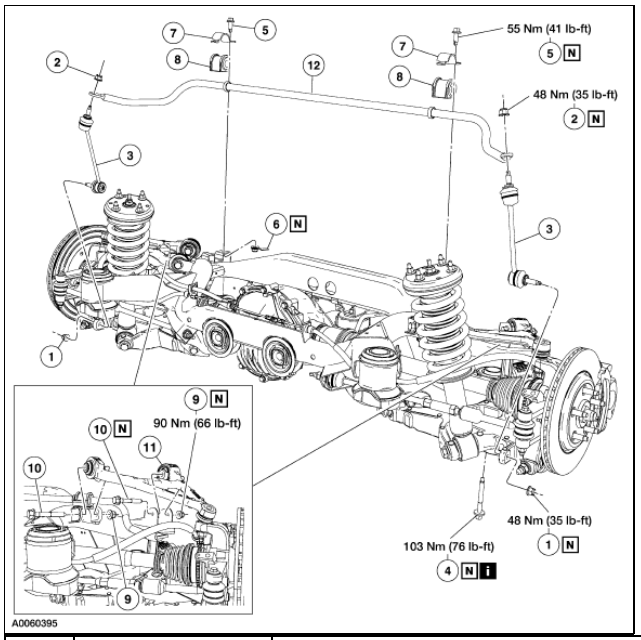
2. With the vehicle in NEUTRAL, position on a hoist.

3. Remove the components in the order indicated in the following illustration and table.

4. To remove individual components, only carry out the listed steps.

Component	Steps
Stabilizer bar links	1-3
Stabilizer bar bushings	4-8
Stabilizer bar	1-13

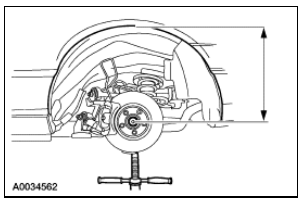
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	W520213-S427	Stabilizer bar link-to-lower arm nuts

2	W520213-S427	Stabilizer bar link-to-stabilizer bar nuts
3	5K486	Stabilizer bar links
4	W707614-S426	Subframe forward bolts (2 req'd) Removal Note
5	W705551-S426	Stabilizer bar brackets-to-subframe bolts
6	W707007-S436	Stabilizer bar brackets-to-subframe flag nuts (2 req'd)
7	5486	Stabilizer bar brackets
8	5493	Stabilizer bar bushings
9	W520213-S427	Upper arm-to-frame nuts (both sides)
10	W704887-S426	Upper arm-to-frame bolts (both sides)
11	5500	Upper arms RH/LH (position aside)
12	5A772	Stabilizer bar

6. Before tightening the upper arm-to-frame fasteners, position a jack under the lower arm and raise the vehicle until the distance between the center of the hub and the lip of fender is equal to the measurement taken during the removal procedure.



Item 4: Subframe Forward Bolts Removal Note

1. Using suitable jack stands, support the subframe.

2. Remove the subframe forward bolts.
    - Lower the front of the subframe approximately 37 mm (1.48 in).

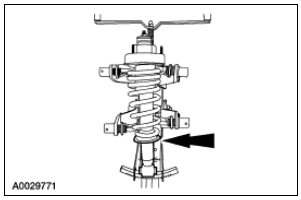
Shock Absorber and Spring Assembly

Printable View (48 KB)

1. Remove the shock absorber and spring assembly. For additional information, refer to Shock Absorber and Spring Assembly - Front or Shock Absorber and Spring Assembly - Rear in this section.

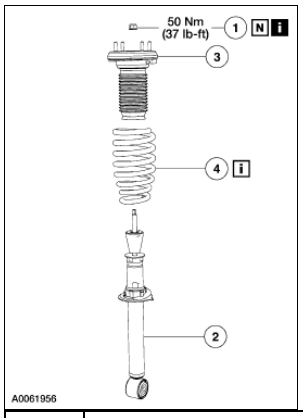
2. For reference during assembly, make an index mark on the mount, spring and shock.

3. Using a suitable spring compressor, compress the spring until the tension is released from the shock absorber.



4. Disassemble the components in the order indicated in the following illustration and table.

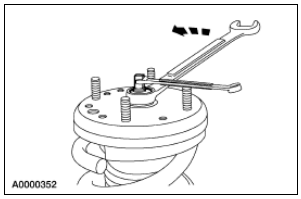
5. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	W704792-S427	Shock absorber-to-upper mount nut Disassembly Note
2	18124/18125 (front/rear)	Shock absorber
3	18183/18178 (front/rear)	Upper shock mount
4	5310/5560 (front/rear)	Coil spring Assembly Note

Item 1: Shock Absorber-to-Upper Mount Nut Disassembly Note

1. While holding the shock absorber rod, remove the nut.



Item 4: Coil Spring Assembly Note

1. If installing a new spring, make sure the part number is correct. Refer to the vehicle certification (VC) label for the correct spring code. Refer to Section 100-00 to convert the spring code to the correct part number.

XW4Z-4613-AA	Black	4.0

Driveline System

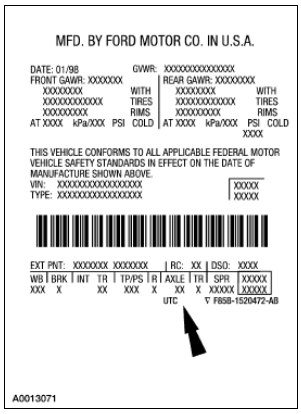
Printable View (46 KB)

The drivetrain's power is generated by the engine and delivered to the transmission. The driveline transfers the engine torque through the driveshaft to the axle.

The driveshaft is connected to the output shaft flange on the transmission and to the axle pinion flange. Flex couplers and alignment bushings are used at the ends of the driveshaft to allow for any angular motion. The two-piece driveshaft has a slip spline, the spline connects the driveshaft halves and is supported by a center bearing. Engine torque enters the axle through the drive pinion, which rotates the ring gear. The ring gear is mounted to the differential case, which contains the gears that transmit power to the axle halfshafts. The differential case is retained by two differential carrier bearings. There is one differential bearing cap while the right carrier bearing is enclosed by the differential housing. A selective snap ring is used instead of shims on the right side of the differential housing. The axle halfshafts rotate the drive wheels.

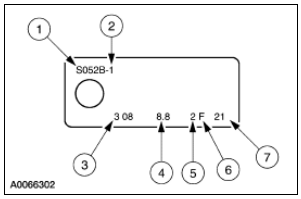
The engine angle is built into the engine mounts. If the flex coupler operating angles are out of specification, the engine mounts must be inspected for damage.

Vehicle Certification (VC) Label Example



The vehicle certification (VC) label is located in the driver door jamb. The first two digits of the axle code indicate the axle and ratio. For additional information on the VC label, refer to Section 100-00 .

A metal axle identification tag is attached to the differential by a housing cover bolt.



Item	Description
1	Plant code
2	Denotes interchangeability affected internally
3	Axle ratio
4	Ring gear diameter (inch)
5	Build year

6	Build month
7	Build day

⚠ CAUTION: The axle identification tag is the official service identifier. Do not damage the tag. Always reinstall the tag after removing it for axle inspection/repair.

The axle identification tag identifies a particular axle design and a specific ratio. In addition, the plant code will not change as long as that particular axle assembly never undergoes an external design change. If, however, an internal design change takes place during the production life of the axle and that internal change affects parts interchangeability, a dash and numerical suffix is added to the plant code. This means that as an assembly both axles are interchangeable; however, internally they are different. Therefore, each requires different internal parts at the time of repair.

Driveline System Printable View (316 KB)

Special Tool(s)

 ST1348-A	Gauge, Clutch Housing 308-021 (T75L-4201-A)
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent
ST1266-A	Dial Indicator Gauge with Holding Fixture 100-D002 (D78P-4201-B) or equivalent
ST2456-A	Adapter, Drive Pinion Angle 205-449
 ST2457-A	Gauge, Drive Pinion Angle 205-025 (T68P-4602-A)

Inspection and Verification

Certain axle and driveline symptoms are also common to the engine, transmission, wheel bearings, tires, and other parts of the vehicle. For this reason, be sure that the cause of the concern is in the axle before disassembling, adjusting or repairing the axle. For additional information, refer to Section 100-00 .

Certain driveshaft vibration symptoms are common to the front engine accessory drive (FEAD), the engine, transmission or tires. Be sure the cause of the concern is the driveshaft before repairing or installing a new driveshaft. For additional information, refer to Section 100-00 .

Noise Acceptability

A gear-driven unit will produce a certain amount of noise. Some noise is acceptable and audible at certain speeds or under various driving conditions, such as a newly paved blacktop road. Slight noise is not detrimental to the operation of the axle and is considered normal.

Flex Coupling Inspection

Check for visible signs of tearing, cracking or wear in the reinforcing cord. If the flex couplings show signs of damage, inspect the axle and subframe mounts for cracking or tearing.

Driveshaft Center Bearing Universal Joint (U-Joint) Inspection

Place the vehicle on a frame hoist and rotate the driveshaft by hand. Check for rough operation or a seized U-joint. The U-joint is not repairable, a new driveshaft must be installed if the U-joint shows signs of seizure,

excessive wear, or incorrect seating.

Driveshaft Center Bearing

Rotate the driveshaft by hand. If the bearing shows signs of roughness or is noisy, install a new bearing assembly.

Analysis of Leakage

Clean up the leaking area enough to identify the exact source. An axle leak can be caused by the following:

- Axle lubricant level is too high.
- Worn or damaged halfshaft seals or differential seals.
- Axle housing is cracked.
- Flange yoke seal is worn or damaged.
- Pinion flange is scored or damaged.
- Axle cover is not sealed.
- Vent is plugged.

Repair the axle as necessary. Make sure the axle lubricant is at the correct level. For additional information, refer to Specifications in this section.

Axle Vent

NOTE: If a plugged vent cannot be cleared, install a new vent.

A plugged vent will cause excessive seal lip wear due to internal pressure buildup. If a leak occurs, check the vent.

Flange Yoke Seal

Leaks at the axle drive pinion seal originate for the following reasons:

- Seal is not correctly installed.
- Damaged seal journal surface.

Any damage to the seal bore (dings, dents, gouges, or other imperfections) will distort the seal casing and allow leakage past the outer edge of the axle drive pinion seal.

The axle drive pinion seal can be torn, cut, or gouged if it is not installed carefully. The spring that holds the axle drive pinion seal against the pinion flange can be knocked out, which can allow leakage past the lip.

The rubber lips can occasionally become hard (like plastic) with cracks at the oil lip contact point. The contact point on the pinion flange may blacken, indicating excessive heat. Marks, nicks, gouges, or rough surface texture on the seal journal of the pinion flange will also cause leaks.

A new pinion flange must be installed if any of these conditions exist.

Metal chips or sand trapped at the sealing lip can also cause oil leaks. This can cause a wear groove on the pinion flange and heavy pinion seal wear.

When a seal leak occurs, install a new seal and check the vent.

Differential Seals

Stub shaft pilot bearing housing seals are susceptible to the same kinds of damage as axle drive pinion seals if they are incorrectly installed. The seal bore must be clean and the lip handled carefully to avoid cutting or tearing it. The seal journal surface must be free of nicks, gouges and rough surface texture.

Analysis of Vibration

Few vibration conditions are caused by the rear axle. For a vibration concern, follow the diagnosis procedure in Section 100-00 unless there is a good reason to suspect the axle.

Tires

⚠ WARNING: Do not balance the wheels and tires while they are mounted on the vehicle. Possible tire disintegration or differential failure could result, causing personal injury or extensive component damage. Use an off-vehicle wheel and tire balancer only.

Most vibration is caused by tires, driveline angle or driveline imbalance.

Vibration is a concern with modern, high-mileage tires if they are not "true" both radially and laterally. They are more susceptible to vibration around the limits of radial and lateral runout of the tire and wheel assembly. They also require more accurate balancing. Wheel and tire runout checks, trueing and balancing are normally done before axle inspection. For additional information, refer to Section 204-00 .

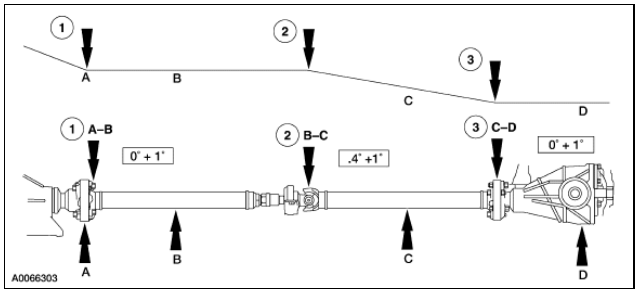
Driveline Imbalance

Driveline imbalance can be caused by excessive looseness in the driveshaft, damaged driveshaft tubing, looseness or high runout at the driveshaft attachments. Excessive looseness in the driveshaft can be caused by CV joint or universal joint wear as well as loose fitting slip-yoke splines. Inspect and install new driveshaft components as necessary.

Driveline Angle

Driveline operating angularity is the angular relationship between the input and output sides of any flex coupling or universal joint. Some of the factors determining driveline angularity include ride height, rear spring, and engine mounts.

Driveline Operating Angle



NOTE: See Steps one through sixteen for front and rear flex coupling angles between joints one, two and three. Joint number one is the operating angle of the front flex coupler, number two is the operating angle of the center U-joint and number three is the operating angle of the rear flex coupler.

An incorrect driveline (pinion) angle can often be detected by examining the driving condition in which the vibration occurs.

- A vibration during coastdown, from 72 to 56 km/h (45 to 35 mph) is often caused by an excessive angle at the axle (pinion nose downward).
- A vibration during acceleration, from 56 to 72 km/h (35 to 45 mph) may indicate an excessive angle at the axle (pinion nose upward).

When these conditions exist, check the driveline operating angles.

1. ⚠ **CAUTION: Prior to checking driveline angularity, inspect the flex couplers and the U-joint for correct operation.**

   Check the vehicle for:

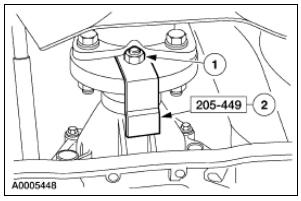
   - overload or sagging.
   - specified air pressures in all four tires.
   - loose axle mounts.
   - loose rear subframe-to-body mounts.

2. Normalize the suspension.

3. Drive the vehicle onto a drive-on hoist or front end alignment rack.

4. Inspect the suspension and chassis.

5. Remove the exhaust heat shield fasteners and slide the exhaust heat shield as far forward as possible to expose the driveshaft to axle flange coupling.

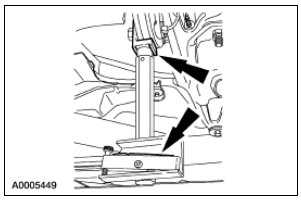


6. **NOTE:** The special tool contacts the flex coupling bolt sleeve to obtain an accurate reading.

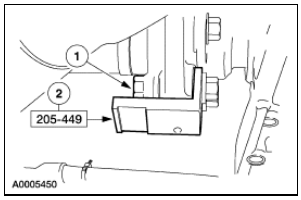
   NOTE: The bolt is serrated in the flange. The bolt should not be removed, only the nut.

   Prepare to measure the front flex coupling operating angle (A).

   1. Remove one of the nuts that attach the flex coupling to the transmission flange.
   2. Install the special tool onto the bolt on the rear of the flex coupling and tighten the nut.



7. Place the special tool in the bracket slot with the special tool facing the passenger side and set the gauge to zero using the thumbscrew.
   - Remove the special tool and tighten the fastener to specification.

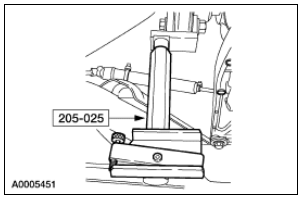


8. **NOTE:** The special tool must contact the flex coupling bolt sleeve to obtain an accurate reading.

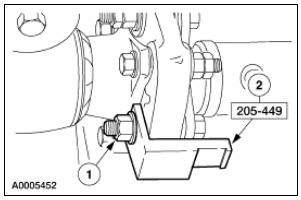
   NOTE: The bolt is serrated in the flange. The bolt should not be removed, only the nut.

   Prepare to measure the front flex coupling operating angle (B).

   1. Remove one of the nuts that attach the flex coupling to the front driveshaft.
   2. Install the special tool onto the bolt on the front of the flex coupling and tighten the nut.



9. Place the special tool in the bracket slot with the special tool facing the passenger side and record the reading.
   - Remove the special tool and tighten the fastener to specification.

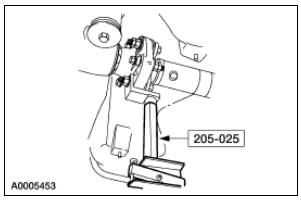


10. **NOTE:** The special tool must contact the flex coupling bolt sleeve to obtain an accurate reading.

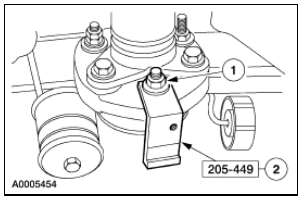
    NOTE: The bolt is serrated in the flange. The bolt should not be removed, only the nut.

    Prepare to measure the rear flex coupling operating angle (C).

    1. Remove one of the nuts that attach the flex coupling to the rear driveshaft.
    2. Install the special tool onto the bolt on the rear of the flex coupling and tighten the nut.



11. Place the special tool in the bracket slot with the special tool facing the passenger side and record the reading.
    - Remove the special tools and tighten the fastener to specification.

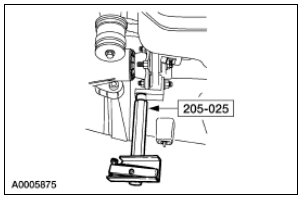


12. **NOTE:** The special tool must contact the flex coupling bolt sleeve to obtain an accurate reading.

    NOTE: The bolt is serrated in the flange. The bolt should not be removed, only the nut.

    Prepare to measure the rear flex coupling operating angle (D).

    1. Remove one of the nuts that attach the flex coupling to the pinion flange.
    2. Install the special tool onto the bolt on the rear of the flex coupling and tighten the nut.



13. Place the special tool in the bracket slot with the special tool facing the passenger side and record the reading (D).
    - Remove the special tool and tighten the fastener to specification.

14. Calculate the operating angles of joints 1, 2 and 3 as follows:
    - A-B = Joint 1
    - B-C = Joint 2
    - C-D = Joint 3

15. **NOTE:** To adjust the center support bearing adjusting washers, the exhaust heat shield must be removed.

    NOTE: Left and right washers should be the same thickness.

    NOTE: Two washers should not be assembled together.

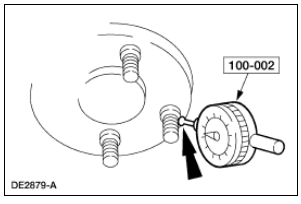
    Adjust the joint operating angles by varying the center support bearing adjusting washers.

16. Install the exhaust heat shield.

If the tires and driveline angle are not the cause, carry out the NVH tests to determine whether the concern is caused by a condition in the axle. For additional information, refer to Section 100-00 .

Wheel Hub Bolt Circle Runout

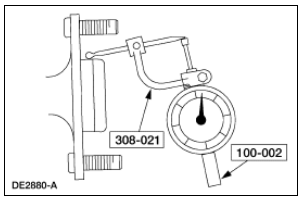
NOTE: The brake discs must be removed to carry out all runout measurements.



1. Position the special tool on the wheel hub bolt, as close to the hub face as possible. Zero the indicator to allow the pointer to deflect either way.

2. Rotate the hub until the next bolt is contacted. Record the measurement and continue until each bolt is checked. The difference between the maximum and minimum contact readings will be the total wheel hub bolt circle runout. The runout must not exceed 0.38 mm (0.015 inch).

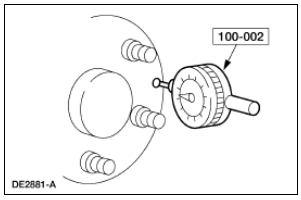
Pilot Runout



1. Position the special tools on the pilot, as close to the hub as possible. Zero the indicator to allow the pointer to deflect either way.

2. Rotate the hub one full turn and note the maximum and minimum readings. The difference between the maximum and minimum readings will be the total pilot runout. Pilot runout must not exceed 0.15 mm (0.006 inch).

Wheel Hub Runout



1. Position the special tool on the wheel hub, as close to the outer edge as possible. Zero the indicator to allow the pointer to deflect either way.

2. Rotate the hub one full turn and note the maximum and minimum readings. The difference between the maximum and minimum readings will be the total wheel hub runout. The runout must not exceed 0.127 mm (0.005 inch).

Drive Pinion Stem and Pinion Flange

Check the pinion flange runout when all other checks have failed to show the cause of the vibration.

One cause of excessive pinion flange runout is incorrect installation of the axle drive pinion seal. Check to see if the spring on the seal lip has been dislodged.

Halfshafts

NOTE: While inspecting the boots, watch for indentations ("dimples") in the boot convolutions. Indentations must be removed.

- Inspect the boots for evidence of cracks, tears, or splits.
- Inspect the underbody for any indication of grease splatter near the boots outboard and inboard locations. This is an indication of boot/clamp damage.

Axle Noise

NOTE: Before disassembling the axle to diagnose and correct gear noise, eliminate the tires, exhaust, trim items, roof racks and wheel bearings as possible causes. Follow the diagnostic procedures in Section 100-00 .

The noises described as follows usually have specific causes that can be diagnosed by observation as the unit is disassembled. The initial clues are the type of noise heard during the road test.

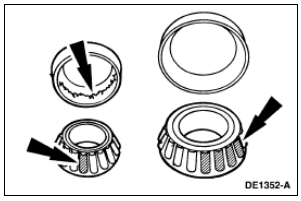
Gear Howl and Whine

Howling or whining of the ring gear and pinion is due to an incorrect gear pattern, gear damage or incorrect bearing preload.

Bearing Whine

Bearing whine is a high-pitched sound similar to a whistle. It is usually caused by worn/damaged pinion bearings, which are operating at driveshaft speed. Bearing noise occurs at all driving speeds. This distinguishes it from gear whine which usually comes and goes as speed changes.

As noted, pinion bearings make a high-pitched, whistling noise, usually at all speeds. If however there is only one pinion bearing that is worn/damaged, the noise may vary in different driving phases. New pinion bearings must not be installed unless they are scored or damaged or there is a specific pinion bearing noise. A worn/damaged bearing will normally be obvious at disassembly. Examine the large end of the rollers for wear. If the pinion bearings original blend radius has worn to a sharp edge, a new pinion bearing must be installed.



A wheel bearing noise can be mistaken for a pinion bearing noise. Check the wheel bearing for a spalled cup, and spalled/damaged rollers. Install a new wheel bearing if any of these concerns are detected.

Chuckle

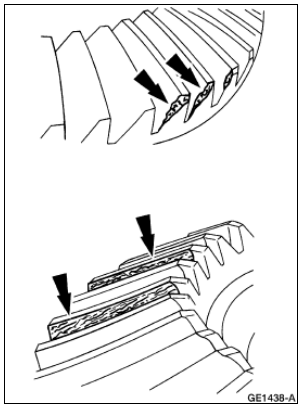
Chuckle that occurs on the coast driving phase is usually caused by excessive clearance between the differential gear hub and the differential case bore.

Damage to a gear tooth on the coast side can cause a noise identical to a chuckle. A very small tooth nick or ridge on the edge of a tooth can cause the noise.

Clean the gear tooth nick or ridge with a small grinding wheel. If the damaged area is larger than 3.2 mm (1/8 inch), install a new gearset.

To check the ring gear and pinion, remove as much lubricant as possible from the gears with clean solvent. Wipe the gears dry or blow them dry with compressed air. Look for scored or damaged teeth. Also look for cracks or other damage.

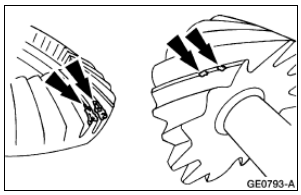
If either gear is scored or badly damaged, a new ring gear and pinion must be installed.



If metal has broken loose, the axle housing must be cleaned to remove particles that will cause damage. At this time, any other damaged parts in the axle housing must also be installed new.

Knock

Knock, which can occur in all driving phases, has several causes including damaged teeth or gearset.



1. **NOTE:** Measure the end play with a dial indicator and not by feel.

   Knock is also caused by excessive end play in the axle shafts. Up to 0.762 mm (0.030 inch) is allowed in semi-float axles. The frequency of the knock will be less because the axle shaft speed is slower than the driveshaft.

Clunk

Clunk is a metallic noise heard when the automatic transmission is engaged in REVERSE or DRIVE. The noise can also occur when throttle is applied or released. It is caused by backlash somewhere in the driveline or loose suspension components; it is felt or heard in the axle.

Additionally, clunk may be heard upon initial drive-away. This occurs as engine torque shifts vehicle weight, forcing changes in driveline angles which prevent the driveshaft slip-yoke from sliding on the output shaft. To correct this condition, lubricate the slip-yoke splines.

Bearing Rumble

Bearing rumble sounds like marbles being tumbled. This condition is usually caused by a worn/damaged wheel bearing. The lower pitch is because the wheel bearing turns at only about one-third the speed of the driveshaft. Wheel bearing noise also may be high-pitched, similar to gear noise, but will be evident in all four driving modes.

Symptom Chart

Symptom Chart

Component Tests

Driveshaft Vibration Diagnosis

1. Road test the vehicle to determine the critical vibration points. Note the road speed, the engine RPM, and the shift lever positions at which the vibration occurs.

2. Stop the vehicle, place the transmission lever in NEUTRAL and run the engine through the critical speed ranges determined in Step 1.

3. If no vibration is felt, balance the driveshaft.

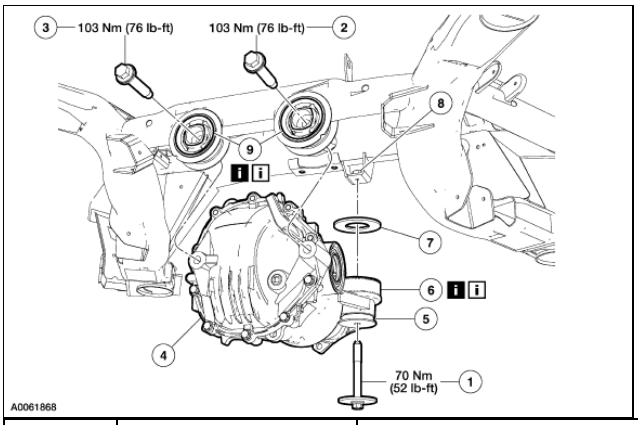
Rear Axle Assembly

Printable View (152 KB)

Special Tool(s)

ST2543-A	Remover/Installer, Differential Bushing 205-485

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
2. Remove the rear halfshafts. For additional information, refer to Rear Axle Halfshafts, Bearings and Seals in this section.
3. Remove the driveshaft assembly. For additional information, refer to Rear Driveshaft in this section.
4. Position a suitable hydraulic jack to the axle housing. Securely strap the jack to the housing.
5. Remove the components in the order indicated in the following illustration and table.
6. To install, reverse the removal procedure.



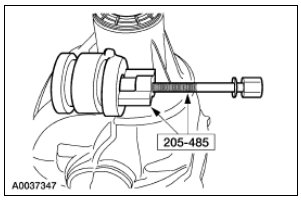
Item	Part Number	Description
1	W706464-S426	Pinion nose isolator bolt
2	W701905-S	Rear isolator bolt
3	W701905-S	Rear isolator bolt
4	4000	Rear axle assembly
5	4B424	Pinion nose isolator snubber
6	4B431	Pinion nose isolator bushing Removal Note
6	4B431	Pinion nose isolator bushing Installation Note
7	4067	Shim
8	W520114-S	Nut
9	4B424	

		Rear axle assembly isolator bushing Removal Note
9	4B424	Rear axle assembly isolator bushing Installation Note

7. Fill the axle with the specified quantity of the specified lubricant.

Item 6: Pinion Nose Isolator Bushing Removal Note

1. Using the special tool and a hammer, remove and discard the bushing.



Item 9: Rear Axle Assembly Isolator Bushing Removal Note

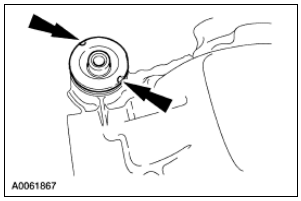
1. Using the special tool, draw the isolator from the frame pocket.

Item 9: Rear Axle Assembly Isolator Bushing Installation Note

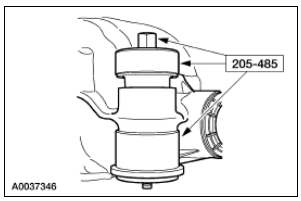
1. Using the special tool, draw the isolator into the frame pocket.
   - Install the isolator with the rubber legs positioned vertically.

Item 6: Pinion Nose Isolator Bushing Installation Note

1. Insert the rear axle differential pinion nose isolator bushing and make sure the notches are aligned 45° from a forward and aft location.



2. Using the special tool, install the rear axle differential pinion nose isolator bushing.



Rear Driveshaft

 ST1255-A	Adapter for 303-224 205-153 (T80T-4000-W)
ST1508-A	Driveshaft Alignment Bushing Installer 205-D074 or equivalent

1. ⚠ **CAUTION: Only remove the flex couplings from the driveshaft if it is necessary to install new flex couplings and alignment bushings. Install new flex couplings and alignment bushings as a pair.**

   With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. ⚠ **CAUTION: Do not allow the full weight of the exhaust to bear against the exhaust pipe manifold flanges. This will damage the flanges and create exhaust leaks.**

   Remove the muffler and extension pipe assembly. For additional information, refer to Section 309-00 .

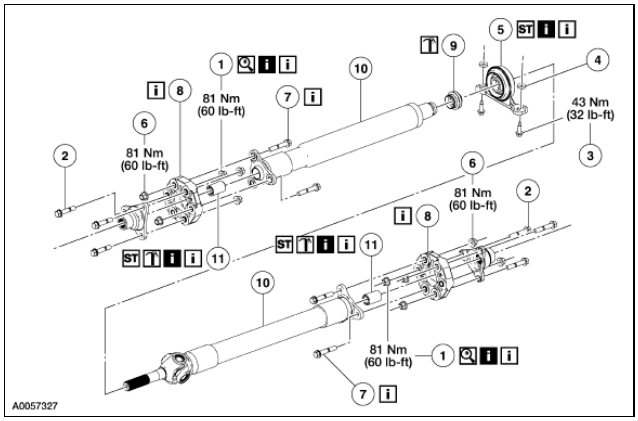
3. Remove the eight retainers and the heat shield.

4. Index-mark the driveshaft on both sides of the slip joint.

5. Remove the components in the order indicated in the following illustration and table.

6. **NOTE:** Install 1 gram of grease in each alignment bushing when installing the driveshaft.

   To install, reverse the removal procedure.



Item	Part Number	Description

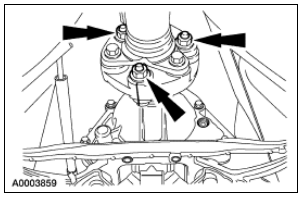
Item 1: Flex Coupling To Flange Bolt Nut Removal Note

1. **⚠ CAUTION: To make sure assembly will be in the exact location as when removed, index-mark the bolt, nut, washer and flex coupling to the pinion flange with paint or marker. Using a different color paint or marker, index-mark the second bolt, nut, washer and flex coupling to the pinion flange. These fasteners are balanced weights. Always assemble them in their original positions. Failure to do so can cause driveshaft NVH.**

   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   NOTE: The bolt heads are serrated. Hold the bolt and loosen the nut.

   Remove three nuts, washers and bolts.

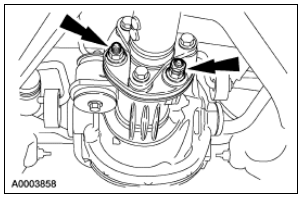


2. **⚠ CAUTION: To make sure assembly will be in the exact location as when removed, index-mark the bolt, nut, washer and flex coupling to the pinion flange with paint or marker. Using a different color paint or marker, index-mark the second bolt, nut, washer and flex coupling to the pinion flange. These fasteners are balanced weights. Always assemble them in their original positions. Failure to do so can cause driveshaft NVH.**

   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   NOTE: The bolt heads are serrated. Hold the bolt and loosen the nut.

   Remove three nuts, washers and bolts.

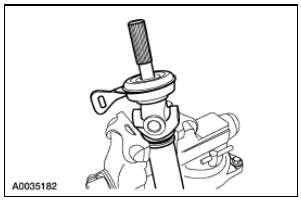


Item 5: Center Bearing and Bracket Assembly Removal Note

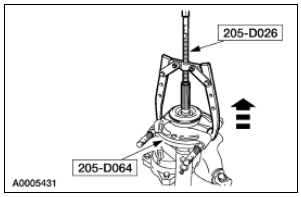
1. Separate the front and rear driveshaft sections.

2. **⚠ CAUTION: Do not clamp on the driveshaft tube as a fracture can result.**

   Position and clamp the driveshaft at the weld yoke.



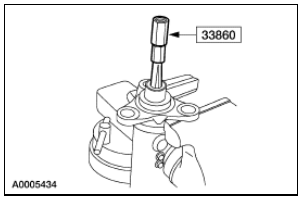
3. Using the special tools, remove the retaining ring and the center bearing and bracket assembly.



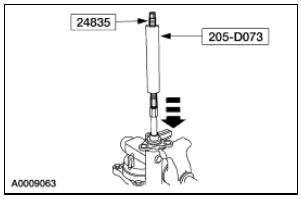
Item 11: Alignment Bushing Removal Note

1. **⚠ CAUTION: Do not clamp the vise on the driveshaft tube as a fracture can result.**

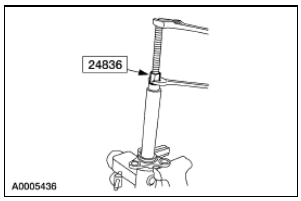
   Insert the special tool inside the alignment bushing and expand the collet.



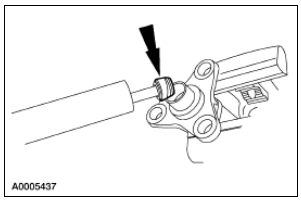
2. Install the special tools.



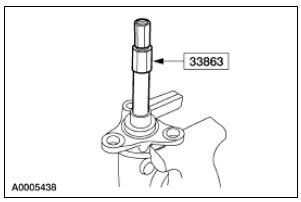
3. Hold the forcing screw and tighten the nut until the alignment bushing inner core is removed.



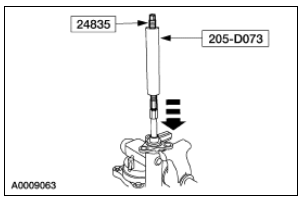
4. Discard the alignment bushing inner core.



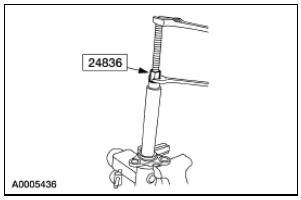
5. Insert the special tool and adjust it to seat behind the bushing shell.



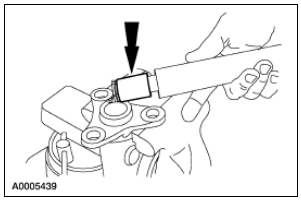
6. Install the special tools.



7. Hold the forcing screw and tighten the nut until the alignment bushing outer shell is removed.



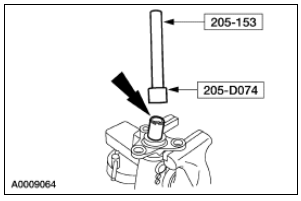
8. Discard the alignment bushing outer shell.



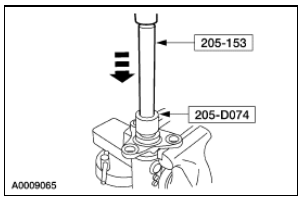
Item 11: Alignment Bushing Installation Note

1. **NOTE:** Install the alignment bushing with the seal facing outboard.

   Using the special tools, align the bushing with the driveshaft.



2. Using the special tools, drive the alignment bushing until the tool contacts the end yoke.



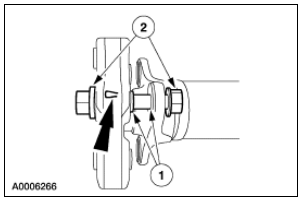
Item 8: Flex Coupling Installation Note

1. ⚠ **CAUTION: There are six bushings in each flex coupling. Three of the bushings protrude from one side of the flex coupling and three protrude from the other side. The arrows on the side of the flex coupling point toward the protruding end of the bushing. When installing the flex coupling, the protruding end of the bushing must seat in the driveshaft flange counterbore or damage will occur to the flex coupling during driveshaft operation.**

   Install the flex coupling.

   1. Position the end of the bushing against the driveshaft flange.
   2. ⚠ **CAUTION: The bolt heads must seat against the driveshaft flange and the nuts against the flex coupling.**

      Install the three nuts and bolts in their original position.

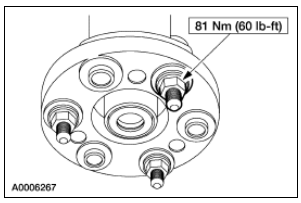


Item 7: Flex Coupling To Driveshaft Bolt Installation Note

1. **NOTE:** The bolt heads are serrated. Hold the bolt and tighten the nut.

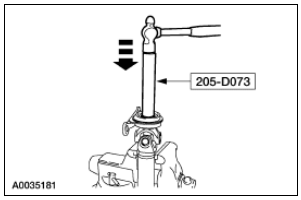
   Tighten the nuts.

   - Coat the threads of the bolts with sealer.

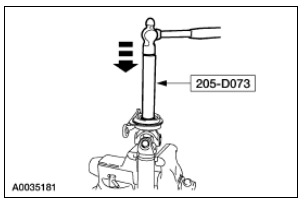


Item 5: Center Bearing and Bracket Assembly Installation Note

1. Position the center bearing and bracket assembly and the retaining ring on the yoke.



2. Using the special tool, drive the retaining ring and bearing assembly until fully seated on the yoke.



Item 1: Flex Coupling To Flange Bolt Nut Installation Note

1. ⚠ **CAUTION: Install the bolts, washers and nuts in their original positions or driveshaft NVH can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange and the nuts seated against the flex coupling.**

   NOTE: The bolt heads are serrated. Hold the bolt and tighten the nut.

   Install the bolts, washers and nuts.

   - Coat the nut and bolt threads with sealer.

Rear Axle Halfshafts, Bearings and Seals

Printable View (444 KB)

Special Tool(s)

 ST2258-A	Protector, Differential Seal 205-506
 ST1516-A	Hub Remover/Replacer 204-069 (T81P-1104-C)
ST2309-A	Remover, Halfshaft 205-475
ST1517-A	Metric Hub Remover Adapter 205-237 (T86P-1104-A1)
ST1518-A	Metric Hub Remover Adapters 204-085 (T83P-1104-BH)
ST1200-A	Remover, Bearing Cup 308-047 (T77F-1102-A)
 ST2027-A	Installer, Differential Oil Seal 205-539
 ST1326-A	Adapter for 303-224 (Handle) 205-153 (T80T-4000-W)
ST1185-A	Impact Slide Hammer 100-001 (T50T-100-A)
ST1721-A	Installer, Needle Bearing 205-288 (T89P-1244-A)

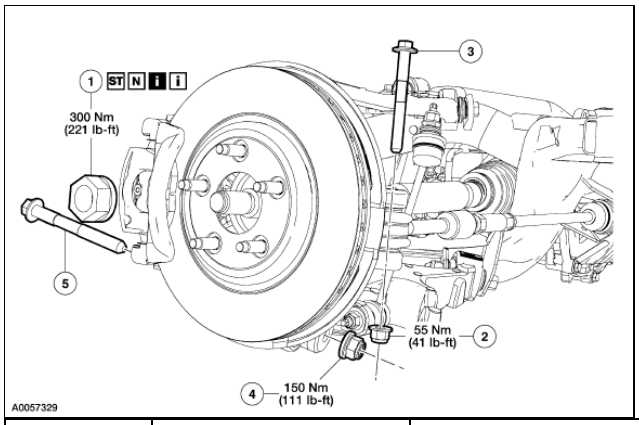
NOTE: This procedure applies to both rear halfshaft assemblies.

1. ⚠ **CAUTION: Do not loosen the rear axle wheel hub retainer until after the wheel and tire assembly are removed from the vehicle. Wheel bearing damage will occur if the wheel bearing is unloaded with the weight of the vehicle applied.**

   With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

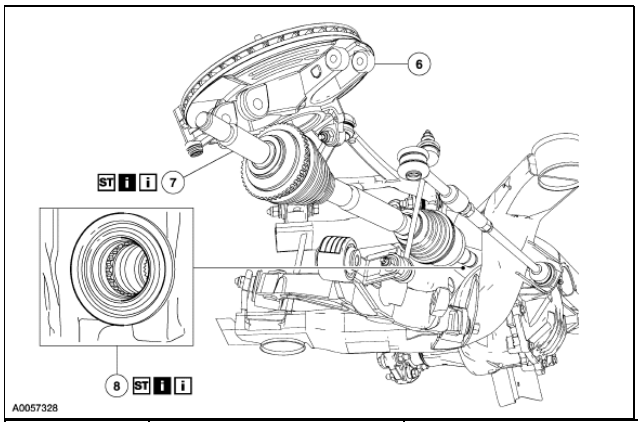
2. Remove the rear wheel and tire assembly. For additional information, refer to Section 204-00 .

3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	4B423	Rear axle wheel hub retainer Removal Note
1	4B423	Rear axle wheel hub retainer Installation Note
2	W520213-S	Toe link nut
3	W705517-S	Toe link bolt
4	W705518-S	Suspension lower arm nut
5	W705516-S	Suspension lower arm bolt

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
6	3K185	Rear wheel knuckle assembly
7	3514	Rear halfshaft assembly Removal Note
7	3514	Rear halfshaft assembly Installation Note
8	4B413/4B416	Halfshaft seal Removal Note
8	4B413/4B416	Halfshaft seal Installation Note

5. To install, reverse the removal procedure.

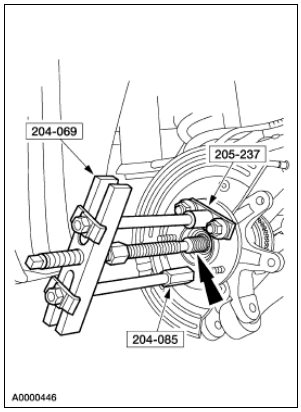
6. Fill the axle with the specified quantity of the specified lubricant.

Item 1: Rear Axle Wheel Hub Retainer Removal Note

1. **⚠ CAUTION: Do not use a hammer to separate the rear axle halfshaft assembly from the hub. Damage to the threads and internal CV joint components can result.**

   Separate the rear axle halfshaft assembly from the hub.

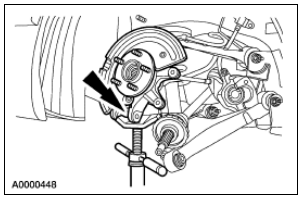
   1. Using the special tools, press the outboard CV joint until it is loose in the hub.
   2. Remove the special tool.
   3. Separate the outboard CV joint from the hub.



Item 7: Rear Halfshaft Assembly Removal Note

1. **⚠ CAUTION: Do not over-angulate the outboard CV joint or damage the boot.**

   Position the knuckle to gain clear access for the halfshaft removal.

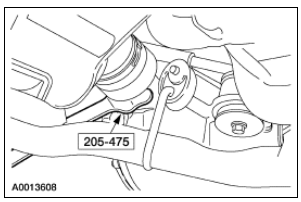


2. **⚠ CAUTION: Do not damage the axle shaft oil seal or the machined sealing surface on the inboard CV joint housing.**

   ⚠ CAUTION: Do not allow the splines on the inboard CV joint housing to touch the axle shaft oil seal.

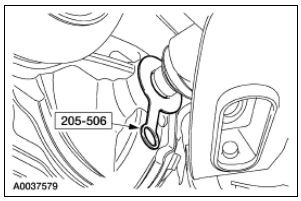
   NOTE: A circlip retains the inboard CV joint housing to the differential side gear in the axle.

   Using the special tool, disengage the inboard CV joint housing from the differential side gear.

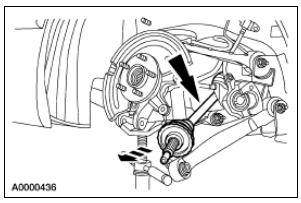


3. ⚠ **CAUTION: To prevent damage to the axle shaft oil seal, install the special tool before removing the inboard CV joint housing from the axle.**

   Install the special tool.

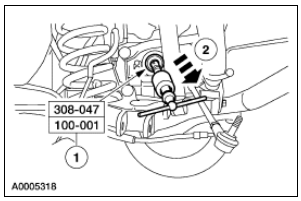


4. Carefully remove the halfshaft. The halfshaft assemblies are not repairable. Install a new assembly if worn or damaged.



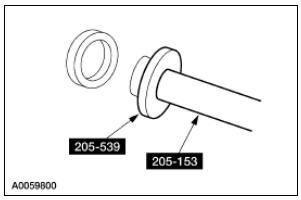
Item 8: Halfshaft Seal Removal Note

1. Using the special tools, remove the halfshaft seal.



Item 8: Halfshaft Seal Installation Note

1. Lubricate the lips of the halfshaft seal with rear axle lubricant. Place the seal on the special tool.

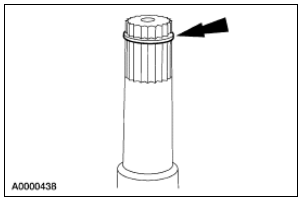


2. ⚠ **CAUTION: Installation of the halfshaft seal without the correct tool can result in an early seal failure. If the seal becomes cocked during installation, remove it and install a new one.**

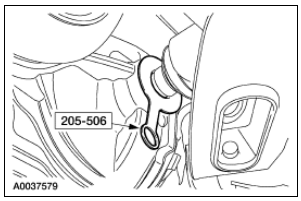
   Carefully align the halfshaft seal with the housing bore and install the seal.

Item 7: Rear Halfshaft Assembly Installation Note

1. Install a new axle circlip.



2. Install the special tools to protect the differential seals.



Item 1: Rear Axle Wheel Hub Retainer and Washer Installation Note

1. ⚠ **CAUTION: Never use power tools to tighten the rear axle wheel hub retainer.**

   Install a new rear axle wheel hub retainer and washer.

Drive Pinion Flange and Drive Pinion Seal

Printable View (224 KB)

Special Tool(s)

 ST2458-A	Holding Tool, Drive Pinion Flange 205-478
ST1734-A	Installer, Drive Pinion Flange 205-479
ST2452-A	Remover, Output Flange 307-408
ST1325-A	Installer, Drive Pinion Oil Seal 205-208 (T83T-4676-A)

Material

Item	Specification
Premium Long Life Grease XG-1-C	ESA-M1C75-B

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. Remove the rear wheel and tire assemblies. For additional information, refer to Section 204-00 .

3. **⚠ CAUTION: Remove the rear brake calipers to prevent drag during the drive pinion bearing preload adjustment.**

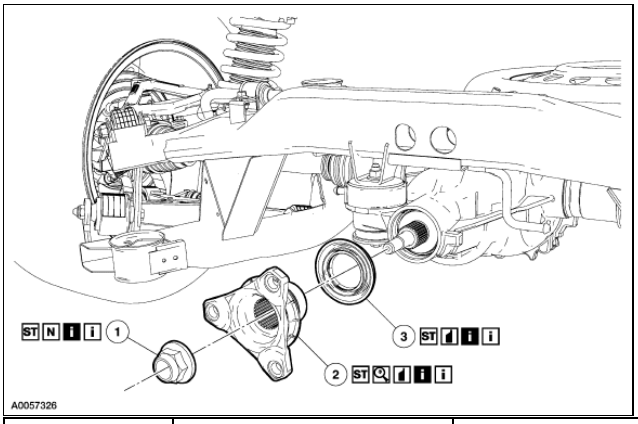
   ⚠ CAUTION: Do not allow the calipers to hang from the brake hoses.

   Remove the rear brake caliper and support bracket from the knuckle as an assembly. Wire the caliper and support bracket out of the way. For additional information, refer to Section 206-00 .

4. Remove the driveshaft assembly. For additional information, refer to Driveshaft Removal and Installation in this section.

5. Remove the components in the order indicated in the following illustration and table.

6. To install, reverse the removal procedure.

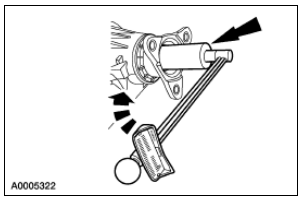


Item	Part Number	Description
1	391915-S	Pinion nut Removal Note
1	391915-S	Pinion nut Installation Note
2	4858	Rear axle pinion flange Removal Note
2	4858	Rear axle pinion flange Installation Note
3	4676	Rear pinion oil seal Removal Note
3	4676	Rear pinion oil seal Installation Note

7. Fill the axle with the specified quantity of the specified lubricant.

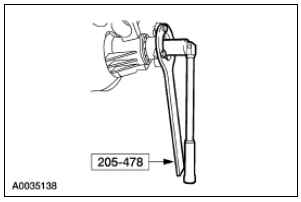
Item 1: Pinion Nut Removal Note

1. Install a Nm (inch-pound) torque wrench on the pinion nut and record the torque necessary to maintain rotation of the drive pinion gear through several revolutions.



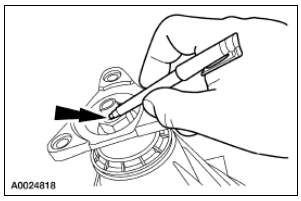
2. ⚠ **CAUTION: After removing the nut, discard it. Always use a new nut for installation.**

   Use the special tool to hold the rear axle pinion flange while removing the nut.

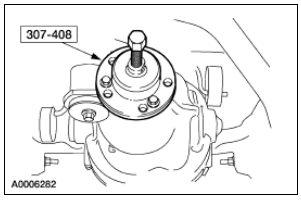


Item 2: Rear Axle Pinion Flange Removal Note

1. Index-mark the rear axle pinion flange and drive pinion gear to maintain initial balance during installation.

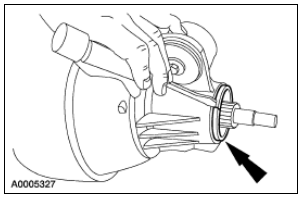


2. Using the special tool, remove the rear axle pinion flange.



Item 3: Rear Pinion Oil Seal Removal Note

1. Use a screwdriver to force up the metal flange of the rear axle drive pinion seal. Install gripping pliers and strike with a hammer to remove the rear axle drive pinion seal.

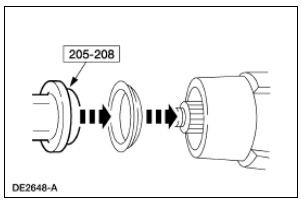


Item 3: Rear Pinion Oil Seal Installation Note

1. Lubricate the lips of the new seal with grease.

2. ⚠ **CAUTION: If the rear axle drive pinion seal becomes misaligned during installation, remove the seal and install a new one.**

   Using the special tool, install the rear axle drive pinion seal.



Item 2: Rear Axle Pinion Flange Installation Note

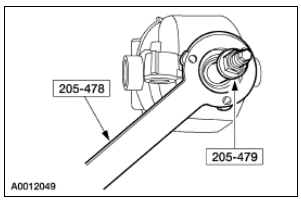
1. Inspect the rear axle pinion flange seal journal for rust, nicks and scratches prior to installing the flange. Polish the seal journal with fine crocus cloth, if necessary.

2. Lubricate the rear axle pinion flange splines.

3. **NOTE:** Disregard the index marks if installing a new rear axle pinion flange.

   Position the index marks on the rear axle pinion flange.

4. Using the special tools, install the rear axle pinion flange.

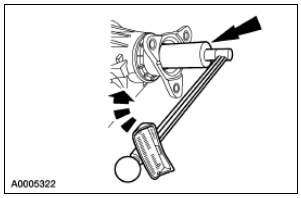


Item 1: Pinion Nut Installation Note

1. **⚠ CAUTION: Do not under any circumstance loosen the nut to reduce preload. If it is necessary to reduce preload, install a new differential drive pinion collapsible spacer and nut.**

   Tighten the nut to set the preload.

   - Rotate the pinion occasionally to make sure the pinion bearings seat correctly. Take frequent pinion bearing torque preload readings by rotating the drive pinion gear with a Nm (inch-pound) torque wrench.
   - If the preload recorded prior to disassembly is lower than the specification for used bearings, tighten the nut to specification. If the preload recorded prior to disassembly is higher than the specification for used bearings, tighten the nut to the original reading as recorded.
   - Refer to the torque specification for used pinion bearings in the Specifications portion of this section.



Rear Axle Differential Case

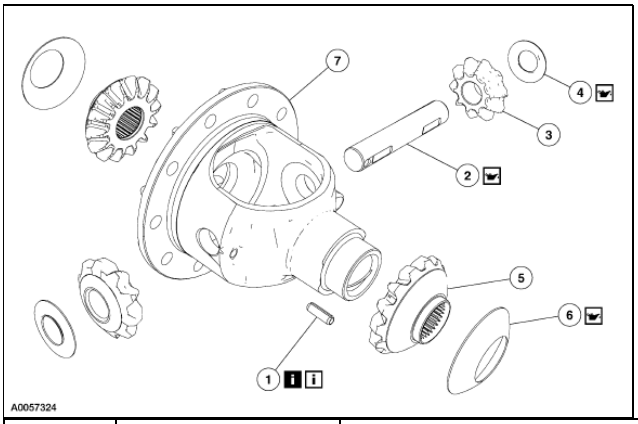
Printable View (80 KB)

Material

Item	Specification
Motorcraft FEHP 75W-90 Rear Axle Lubricant XY-75W90-Q FEHP	ES-3W4W-19A508-AA

Disassembly and Assembly

1. Remove the differential case from the differential housing.
2. Remove the components in the order indicated in the following illustration and table.
3. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	4241	Differential pinion shaft roll pin Disassembly Note
1	4241	Differential pinion shaft roll pin Assembly Note
2	4211	Differential pinion shaft
3	4215	Differential pinion gear
4	4230	Differential pinion gear thrust washer
5	4236	Differential side gear
6	4228	Differential side gear thrust washer
7	4205	Differential case

Item 1: Differential Pinion Shaft Roll Pin Disassembly Note

1. Use a drift punch to drive the roll pin into the differential pinion shaft until the roll pin bottoms against the differential case. When the differential pinion shaft is removed from the differential case, drive the roll pin from the shaft.

Item 1: Differential Pinion Shaft Roll Pin Assembly Note

1. Align the differential pinion shaft hole with the hole in the differential case. Using a hammer, install the differential shaft roll pin in the differential case until the pin is flush with the case.

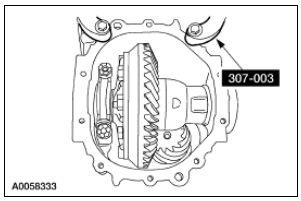
25	4616	Outer pinion bearing cup

		Assembly Note
26	4221	Differential bearing Disassembly Note
26	4221	Differential bearing Assembly Note
27	4241	Differential pinion shaft roll pin Disassembly Note
27	4241	Differential pinion shaft roll pin Assembly Note
28	4211	Differential pinion shaft
29	4215	Differential pinion gear
30	4230	Differential pinion thrust washer
31	4236	Differential side gear
32	4228	Differential side gear thrust washer
33	4B431	Axle isolator bushing Disassembly Note
33	4B431	Axle isolator bushing Assembly Note

5. Fill the axle with the specified quantity of the specified lubricant.

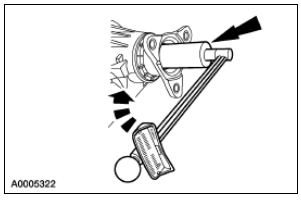
Item 3: Differential Housing Cover Disassembly Note

1. After removal of the rear housing cover, mount the differential assembly in the special tool.

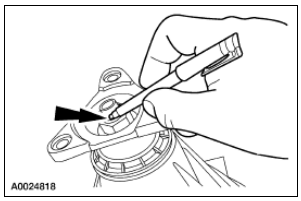


Item 4: Pinion Nut Disassembly Note

1. Install a Nm (inch-pound) torque wrench on the nut and record the torque necessary to maintain rotation of the drive pinion gear through several revolutions

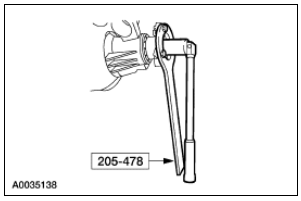


2. Index-mark the rear axle pinion flange to the drive pinion stem.



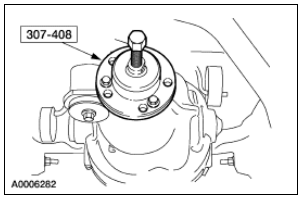
3. ⚠ **CAUTION: After removing the nut, discard it. Use a new nut for installation.**

   Use the special tool to hold the rear axle pinion flange while removing the nut.



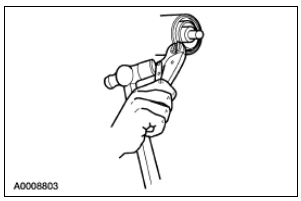
Item 5: Rear Axle Pinion Flange Disassembly Note

1. Using the special tool, remove the rear axle pinion flange.



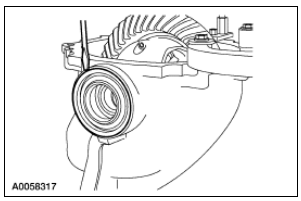
Item 7: Rear Pinion Oil Seal Disassembly Note

1. Use a screwdriver to force up the metal flange of the rear pinion oil seal. Install gripping pliers and strike with a hammer to remove the rear pinion oil seal.

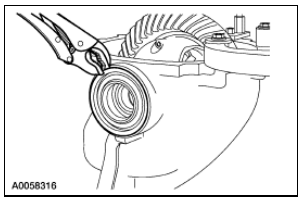


Item 12: Halfshaft Housing Seal Disassembly Note

1. Force up the metal flange on the halfshaft seal.



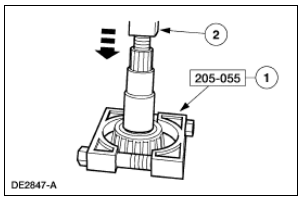
2. Install gripping pliers and strike with a hammer to remove the seal from the housing.



Item 22: Inner Pinion Bearing Disassembly Note

1. Using the special tool and a press, remove the pinion bearing.

1. Position the special tool under the pinion bearing.
2. Using a press, remove the pinion bearing.

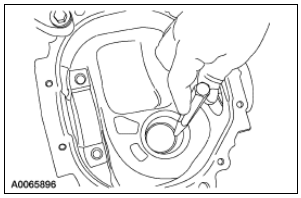


Item 24: Inner Pinion Bearing Cup Disassembly Note

1. Using the drift punch and a hammer, remove the inner pinion bearing cup.

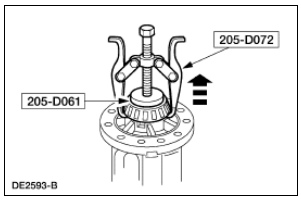
Item 25: Outer Pinion Bearing Cup Disassembly Note

1. Using the commercially available drift punch and a hammer, remove the outer pinion bearing cup.



Item 26: Differential Bearing Disassembly Note

1. Using the special tools, remove the differential bearing.
   - Repeat for the other side.

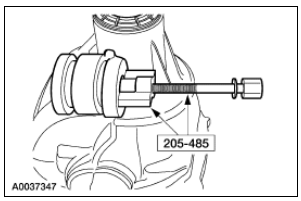


Item 27: Differential Pinion Shaft Roll Pin Disassembly Note

1. Using a drift punch and a hammer, drive the roll pin into the pinion shaft until bottomed. The pinion shaft roll pin will remain in the shaft when the pinion shaft is removed from the case. Drive the roll pin from the pinion shaft after the shaft is removed from the case. Discard the roll pin.

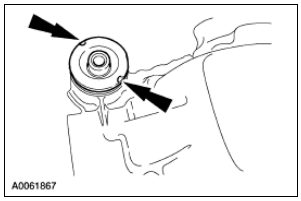
Item 33: Axle Isolator Bushing Disassembly Note

1. Using a hammer and the special tools, remove the rear axle isolator bushing.

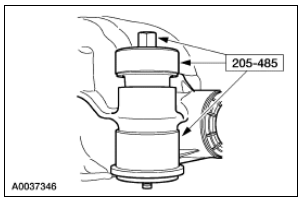


Item 33: Axle Isolator Bushing Assembly Note

1. Align the notches in the bushing at 45° from the fore and aft position.



2. Using the special tools, install the rear axle isolator bushing.



Item 27: Differential Pinion Shaft Roll Pin Assembly Note

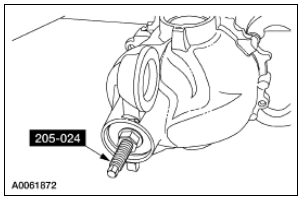
1. ⚠ **CAUTION: Always use a new roll pin.**

   Install the differential shaft roll pin so the top of the roll pin is flush with the differential case.

Item 24 and 25: Outer and Inner Pinion Bearing Cup Assembly Note

1. Coat the new differential drive pinion bearing cup(s) with lubricant.

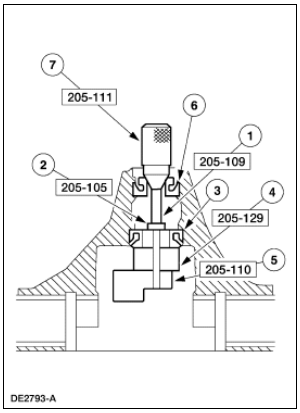
2. Using the special tool, install the differential drive pinion bearing cup(s).
   - Position the bearing cup(s) on the special tool.
   - Position the special tool and the bearing cup(s) in the differential housing.
   - Tighten the special tool to fully seat the bearing cup(s) in the bore(s).



Item 23: Differential Pinion Bearing Adjustment Shim Assembly Note

1. **NOTE:** Apply a light film of lubricant on the front and rear pinion bearings.

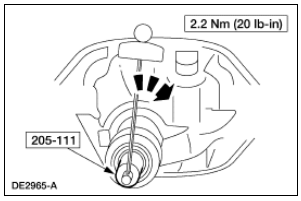
   Install the pinion bearings and special tools as shown.



Item	Part Number	Description
1	205-109	Adapter for 205-S127
2	205-105	Adapter for 205-S127
3	4630	Rear (inner) pinion bearing
4	205-129	Adapter for 205-S127
5	205-110	Adapter for 205-S127
6	4621	Front (outer) pinion bearing
7	205-111	Adapter for 205-S127

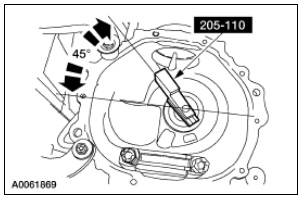
2. **NOTE:** This step duplicates pinion bearing preload.

   Thread the special tool onto the screw and tighten to the specification shown.

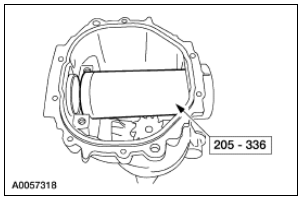


3. ⚠ **CAUTION: Offset the special tool to obtain an accurate reading.**

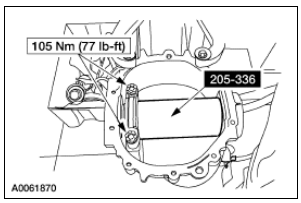
   Rotate the special tool several half turns to seat the pinion bearings. Position the special tool as shown.



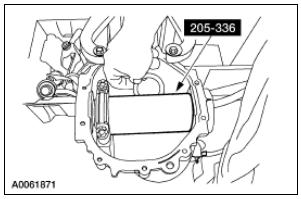
4. Install the special tool.
   - Position the special tool in the differential housing differential bearing seat.



5. Install the differential bearing cap.
   - Seat the special tool in the housing.
   - Position the bearing cap.
   - Torque the cap to specification.



6. Use a drive pinion bearing adjustment shim as a gauge for shim selection. Check the drive pinion bearing adjustment shim thickness between the Gauge Block and the Gauge Tube. A slight drag indicates correct shim selection.



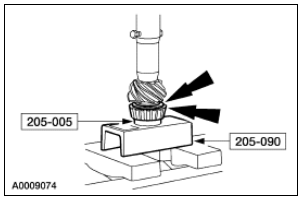
7. Remove all of the special tools.

8. **⚠ CAUTION: Use the same pinion bearings and drive pinion bearing adjustment shim from the drive pinion bearing adjustment shim selection procedure for final assembly.**

   Position the drive pinion bearing adjustment shim and the pinion bearing on the drive pinion gear stem.

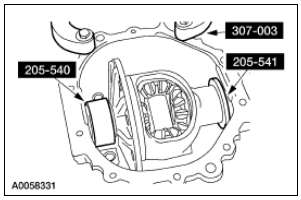
Item 22: Inner Pinion Bearing Assembly Note

1. Using the special tools and a suitable press, firmly seat the drive pinion bearing adjustment shim and pinion bearing on the drive pinion gear stem.

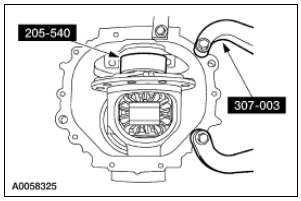


Item 13, Item 14, Item 18 and Item 26: Selective Snap Ring, Differential Bearing Shim, Differential Case and Differential Bearing Assembly Note

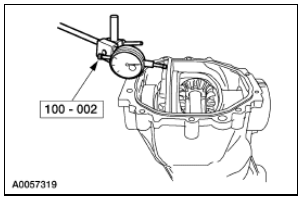
1. Install the special tools on the differential case.



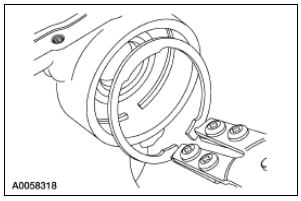
2. Place the differential case with the special tool in the differential housing.



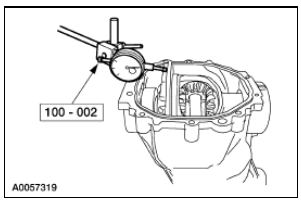
3. Position the special tool on the differential case in the differential housing.



4. Install a unique set-up selective snap ring with a thickness of 0.100 inches.



5. Position the special tool.



6. **NOTE:** Repeat this step until obtaining a consistent reading.

   Measure the total end play.

   - Attach the special tools and position the indicator tip on the machined surface of the differential case flange.
   - Move the differential case to the left and the right (as far as possible).
   - Record the reading in Line A.

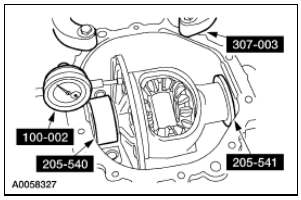
   Differential Bearing Shim Selection Chart

8.0 Inch Lightweight Axle	Example	Actual
Line A Total end play without ring gear	0.230	
Line B Total end play with ring gear	0.193	
Line C Subtract Line B from Line A	0.037	
Line D Initial backlash clearance	0.016	0.016
Line E Set-up snap ring thickness	0.100	0.100
Line F Left Master Bearing compensation	0.100	0.100
Line G Carrier bearing preload	0.012	0.012

   To determine the snap ring thickness, add lines C, D and E (Example: 0.037 + 0.016 + 0.100 = 0.153 snap ring thickness).

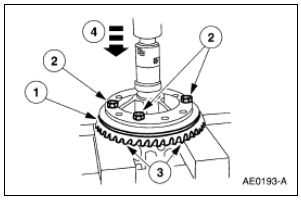
   To determine the bearing shim thickness, add lines A, F and G. Subtract line C and D from the sum. Example:

   - 0.230 + 0.100 + 0.012 = 0.342
   - 0.342 - 0.037 - 0.016 = 0.289 bearing shim thickness

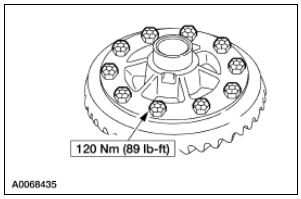


7. Remove the Dial Indicator and the differential case from the differential housing.

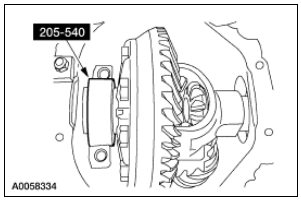
8. Install the differential ring gear.
    1. Place the differential ring gear on the differential case.
    2. Hand start three bolts to align the holes in the differential ring gear and the differential case.
    3. Place the differential case and differential ring gear onto the press bed blocks with the differential ring gear teeth facing downward.
    4. Press the differential ring gear into place.



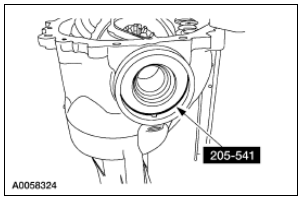
9. Install the remaining bolts.



10. Place the differential case with the special tool into the differential housing.

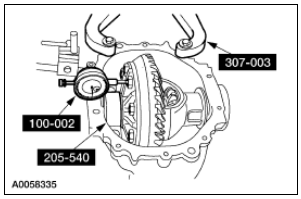


11. Install the special tool.

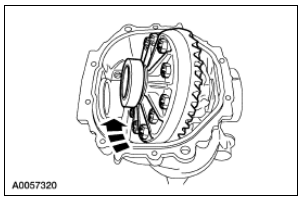


12. Measure the end play.
    - Attach the special tool and position the indicator tip on the machined surface of the differential case flange.
    - Rock the differential ring gear to allow full mesh with the drive pinion gear.
    - With the gears in full mesh, set the special tool to zero.
    - Move the differential case as far as possible to the left and note the reading.
    - Record the reading on the differential bearing shim selection procedure Line B.

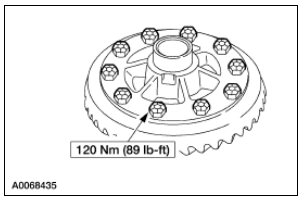
♦ Remove the special tool.



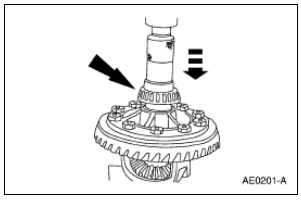
13. Remove the differential case from the differential housing.



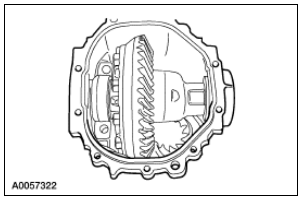
14. Remove the bolts. Apply stud and bearing mount to the bolt threads, and reinstall the bolts.



15. Press the left and right differential bearing on the differential case.



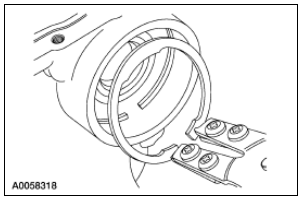
16. Place the differential case and bearing cups in the differential case.



17. **NOTE:** Select the correct size selective snap ring using the differential bearing shim selection chart.

    NOTE: To determine the thickness of the snap ring to be used, subtract Line B from Line A. Add Lines D and E to the difference. This is the thickness of the snap ring required.

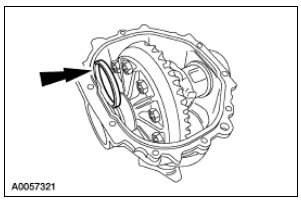
    Place the selective snap ring in the differential housing.



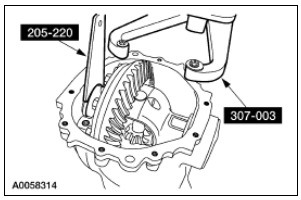
18. **NOTE:** Select the correct size selective bearing shim using the differential bearing shim selection chart.

    NOTE: To determine the thickness of the bearing shim to be used, add Lines A, F and G. Subtract Lines C and D from the sum. This is the thickness of the bearing shim required.

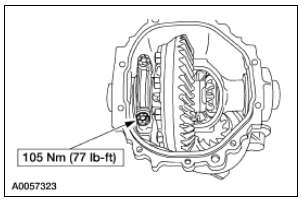
    Position the differential bearing shim indicated by the bearing shim selection chart.



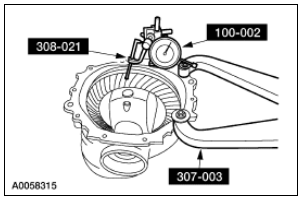
19. Using the special tools, seat the differential bearing shim in the differential housing.



20. Install the differential bearing cap in the original location and tighten the bolts.



21. Using the special tools, measure the differential ring gear backlash at four equally spaced points.
    - Attach the special tool.
    - Position the special tool tip centrally on a drive tooth.
    - Zero the indicator.
    - Turn the differential ring gear without turning the drive pinion gear. Record the indicator reading. The allowable backlash is 0.127 mm (0.005 in) to 0.228 mm (0.009 in) and must not vary more than 0.076 mm (0.003 in) between points measured. A backlash variation of more than 0.076 mm (0.003 in) between points checked indicates gear/case runout.
        - ♦ If backlash is within specifications, install the differential assembly.
        - ♦ To correct for a high or low backlash, proceed as follows.



22. To correct for high or low backlash, increase or decrease the thickness of the differential bearing shim and decrease or increase the thickness of the selective snap ring by the same amount. Refer to the following tables when adjusting the backlash. When the backlash is within specifications, install the differential assembly.

Backlash Change Required		Thickness Change Required	
mm	in	mm	in
0.025	0.001	0.050	0.002
0.050	0.002	0.050	0.002

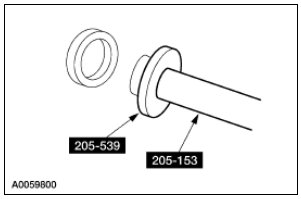
Item 12: Halfshaft Housing Seal Assembly Note

1. **NOTE:** Lubricate the lips of the seal with axle lubricant.

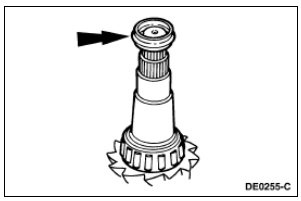
   Using the special tools, install the halfshaft housing seal.



Item 10: Drive Pinion Collapsible Spacer Assembly Note

1. **⚠ CAUTION: Make sure the splines on the drive pinion gear stem are free of burrs. If burrs are evident, remove them using a fine crocus cloth.**

   Place a new differential drive pinion collapsible spacer on the drive pinion gear stem against the pinion stem shoulder.



2. Install the drive pinion gear with the differential drive pinion collapsible spacer in the differential housing.

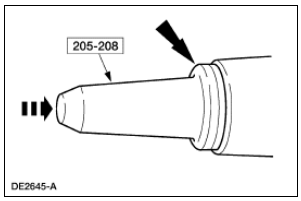
Item 7: Rear Pinion Oil Seal Assembly Note

1. **⚠ CAUTION: Installation without the correct tool can result in early seal failure.**

   ⚠ CAUTION: If the seal becomes misaligned during installation, remove it and install a new one.

   NOTE: Coat the rear axle drive pinion seal lips with grease.

   Using the special tool, install the new rear axle drive pinion seal.

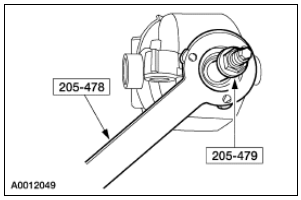


Item 5: Rear Axle Pinion Flange Assembly Note

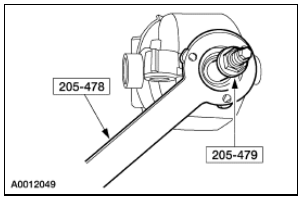
1. **NOTE:** Disregard the index marks if installing a new rear axle pinion flange.

   Position the rear axle pinion flange.

   - Lubricate the rear axle pinion flange splines.
   - Position the rear axle pinion flange.



2. Using the special tools, install the rear axle pinion flange.



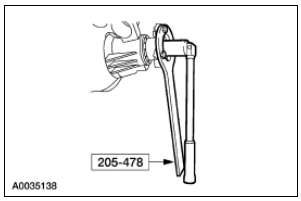
Item 4: Pinion Nut Assembly Note

1. **⚠ CAUTION: Do not, under any circumstance, loosen the nut to reduce preload. If it is necessary to reduce preload, install a new collapsible spacer and nut.**

   ⚠ CAUTION: Remove the special tool while taking preload readings with the Nm (inch-pound) torque wrench.

   Use the special tool to hold the pinion flange while tightening the nut.

   - Rotate the pinion occasionally to make sure the differential pinion bearings seat correctly. Take frequent differential pinion bearing preload readings by rotating the pinion with a Nm (inch-pound) torque wrench.



2. Tighten the nut to set the preload.

Rear brake caliper bleeder screw	20	15

Brake System Printable View (16 KB)

The brake system consists of the following components:

- a vacuum-assisted power braking system.
- a power adjustable brake pedal with memory function.
- a front-to-rear split hydraulic system.
- front disc brakes utilizing a dual piston brake caliper and disc system.
- rear disc brakes utilizing a single piston brake caliper and disc system.
- an electronic parking brake (EPB) system that actuates a drum-in hat system within the rear brake discs.
- A 4-wheel anti-lock brake system (4WABS) available in 2 variants: 4WABS with Traction Control or 4WABS with Traction Control and Stability Assist (also referred to as Interactive Vehicle Dynamics [IVD] or Advance Trac). For additional information, refer to Section 206-09 .

Adjustable Pedals

The vehicle is equipped with an adjustable brake and accelerator pedal system. Using the adjustable pedal switch, located on the instrument panel, the driver can adjust the brake and accelerator pedals for a more comfortable driving position.

Memory Adjustable Pedal Operation

The power adjustable pedals memory feature stores the current accelerator and brake pedal positions and recalls the previously stored pedal positions for a specified driver as directed by the memory feature. The adjustable pedals with memory feature:

- are operational with the ignition switch ON or OFF.
- can be adjusted forward or rearward using the adjustable pedal switch.
- retains two separate driver's pedal positions.
- updates the retained pedal position when that driver's memory is stored.
- moves the pedal to the retained pedal position when that driver's memory is recalled.
- stops pedal movement when any manual actuation of the pedal adjustment switch occurs while memory recall is moving the pedal.

Programming Adjustable Pedal Positions

Programming adjustable pedal positions can be accomplished by doing the following:

- An adjustable pedal position can be stored at any time. To store the adjustable pedal position to memory, the driver must move the pedals to the preferred position using the adjustable pedal switch. The driver must then depress the memory SET switch, activating the memory SET switch light emitting diode (LED). Within 5 seconds (before the LED goes out) the driver must select memory position 1, or 2.
- If no memory switch input is received within the 5 second time limit, the operation is aborted and the memory SET switch LED is turned OFF. If one of the following inputs is received during the 5 second programming limit, the operation is aborted and the memory SET switch LED is turned OFF:
    - ♦ Adjustable pedal switch

- Power driver seat switch
- Power outside rearview mirrors switch
- Memory SET switch.

Recalling a Stored Adjustable Pedal Position

Once the driver has stored a preferred adjustable pedal position, the driver can recall the setting by depressing the corresponding memory switch, or by using a programmed remote keyless entry transmitter. Recalling a stored adjustable pedal position can be accomplished by doing the following:

- The driver can recall a preferred adjustable pedal position by depressing one of the memory recall switches. Pressing memory switch 1 will initiate a recall of the adjustable pedal position stored in memory no. 1. Pressing memory switch 2 will initiate a recall of the adjustable pedal position stored in memory no. 2.
- A remote keyless entry transmitter can be used to recall previously set memory positions. The remote keyless entry transmitters are manufactured with an assigned personality number (1 or 2). The remote keyless entry transmitter assigned with personality 1 is capable of only recalling memory position 1. Similarly, the remote keyless entry transmitters assigned with personalities 1 and 2 can recall memory positions 1 and 2 respectively.
- Memory recall occurs when the UNLOCK switch is pressed on the remote keyless entry transmitters. A second press of the UNLOCK switch, which unlocks the passenger doors, does not initiate a memory recall.
- A memory recall in progress does not prohibit the initiation of another memory recall; the most recently requested memory recall will be executed. For additional memory system information, refer to Section 418-00 .

Electronic Parking Brake (EPB)

The electronic parking brake (EPB) replaces the function of the conventional hand brake lever system. The EPB has two functions. Its primary function is to hold the vehicle on 30% grade. The secondary function is to be able to decelerate the vehicle by using the EPB as an emergency brake.

The EPB system:

- has a switch located in the front console behind the gear selector. The switch is hardwired to the EPB module. It includes a yellow fault warning lamp.
- has a control module that communicates with the other vehicle modules through the SCP network.
- uses an electric motor and gearbox assembly to apply and release tension on a conventional parking brake cable system.

Electronic Parking Brake (EPB) Operation

Pull the park brake switch upward to engage the parking brake. Release the switch, and it will return to the neutral position. To release the parking brake, make sure the ignition is turned to ON, depress the brake pedal, then push the parking brake switch down. The instrument cluster BRAKE warning lamp will illuminate and will remain illuminated until the parking brake is released.

The EPB will automatically release when the gearshift lever is moved from P (Park) with the ignition ON. The EPB will also disengage if a gear is selected and the accelerator pedal is depressed. The EPB will not release when the release switch is activated. If the battery is disconnected, the EPB system must be reset; the vehicle message center will display "APPLY PARK BRAKE" or "APPLY ((P))".

Electronic Parking Brake (EPB) Resetting

NOTE: The EPB can be released after the battery is reconnected.

The EPB system must be reset whenever the battery has been disconnected or has been in a state of discharge.

To reset the EPB system, follow the steps.

1. Place gearshift selector in the park position.
2. Turn the ignition switch ON.
3. Depress the brake pedal and at the same time pull on the EPB switch.
4. Then release the EPB switch. To release the EPB switch, push on the EPB switch while depressing the brake pedal.

Material

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid PM-1 (Canada CXC-31)	ESA-M6C25-A
High Temperature Nickel Anti-Seize Lubricant XL-2 (Canada CXG-2)	ESE-M12A4-A

Inspection and Verification

⚠ WARNING: Use of any brake fluid other than the approved DOT 3 will cause permanent damage to brake components and will render the brakes inoperative.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Do not spill brake fluid onto painted surfaces. If spilled, wipe up immediately.

NOTE: Always check the fluid level in the brake master cylinder reservoir before carrying out the test procedures. If the fluid level is not at the correct level, clean the reservoir cap before removing, then add DOT 3 brake fluid.

NOTE: Prior to carrying out any diagnosis, make sure the red brake warning indicator is functional. Refer to Section 413-00 .

The first indication that something may be wrong in the brake system is a change in the feeling through the brake pedal. The brake warning indicator in the instrument cluster and the brake fluid level in the brake master cylinder reservoir are also indicators of system concerns.

If a wheel is locked and the vehicle must be moved, open a bleeder screw at the locked wheel to let out enough fluid to relieve the pressure. Close the bleeder screw. This bleeding operation may release the brakes but will not correct the cause of trouble. If this does not relieve the locked wheel condition, repair the locked components before proceeding.

Inspect all hoses and connections. All unused vacuum connectors should be capped. Make sure hoses and their connections are correctly secured and in good condition with no holes, soft or collapsed areas.

Non-Pressure Leaks

The only part of the brake system that could have a brake fluid loss that does not appear when the system is under pressure is the brake master cylinder reservoir area. Brake fluid loss can be caused by a missing or poorly-fitted brake master cylinder filler cap, a punctured or otherwise damaged brake master cylinder reservoir, a missing or damaged brake master cylinder filler cap gasket, or by missing, damaged or poorly-fitted sealing grommets between the brake master cylinder and the brake master cylinder reservoir.

The brake master cylinder reservoir grommets are not separately serviceable and must be installed new as part of a new brake master cylinder reservoir.

NOTE: The wet appearance on the outer cover of rubber brake hoses is called "sweating." This is a normal condition for neoprene rayon braid hose. The sweating condition is not evidence of a brake fluid leak and will not result in a loss of pressure in the system.

Install a new flexible brake hose if the hose shows signs of softening, cracking or other damage.

When installing a new brake hose, position the hose to avoid contact with other vehicle components.

Road Test

The technician should have a thorough knowledge of the brake system operation and accepted general braking guidelines in order to detect any problems.

Select a road that is reasonably smooth and level. Gravel or bumpy roads are not suitable because the surface does not allow the tires to grip the road equally. Avoid crowned roads.

A key factor in evaluating brake concerns is the deceleration rate. This varies from vehicle to vehicle and with changes in operating conditions. It is evident how well the brakes are working after just a few applications.

For low or spongy brake pedal concerns:

- check and, if necessary, refill the brake master cylinder reservoir.

- bleed the brake system and retest the brake pedal feel.
- if the brake pedal is still low or feels spongy, check the brake pedal mounting for looseness and correct installation. Check the brake booster and the brake master cylinder for loose mounting. Correct as necessary and retest the system for normal operation.

For a slow or incomplete brake pedal return concern:

- inspect for binding, damage, correct installation or interference at the brake pedal.
- check the brake booster for binding, damage and correct installation.

Vibration When Brakes Are Applied

For vibration concerns when brakes are applied, carry out the following procedure.

Visually inspect:

- tire condition and pressure.
- suspension bushings and ball joints.

Correct as necessary.

1. Verify and isolate the concern. Brake roughness can be felt in:
   - the steering wheel.
   - the seat.
   - the brake pedal.

2. After verifying the concern, check for related concerns in the:
   - On-Line Automotive Service Information System (OASIS)
   - Technical Service Bulletins

3. Check wheel bearing end play and correct as necessary.

4. **NOTE:** Begin at the front of the vehicle unless the vibration has been isolated to the rear.

   Remove the tire and wheel.

5. Remove the brake caliper.

6. Measure and record the brake disc thickness. Install a new brake disc if the brake disc thickness is less than 0.60 mm (0.024 in) above the minimum thickness specification. This will make sure that the brake disc thickness will be above minimum thickness after it has been machined.

7. ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.**

   NOTE: The depth of the cut must be between 0.10 and 0.20 mm (0.004 and 0.008 in). Lighter cuts will cause heat and wear. Heavier cuts will cause poor brake disc surface finish.

   Using the special tool, machine the brake discs. Follow the manufacturer's instructions. After machining, make sure the brake disc still meets the thickness specification.

8. Using a dial indicator, verify that the brake disc lateral runout is now within specification.

9. Remove the special tool hub adapter.

10. Remove any remaining metal chips from the machining operation.

11. **NOTE:** Match-mark the brake disc and hub before removing the brake disc.

    Remove the brake disc from the hub:

    - Remove any remaining metal chips from hub and brake disc mounting surfaces and from the ABS sensor.
    - Apply anti-seize lubricant to the mounting surfaces.
    - Using the match marks, mount the brake disc on the hub.

12. Install the brake caliper and check brake operation.

Brake Master Cylinder Normal Conditions

The following conditions are considered normal and are not indications that the brake master cylinder is in need of service.

Condition 1: During normal operation of the brake master cylinder, the fluid level in the brake master cylinder reservoir will rise during brake application and fall during release. The net fluid level (such as after brake application and release) will remain unchanged.

Condition 2: A trace of brake fluid will exist on the booster shell below the master cylinder mounting flange. This results from the normal lubricating action of the master cylinder bore and seal.

Condition 3: Fluid level will decrease with pad wear.

Brake Master Cylinder Abnormal Conditions

Changes in brake pedal feel or travel are indicators that something could be wrong in the brake system. GO to Symptom Chart for abnormal condition diagnosis.

Adjustable Pedals

1. Verify the customer concern by operating the adjustable pedals.

2. Visually inspect for obvious signs of mechanical or electrical damage. Refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
• Adjustable pedals • Adjustable pedal motor, cables	• Adjustable pedal switch • Central battery junction box (CJB) fuse 30 (10A) • Damaged or corroded connector(s) • Damaged or corroded wiring harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the scan tool does not power up, refer to the scan tool manual.

5. Carry out the DATA LINK DIAGNOSTIC TEST. If the scan tool responds with:
   - CKT914, CKT915 or CKT70 ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
   - NO RESP/NOT EQUIP for Front Electronic Module (FEM), refer to Section 418-00 .
   - System passed, retrieve and record the continuous DTCs and carry out self-test diagnostics for the FEM.

6. If the DTCs retrieved are related to the concern, go to the FEM Diagnostic Trouble Code (DTC) Index.

7. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

Electronic Parking Brake (EPB)

1. Verify the customer concern by operating the EPB system.

2. Visually inspect for obvious signs of mechanical or electrical damage. Refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
• Parking brake cable(s) • Parking brake actuator • Parking brake shoes or related components • Rear brake caliper	• EPB switch • Front battery junction box (FBJB) fuse 15 (40A) • Battery junction box (BJB) fuse 12 (5A) • Damaged or corroded connector(s) • Damaged or corroded wiring harness • EPB module

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the scan tool does not power up, refer to the scan tool manual.

5. Carry out the DATA LINK DIAGNOSTIC TEST. If the scan tool responds with:
   - CKT914, CKT915 or CKT70 ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
   - NO RESP/NOT EQUIP for EPB module, refer to Section 418-00 .
   - System passed, retrieve and record the continuous DTCs and carry out self-test diagnostics for the EPB module.

6. If the DTCs retrieved are related to the concern, go to the Electronic Parking Brake (EPB) System Diagnostic Trouble Code (DTC) Index.

7. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

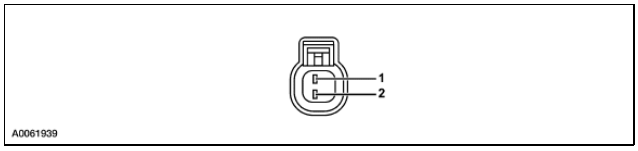
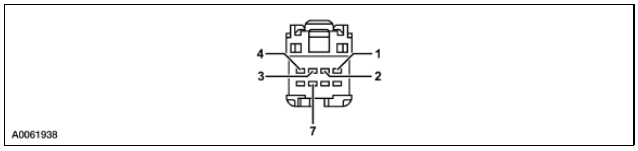
Connector Reference and Terminal Readings

Brake Fluid Level Switch-C124



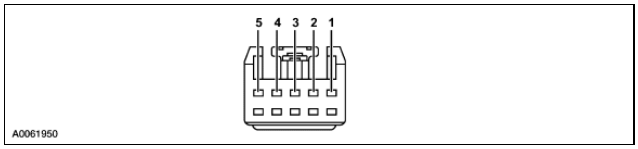
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-GC7 (WH/RD) Brake fluid level switch signal return to instrument cluster	Continuity between brake fluid level indicator switch and instrument cluster.
2	CKT 31-GC7 (BK/BU) Ground circuit for brake indicator lamp when parking brake switch is closed	Continuity between switch and ground, less than 5 ohms resistance to ground when switch is closed.

Adjustable Brake Pedal Switch-C2089



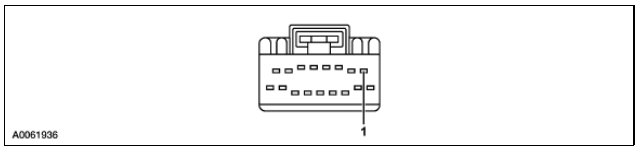
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-AL19 (BK/GN) Switch illumination ground	Zero voltage and less than five ohms resistance to chassis ground.
2	CKT 64S-AL19 (BU/BK) Switch illumination power	Greater than 10 volts with headlamp switch ON.
3	CKT 32-AL19 (WH/GN) Ground input to FEM; moves pedal away from driver	Zero voltage and less than five ohms to chassis ground, continuity between switch and FEM module.
4	CKT 31-AL19a (BK/GN) Switch common ground	Zero voltage and less than five ohms resistance to chassis ground.
7	CKT 34-AL19 (BU/BK) Ground input to FEM, moves pedal toward driver	Zero voltage and less than five ohms resistance to chassis ground, continuity between switch and FEM module.

Adjustable Brake Pedal Motor-C268



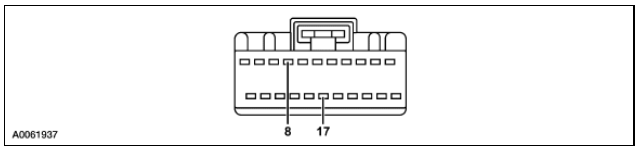
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AL18 (YE/RD) Adjustable pedal potentiometer (+)	Ten volt reference applied to adjustable pedal potentiometer, continuity between adjustable pedal motor and FEM.
2	CKT 8-AL18 (WH/RD) Pedal position feedback circuit (FEM uses signal to recall pedal position from memory)	Voltage varies with pedal position, continuity between FEM and adjustable pedal motor.
3	CKT 9-AL18 (BN/RD) Adjustable pedal potentiometer signal ground (-) and diagnostic feedback circuit	Resistance between 3,600 and 5,400 ohms, 0 voltage, when connected.
4	CKT 35-AL18 (VT/BU) Adjustable pedal motor forward (toward driver)	Greater than 10 volts when adjustable pedal motor moves forward. Provides ground to adjustable pedal motor when adjustable pedal motor moves rearward.
5	CKT 34-AL18 (BU/RD) Adjustable pedal motor rearward (away from driver)	Greater than 10 volts with adjustable pedal motor moves rearward. Provides ground to adjustable pedal motor when adjustable pedal motor moves forward.

Front Electronic Module (FEM)-C201a



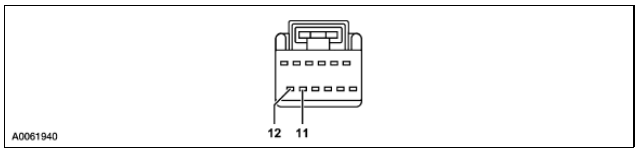
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 29S-DK21 (OG/WH) Power supply to FEM from BJB Fuse 30 (10A)	Greater than ten volts at all times.

Front Electronic Module (FEM)-C201b



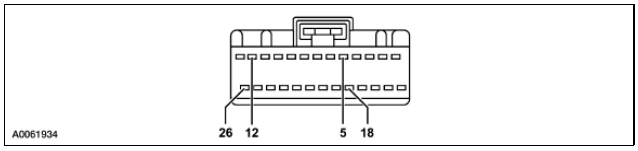
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
8	CKT 32-AL19 (WH/GN) Ground input to FEM; moves pedal away from driver	Zero voltage and less than five ohms to chassis ground, continuity between switch and FEM module.
17	CKT 34-AL19 (BU/BK) Ground input to FEM, moves pedal toward driver	Zero voltage and less than five ohms resistance to chassis ground, continuity between switch and FEM module.

Front Electronic Module (FEM)-C201c



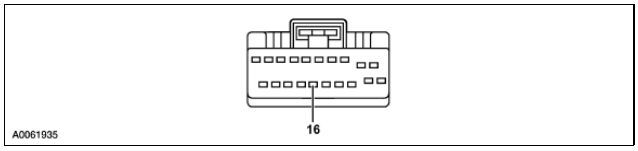
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
11	CKT 8-GC7 (WH/RD) Brake fluid level sensor output circuit	Greater than ten volts with ignition ON.
12	CKT 31-DK20 (BK/RD) Ground circuit for FEM	Zero voltage and less than five ohms resistance to chassis ground.

Front Electronic Module (FEM)-201e



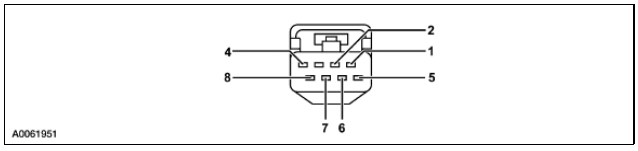
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
5	CKT 8-AL18 (WH/RD) Pedal position feedback circuit (FEM uses signal to recall pedal position from memory)	Voltage varies with pedal position, continuity between FEM and adjustable pedal motor.
12	CKT 34-AL18 (BK/BU) Adjustable pedal motor rearward (away from driver)	Greater than 10 volts with adjustable pedal motor moves rearward. Provides ground to adjustable pedal motor when adjustable pedal motor moves forward.
18	CKT 9-AL18 (BN/RD) Adjustable pedal potentiometer signal ground to FEM, (-), and diagnostic feedback circuit	Resistance between 3,600 and 5,400 ohms, 0 voltage, when connected.
26	CKT 35-AL18 (VT/BU) Adjustable pedal motor forward (toward driver)	Greater than 10 volts with adjustable pedal motor moves forward. Provides ground to adjustable pedal motor when adjustable pedal motor moves rearward.

Front Electronic Module (FEM)-201f



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
16	CKT 7-AL18 (YE/RD) Adjustable pedal potentiometer (+)	Ten volt reference applied to adjustable pedal potentiometer, continuity between adjustable pedal motor and FEM.

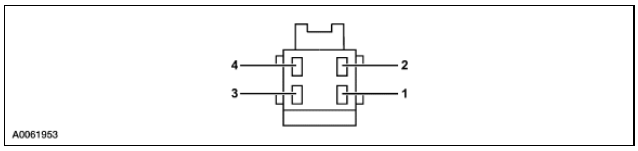
Electronic Parking Brake (EPB) Switch-C3218



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 64S-CG15 (BU/WH) Switch illumination power	Greater than 10 volts with headlamp switch ON.

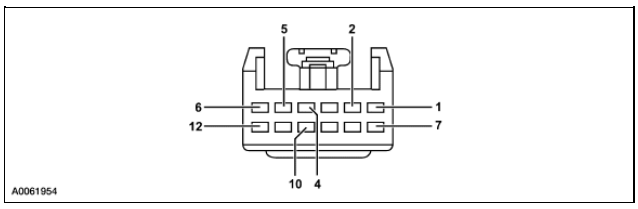
2	CKT 31-CG15 (BK) Switch illumination ground	Zero voltage and less than five ohms resistance to chassis ground.
4	CKT 10-CG15 (GY/VT) EPB module to EPB switch release circuit	EPB module output to EPB switch: open 4.0 volts/closed 2.5 volts.
5	CKT 9-CG15 (BN/BU) EPB switch ground	Continuity between EPB switch and Hall-effect sensor, less than 5 ohms resistance to chassis ground.
6	CKT 31S-CG14 (BK/GN) Yellow EPB indicator lamp ground	Continuity between switch and EPB module, less than 5 ohms resistance to ground (supplied by EPB module) when switch is illuminated.
7	CKT 75-CG14 (YE/GN) Yellow EPB indicator lamp power	Power supplied from BJB fuse 12 (5A), hot at all times.
8	CKT 8-CG15 (WH/BU) EPB module to EPB switch apply circuit	EPB module output to EPB switch: open 4.0 volts/closed 2.5 volts.

Electronic Parking Brake (EPB) Module-C4205a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30-CG16 (RD/BU) Power to EPB module	Greater than 10 volts at all times supplied by FBJB fuse 15 (40A), hot at all times
2	CKT 33-CG19 (YE/VT) EPB actuator motor (-)	EPB switch at rest: half of B+ voltage/EPB switch applying: 0 voltage/EPB switch releasing: B+ voltage.
3	CKT 32-CG19 (WH/VT) EPB actuator motor (+)	EPB switch at rest: half of B+ voltage/EPB switch applying: B+ voltage/EPB switch releasing: 0 voltage.
4	CKT 31-CG16 (BK/BU) EPB module ground	Zero voltage and less than five ohms resistance to chassis ground.

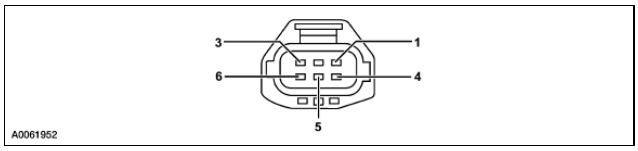
Electronic Parking Brake (EPB) Module-C4205b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 4-CG16 (GY/RD) SCP Bus +	High current (5 volts) with no SCP traffic, when connected.
2	CKT 31S-CG14 (BK/GN) Yellow EPB indicator lamp ground	Continuity between switch and EPB module, less than 5 ohms resistance to

		ground (supplied by EPB module) when switch is illuminated
4	CKT 8-GC20 (WH/VT) Hall-effect signal	Voltage varies directly with EPB actuator rotation, between 0 and 4.4 volts.
5	CKT 8-CG15 (WH/BU) EPB module to EPB switch apply circuit	EPB module output to EPB switch: open 4.0 volts/closed 2.5 volts.
6	CKT 10-CG15 (GY/VT) EPB module to EPB switch release circuit	EPB module output to EPB switch: open 4.0 volts/closed 2.5 volts.
7	CKT 4-CG16 (GY/RD) SCP Bus	Low current (0 volts), with no SCP traffic when connected.
10	CKT 7-CG20 (YE/VT) Hall-effect sensor power	Approximately 2 volts below battery voltage, output from EPB module to EPB sensor.
12	CKT 9-CG20 (BN/WH) Hall-effect sensor and switch ground	Zero voltage, less than 5 ohms resistance to ground (supplied by EPB module)

Electronic Parking Brake (EPB) Actuator-C4206



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-CG19 (WH/VT) EPB actuator motor (+)	EPB switch at rest: half of B+ voltage/EPB switch applying: B+ voltage/EPB switch releasing: 0 voltage.
3	CKT 7-CG20 (YE/VT) Hall-effect sensor power	Approximately 2 volts output from EPB module to EPB sensor.
4	CKT 8-CG20 (WH/VT) Hall-effect signal	Voltage varies directly with EPB actuator rotation between 0 and 4.4 volts.
5	CKT 9-CG20 (BN/WH) Hall-effect sensor ground	Zero voltage and less than 5 ohms to chassis ground.
6	CKT 33-CG19 (YE/VT) EPB actuator motor (-)	EPB switch at rest: half of B+ voltage/EPB switch applying: 0 voltage/EPB switch releasing: B+ voltage.

Pinpoint Tests

Pinpoint Test A: The Red Brake Warning Indicator Lamp Stays On

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation

The red brake warning indicator is located on the instrument cluster. When the brake fluid in the brake master cylinder reservoir is below an acceptable level, and when the parking brake is engaged, the red brake warning will illuminate.

Possible Causes

- Low brake fluid level
- Parking brake engaged
- An open circuit in the brake fluid level switch return ground circuit 31-CG7 (BK/BU)
- A short to ground in circuit 8-GC7 (WH/RD)
- An open circuit in the brake fluid level switch input signal circuit 8-GC7 (WH/RD)
- A defective low brake fluid level switch
- Front electronic module (FEM)
- Instrument cluster

PINPOINT TEST A: RED BRAKE WARNING INDICATOR ALWAYS ON

Test Step	Result / Action to Take
A1 ISOLATE THE BRAKE FLUID LEVEL SWITCH	
• Key in OFF position. • Disconnect: Brake Fluid Level Switch C124. • Key in ON position. • Connect a fused jumper wire between the brake fluid level indicator switch between C124-1, circuit 8-GC7 (WH/RD) and the brake fluid level indicator switch C124-2, circuit 31-CG7 (BK/BU). • **Is the brake indicator lamp on?**	**Yes** GO to A2 . **No** INSTALL a new brake fluid level switch. TEST the system for normal operation.
A2 CHECK CIRCUIT 8-GC7 (WH/RD) FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201c. • Measure the resistance between brake fluid level switch 124-1, circuit 8-GC7 (WH/RD) and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A3 . **No** REPAIR the short to ground in circuit 8-GC7 (WH/RD). TEST the system for normal operation.
A3 CHECK CIRCUITS 8-GC7 (WH/RD) FOR AN OPEN	
• Measure the resistance between the FEM C201c-11, circuit 8-GC7 (WH/RD) and brake fluid level switch connector C124-2, circuit 8-GC7 (WH/RD). • **Is the resistance less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR the open in circuit 8-GC7 (WH/RD). TEST the system for normal operation.
A4 CHECK CIRCUITS 31-GC7 (BK/BU) FOR AN OPEN	
• Measure the resistance between the brake fluid level switch C124-2, circuit 31-GC7 (BK/BU) and ground. • **Is the resistance less than 5 ohms?**	**Yes** CHECK the FEM for further faults. REFER to Section 413-00 . TEST the system for normal operation. **No** REPAIR the open in circuit 31-GC7 (BK/BU). TEST the system for normal operation.

Pinpoint Test B: DTC B2358: Adjustable Pedal Switch Failure

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The adjustable brake and accelerator pedals with memory feature are controlled by the front electronic module (FEM) and are operational with the ignition switch ON or OFF. The FEM supplies power to the adjustable pedal two-way motor until the switch is released, or until the travel limit is reached. The memory feature allows the driver to program a personalized pedal position that can be recalled using the memory switches or remote keyless entry transmitters.

Possible Causes

- Adjustable pedal switch
- Circuit 31-AL19a (BK/GN)

PINPOINT TEST B: DTC B2358: ADJUSTABLE PEDAL SWITCH FAILURE

Test Step	Result / Action to Take
B1 CHECK THE ADJUSTABLE PEDAL SWITCH RWD	
• Disconnect: Adjustable Pedal Switch C268. • Push the adjustable pedal switch DOWN and measure the resistance between C268-3, circuit 32-AL19 (WH/GN) and C268-4, circuit 31-AL19a (BK/GN). • **Is the resistance less than 5 ohms?**	**Yes** GO to B2 . **No** INSTALL a new adjustable pedal switch. CLEAR the DTC. REPEAT the self-test. TEST the system for normal operation.
B2 CHECK THE ADJUSTABLE PEDAL SWITCH FWD	
• Push the adjustable pedal switch UP and measure the resistance between C268-7, circuit 34-AL19 (BU/BK) and C268-4, circuit 31-AL19a (BK/GN). • **Is the resistance less than 5 ohms?**	**Yes** GO to B3 . **No** INSTALL a new adjustable pedal switch. CLEAR the DTC. REPEAT the self-test. TEST the system for normal operation.
B3 CHECK CIRCUIT 31-AL19a (BK/GN)	
• Measure the resistance between C268-4, circuit 31-AL19a (BK/GN) and chassis ground. • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new adjustable pedal switch. CLEAR the DTC. REPEAT the self-test. TEST the system for normal operation. **No** REPAIR circuit 31-AL19a (BK/GN). CLEAR the DTC. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test C: The Adjustable Pedal Does Not Operate

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The adjustable brake pedals operate forward or rearward when the adjustable pedal switch is pushed in either direction and current flows from the FEM module through circuit 34-AL19 (BU/BK) or circuit 32-AL19 (WH/GN). Ground to the switch is supplied by circuit 31-AL19a (BK/GN). The adjustable pedal motor receives power from the FEM through circuit 34-AL18 (BU/RD) (rearward) or circuit 35-AL18 (VT/BU (forward). The adjustable motor connects to a cable that transmits motor rotation into the adjustable brake pedal assembly. Another cable transmits motor rotation between the brake pedal assembly and the accelerator pedal assembly.

Possible Causes

- Adjustable pedal motor
- Circuits 34-AL19 (BU/BK), 32-AL19 (WH/GN), 31-AL19a (BK/GN), 34-AL18 (BU/RD) or 35-AL18 (VT/BU)
- Adjustable pedal motor cables
- Manual switch

PINPOINT TEST C: PINPOINT TEST C: THE ADJUSTABLE PEDAL DOES NOT OPERATE

Test Step	Result / Action to Take
C1 CHECK MOTOR SOUND	
• Allow two minutes for the thermal overload to reset. • Operate the adjustable pedal control switch. • **Can the adjustable pedal motor be heard to operate?**	**Yes** GO to C2 **No** GO to C5 .
C2 CHECK MOTOR INSTALLATION	
• Check adjustable pedal motor for correct installation. • **Is the motor installation OK?**	**Yes** GO to C3 **No** CORRECT the motor installation. TEST the system for normal operation.
C3 CHECK ADJUSTABLE ACCELERATOR PEDAL SYSTEM	
• Disconnect the brake pedal-to-accelerator pedal cable. • Operate the adjustable pedal control switch. • **Does the adjustable brake pedal operate now?**	**Yes** REPAIR the adjustable accelerator pedal system. REFER to Section 310-00 . TEST the system for normal operation. **No** GO to C4 .
C4 INSPECT FOR FOREIGN MATERIAL	
• Inspect the adjustable brake pedal assembly for foreign material causing a binding condition. • **Was any foreign material found?**	**Yes** REMOVE the foreign material. RETEST for normal operation. **No** GO to C5 .

C5 CHECK CABLE	
• Dismount the adjustable pedal motor. • Inspect the ends of the brake pedal motor cable for wear or damage. • **Are the cable ends OK?**	**Yes** GO to C6 . **No** INSTALL a new brake pedal motor cable. TEST the system for normal operation.
C6 CHECK POWER TO SWITCH	
• Disconnect: Adjustable Pedal Switch C2089. • Measure the voltage at C2089-3, circuit 32-AL19 (WH/GN) and C2089-7, circuit 34-AL19 (BU/BK). • **Is the voltage greater than 10 V?**	**Yes** GO to C7 . **No** REPAIR circuit in question. TEST the system for normal operation.
C7 CHECK GROUND TO SWITCH	
• Measure resistance to ground at C2089-4, circuit 31-AL19A (BK/GN). • **Is the resistance less than 5 ohms?**	**Yes** GO to C8 . **No** REPAIR the open circuit. TEST the system for normal operation.
C8 CHECK CIRCUITS FOR SHORT TO BATTERY	
• Disconnect FEM C201b • Measure voltage at C2089-3 and C2089-7. • **Is the voltage greater than 0 V at either pin?**	**Yes** REPAIR the short to battery. TEST the system for normal operation. **No** GO to C9 .
C9 CHECK CIRCUITS FOR SHORT TO GROUND	
• Measure resistance to ground at C2089-3 and C2089-7. • **Are the resistance greater than 10,000 ohms?**	**Yes** GO to C10 . **No** REPAIR the grounded circuit. TEST the system for normal operation.
C10 CHECK SWITCH-TO-MOTOR CIRCUITS CONTINUITY	
• Connect: Adjustable Pedal Switch C2089. • Disconnect: Adjustable Pedal Motor C268. • Measure resistance to ground at both pins of the adjustable pedal motor connector, circuits 34-AL19 (BU/RD) and 35-AL18 (VT/BU). • **Is the resistance less than 5 ohms at both pins?**	**Yes** INSTALL a new adjustable pedal motor. TEST the system for normal operation. **No** REPAIR the open circuit. TEST the system for normal operation.

Pinpoint Test D: DTC B1990: Pedal Forward/Rearward Potentiometer Feedback Circuit Failure

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The adjustable brake and accelerator pedals with memory feature are controlled by the front electronic module (FEM) and are operational with the ignition switch ON or OFF. The FEM supplies power to the adjustable pedal two-way motor until the switch is released, or until the travel limit is reached. The memory feature allows the driver to program a personalized pedal position that can be recalled using the memory switches or remote keyless entry transmitters.

Possible Causes

- Adjustable pedal motor feedback circuits 8-AL18 (WH/RD), circuit 7-AL18 (YE/RD), or circuit 9-AL18 (BN/RD)
- FEM
- Adjustable pedal potentiometer

PINPOINT TEST D: DTC B1990: PEDAL FORWARD/REARWARD FEEDBACK CIRCUIT FAILURE

Test Step	Result / Action to Take
D1 CHECK FEM FOR CORRECT OUTPUT PIDs	
• Use the adjustable pedal switch to move the pedals to a central position. • Monitor the FEM pedal position PID while moving the adjustable pedal switch into the FWD position, then into the RWD position. • **Does the PID value decrease with forward movement, and increase with rearward movement, throughout the pedal's entire travel?**	**Yes** REFER to Section 418-00 for further diagnosis. CLEAR the DTC(s). REPEAT the self-test. **No** GO to D2 .
D2 CHECK ADJUSTABLE PEDAL MOTOR CIRCUITS FOR SHORT TO POWER	
• Disconnect: FEM C201e. • Disconnect: FEM C201f. • Disconnect: Adjustable Pedal Motor C268. • Measure the voltage between adjustable pedal motor C268-2, circuit 8-AL18 (WH/RD), harness side and ground; and between adjustable pedal motor C268-1, circuit 7-AL18 (YE/RD), harness side and ground; and between adjustable pedal motor C268-3, circuit 9-AL18 (BN/RD), harness side and ground. • **Are the voltages greater than 10 volts?**	**Yes** REPAIR the affected circuit. CLEAR the DTC(s). REPEAT the self-test. **No** GO to D3 .
D3 CHECK ADJUSTABLE PEDAL MOTOR CIRCUITS FOR SHORT TO GROUND	
• Measure the resistance between adjustable pedal motor C268-2, circuit 8-AL18 (WH/RD), harness side and ground; and between adjustable pedal motor C268-1, circuit 7-AL18 (YE/RD), harness side and ground; and between adjustable pedal motor C268-3, circuit 8-AL18 (WH/RD), harness side and ground. • **Are the resistances less than 10,000 ohms?**	**Yes** GO to D4 . **No** REPAIR the affected circuit. CLEAR the DTC(s). REPEAT the self-test.
D4 CHECK ADJUSTABLE PEDAL MOTOR CIRCUITS FOR AN OPEN	

• Measure the resistance between adjustable pedal motor C268-2, circuit 8-AL18 (WH/RD), harness side and FEM C201e-5, circuit 8-AL18 (WH/RD), harness side; and between adjustable pedal motor C268-1, circuit 7-AL18 (YE/RD), harness side and FEM C201f-16, circuit 7-AL18 (YE/RD), harness side; and between adjustable pedal motor C268-3, circuit 9-AL18 (BN/RD), harness side and C201e-18, circuit 9-AL18 (BN/RD), harness side. • **Are the resistances less than 5 ohms?**	**Yes** GO to D5 . **No** REPAIR the affected circuit. CLEAR the DTC(s). REPEAT the self-test.
D5 CHECK ADJUSTABLE PEDAL POTENTIOMETER	
• Disconnect: Adjustable Pedal Potentiometer C268. • Measure the resistance between C268-2, circuit 8-AL18 (WH/RD), and C268-1, circuit 7-AL18 (YE/RD), harness side; and between C268-2, circuit 8-AL18 (WH/RD) and C268-3, circuit 9-AL18 (BN/RD) component side. • **Are the resistances between 5,400 ohms and 3,700 ohms?**	**Yes** INSTALL a new FEM. REFER to Section 418-00 . CLEAR the DTC(s). REPEAT the self-test. **No** INSTALL a new adjustable pedal motor. CLEAR the DTC(s). REPEAT the self-test.

Pinpoint Test E: DTC B1317/B1318 Battery Voltage High/Low

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The vehicle electrical system supplies 12 volts to the EPB module.

Voltage is supplied by circuit 30-CG16 (RD/BU) (power hot at all times). Ground is supplied by circuit 31-CG16 (BK/BU).

Possible Causes

- Charging system.
- Battery.
- Ground circuit 31-CG16 (BK/BU).
- Power supply circuit 30-CG16 (RD/BU).

PINPOINT TEST E: DTC B1317/B1318 BATTERY VOLTAGE HIGH/LOW

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
E1 CHECK THE BATTERY VOLTAGE	
• Measure the battery voltage between the positive and negative battery posts with the key ON engine OFF (KOEO), and with the engine running.	**Yes** GO to E2 . **No** REFER to Section 414-00 . CLEAR the DTC(s). REPEAT the self-test. RESET the EPB system.

• **Is the battery voltage between 10 and 13 volts with KOEO, and between 11 and 17 volts with the engine running?**	REFER to Electronic Parking Brake (EPB) Resetting in this section.
E2 CHECK VOLTAGE TO THE EPB MODULE	
• Disconnect: EPB Module C4205a. • Measure the voltage between EPB module C4205a-1, circuit 30-CG16 (RD/BU), harness side and ground. • **Is the voltage greater than 10 volts?**	**Yes** GO to E3 . **No** REPAIR circuit 30-CG16 (RD/BU). CLEAR the DTC. REPEAT the self-test.
E3 CHECK THE EPB MODULE GROUND	
• Key in OFF position. • Measure the resistance between EPB module C4205a-4, circuit 31-CG16 (BK/BU), harness side, and ground. • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB module. REFER to Parking Brake in this section. REPEAT the self-test. **No** REPAIR circuit 31-CG16 (BK/BU). CLEAR the DTC(s). REPEAT the self-test.

Pinpoint Test F: DTC C1094/C1782: Park Brake Apply/Release Switch Circuit Failure

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) switch circuits 8-CG15 (WH/BU) and 10-CG15 (GY/VT) receive a reference voltage from the EPB module when the switch is in its neutral position. This voltage is between 3.5 and 4.5 volts. When the switch contacts close on the apply or release side, a resistor inside the switch is shorted, causing a voltage on switch circuits 8-CG15 (WH/BU) or 10-CG15 (GY/VT) to change from 1.5-3.0 volts. When the EPB module receives this voltage range on the apply or release circuit, an output signal is generated to the actuator to apply or release the EPB.

Possible Causes

- EPB switch
- Circuit 8-CG15 (WH/BU)
- Circuit 10-CG15 (GY/VT)
- EPB module

PINPOINT TEST F: DTC C1094/C1782: PARK BRAKE APPLY/RELEASE SWITCH CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
F1 CHECK THE EPB SWITCH	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Switch C3218. • Measure the resistance between EPB switch C3218-8 and C3218-5 while the EPB switch is in the apply position or between EPB switch C3218-4 and	**Yes** GO to F2 . **No** INSTALL a new EPB switch. CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic

C3218-5 while the EPB switch is in the release position. • **Is the resistance between 65 and 225 ohms in the apply position and between 351 and 1,350 ohms in the release position?**	Parking Brake (EPB) Resetting in this section.
F2 CHECK CIRCUIT 8-CG15 (WH/BU) FOR A SHORT TO POWER	
• Measure the voltage between EPB switch C3218-8 circuit 8-CG15 (WH/BU), harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 8-CG15 (WH/BU). CLEAR the DTC. RESET the EPB module. REFER to Electronic Parking Brake (EPB) Resetting in this section. REPEAT the self-test. **No** GO to F3 .
F3 CHECK CIRCUIT 8-CG15 (WH/BU) FOR AN OPEN	
• Disconnect: EPB Module C4205b. • Measure the resistance between EPB module C4205b-5 and EPB switch C3218-8 circuit 8-CG15 (WH/BU), harness side. • **Is the resistance less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR circuit 8-CG15 (WH/BU). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
F4 CHECK CIRCUIT 10-CG15 (GY/VT) FOR A SHORT TO POWER	
• Measure the voltage between EPB switch C3218-4 circuit 10-CG15 (GY/VT), harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 10-CG15 (GY/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** GO to F5 .
F5 CHECK CIRCUIT 10-CG15 (GY/VT) FOR AN OPEN	
• Measure the resistance between EPB module C4205b-6 and EPB switch C3218-4 circuit 10-CG15 (GY/VT), harness side. • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB module. REFER to Parking Brake . REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** REPAIR circuit 10-CG15 (GY/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting

	in this section.

Pinpoint Test G: DTC C1769/C1783: Park Brake Apply/Release Switch Circuit Short To Ground

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) switch circuits 8-CG15 (WH/BU) and 10-CG15 (GY/VT) receive a reference voltage from the EPB module when the switch is in its neutral position. This voltage is between 3.5 and 4.5 volts. When the switch contacts close on the apply or release side, a resistor inside the switch is shorted, causing the voltage on switch circuits 8-CG15 (WH/BU) or 10-CG15 (GY/VT) to change from 1.5 to 3.0 volts. When the EPB module receives this voltage range on the apply or release circuit, an output signal is generated to the actuator to apply or release the EPB.

Possible Causes

- Circuit 8-CG15 (WH/BU)
- Circuit 10-CG15 (GY/VT)
- EPB module
- EPB switch

PINPOINT TEST G: DTC C1769/C1783: PARK BRAKE APPLY/RELEASE SWITCH SHORT TO GROUND

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
G1 RETRIEVE THE DTCs	
• Connect the diagnostic tool. • Enter the following diagnostic mode on the diagnostic tool: Retrieve the DTC(s). • **Is DTC C1769 or C1783 retrieved?**	**Yes** GO to G2 . **No** If DTC C1783 is retrieved, GO to G3 .
G2 CHECK CIRCUIT 8-CG15 (WH/BU)	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Switch C3218. • Measure the resistance between EPB switch C3218-8 circuit 8-CG15 (WH/BU), harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to G3 . **No** REPAIR circuit 8-CG15 (WH/BU). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
G3 CHECK CIRCUIT 10-CG15 (GY/VT)	
• Measure the resistance between EPB switch C3218-4 circuit 10-CG15 (GY/VT), harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to G4 . **No** REPAIR circuit 10-CG15 (GY/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
G4 CHECK EPB SWITCH PIDs	

• Using the scan tool, monitor the EPB apply, neutral and release PIDs while pulling and releasing then pressing and releasing the EPB switch. • **Do the EPB PIDs match the EPB switch positions?**	**Yes** INSTALL a new EPB module. REFER to Parking Brake . REPEAT the self-test. **No** INSTALL a new EPB switch. CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test H: DTC C1784: EPB Motor Output Short To Ground

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) two-way motor receives power from circuit 32-CG19 (WH/VT) or 33-CG19 (YE/VT), depending the direction of the motor revolution. When the EPB applies, circuit 32-CG19 (WH/VT) is equal to battery voltage and circuit 33-CG19 (YE/VT) is equal to zero volts. When the EPB releases, 32-CR19 (YE/VT) is equal to zero volts and 33-CT19 (YE/VT) is equal to battery voltage. Otherwise both circuits are at one half of battery voltage.

Possible Causes
- Circuit 32-CG19 (WH/VT)
- Circuit 33-CG19 (YE/VT)
- EPB module
- EPB switch
- EPB actuator

PINPOINT TEST H: C1784: EPB MOTOR OUTPUT CIRCUIT SHORT TO GROUND

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
H1 CHECK CIRCUIT 32-CG19 (WH/VT) FOR A SHORT TO GROUND	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Module C4205a. • Measure the resistance between EPB module C4205a-3 circuit 32-CG19 (WH/VT), harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H2 . **No** REPAIR circuit 32-CG19 (WH/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
H2 CHECK CIRCUIT 33-CG19 (YE/VT) FOR A SHORT TO GROUND	
• Measure the resistance between EPB module C4205a-2 circuit 33-CG19 (YE/VT), harness side and ground.	**Yes** INSTALL a new EPB module. REFER to Parking Brake in this section. REPEAT the self-test. **No**

• **Is the resistance greater than 10,000 ohms?**	REPAIR circuit 33-CG19 (YE/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test I: DTC C1785: EPB Motor Output Open Circuit

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) two-way motor receives power from circuit 32-CG19 (WH/VT) or 33-CG19 (YE/VT), depending on the direction of the motor revolution. When the EPB applies, circuit 32-CG19 (WH/VT) is equal to battery voltage and circuit 33-CG19 (YE/VT) is equal to zero volts. When the EPB releases, 32-CR19 (YE/VT) is equal to zero volts and 33-CT19 (YE/VT) is equal to battery voltage. Otherwise both circuits are at one half of battery voltage.

Possible Causes

- Circuit 32-CG19 (WH/VT)
- Circuit 33-CG19 (YE/VT)
- EPB actuator
- EPB module

PINPOINT TEST I: DTC C1785: EPB MOTOR OUTPUT OPEN CIRCUIT

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
I1 CHECK CIRCUIT 32-CG19 (WH/VT) FOR AN OPEN	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Module C4205a. • Disconnect: EPB Actuator C4206. • Measure the resistance between EPB module C4205a-3 and EPB actuator C4206-1 circuit 32-CG19 (WH/VT), harness side. • **Is the resistance less than 5 ohms?**	**Yes** GO to I2 . **No** REPAIR circuit 32-CG19 (WH/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
I2 CHECK CIRCUIT 33-CG19 (YE/VT) FOR AN OPEN	
• Measure the resistance between EPB module C4205a-2 and EPB actuator C4206-6 circuit 33-CG19 (YE/VT), harness side. • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB module. RETEST the EPB system. **No** REPAIR circuit 33-CG19 (YE/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test J: DTC C1786: EPB Motor Output Circuit Short To Battery

Refer to Wiring Diagrams Cell 127 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) two-way motor receives power from circuit 32-CG19 (WH/VT) or 33-CG19 (YE/VT), depending on the direction of the motor revolution. When the EPB applies, circuit 32-CG19 (WH/VT) is equal to battery voltage and circuit 33-CG19 (YE/VT) is equal to zero volts. When the EPB releases, 32-CR19 (YE/VT) is equal to zero volts and 33-CT19 (YE/VT) is equal to battery voltage. Otherwise both circuits are at one half of battery voltage.

Possible Causes

- Circuit 32-CG19 (WH/VT)
- Circuit 33-CG19 (YE/VT)
- EPB actuator
- EPB module

PINPOINT TEST J: DTC C1786: EPB MOTOR OUTPUT CIRCUIT SHORT TO BATTERY

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
J1 CHECK CIRCUIT 32-CG19 (WH/VT) FOR A SHORT TO BATTERY	
• Disconnect: EPB Module C4205a. • Disconnect: EPB Actuator C4206. • Measure the voltage between EPB module C4205a-3 circuit 32-CG19 (WH/VT), harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 32-CG19 (WH/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** GO to J2 .
J2 CHECK CIRCUIT 33-CG19 (YE/VT) FOR A SHORT TO BATTERY	
• Measure the voltage between EPB module C4205a-2 circuit 33-CG19 (YE/VT), harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 33-CG19 (YE/VT). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** GO to J3 .
J3 CHECK EPB ACTUATOR MOTOR (+)	
• Connect: EPB Actuator C4206. • Measure the voltage between EPB module C4205a-3 circuit 32-CG19 (WH/VT), harness side and ground. • **Is voltage present?**	**Yes** INSTALL a new EPB actuator. REFER to Parking Brake . REPEAT the self-test. **No** GO to J4 .
J4 CHECK EPB ACTUATOR MOTOR (-)	
	Yes

• Measure the voltage between EPB module C4205a-2 circuit 33-CG19 (YE/VT), harness side and ground. • **Is voltage present?**	INSTALL a new EPB actuator. REFER to Parking Brake . CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** INSTALL a new EPB module. REFER to Parking Brake . RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test K: DTC C1799: EPB Hall-Effect Circuit Failure

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The EPB actuator contains a Hall-effect sensor, which the EPB module uses to determine how long the EPB motor is required to run during an application or release of the parking brake. The Hall-effect sensor receives power (approximately 2 volts below battery voltage) from the EPB module through circuit 7-CG20(YE/VT). Circuit 8-CG20 (WH/VT) provides a signal to the EPB module and this signal will vary between 0 and 4.4 volts when the EPB motor is rotating. The voltage varies due to the presence of a magnetic field, which is being detected by the Hall-effect sensor. Ground to the Hall-effect sensor is supplied by circuit 9-CG20 (BN/VT).

Possible Causes

- Circuit 7-CG20 (YE/VT)
- Circuit 8-CG20 (WH/VT)
- Circuit 9-CG20 (BN/VT)
- EPB actuator
- EPB module

PINPOINT TEST K: DTC C1799: EPB HALL EFFECT FAILURE

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
K1 CHECK THE HALL EFFECT CIRCUITS FOR A SHORT TO POWER	
• Disconnect: EPB Module C4205B. • Disconnect: EPB Actuator C4206. • Measure the voltage between the EPB actuator C4206 circuits harness side and ground as follows:	**Yes** REPAIR the affected circuit(s). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** GO to K2 .

Circuit	Pin	Function
7-CG20 (YE/VT)	3	Hall effect-Power
8-CG20 (WH/VT)	4	Hall effect-Signal
9-CG20 (BN/WH)	5	Hall effect-Ground

• **Is any voltage present?**	
K2 CHECK THE HALL EFFECT CIRCUITS FOR A SHORT TO GROUND	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Measure the resistance between the EPB actuator C4206 circuits harness side and ground as follows: • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K3 . **No** REPAIR the affected circuit(s). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
K3 CHECK THE HALL EFFECT CIRCUITS FOR AN OPEN	
• Measure the resistance between the EPB actuator C4206 circuits, harness side and the EPB module C4205b circuits, harness side as follows: • **Is the resistance less than 5 ohms?**	**Yes** GO to K4 . **No** REPAIR the affected circuit(s). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
K4 CHECK THE HALL EFFECT CIRCUITS FOR A SHORT TO POWER	
• Connect: EPB Actuator C4206.	**Yes** INSTALL a new EPB actuator. REFER to Parking Brake in this section. CLEAR the DTC. REPEAT the self-test. RESET the EPB module. **No** GO to K5 .

Circuit	Pin	Function
7-CG20 (YE/VT)	3	Hall effect-Power
8-CG20 (WH/VT)	4	Hall effect-Signal

Circuit	EPB Actuator Pin	EPB Module Pin

Circuit	Pin	Function
7-CG20 (YE/VT)	3	Hall effect-Power

8-CG20 (WH/VT)	4	Hall effect-Signal
9-CG20 (BN/WH)	5	Hall effect-Ground

- **Is any voltage present?**

K5 CHECK THE HALL EFFECT CIRCUITS FOR A SHORT TO GROUND	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Measure the resistance between the EPB actuator C4206 circuits, harness side and ground as follows: **Circuit** / **Pin** / **Function** 7-CG20 (YE/VT) / 3 / Hall effect-Power 8-CG20 (WH/VT) / 4 / Hall effect-Signal • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K6 . **No** INSTALL a new EPB actuator. REFER to Parking Brake in this section. CLEAR the DTC. REPEAT the self-test. RESET the EPB module.
K6 CHECK THE HALL EFFECT CIRCUITS FOR AN OPEN	
• Measure the resistance between the EPB actuator C4206 circuits, harness side and the EPB module C4205b circuits, harness side as follows: **Circuit** / **EPB Actuator Pin** / **EPB Module Pin** 7-CG20 (YE/VT) / 3 / 10 8-CG20 (WH/VT) / 4 / 4 9-CG20 (BN/WH) / 5 / 12 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB actuator. REFER to Parking Brake in this section. REPEAT the self-test. **No** INSTALL a new EPB actuator. REFER to Parking Brake in this section. CLEAR the DTC. REPEAT the self-test. RESET the EPB module.

Pinpoint Test L: DTCS C1801, C1802 AND C1803: EPB Actuator Apply/Release Faults

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The EPB system applies and releases the parking brake cables using an electric motor and gear connected to the parking brake cables. The cable ends are connected to the rear disc brake caliper lever. The lever applies and releases the brake piston toward or away from rear disc.

Possible Causes

- Parking brake cables
- Rear disc brake caliper
- EPB module

PINPOINT TEST L: DTCS C1801, C1802 AND C1803: EPB ACTUATOR APPLY/RELEASE FAULTS

Test Step	Result / Action to Take
L1 CHECK THE LH AND RH PARKING BRAKE CABLE AND CONDUIT	
• Check the parking brake cable and conduit for binding, damage, stretching and correct routing. For correct parking brake cable routing, refer to Parking Brake . • Check that the correct parking brake cables are installed on the vehicle on the correct side. • **Are the parking brake cables OK?**	**Yes** GO to L2 . **No** REPAIR or INSTALL new parking brake components as necessary. CLEAR the DTC(s). REPEAT the self-test. RESET the parking brake system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
L2 CHECK THE REAR DISC BRAKE CALIPER LEVERS	
• INSPECT the brake caliper. Be sure that there is no corrosion, dirt or damage that could cause the rear disc brake caliper to bind. • **Is the rear disc brake caliper OK?**	**Yes** INSTALL a new EPB Actuator. REFER to Parking Brake . CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** INSTALL a new rear disc brake caliper. REFER to Rear Disc Brake . CLEAR the DTC(s). REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test M: DTCS C1987/C1988: Yellow EPB Fault Warning Indicator Short To Battery/Circuit Failure

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The yellow EPB system warning lamp (in the EPB switch) will illuminate at prove-out for 3 seconds when the ignition switch is cycled to RUN and will illuminate continuously (even with ignition OFF) when the EPB module has detected a fault in the system and DTCs are present.

Possible Causes

- EPB module
- EPB switch
- BJB fuse 30 (10A)
- Circuit 75-CG14 (YE/GN)
- Circuit 31S-CG14 (BK/GN)

PINPOINT TEST M: DTCS C1987/C1988: YELLOW EPB FAULT WARNING INDICATOR SHORT TO BATTERY/CIRCUIT FAILURE

Test Step	Result / Action to Take
M1 CHECK BATTERY JUNCTION BOX (BJB) FUSE 30 (10A)	
• Check the BJB fuse 30 (10A). • **Is the fuse OK?**	**Yes** GO to M2 . **No** INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.
M2 CHECK THE EPB SWITCH	
• Disconnect: EPB Switch C3218. • Measure the resistance between EPB switch C3218-6 and EPB switch C3218-7. • **Is the resistance less than 15 ohms?**	**Yes** GO to M3 . **No** INSTALL a new EPB switch. CLEAR the DTC. REPEAT the self-test.
M3 CHECK CIRCUIT 31S-CG14 (BK/GN) FOR A SHORT TO POWER	
• Disconnect: EPB Module C4205b. • Measure the voltage between EPB module C4205b-2, circuit 31S-CG14 (BK/GN), harness side, and ground. • **Is voltage present?**	**Yes** REPAIR circuit 31S-CG14 (BK/GN). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section. **No** GO to M4 .
M4 CHECK CIRCUIT 31S-CG14 (BK/GN) FOR A SHORT TO GROUND	
• Measure the resistance between EPB module C4205b-2, harness side and EPB switch C3218-5, harness side, circuit 31S-CG14 (BK/GN). • **Is the resistance less than 5 ohms?**	**Yes** GO to M5 **No** REPAIR circuit 31S-CG14 (BK/GN). REPEAT the self-test. CLEAR the DTC(s). REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
M5 CHECK CIRCUIT 31S-CG14 (BK/GN) FOR AN OPEN	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Measure the resistance between EPB module C4205b-2, harness side, and EPB switch C3218-6, harness side, circuit 31S-CG14 (BK/GN). • **Is the resistance less than 5 ohms?**	**Yes** GO to M6 . **No** REPAIR circuit 31S-CG14 (BK/GN). CLEAR the DTC. REPEAT the self-test.
M6 CHECK CIRCUIT 75-CG14 (YE/GN) FOR AN OPEN	

• Measure the resistance between EPB switch C3218-7 and BJB fuse 30 (10A) output cavity. • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB module. REFER to Parking Brake in this section. REPEAT the self-test. **No** REPAIR circuit 75-CG14 (YE/GN). CLEAR the DTC(s). REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Pinpoint Test N: DTC C1989: Park Brake Apply And Release Switch Contacts Energized Simultaneously

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) two-way motor receives power from circuit 32-CG19 (WH/VT) or 33-CG19 (YE/VT), depending on the direction of the motor revolution. When the EPB applies, circuit 32-CG19 (WH/VT) is equal to battery voltage and circuit 33-CG19 (YE/VT) is equal to zero volts. When the EPB releases, 32-CR19 (YE/VT) is equal to zero volts and 33-CT19 (YE/VT) is equal to battery voltage. Otherwise both circuits are at one half of battery voltage.

Possible Causes
- 8-CG15 (WH/BU)
- 10-CG15 (GY/VT)
- 9-CG20 (BN/WH)
- EPB switch
- EPB module

PINPOINT TEST N: C1989: PARK BRAKE APPLY AND RELEASE SWITCH CONTACTS ENERGIZED SIMULTANEOUSLY

Test Step	Result / Action to Take
N1 CHECK EPB PIDs	
• Connect the diagnostic tool. • Using the scan tool, monitor the EPB PIDs when then the EPB switch is in its apply, neutral and release positions. • **Do the EPB PIDs match the EPB switch positions?**	**Yes** GO to N2 . **No** INSTALL a new EPB switch. CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
N2 CHECK THE EPB CIRCUITS FOR SHORTED TOGETHER	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Module C4205b. • Disconnect: EPB Switch C3218. • Disconnect: EPB Actuator C4206. • Check the following EPB module C4205b circuits for a short together.	**Yes** INSTALL a new EPB module. REFER to Parking Brake . REPEAT the self-test. **No** REPAIR the affected circuits. CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake

	(EPB) Resetting in this section.

Circuit	Description	EPB Module Pin
9-CG20 (BN/WH)	EPB Actuator and EPB Switch Ground	12
10-CG15 (GY/VT)	EPB Release	6
8-CG15 (WH/BU)	EPB Apply	5

- **Are any of the resistances greater than 10,000 ohms?**

Pinpoint Test O: DTC C1408/C1409: Parking Brake Apply/Release Switch Circuit Out Of Range

Refer to Wiring Diagrams Cell 129 for schematic and connector information.

Normal Operation

The electronic parking brake (EPB) switch circuits 8-CG15 (WH/BU) and 10-CG15 (GY/VT) receive a reference voltage from the EPB module when the switch is in its neutral position. This voltage is between 3.5 and 4.5 volts. When the switch contacts close on the apply or release side, a resistor inside the switch is shorted, causing the voltage on circuits 8-CG15 (WH/BU) or 10 CG15 (GY/VT) to change from 1.5 to 3.0 volts. When the EPB module receives this voltage range on the apply or release circuit, an output signal is generated to the actuator to apply or release the EPB.

Possible Causes

- EPB switch
- Circuit 8-CG15 (WH/BU)
- Circuit 10-CG15 (GY/VT)
- EPB module

PINPOINT TEST O: DTC C1408/C1409: PARKING BRAKE APPLY/RELEASE SWITCH CIRCUIT OUT OF RANGE

Test Step	Result / Action to Take
O1 CHECK THE PARKING BRAKE SWITCH APPLY/RELEASE OUTPUT	
NOTE: If DTC C1408 is retrieved, go to step 1. If DTC C1409 is retrieved, go to step 2. • Measure the voltage between EPB switch C3218-8, circuit 8-CG15 (WH/BU) and ground while pulling the EPB switch up from its rest position. • Measure the voltage between EPB switch C3218-1, circuit 10-CG15 (GY/VT) and ground while pushing the EPB switch down from its rest position.	**Yes** INSTALL a new EPB switch. REFER to Parking Brake in this section. RESET the parking brake system. REFER to Electronic Parking Brake (EPB) Resetting in this section. CLEAR the DTC. REPEAT the self-test. **No** If the EPB switch apply voltage is within range, GO to O2 . If the EPB switch release voltage is within range, GO

• **Do the voltages change from 3.5-4.5 volts (with EPB switch at rest) to 1.5-3.0 volts (with EPB switch in the apply or release position)?**	to O3 .
O2 CHECK CIRCUIT 8-CG15 (WH/BU)	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Switch C3218. • Disconnect: EPB Module C4205. • Measure the resistance between EPB switch C3218-8 and EPB module C4205-5, circuit 8-CG15 (WH/BU). • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB switch. REFER to Parking Brake in this section. REPEAT the self-test. **No** REPAIR circuit 8-CG15 (WH/BU). CLEAR the DTC. REPEAT the self-test. RESET the EPB system. REFER to Electronic Parking Brake (EPB) Resetting in this section.
O3 CHECK CIRCUIT 10-CG15 (GY/VT)	
• Disconnect the battery ground cable. Refer to Section 414-00 . • Disconnect: EPB Switch C3218. • Disconnect: EPB Module C4205. • Measure the resistance between EPB switch C3218-1 and EPB module C4205-6, circuit 10-CG15 (GY/VT). • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new EPB module. REFER to Parking Brake in this section. REPEAT the self-test. **No** REPAIR circuit 10-CG15 (GY/VT). CLEAR the DTC. REPEAT the self-test. RESET the parking brake system. REFER to Electronic Parking Brake (EPB) Resetting in this section.

Component Tests

Brake Booster

1. Check the hydraulic brake system for leaks or insufficient fluid.

2. With the transmission in NEUTRAL, stop the engine and apply the parking brake control. Apply the brake pedal several times to exhaust all vacuum in the system.

3. Apply the brake pedal and hold it in the applied position. Start the engine. If the vacuum system is operating, the brake pedal will tend to move downward under constant foot pressure. If no motion is felt, the brake booster system is not functioning. Continue with the following steps.

4. Remove the vacuum booster hose from the check valve connection. Manifold vacuum must be available at the check valve end of the vacuum booster hose with the engine at idle speed and the transmission in NEUTRAL. If the manifold vacuum is available to the brake booster, connect the vacuum booster hose to the brake booster check valve and repeat Steps 2 and 3.

5. If no downward movement of the brake pedal is felt, install a new brake booster.

6. Operate the engine a minimum of 10 seconds at fast idle. Stop the engine, and let the vehicle stand for 10 minutes. Then apply the brake pedal with approximately 89 N (20 lb) of force. The brake pedal feel should be the same as that noted with the engine operating. If the brake pedal feels hard (no power assist), install a new brake booster check valve and retest. If the brake pedal feels spongy, bleed the hydraulic system to remove air. Refer to Brake System Bleeding in this section.

Check Valve

The function of the brake booster check valve is to allow manifold vacuum to enter the brake booster and prevent the escape of vacuum in case manifold vacuum is lost during sustained full throttle operation.

To test the function of the brake booster check valve:

- Start and run the engine for at least 10 seconds.
- Operate the brake pedal to check for power assist.
- Disconnect the vacuum booster hose from the brake booster check valve. Do not remove the brake booster check valve from the brake booster.
- There should be enough vacuum retained in the brake booster for at least one more power-assisted brake operation.

Bypass Condition Test

1. Disconnect the brake lines at the brake master cylinder.

2. Plug the outlet ports of the brake master cylinder.

3. Apply the brakes. If brake pedal height cannot be maintained, the brake master cylinder has an internal leak and must be rebuilt or a new master cylinder must be installed.

Compensator Port Check

The purpose of the compensator ports in the brake master cylinder is to supply any additional brake fluid required by the system due to brake pad wear and to allow brake fluid returning from the brake lines to the brake master cylinder to enter the brake master cylinder reservoir.

The returning brake fluid will cause a slight turbulence in the brake master cylinder reservoir. Turbulence seen in the brake master cylinder reservoir upon application or release of the brake pedal is normal and shows that the compensating ports are not plugged.

Brake System Bleeding

Printable View (115 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation Star (NGS) Tester 418-F052 or equivalent scan tool

Manual

⚠ WARNING: Use of any other than approved DOT 3 or DOT 4 brake fluid will cause permanent damage to brake components and will render the brakes inoperative.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

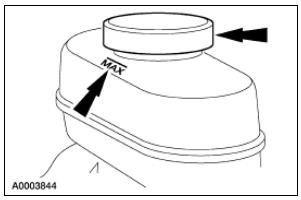
⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

⚠ CAUTION: Do not allow the brake master cylinder reservoir to run dry during the bleeding operation. Keep the brake master cylinder reservoir filled with the specified brake fluid. Never reuse the brake fluid that has been drained from the hydraulic system.

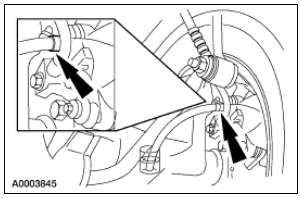
NOTE: When any part of the hydraulic system has been disconnected for repair or installation of new components, air can get into the system and cause spongy brake pedal action. This requires bleeding of the hydraulic system after it has been correctly connected. The hydraulic system can be bled manually or with pressure bleeding equipment.

1. Connect the diagnostic tool cable adapter into the vehicle data link connector (DLC) under the dash and follow the scan tool instructions.

2. Clean all dirt from and remove the brake master cylinder filler cap and fill the brake master cylinder reservoir with the specified brake fluid.



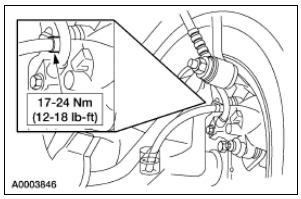
3. Place a box end wrench on the RH rear bleeder screw. Attach a rubber drain tube to the RH rear bleeder screw and submerge the free end of the tube in a container partially filled with clean brake fluid.



4. Have an assistant hold firm pressure on the brake pedal.

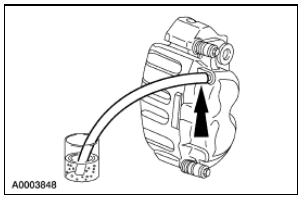
5. Loosen the RH rear bleeder screw until a stream of brake fluid comes out. While the assistant maintains pressure on the brake pedal, tighten the RH rear bleeder screw.
    - Repeat until clear, bubble-free fluid comes out.
    - Refill the brake master cylinder reservoir as necessary.

6. Tighten the RH rear bleeder screw.



7. Repeat Steps 3, 4, 5 and 6 for the LH rear bleeder screw.

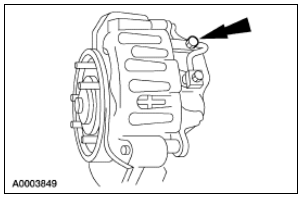
8. Place a box end wrench on the RH front disc brake caliper bleeder screw. Attach a rubber drain tube to the RH front disc brake caliper bleeder screw, and submerge the free end of the tube in a container partially filled with clean brake fluid.



9. Have an assistant hold firm pressure on the brake pedal.

10. Loosen the RH front disc brake caliper bleeder screw until a stream of brake fluid comes out. While the assistant maintains pressure on the brake pedal, tighten the RH front disc brake caliper bleeder screw.
    - Repeat until clear, bubble-free fluid comes out.
    - Refill the brake master cylinder reservoir as necessary.

11. Tighten the RH front disc brake caliper bleeder screw. For additional information, refer to Specifications.



12. Repeat Steps 8, 9, 10 and 11 for the LH front disc brake caliper bleeder screw.

Pressure

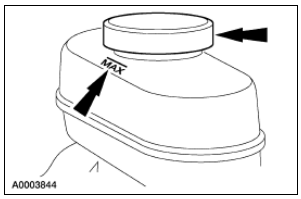
⚠ WARNING: Use of any other than approved DOT 3 or DOT 4 brake fluid will cause permanent damage to brake components and will render the brakes inoperative.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

⚠ CAUTION: Do not allow the master cylinder to run dry during the bleeding operation. Keep the master cylinder reservoir filled with the specified brake fluid. Never reuse the brake fluid that has been drained from the hydraulic system.

1. Clean all dirt from and remove the brake master cylinder filler cap. Fill the brake master cylinder reservoir with the specified brake fluid.

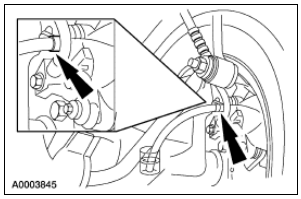


2. **NOTE:** Master cylinder pressure bleeder adapter tools are available from various manufacturers of pressure bleeding equipment. Follow the instructions of the manufacturer when installing the adapter.

   Install the bleeder adapter to the brake master cylinder reservoir, and attach the bleeder tank hose to the fitting on the adapter.

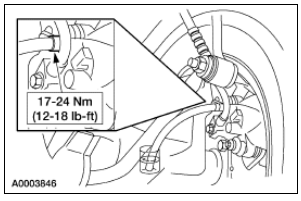
3. **NOTE:** Bleed the longest line first. Make sure the bleeder tank contains enough specified brake fluid to complete the bleeding operation.

   Place a box end wrench on the RH rear bleeder screw. Attach a rubber drain tube to the RH rear bleeder screw, and submerge the free end of the tube in a container partially filled with clean brake fluid.



4. Open the valve on the bleeder tank.

5. Loosen the RH rear bleeder screw. Leave open until clear, bubble-free brake fluid flows, then tighten the RH rear bleeder screw and remove the rubber hose.



6. Continue bleeding the rear of the system, going in order from the LH rear bleeder screw to the RH front disc brake caliper bleeder screw ending with the LH front disc brake caliper bleeder screw.

7. Close the bleeder tank valve. Remove the tank hose from the adapter, and remove the adapter.

Brake System Hydraulic Leak Check

Printable View (8 KB)

1. **NOTE:** Brake fluid is water soluble and it is possible that all evidence of fluid leakage has been washed off if the vehicle has been operated in the rain or snow.

   Make sure the brake master cylinder reservoir is full.

2. Apply the brakes several times and make sure the brake pedal (2455) feel is not spongy. If necessary, bleed the system. For additional information, refer to Brake System Bleeding in this section.

3. Verify that the reservoir level is dropping.

4. If the reservoir level is dropping, inspect the brake components, fittings and lines to locate the source of the leak.

Special Tool(s)

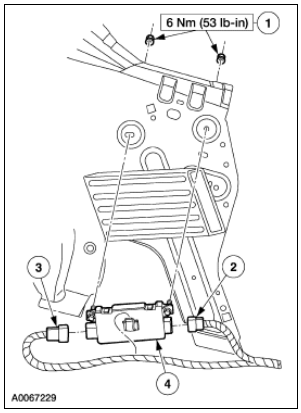
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation Star (NGS) Tester 418-F052 or equivalent scan tool

NOTE: The electronic parking brake (EPB) module must be configured if it is installed new. Follow the diagnostic tool instructions for configuring the EPB module. For additional information, refer to Section 418-00 .

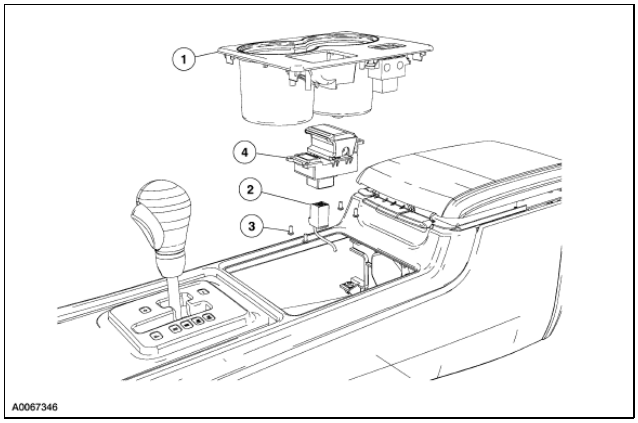
NOTE: The electronic parking brake (EPB) system must be reset following the EPB system reset procedure if the battery has been discontinued. Refer to Electronic Parking Brake (EPB) Resetting in this section.

NOTE: The electronic parking brake (EPB) module is located above the subwoofer amplifier on the rear quarter panel reinforcement.

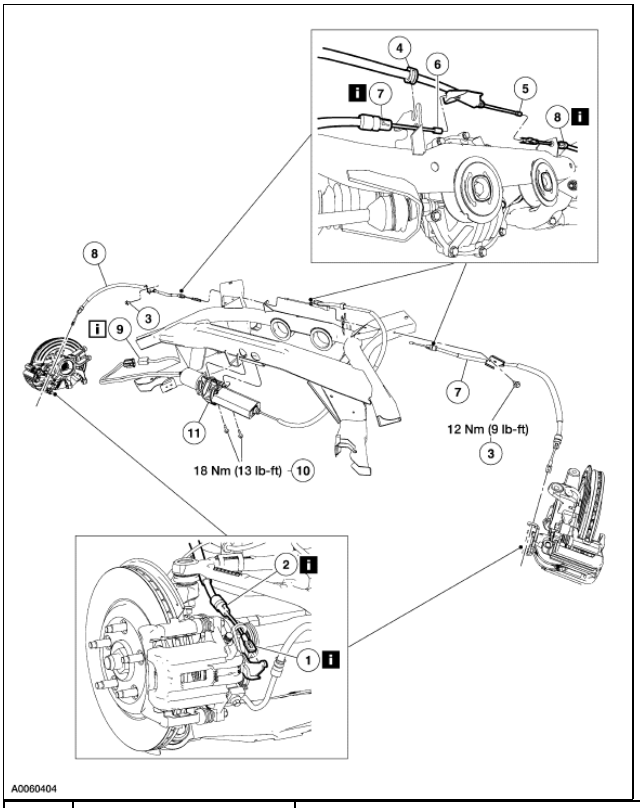
1. To remove the electronic parking brake (EPB) module only, follow these steps:
    1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
    2. Fold the LH side luggage compartment trim aside.
    3. Remove the components in the following order:
        - Nuts.
        - The electrical connector.
        - The electrical connector.
        - The electronic parking brake (EPB) module.



2. To remove the electronic parking brake (EPB) switch only, follow these steps:
    1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
    2. Remove the components in the following order:
        - The cup holder.
        - The electrical connector.
        - Screws (4 req'd).
        - The electronic parking brake (EPB) switch.



3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	2A635/2A823	Parking brake cable end (RH/LH) Removal Note
2	2A635 and 2A823	Parking brake cable and conduit (RH and LH) Removal Note
3	W706703	Bolt
4	2598	Electronic parking brake actuator cable
5	2598	Electronic parking brake actuator cable end
6	2A823	LH Parking brake cable end
7	2A823	LH Parking brake cable and conduit Removal Note
8	2A635	RH Parking brake cable and conduit Removal Note
9		

		Electronic parking brake actuator assembly connector Installation Note
10	W708829	Bolts
11	2598	Electronic parking brake actuator assembly

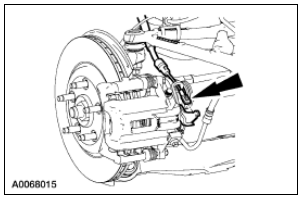
4. To install, reverse the removal procedure.

Item 1: Parking Brake Cable End (RH/LH) Removal Note

1. Connect the diagnostic tool cable adapter into the vehicle data link connector (DLC) under the dash and follow the diagnostic tool instructions to slacken the electronic parking brake cables.

Items 2, 7 and 8: Parking Brake Cable And Conduit (RH/LH) Removal Note

1. Compress the conduit retaining prongs and remove the parking brake cable and conduit from the brake caliper.



Item 9: Electronic Parking Brake Actuator Assembly Connector Installation Note

1. Connect the electronic parking brake connector. Reset the system as follows:
    1. Turn the ignition switch ON without the engine running.
    2. Press the brake pedal.
    3. **NOTE:** The red brake warning lamp will illuminate for ten seconds and go out if the system is functioning correctly.

       If the system is not functioning correctly, refer to Brake System in this section for diagnosis and testing of the EPB system.

       Apply the parking brake. The electronic parking brake system is reset.

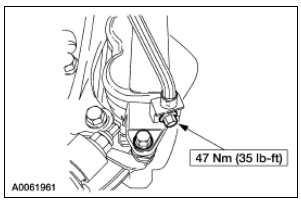
7	1125	Brake disc Removal Note
7	1125	Brake disc Installation Note
8	W701950-S100	Rivets
9	2C208	Brake disc shield Removal Note

2. To install, reverse the removal procedure.

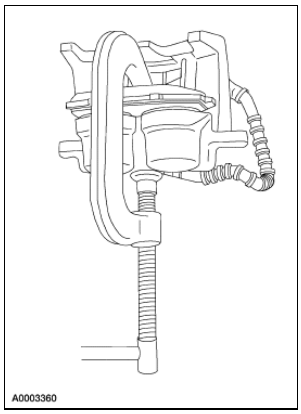
Item 2: Brake Caliper Assembly Removal Note

1. Remove the caliper flow bolt and the two copper washers. Discard the copper washers.



Item 3: Brake Pads Removal Note

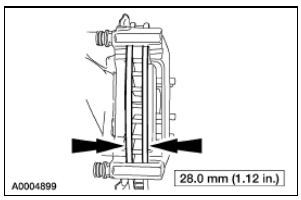
1. Compress the disc brake pistons.
    - Use a wood block or used brake pad to protect pistons and boots.



Item 7: Brake Disc Removal Note

1. If the brake disc will be reused, match-mark the hub and brake disc.
2. ⚠ **CAUTION: If it is necessary to machine the brake disc, only use a hub-mount brake lathe.**

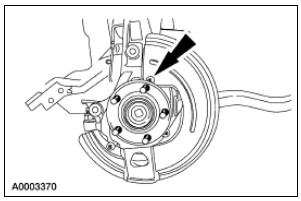
   Measure the brake disc, and resurface as necessary. Install a new brake disc if beyond specification.



Item 9: Brake Disc Shield Removal Note

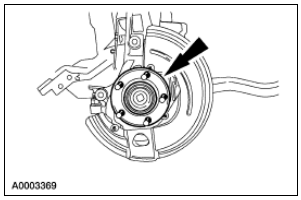
1. ⚠ **CAUTION: Use a 5.5 mm (0.22 in) drill. Do not exceed past a 6.0 mm (0.24 in) drill.**

   Drill out the rivets.



Item 7: Brake Disc Installation Note

1. Clean any rust or foreign material from the brake disc and wheel hub.
    - Use a suitable brake parts cleaner to clean the brake disc and hub surfaces.
    - Apply a suitable anti-seize lubricant to the hub flange.



Item 2: Brake Caliper Installation Note

1. Install new copper washers.

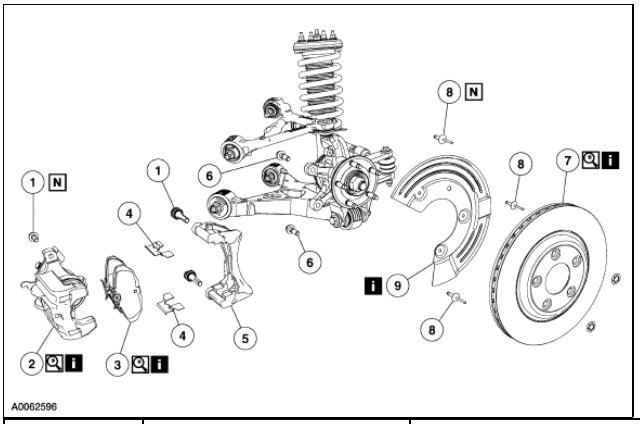
Rear Disc Brake

Printable View (192 KB)

Special Tool(s)

 ST1112-A	Adapter for Adjuster, Rear Brake Caliper Piston 206-026 (T87P-2588-A)

1. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	2N386	Guide pin assembly
2	2B120	Brake caliper Removal Note
3	2200	Brake pads (part of kit) Removal Note

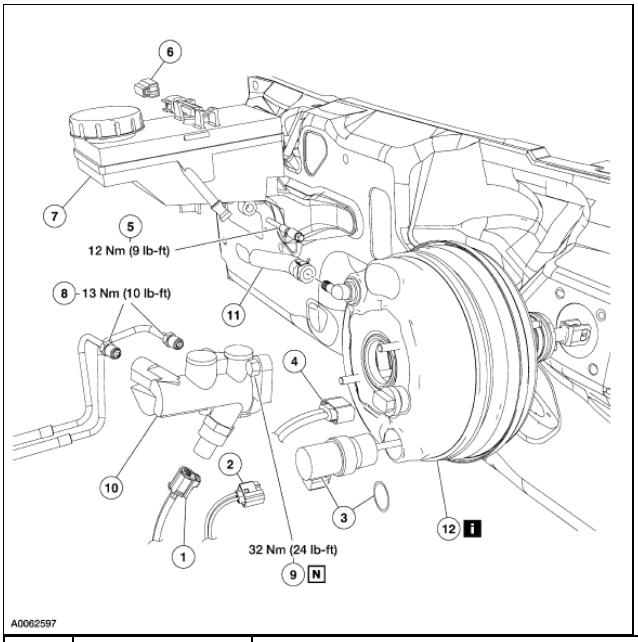
Item 5: Brake Pedal Pin/Brake Booster Input Shaft Removal Note

1. Disconnect the brake pedal pin from the brake booster input shaft.
    1. Remove the brake pedal pin clip.
    2. Disconnect the booster input shaft from the brake pedal pin.

Brake Master Cylinder and Brake Booster

Printable View (289 KB)

1. Remove the components in the order indicated in the following illustration and table.

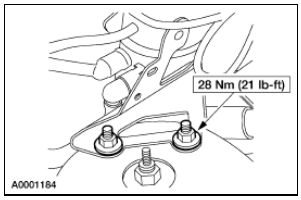


Item	Part Number	Description
1		Connector (vehicles with IVD)
2		Connector (vehicles with IVD)
3		Pedal travel switch (PTS) and O-ring (vehicles with IVD)
4		Connector (vehicles with IVD)
5	2462	Brake fluid reservoir screw
6		Connector
7	2K478	Brake fluid reservoir
8	2C326	Brake tubes
9	382802-S191	Nuts
10	2140	Master cylinder assembly
11	2C429	Vacuum hose (to brake booster check valve)
12	2005	Brake booster assembly (vehicles with or without IVD) Removal Note

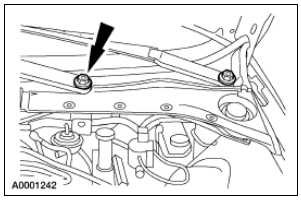
2. To install, reverse the removal procedure.

Item 12: Brake Booster Assembly Removal Note

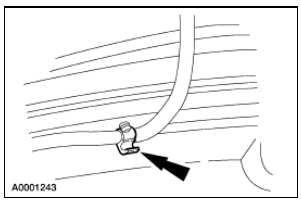
1. Remove the vapor management valve (VMV) and bracket assembly and position it aside.



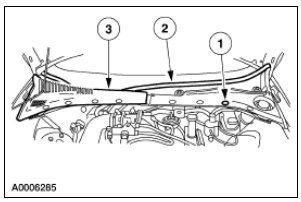
2. Remove the wiper arm nuts and remove wiper arms.



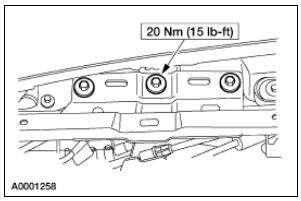
3. Disconnect the washer hose.



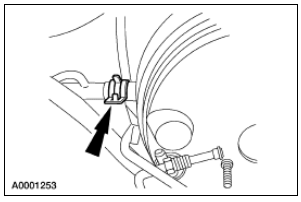
4. Remove the cowl cover.
    1. Remove the cowl cover pushpins.
    2. Remove the cowl cover rubber trim.
    3. Remove the cowl cover.



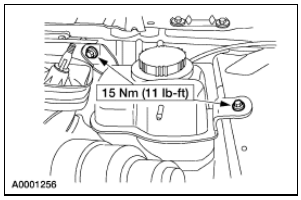
5. Remove the cowl brace center bolts. Remove the cowl brace end bolts and the bracket.



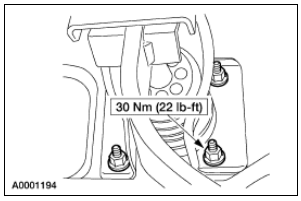
6. Disconnect the coolant reservoir return hose.



7. Remove the coolant reservoir bolts.



8. Remove and discard the brake booster-to-brake pedal bracket nuts.



9. Disconnect the brake pedal pin from the brake booster input shaft.
    1. Remove the brake pedal pin clip.
    2. Disconnect the booster input shaft from the brake pedal pin.

Disassembly and Assembly

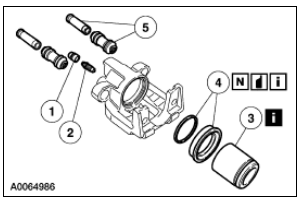
⚠ WARNING: Use of any other than approved DOT 3 or DOT 4 brake fluid will cause permanent damage to brake components and will render the brakes inoperative.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Brake fluid is harmful to painted or plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Remove the brake caliper. For additional information, refer to Rear Disc Brake in this section.
2. Drain the brake fluid from the brake caliper.
3. Secure the brake caliper in a vise.
4. **NOTE:** Do not hone the piston bores. If the bores are excessively scored or corroded, install a new brake disc caliper.

   Disassemble the components in the order indicated in the following illustration and table.

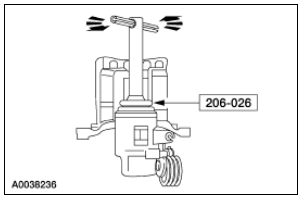


Item	Part Number	Description
1	2L126	Cap
2	378444-S	Bleeder screw
3	2B588	Piston Disassembly Note
4	2B595	Seal kit Assembly Note
5	2B296	Guide pin and boot

5. To assemble, reverse the disassembly procedure.

Item 3: Piston Disassembly Note

1. Using the special tool, turn the brake piston counterclockwise.



Item 4: Seal Kit Assembly Note

1. Use the special tools to install the seal.

Anti-Lock Control

Printable View (22 KB)

Anti-Lock Brake System (ABS) with Traction Control

The anti-lock brake system with traction control consists of the following components:

- Hydraulic control unit (HCU)
- Anti-lock brake system (ABS) module
- Rear wheel speed sensor
- Rear wheel speed sensor ring
- Front wheel speed sensor (integral to wheel hub assembly)
- Front wheel speed sensor ring
- Traction control switch
- Yellow ABS warning indicator

Anti-Lock Brake System (ABS) With Traction Control Advance Trac®/IVD

The anti-lock brake system with traction control Advance Trac®/IVD consists of these additional components:

- Accelerometer (in the same component as the yaw rate sensor)
- Yaw rate sensor (in the same component as the accelerometer)
- Steering wheel rotation sensor
- Active brake booster
    - ♦ master cylinder pressure sensor
    - ♦ pedal travel switch

Principles of Operation

The anti-lock brake control module with or without Advance Trac®/IVD simultaneously manages the anti-lock braking, traction control in conjunction with the engine control systems to maintain vehicle control during deceleration and acceleration.

When the ignition switch is put in the RUN position, the module will do a preliminary electrical check and, at approximately 20 km/h (12 mph), the hydraulic pump motor is turned on for approximately one half-second. Any malfunction of the anti-lock brake control system will disable the traction control and Advance Trac®/IVD and the anti-lock brake warning indicator will illuminate. However, the power-assist braking system will function normally.

Traction Control and Traction Control with Advance Trac®/IVD

With the ignition in the START or RUN positions, the traction control module functions similarly to a conventional anti-lock brake module by monitoring and comparing the rotational speed of each wheel. Wheel speeds are measured by the wheel speed sensor which electrically senses each tooth of the anti-lock sensor ring as they pass through the sensor's magnetic field. When the traction control module detects an impending wheel lock, wheel spin or vehicle motion that is inconsistent with the driver's commands, brake pressure is modulated to the appropriate brake caliper(s). The traction control module triggers the hydraulic control unit (HCU) to open and close the appropriate solenoid valves. Once the affected wheel(s) return to the desired speed, the traction control module returns the solenoid valves to their normal position, and normal base brake operation is restored.

The traction control module communicates with the powertrain control module (PCM) to assist with traction control. At speeds under 40 km/h (25 mph), when drive wheels lose traction and begin to spin, the traction control module requests the PCM to reduce engine torque, while simultaneously applying and releasing the appropriate brake caliper(s) to maintain traction. The PCM accomplishes this by minor incremental timing changes and fewer fuel injector pulses until the traction control module ends the request. The request ends when the driven wheel speed returns to normal. After the vehicle speed exceeds 40 km/h (25 mph), the traction control is accomplished only through the PCM torque control.

The Advance Trac®/IVD system constantly monitors vehicle motion relative to the driver's intended course. This is done by using sensors to compare the driver's steering input and brake application with that of the actual vehicle motion. The system does not activate when the vehicle is traveling in reverse, however, ABS and traction control will continue to function as usual.

The Advance Trac®/traction control switch allows the driver to control use of the Advance Trac®/IVD system. This is independent of the ABS function, which cannot be switched off by the driver. The Advance Trac®/IVD system's status is indicated by a traction control warning light in the Advance Trac®/traction control switch. An illuminated Advance Trac®/traction control switch indicates that the Advance Trac®/IVD system is switched off. In the message center, the message "Advance Trac OFF/Traction Control OFF" is displayed. However, if another alert message is being displayed on the message center ("Door Ajar"), the "Advance Trac OFF/Traction Control OFF" message may not be displayed. If a failure is detected somewhere in the Advance Trac®/IVD system which affects either the yaw control or traction control functions, the traction control indicator will illuminate. The anti-lock brake function continues to work as designed unless the yellow anti-lock brake warning indicator is also illuminated. The normal brake function always occurs, unless the red brake warning indicator is illuminated.

When Advance Trac® activates, any of the following can occur:

- a rumble or grinding sound much like ABS with traction control
- a small deceleration or a reduction in the acceleration of the vehicle
- the traction control indicator will flash
- if the driver's foot is on the brake pedal, a vibration will be felt in the pedal much like ABS
- if the event is severe and the driver's foot is not on the brake, the solenoid in the active booster will be energized by the traction control module. In the case of a severe event, you may notice brake pedal movement, a "whoosh" sound and/or a loud vibration from the brake pedal.

Some drivers may notice a slight movement of the brake pedal when the Advance Trac®/IVD system checks itself. The brake pedal moves when an active test of the brake booster is run. During this test a small amount of pressure will be generated at the master cylinder, but no pressure will be generated in the brake calipers. This test will occur above 48 km/h (30 mph) after the vehicle has been running approximately 8 minutes. The test will only be run if the vehicle is stable, the driver is not braking and the accelerator pedal is slightly pressed. If the brake system is not bled correctly, the brake pedal movement can become more significant.

Yaw Rate Sensor

The yaw rate sensor measures the relative vehicle motion about the vertical axis through its center of gravity.

Lateral Accelerometer

The lateral accelerometer measures the acceleration that corresponds to the force involved while the vehicle slides sideways. This acceleration has two forms. The first is the centrifugal acceleration generated when the vehicle travels around in a circle. The second is the acceleration due to gravity. The accelerometer only measures the acceleration along the lateral (or sideways) direction of the vehicle. On level ground there is no contribution from this acceleration. However, if the vehicle is parked sideways on a bank or incline, the sensor will measure some lateral acceleration due to gravity, even though the vehicle is not moving.

Steering Wheel Rotation Sensor

The steering wheel rotation sensor measures the rate of rotation of the steering wheel by monitoring the steering wheel rotation ring as it passes through the sensor gap. The steering wheel rotation sensor uses two signal lines to transmit information to the traction control module: whether the steering wheel is being turned left or right and how far it is being turned. The steering wheel rotation sensor cannot automatically indicate the position of the steering wheel relative to straight ahead. The Advance Trac®/IVD system must learn this position by comparing the steering wheel position to other input signals and stores them to determine a relative straight ahead position. The Advance Trac®/IVD system confirms this position and modifies it as necessary during every new driving cycle.

Active Brake Booster

The active brake booster functions like a conventional brake booster with the added feature that it can be actuated electrically by the traction control module. The electrical brake booster actuation is necessary in severe traction control events and makes sure that the hydraulic control unit can generate enough brake pressure to maintain vehicle stability. The brake assist from the brake booster is especially useful in cold weather when the hydraulic control unit cannot draw the brake fluid from the reservoir quickly at cold temperatures.

A solenoid within the active brake booster has a release switch to indicate when the driver is stepping on the brake pedal. The solenoid provides electrical actuation of the brake booster. Without the force of the input rod, the air valve is directly opened due to the movement of the energized solenoid. With increasing current applied to the solenoid, the air valve opens and output force is created. With decreasing current applied to the solenoid, the air valve is closed and the vacuum valve opens reducing output force. The release switch indicates when the brake pedal has been depressed. It is integrated into the booster key that normally sits against the rear shell of the boot in its rest position and it adjoins the valve body when in its balance position. The switch itself provides indication from two positions. In its rest position, it supplies two signals: normally open (NO) and normally closed (NC). When sufficient force is applied to initiate movement of the key away from the valve body, the brake booster switch changes state, signifying a driver application. When the traction control module is activating the brake booster, the brake pedal is pulled forward as the valve body moves. The release switch is held in position by the input rod spring and remains against the valve body. Although the switch changes state when the brake pedal drops, the release switch remains inactive until it encounters an external force from the driver, whether in a traction control event controlled by the traction control module, or in a standard mechanical braking event.

The pedal travel switch (PTS) sends brake application inputs to the traction control module. This signal is called driver brake application. This signal only changes state when the driver has applied the brake. If the ignition switch is in the RUN position, the brake booster is not electrically actuated, and no failure has been detected, the driver brake application signal will indicate a brake application when either the PTS switch or the release switch (built into the brake booster) indicates that the driver has applied the brake pedal. If the ignition switch is in the OFF position, the driver brake application signal will indicate a brake apply only when the PTS switch indicates that the driver is applying the brake pedal.

When the ignition switch is in the OFF position, failures cannot be detected. If there are failures, several layers of redundancy will attempt to keep the driver brake application signal accurate. If the Advance Trac®/IVD system detects faults on the driver brake apply signal line, it will also attempt to maintain correct stoplamp operation by communicating on the standard corporate protocol (SCP) network. Control of the stoplamp operation is also required because the PTS switch can change states during a traction control event when the driver is not applying the brake pedal. The switch can also change states during the system check of the brake booster. Only the Advance Trac®/IVD system can interpret these changed states and determine which are actually due to driver brake application. Similarly, the Advance Trac®/IVD system can take advantage of its other sensors to detect PTS switch failures.

Electronic Brake Distribution

The electronic brake distribution (EBD) controls rear brake pressure and acts as an electronic proportioning valve. It is controlled by the ABS module. When EBD is disabled, the amber ABS warning indicator and the red brake warning indicator will illuminate.

Panic Assist Braking

Panic assist braking functions by fully applying the brakes during a panic stop, using a specially developed pressure/pedal movement mechanism. Depending on vehicle speed, if pedal stroke is more rapid than normal, the brake booster automatically applies full brake boost. Panic assist will be disabled when the driver releases the brake pedal.

DTC C1963

This diagnostic trouble code (DTC) is stored if the traction control warning indicator has been turned ON because the system could not confirm the straight-ahead position for more than 30 seconds above 18 km/h (11 mph) or if the vehicle reaches 75 kph (47 mph) before confirming the straight-ahead position. This condition will most likely occur if there is some other DTC or if driving aggressively immediately after turning the ignition on. If there is another DTC logged, the repair procedure is to follow the procedure for the first DTC. This DTC can be stored if:

- the PRNDL or Reverse switch has failed (check operation of PRNDL display and back-up lights).
- chassis modifications have been made that were not authorized by Ford.

In very rare circumstances this DTC can be stored by itself without the occurrence of any actual component failure. These conditions can cause DTC C1963 to set with no other DTC:

- The steering wheel has been turned while the ignition is off and then the vehicle is started, and either the vehicle is driven continuously in a circle or the vehicle is driven with continuous swerving, sliding or tire spinning.
- A new traction control module has been installed in the vehicle and is not calibrated.

⚠ CAUTION: When carrying out he accelerometer or yaw rate sensor calibration procedure, do not press the brake pedal.

Traction Control Module Calibration

The ABS module needs to be recalibrated whenever a component specific to the Advance Trac®/IVD system is disconnected or a new component is installed. For additional information regarding the DTCs that require the recalibration procedure, refer to the Traction Control Calibration List. If a DTC is logged for any component of the Advance Trac®/IVD system, the DTC must be cleared before carrying out the recalibration procedure. The need to recalibrate the traction control module is also indicated by the active/fail lamp flashing. The lamp will flash after clearing the DTCs that are indicated on the Traction Control Calibration List. If a DTC is retrieved after recalibration, refer to the Traction Control Module Diagnostic Trouble Code (DTC) Index. If installing a new traction control module, the calibration procedures as well as the configuration procedure must be carried out. For additional information regarding the module configuration procedure, refer to Section 418-00 .

When carrying out the accelerometer or yaw rate sensor calibration using the diagnostic tool, the vehicle must be on a level surface, must be stationary and the ignition switch must be in the RUN position. When carrying out the steering wheel rotation sensor calibration and the active booster calibration using the diagnostic tool, the ignition switch must be in the RUN position with the engine running and the steering wheel must be rotated back and forth from lock position to lock position.

Anti-Lock Control Printable View (498 KB)

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation Star (NGS) Tester 418-F052 or equivalent scan tool
ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST1177-A	88 Digital Multimeter or equivalent 105-R0053
ST2574-A	Flex Probe Kit 105-R025B

Inspection and Verification

NOTE: If a module is installed it must be reconfigured. Refer to Section 418-00 .

1. Verify the customer's concern by operating the vehicle to duplicate the condition.

2. Verify the stoplamps operate correctly by depressing and releasing the brake pedal with the ignition switch in the OFF position. If the stoplamps do not operate correctly, refer to Section 417-01 . If the stoplamps operate correctly, proceed to the next step.

3. Verify that the PRNDL operates correctly on the instrument cluster. If the PRNDL does not operate correctly, refer to Section 413-00 . If the PRNDL operates correctly, proceed to the next step.

4. Inspect to determine if one of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
• Wheel speed sensor ring • Hydraulic control unit (HCU) • Incorrectly inflated tires • Mismatched wheels or tires on vehicle • Base brake concern	• Front battery junction box (FBJB) Fuse: ♦ 14 (30A) ♦ 22 (40A) • ABS module

• Brake booster vacuum hose • Ford-specified steering components, suspension components and tire size • Steering wheel rotation ring	• EVAC and fill connector • Wheel speed sensor • Advance Trac®/IVD switch • PTS switch • Steering wheel rotation sensor • Brake booster solenoid • Brake booster release switch • Brake pressure transducer • Yaw rate sensor (integral to sensor cluster) • Accelerometer (integral to sensor cluster) • Wiring harness • Connectors or connections • Circuitry

5. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the scan tool menu. If the scan tool does not communicate with the vehicle:
    - Check that the program card is correctly installed.
    - Check the connection of the data link connector to the vehicle.
    - Check that the ignition switch is in the RUN position.

6. If the scan tool still does not communicate with the vehicle, refer to the scan tool manual.

7. Carry out the DATA LINK DIAGNOSTIC TEST. If scan tool responds with:
    - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
    - NO RESP/NOT EQUIP for the ABS module, Go To Pinpoint Test A .
    - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), clear the continuous DTCs, cycle the ignition switch OFF and ON, then carry out the self-test diagnostics for the ABS module.

8. If the DTCs retrieved are related to the concern, go to ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble Code (DTC) Index to continue diagnostics.

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

ABS/Traction Control and ABS/Traction Control with Advance Trac®/IVD Diagnostic Trouble Code (DTC) Index

NOTE: The need to recalibrate the module is indicated by the active/fail lamp flashing. There are other service actions that can require recalibration when there is no flashing lamp. The lamp will flash after clearing the DTCs that are indicated in the module calibration list.

NOTE: Always retrieve the continuous DTCs after running the self-test.

ABS/Traction Control and ABS/Traction Control with Advance Trac®/IVD Diagnostic Trouble Code (DTC) Index

NOTE: DTC C1730 (Reference Voltage Out Of Range) must be repaired before DTC C1279, C1280, C1281, C1282, C1288, C1289.

DTCDescriptionSourceActionB1342 [a]ECU Is DefectiveABS [a]

NOTE: If other DTCs are present, REPAIR them before installing a new component.

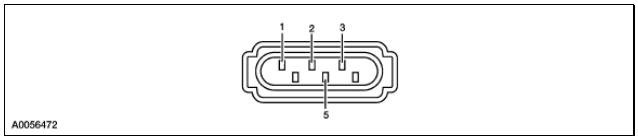
11	Not used	
12	CKT 4-CF6 (GY) SCP Bus (+)	SCP communication high current when connected.
13	CKT 31S-CF45 (BK/GN) Advance Trac®/IVD OFF indicator	Zero volts when Advance Trac®/IVD switch is OFF.
14	CKT 5-CF6 (BU) SCP Bus (-)	SCP communication low current when connected.
15	Not used	
16	CKT 31-CF6A (BK/YE) ABS module ground	Zero volts, less than five ohms to chassis ground.
17	CKT 8-CF68 (WH/RD) Active brake booster power	B+ with key ON.
18	CKT 7-CF64 (YE/BK) Brake pressure transducer power	Five volts with ignition in RUN.
19	CKT 9-CF64 (BN/YE) Brake pressure transducer ground	Zero volts, less than five ohms to chassis ground.
20	CKT 8-CF64 (WH/BK) Brake pressure transducer signal	Zero to five volts, varies proportional to brake pressure.
21	Not used	
22	CKT 8-CF63 (WH/GN) Navigation system signal	Signal varies with vehicle speed.
23	Not used	
24	CKT 9-CF65 (BN/WH) Pedal travel switch (PTS) switch ground	Zero volts, less than five ohms to chassis ground.
25	CKT 9-CF66 (BN/BU) Accelerometer/yaw rate sensor CAN Bus (-)	CAN communication low current when connected.
26	CKT 7-CF65 (YE/VT) Pedal travel switch (PTS) switch power	Five volts with ignition in RUN.
27	CKT 8-CF51 (WH/GN) Brake pedal force switch normally open (NO)	Open circuit without brake pedal applied.
28	CKT 9-CF51 (BN/GN) Brake pedal force	Zero to five volts varies with brake pedal

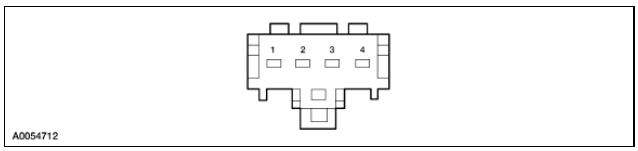
	switch signal	application.
29	CKT 8-CF66 (WH/BU) Accelerometer/yaw rate sensor CAN Bus (+)	CAN communication high current when connected.
30	CKT 10-CF51 (GY/OG) Brake pedal force switch normally closed (NC)	Closed circuit without brake pedal applied.
31	CKT 9-CF68 (BN/RD) Active brake booster power	Five volts with ignition in RUN
32	CKT 30-CF6A (RD) HCU solenoid valves power	B+ voltage at all times.
33	CKT 8-CF38 (WH/RD) RF active wheel speed sensor ground	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
34	CKT 7-CF38 (YE/RD) RF active wheel speed sensor power	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
35	Not used	
36	CKT 7-CF34 (YE/BU) LR active wheel speed sensor power	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
37	CKT 8-CF34 (WH/BU) LR active wheel speed sensor ground	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
38	CKT 8-CF54 (WH/VT) Traction Control Actuator/Advance Trac®/IVD switch input	Twelve volts with Advance Trac®/IVD switch ON.
39	CKT 8-GN14 (WH/BK) Backup aid signal	Five-volt reference signal to backup aid with transmission selector in R
40	CKT 8-CF65 (WH/VT) Pedal travel switch (PTS) switch signal	Zero to five volts varies with pedal travel switch position.
41	CKT 29-CF1 (OG/BU) Brake ON/OFF switch input	Brake applied, 0 volts/brake not applied, 12 volts.
42	CKT 8-CF40 (WH/GN) RR active wheel speed sensor ground	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
43	CKT 7-CF40 (YE/GN) RR active wheel speed sensor power	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
44	CKT 29S-CF2 (OG/BU) Driver brake apply signal power	Brake applied 12 volts to trailer tow relay (if equipped).
45	CKT 7-CF32 (YE/BR) LF active wheel speed sensor power	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
46	CKT 8-CF32 (WH/BR) LF active wheel speed sensor ground	PID value 0 to 255 km/h (0 to 158 mph); 0 volts, less than 5 ohms to chassis ground when connected.
47	CKT 31-CF6B (BK/YE) ABS module ground	Zero volts, less than five ohms to chassis ground.

Accelerometer/Yaw Rate Sensor C3073



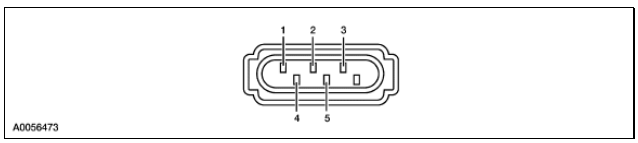
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 9-CF66 (BN/BU) Accelerometer/yaw rate sensor CAN Bus (-)	CAN communication low current when connected.
2	CKT 8-CF66 (WH/BU) Accelerometer/yaw rate sensor CAN Bus (+)	CAN communication high current when connected.
3	CKT 7-CF67 (YE/RD) Steering wheel rotation sensor/accelerometer/yaw rate sensor power	Greater than 9 volts with ignition in START or RUN.
5	CKT 9-CF67 (BN/RD) Steering wheel rotation/accelerometer/yaw rate sensor return	Zero volts, less than five ohms to chassis ground.

Steering Wheel Rotation Sensor C226



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-CC16A (YE/BK) Steering wheel rotation sensor/accelerometer/yaw rate sensor power	Greater than 9 volts with ignition in START or RUN.
2	CKT 10-CC17 (GY) Steering wheel rotation sensor angle 2	PID value when connected 0° to -45°.
3	CKT 8-CC18 (WH/RD) Steering wheel rotation sensor angle 1	PID value when connected 0° to 45°.
4	CKT 9-CC16 (BN/YE) Steering wheel rotation/accelerometer/yaw rate sensor return	Zero volts, less than five ohms to chassis ground.

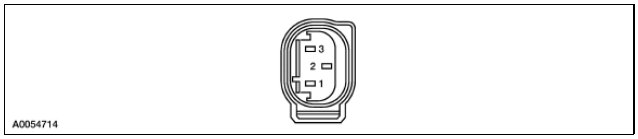
Active Brake Booster C149



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-CF51 (WH/GN) Brake pedal force switch normally open (NO)	Open circuit without brake pedal applied.
2	CKT 10-CF51 (GY/OG) Brake pedal force switch normally closed (NC)	Closed circuit without brake pedal applied.

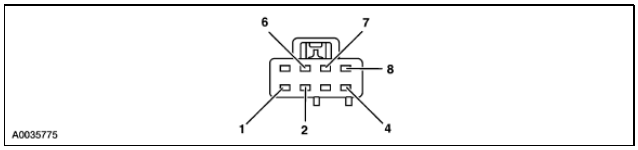
3	CKT 9-CF68 (BN/RD) Active brake booster power	Five volts with ignition ON.
4	CKT 8-CF68 (WH/RD) Active brake booster power	B+ with ignition ON.
5	CKT 9-CF51 (BN/GN) Brake pedal force switch signal	Zero to five volts varies with brake pedal application.

Brake Pressure Transducer C147



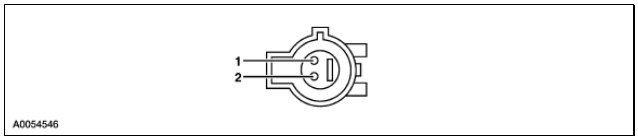
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 9-CF64 (BN/YE) Brake pressure transducer ground	Zero volts, less than five ohms to chassis ground.
2	CKT 8-CF64 (WH/BK) Brake pressure transducer signal	Zero to five volts, varies proportional to brake pressure.
3	CKT 7-CF64 (YE/BK) Brake pressure transducer power	Five volts with ignition ON.

Advance Trac®/IVD Switch C3208



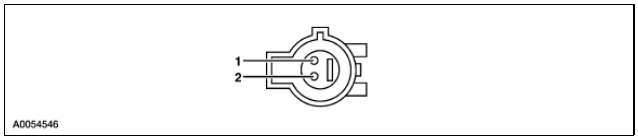
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20-CF54 (PK/WH) Advance Trac®/IVD switch power	Greater than 10 volts on actuation.
2	CKT 8-CF54 (WH/VT) Advance Trac®/IVD signal	Greater than 10 volts on actuation.
4	CKT 31S-CF45 (BK/GN) Advance Trac®/IVD OFF signal	Greater than 10 volts with switch OFF.
7	CKT 31-LH45 (BK/WH) Switch illumination ground	Zero voltage, less than five ohms to chassis ground.
8	CKT 64S-LH45 (BU/OG) Switch illumination power	Greater than 9 volts on actuation when connected.

LF Wheel Speed Sensor C150



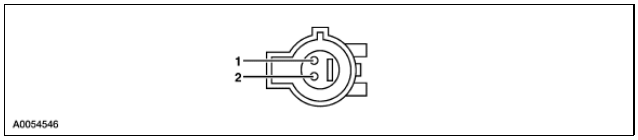
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-CF32 (YE/BR) LF wheel speed (+)	PID value 0 to 255 km/h (0 to 158 mph).
2	CKT 8-CF32 (WH/BR) LF wheel speed (-)	PID value 0 to 255 km/h (0 to 158 mph).

RF Wheel Speed Sensor C160



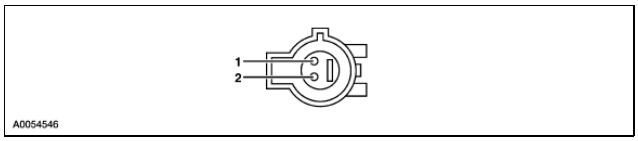
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-CF38 (YE/RD) RF wheel speed (+)	PID value 0 to 255 km/h (0 to 158 mph).
2	CKT 8-CF38 (WH/RD) RF wheel speed (-)	PID value 0 to 255 km/h (0 to 158 mph).

LR Wheel Speed Sensor C440



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-CF34 (YE/BU) LR wheel speed (-)	PID value 0 to 255 km/h (0 to 158 mph).
2	CKT 8-CF34 (WH/BU) LR wheel speed (+)	PID value 0 to 255 km/h (0 to 158 mph).

RR Wheel Speed Sensor C426



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-CF40 (YE/GN) RR wheel speed (+)	PID value 0 to 255 km/h (0 to 158 mph).
2	CKT 8-CF40 (WH/GN) RR wheel speed (-)	PID value 0 to 255 km/h (0 to 158 mph).

Pinpoint Tests

Pinpoint Test A: No Communication With The ABS Module

Normal Operation

The operating voltage required to supply the ABS module, hydraulic pump, and isolation valves is in a range between 10 and 17 volts.

Voltage is supplied by circuit 20-CF6A (PK/YE) (ignition feed) and circuit 30-CF13 (RD) (power hot at all times). Ground is provided through circuit 31-CF6A (BK/YE) and 31-CF6B (BK/YE).

Possible Causes

- Charging system.
- Battery.
- Ground circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE).
- Power supply:
  - ♦ circuit 30-CF13 (RD)
  - ♦ circuit 20-CF6A (PK/YE)

PINPOINT TEST A: NO COMMUNICATION WITH THE ABS MODULE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
A1 CHECK THE VOLTAGE TO THE ABS MODULE	
• Key in OFF position. • Disconnect: ABS Module C135. • Key in ON position. • Measure the voltage between ABS module C135-4, circuit 20-CF6A (PK/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** REPAIR circuit 20-CF6A (PK/YE). REPEAT the self-test.
A2 CHECK THE ABS MODULE GROUNDS	
• Key in OFF position. • Measure the resistance between ABS module C135-16, circuit 31-CF6A (BK/YE), harness side, and ground; and between ABS module C135-47 circuit 31-CF6B (BK/YE) harness side, and ground.  • **Are the resistances less than 5 ohms?**	**Yes** CHECK the module communications network. REFER to Section 418-00 . **No** REPAIR circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE). REPEAT the self-test.

Pinpoint Test B: DTC B1483 Brake Pedal Input Circuit Failure

Normal Operation

The operating voltage required to supply the pedal travel switch (PTS) switch is 5 volts through circuit 7-CF65 (YE/VT).

The PTS signal is sent through circuit 8-CF65 (WH/VT) to the ABS module.

Ground is provided through circuit 9-CF65 (BN/WH).

Possible Causes

- Power circuit 7-CF65 (YE/VT).
- Ground circuit 9-CF65 (BN/WH).
- Signal circuit 8-CF65 (WH/VT).

PINPOINT TEST B: DTC B1483 BRAKE PEDAL INPUT CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
B1 CHECK CIRCUIT 7-CF65 (YE/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: ABS Module C135. • Measure the voltage between ABS module C135-26, circuit 7-CF65 (YE/VT), harness side, and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B2 . **No** REPAIR circuit 7-CF65 (YE/VT). CLEAR the DTC. REPEAT the self-test.
B2 CHECK CIRCUIT 8-CF65 (WH/VT)	
• Measure the voltage between ABS module C135-40, circuit 8-CF65 (WH/VT), harness side, and ground, while depressing and releasing the brake pedal.  • **Is the voltage greater than 10 volts with the brake pedal depressed, and zero volts with the brake pedal released?**	**Yes** INSTALL a new pedal travel switch (PTS) switch. CLEAR the DTC. REPEAT the self-test. **No** GO to B3 .

B3 CHECK CIRCUIT 8-CF65 (WH/VT) FOR A SHORT TO GROUND	
• Measure the resistance between ABS module C135-40, circuit 8-CF65 (WH/VT), harness side, and ground.  A0073269 • **Is the resistance less than 10,000 ohms?**	**Yes** GO to B4 . **No** REPAIR circuit 8-CF65 (WH/VT). CLEAR the DTC. REPEAT the self-test.
B4 CHECK CIRCUIT 9-CF65 (BN/WH) FOR A SHORT TO POWER	
• Measure the voltage between ABS module C135-24, circuit 9-CF65 (BN/WH), harness side and ground.  A0073268 • **Is voltage present?**	**Yes** REPAIR circuit 9-CF65 (BN/WH). CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new pedal travel switch (PTS) switch. CLEAR the DTC. REPEAT the self-test.

Pinpoint Test C: DTC B1676 Battery Pack Voltage Out Of Range

Normal Operation

The vehicle electrical system supplies 12 volts to the ABS module.

Voltage is supplied by circuit 20-CF6A (PK/YE) (ignition feed) and circuit 30-CF13 (RD) (power hot at all times). Ground is provided through circuit 31-CF6A (BK/YE) and 31-CF6B (BK/YE).

Possible Causes

- Charging system.
- Battery.
- Ground circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE).
- Power supply:
  - ♦ circuit 30-CF13 (RD)
  - ♦ circuit 20-CF6A (PK/YE)

PINPOINT TEST C: DTC B1676 BATTERY PACK VOLTAGE OUT OF RANGE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
C1 CHECK THE BATTERY VOLTAGE	

• Measure the battery voltage between the positive and negative battery posts with the key ON engine OFF (KOEO), and with the engine running. • **Is the battery voltage between 10 and 13 volts with KOEO, and between 11 and 17 volts with the engine running?**	**Yes** GO to C2 . **No** CHECK the charging system. REFER to Section 414-00 . TEST the system for normal operation.
C2 CHECK VOLTAGE TO THE ABS MODULE	
• Key in OFF position. • Disconnect: ABS Module C135. • Key in ON position. • Measure the voltage between ABS module C135-4, circuit 20-CF6A (PK/YE), harness side and ground; and between ABS module C135-32, circuit 30-CF6A (RD), harness side and ground.  • **Are the voltages greater than 10 volts?**	**Yes** GO to C3 . **No** REPAIR circuit 20-CF6A (PK/YE) or circuit 30-CF6A (RD). CLEAR the DTC. REPEAT the self-test.
C3 CHECK THE ABS MODULE GROUNDS	
• Key in OFF position. • Measure the resistance between ABS module C135-16, circuit 31-CF6A (BK/YE), harness side, and ground; and between ABS module C135-47 circuit 31-CF6B (BK/YE) harness side, and ground.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test. **No** REPAIR circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE). CLEAR the DTC. REPEAT the self-test.

Pinpoint Test D: DTC C1095 ABS Hydraulic Pump Motor Circuit Failure

Normal Operation

The operating voltage required to run the hydraulic pump motor is in a range between 10 and 17 volts.

Voltage is supplied by circuit 30-CF13 (RD) (power hot at all times). Ground is provided through circuit 31-CF6A (BK/YE) and 31-CF6B (BK/YE).

Possible Causes

- Ground circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE).
- Power supply circuit 30-CF13 (RD).
- Hydraulic pump motor.
- ABS module.

PINPOINT TEST D: DTC C1095 ABS HYDRAULIC PUMP MOTOR CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
D1 CHECK THE ABS PUMP MOTOR	
• Key in ON position. • **Is the ABS pump motor running all the time?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test. **No** GO to D2 .
D2 CHECK PUMP MOTOR OPERATION	
• Key in ON position. • Trigger the ABS module pump motor ON active command. • **Does the ABS pump motor run for approximately three seconds?**	**Yes** CLEAR the DTC. CHECK the yellow ABS warning indicator while driving the vehicle (brakes must not be applied) above 32 km/h (20 mph). If the yellow ABS warning indicator illuminates, RETRIEVE the DTCs. If DTC C1095 is retrieved, INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test. If the yellow ABS warning indicator does not illuminate, the system is OK. **No** TRIGGER the ABS module pump motor OFF active command.GO to D3 .
D3 CHECK CIRCUIT 30-CF13 (RD) FOR AN OPEN	
• Disconnect: ABS Module C135. • Measure the voltage between ABS module C135-1, circuit 30-CF13 (RD) harness side, and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to D4 . **No** REPAIR circuit 30-CF13 (RD). CLEAR the DTC. REPEAT the self-test.
D4 CHECK CIRCUIT 31-CF6A (BK/YE) OR 31-CF6B (BK/YE) FOR AN OPEN	

• Disconnect: ABS Module C135. • Measure the resistance between ABS module C135-16, circuit 31-CF6A (BK/YE) harness side, and ground; and between ABS module C135-47, circuit 31-CF6B (BK/YE) harness side and ground. Then, measure the resistance between ABS module C135-16 circuit 31-CF6A (BK/YE) and C135-47 circuit 31-CF6B (BK/YE), component side.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new hydraulic pump motor in the HCU. REFER to Hydraulic Control Unit (HCU) in this section. CLEAR the DTC. REPEAT the self-test. **No** REPAIR circuit 31-CF6A (BK/YE) or 31-CF6B (BK/YE). CLEAR the DTC. REPEAT the self-test.

Pinpoint Test E: DTC C1145 (RF), DTC C1155 (LF), DTC C1165 (RR), DTC C1175 (LR) Wheel Speed Sensor Input Circuit Failure

Normal Operation

The active wheel speed sensor generates a square wave signal that is sent to the ABS module. The wheel speed sensor circuitry connects to the ABS module connector C135 through two wires and a connector at each wheel speed sensor. When the ignition is turned to the RUN position, the ABS module carries out a self-test by sending a reference voltage through the right front wheel speed sensor and its circuitry to determine if they are functional.

Twelve volts are supplied to the active wheel speed sensors from the ABS module. The wheel speed sensor ground is supplied by the ABS module.

Possible Causes

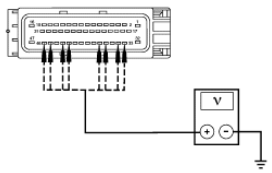
- Wheel speed sensor.
- Wheel speed sensor harness circuit(s) (power or ground).
- ABS or wheel speed sensor connector(s).

PINPOINT TEST E: DTC C1145 (RF), DTC C1155 (LF), DTC C1165 (RR), DTC C1175 (LR) WHEEL SPEED SENSOR INPUT CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
E1 CHECK FOR A SHORT TO POWER	
NOTE: Both circuits must be checked for each DTC. • Key in OFF position. • Disconnect: ABS Module C135. • Disconnect: Suspect Wheel Speed Sensor. • Key in ON position. • Measure the voltage between ABS module	**Yes** REPAIR the circuit in question. CLEAR the DTC(s). REPEAT the self-test. **No** GO to E2 .

C135 pins, harness side, and ground, as follows:

DTC	ABS Module C135 Pin	Circuit
C1145 (RF)	33	8-CF38 (WH/RD)
C1145 (RF)	34	7-CF38 (YE/RD)
C1155 (LF)	45	7-CF32 (YE/BR)
C1155 (LF)	46	8-CF32 (WH/BR)
C1165 (RR)	42	8-CF40 (WH/GN)
C1165 (RR)	43	7-CF40 (YE/GN)
C1175 (LR)	36	7-CF34 (YE/BU)
C1175 (LR)	37	8-CF34 (WH/BU)



- **Is voltage present?**

E2 CHECK FOR A SHORT TO GROUND

NOTE: Both circuits must be checked for each DTC.

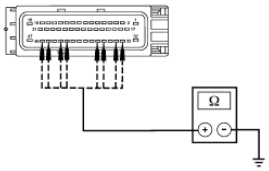
- Key in OFF position.
- Measure the resistance between ABS module C135 pins harness side and ground, as follows:

DTC	ABS Module C135 Pin	Circuit
C1145 (RF)	33	8-CF38 (WH/RD)
C1145 (RF)	34	7-CF38 (YE/RD)

Yes
GO to E3 .

No
REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.

C1155 (LF)	45	7-CF32 (YE/BR)
C1155 (LF)	46	8-CF32 (WH/BR)
C1165 (RR)	42	8-CF40 (WH/GN)
C1165 (RR)	43	7-CF40 (YE/GN)
C1175 (LR)	36	7-CF34 (YE/BU)
C1175 (LR)	37	8-CF34 (WH/BU)



- **Are the resistances greater than 10,000 ohms?**

E3 CHECK FOR AN OPEN

NOTE: Both circuits must be checked for each DTC.

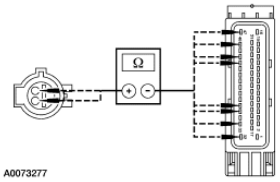
- Measure the resistance between ABS module C135 pins, harness side and the suspect wheel speed sensor connector pins, harness side, as follows:

DTC	Circuit	ABS Module C135 Pin	Wheel Speed Sensor Connector Pin
C1145 (RF)	8-CF38 (WH/RD)	33	2
C1145 (RF)	7-CF38 (YE/RD)	34	1
C1155 (LF)	7-CF32 (YE/BR)	45	2
C1155 (LF)	8-CF32 (WH/BR)	46	1
C1165 (RR)	7-CF40 (YE/GN)	43	2
C1165 (RR)	8-CF40 (WH/GN)	42	1

Yes
GO to E4 .

No
REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.

C1175 (LR)	7-CF34 (YE/BU)	36	2
C1175 (LR)	8-CF34 (WH/BU)	37	1



- **Are the resistances less than 5 ohms?**

E4 CHECK FOR SHORTED WHEEL SPEED SENSOR CIRCUITS	
• Measure the resistance between the suspect wheel speed sensor pins.  • **Is the resistance greater 10,000 ohms?**	**Yes** GO to E5 . **No** REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.
E5 CHECK THE ABS MODULE OUTPUT	
• Connect: ABS Module C135. • Key in ON position. • Measure the voltage between the suspect wheel speed sensor pins, harness side.  • **Is the voltage less than 9 volts?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new wheel speed sensor. For the front wheel speed sensor, REFER to Front Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test. For the rear wheel speed sensor, REFER to Rear Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test.

Pinpoint Test F: DTC C1233 (LF), DTC C1234 (RF), DTC C1235 (RR), DTC C1236 (LR) Wheel Speed Sensor Input Signal Missing

Normal Operation

The wheel speed sensor and sensor ring generate a square wave signal to the ABS module that is proportional to wheel speed. The ABS module compares wheel speed inputs from all wheel speed sensors to determine an impending wheel lockup.

Possible Causes

- Mismatched tire sizes.
- Wheel speed sensor ring.
- Wheel speed sensor.

- ABS module.

PINPOINT TEST F: DTC C1233 (LF), DTC C1234 (RF), DTC C1235 (RR), DTC C1236 (LR) WHEEL SPEED SENSOR INPUT SIGNAL MISSING

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
F1 CHECK FOR DTCs	
• Key in ON position. • Connect the diagnostic tool. • **Is DTC C1145, C1155, C1165 or C1175 present?**	**Yes** Go To Pinpoint Test E . **No** GO to F2 .
F2 CHECK THE WHEEL SPEED PIDs	
• Use the scan tool to monitor the wheel speed PIDs while driving the vehicle at a constant speed. • **Are the four wheel speed PID values similar?**	**Yes** CLEAR the DTC. DRIVE the vehicle. RETRIEVE DTCs. If DTC C1233, C1234, C1235 or C1236 is present, INSTALL a new anti-lock brake control module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test. **No** GO to F3 .
F3 CHECK THE WHEEL SPEED SENSOR FOR DAMAGE AND/OR LOOSENESS	
• Key in OFF position. • Raise and support the vehicle. Refer to Section 100-00 . • **⚠ CAUTION: Examine the wheel speed sensor wire carefully with a good light. Failure to verify damage in the wheel speed sensor wire can lead to unnecessary installation of a new component.** • Inspect the wheel speed sensor mounting for looseness. If the wheel speed sensor is suspected, inspect the sensor for corrosion or on the front anti-lock brake mounting flange. Clean as necessary. • **Is the wheel speed sensor OK?**	**Yes** GO to F4 . **No** INSTALL a new wheel speed sensor. For the front wheel speed sensor, REFER to Front Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test. For the rear wheel speed sensor, REFER to Rear Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test.
F4 CHECK FOR WHEEL SPEED SENSOR RING DAMAGE	
• Remove the wheel speed sensor. • Inspect the wheel speed sensor ring for damaged or missing teeth. Rotate the wheel to verify that no teeth are missing. • **Is the wheel speed sensor ring OK?**	**Yes** GO to F5 . **No** INSTALL a new wheel speed sensor ring. For the front wheel speed sensor ring, REFER to

	Front Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test. For the rear wheel speed sensor ring, REFER to Rear Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test.
F5 CHECK THE ANTI-LOCK BRAKE CONTROL MODULE OUTPUT	
• Key in ON position. • Measure the voltage between the ABS module C135 pins and the suspect wheel speed sensor connector pins as follows: **DTC / Circuit / ABS Module C135 Pin / Wheel Speed Sensor Connector Pin** C1234 (RF) / 8-CF38 (WH/RD) / 33 / 1 C1234 (RF) / 7-CF38 (YE/RD) / 34 / 2 C1233 (LF) / 7-CF32 (YE/BR) / 45 / 1 C1233 (LF) / 8-CF32 (WH/BR) / 46 / 2 C1235 (RR) / 7-CF40 (YE/GN) / 43 / 1 C1235 (RR) / 8-CF40 (WH/GN) / 42 / 2 C1236 (LR) / 7-CF34 (YE/BU) / 36 / 1 C1236 (LR) / 8-CF34 (WH/BU) / 37 / 2  • **Are the voltages greater than 9 volts?**	**Yes** INSTALL a new wheel speed sensor. For the front wheel speed sensor, REFER to Front Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test. For the rear wheel speed sensor, REFER to Rear Wheel Speed Sensor and Sensor Ring in this section. CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new anti-lock brake control module. REFER to Anti-Lock Brake System (ABS) Module in this section. TEST the system for normal operation.

Pinpoint Test G: DTC C1277/C1278 Steering Wheel Angle 1 and 2 Circuit Failure/Faulted

Normal Operation

The steering wheel rotation sensor monitors the steering wheel position when the toothed-wheel on the steering shaft passes through its magnetic field.

Steering wheel rotation (in degrees) is sent to the ABS module through circuit 8-CC18 (WH/RD) and circuit 10-CC17 (GY). Voltage is supplied by the ABS module through circuit 7-CC1 (YE/RD). Ground is provided by the ABS module through circuit 9-CC1 (BN/RD).

Possible Causes

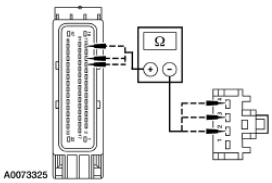
- Sensor signal circuit 8-CC18 (WH/RD).
- Sensor signal circuit 10-CC17 (GY).
- Sensor power circuit 7-CC1 (YE/RD).
- Sensor ground circuit 9-CC1 (BN/RD).
- Steering wheel rotation sensor.

PINPOINT TEST G: DTC C1277/C1278 STEERING WHEEL ANGLE 1 AND 2 CIRCUIT FAILURE/FAULTED

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
G1 CARRY OUT THE RECALIBRATION PROCEDURE	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear the DTC. • Carry out the steering wheel rotation sensor recalibration procedure using the scan tool. • Follow the scan tool directions for the calibration procedure. REFER to Section 418-00 . • Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Are any DTCs retrieved or does the recalibration procedure indicate a fault?**	**Yes** If DTC C1277 or C1278 is retrieved or the recalibration procedure indicates a fault, GO to G2 . If any other DTC, GO to the ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble Code (DTC) Index. **No** The ABS system is operating correctly. The DTC C1278 was meant for detection of steering wheel rotation sensor harness wiring problems at vehicle assembly time. The steering wheel rotation sensor circuit is checked for swapped wires (channel A and B). This DTC should not occur during repair unless the harness wiring to the steering wheel rotation sensor was changed or the PRNDL position indicator is not operating correctly. The DTC will occur only after driving a few feet and making a turn if the wiring problem or PRNDL problem exists.
G2 MONITOR THE STEERING ROTATION SENSOR PIDs	
• Key in ON position. • Monitor the steering rotation sensor PIDs	**Yes** CLEAR the DTC. DRIVE the vehicle. RETRIEVE the DTCs. If DTC C1277 is present,

while rotating the steering wheel clockwise and counterclockwise. • **Are the two PID values similar?**	INSTALL a new ABS control module. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** GO to G3 .
G3 CHECK THE VOLTAGE TO THE STEERING WHEEL ROTATION SENSOR	
• Key in OFF position. • Disconnect: Steering Wheel Rotation Sensor C226. • Key in ON position. • Measure the voltage between steering wheel rotation sensor C226-1 circuit 7-CC1 (YE/RD), harness side, and ground.  A0057752 • **Is the voltage greater than 5 volts?**	**Yes** GO to G4 . **No** REPAIR circuit 7-CC1 (YE/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
G4 CHECK THE STEERING WHEEL ROTATION SENSOR CIRCUITRY FOR AN OPEN	
• Key in OFF position. • Measure the resistance between ABS module C135 pins, harness side, and steering wheel rotation sensor C226 pins, harness side, as follows:	**Yes** GO to G5 . **No** REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

Steering Wheel Rotation Sensor C226 Pin	Circuit	ABS Module C135 Pin	Circuit
2	10-CC17 (GY)	6	10-CC17 (GY)
3	8-CC18 (WH/RD)	3	8-CC18 (WH/RD)
4	9-CC1 (BN/RD)	5	9-CC1 (BN/RD)

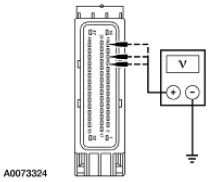


- **Are the resistances less than 5 ohms?**

G5 CHECK THE STEERING WHEEL ROTATION SENSOR FOR A SHORT TO POWER

- Key in OFF position.
- Connect: Steering Wheel Rotation Sensor C226.
- Disconnect: ABS Module C135.
- Key in ON position.
- Measure the voltage between ABS module C135 pins, harness side and ground as follows:

ABS Module C135 Pin	Circuit
6	10-CC17 (GY)
3	8-CC18 (WH/RD)
5	9-CC1 (BN/RD)



- **Is voltage present?**

Yes
REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

No
GO to G6 .

G6 CHECK THE STEERING WHEEL ROTATION SENSOR CIRCUITRY FOR A SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between ABS module C135 pins, harness side, and ground as follows:

ABS Module C135 Pin	Circuit
6	10-CC17 (GY)
3	8-CC18 (WH/RD)
5	9-CC1 (BN/RD)

Yes
INSTALL a new steering rotation sensor. REFER to Steering Wheel Rotation Sensor in this section. CLEAR the DTC. REPEAT the self-test.

No
REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

 • **Is the resistance greater than 10,000 ohms?**	

Pinpoint Test H: DTC C1279, C1280, C1281, C1282, C2769, C2770 Sensor Cluster Fault

Normal Operation

The accelerometer (lateral and longitudinal-4x4) and the yaw rate sensor are contained in the sensor cluster. The sensor measures the vehicle acceleration and yaw rate then sends the signal via CAN communication wires to the ABS module.

Voltage is supplied by circuit 7-CC1 (YE/RD). Ground is provided through circuit 9-CF67 (BN/RD). The CAN communication is transmitted through circuit 8-CF66 (WH/BU) and circuit 9-CF66 (BN/BU).

Possible Causes

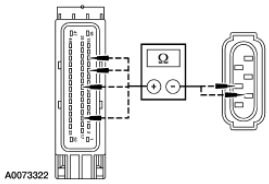
- Power circuit 7-CC1 (YE/RD).
- Ground circuit 9-CF67 (BN/RD).
- CAN communication:
  - circuit 8-CF66 (WH/BU)
  - circuit 9-CF66 (BN/BU)

PINPOINT TEST H: DTC C1279, C1280, C1281, C1282, C2769, C2770 SENSOR CLUSTER FAULT

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
NOTE: The yaw rate sensor and accelerometer are integral to the sensor cluster. The sensor cluster is not serviceable and must be installed as an assembly.	
H1 CARRY OUT THE RECALIBRATION PROCEDURE	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear DTCs. • Carry out the yaw rate sensor recalibration procedure using the scan tool. • Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Are any DTCs retrieved or does the recalibration procedure indicate a fault?**	**Yes** GO to H2 . **No** The ABS system is operating correctly.
H2 CHECK THE ABS MODULE YAW RATE PID	
• Monitor the ABS module yaw rate PID. • **Is the ABS module yaw rate PID value between 479 and 545?**	**Yes** INSTALL a new yaw rate sensor. REFER to Yaw Rate Sensor in this section. CLEAR DTCs. RECALIBRATE the ABS module.

	FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** GO to H3 .
H3 REVERIFY THE ABS MODULE YAW RATE PID	
• Monitor the ABS module yaw rate PID. • **Is the ABS module yaw rate PID value between 479 and 545?**	**Yes** CHECK the ABS module connector for loose or corroded pins. CLEAR the DTC. REPEAT the self-test. **No** GO to H4 .
H4 CHECK THE VOLTAGE FROM THE ABS MODULE	
• Connect: ABS Module C135. • Key in ON position. • Measure the voltage between yaw rate sensor C3073-1, circuit 7-CF67 (YE/RD), harness side, and yaw rate sensor C3073-5, circuit 9-CF67 (BN/RD), harness side.  A0057757 • **Is the voltage approximately 10 volts?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test. **No** GO to H5 .
H5 CHECK THE YAW RATE SENSOR CIRCUITRY FOR AN OPEN	
• Measure the resistance between ABS module C135 pins, harness side, and yaw rate sensor C3073 pins, harness side as follows: **ABS Module C135 Pin** / **Yaw Rate Sensor C3073 Pin** / **Circuit** 7 / 3 / 7-CC1 (YE/RD) 5 / 5 / 9-CF67 (BN/RD) 25 / 1 / 9-CF66 (BN/BU)	**Yes** GO to H6 . **No** REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

29	2	8-CF66 (WH/BU)

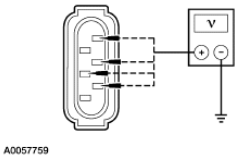


- **Is the resistance less than 5 ohms?**

H6 CHECK THE YAW RATE SENSOR CIRCUITRY FOR A SHORT TO POWER

- Key in OFF position.
- Disconnect: ABS Module C135.
- Disconnect: Yaw Rate Sensor C3073.
- Key in ON position.
- Measure the voltage between ABS module C135 pins, harness side, and ground as follows:

Yaw Rate Sensor C3073 Pin	Circuit
3	7-CF67 (YE/RD)
5	9-CF67 (BN/RD)
1	9-CF66 (BN/BU)
2	8-CF66 (WH/BU)



- **Is voltage present?**

Yes
REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

No
GO to H7 .

H7 CHECK THE YAW RATE SENSOR CIRCUITRY FOR A SHORT TO GROUND

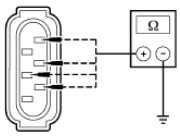
- Key in OFF position.
- Measure the resistance between the yaw rate sensor C3073 pins, harness side, and ground as follows:

Yaw Rate Sensor C3073 Pin	Circuit
3	7-CF67 (YE/RD)
5	9-CF67 (BN/RD)

Yes
INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. REPEAT the self-test.

No
REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

1	9-CF66 (BN/BU)
2	8-CF66 (WH/BU)



- **Is the resistance greater than 10,000 ohms?**

Pinpoint Test I: DTC C1285 Booster Solenoid Circuit Failure

Normal Operation

The active brake booster has internal solenoids that assist driver brake applications or can apply the brakes when needed if the vehicle loses control.

Power is supplied by circuit 8-CF68 (WH/RD). Ground is provided through circuit 9-CF68 (BN/RD).

Possible Causes

- Power circuit 8-CF68 (WH/RD).
- Ground circuit 9-CF68 (BN/RD).
- Active brake booster.
- ABS module.

PINPOINT TEST I: DTC C1285 BOOSTER SOLENOID CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
I1 CARRY OUT THE RECALIBRATION PROCEDURE	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear DTC. • Carry out the brake booster recalibration procedure using the scan tool. • Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Are any DTCs retrieved or does the recalibration procedure indicate a fault?**	**Yes** If DTC C1285 is retrieved, or the brake booster portion of the recalibration procedure indicates a failure, GO to I2 . If any other DTC is retrieved, GO to the ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble Code (DTC) Index. **No** The ABS system is operating correctly.
I2 CHECK THE BRAKE BOOSTER SOLENOID	
• Key in OFF position. • Disconnect: Brake Booster C149. • Measure the resistance between brake booster solenoid 149-3 (component side) and brake booster	**Yes** GO to I3 . **No** INSTALL a new brake booster. REFER to

solenoid C149-4 (component side).  A0057761 • **Is the resistance between 1 and 2 ohms?**	Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
I3 CHECK CIRCUIT 8-CF68 (WH/RD) AND CIRCUIT 9-CF68 (BN/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between ABS module C135-17, circuit 8-CF68 (WH/RD), harness side, and brake booster C149-4, circuit 8-CF68 (WH/RD), harness side.  A0073321 • **Is the resistance less than 5 ohms?**	**Yes** GO to I4 . **No** REPAIR circuit 8-CF68 (WH/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
I4 CHECK CIRCUIT 8-CF68 (WH/RD) FOR A SHORT TO GROUND	
• Measure the resistance between brake booster C149-4, circuit 8-CF68 (WH/RD), harness side and ground.  A0057763 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I5 . **No** REPAIR circuit 8-CF68 (WH/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
I5 CHECK CIRCUIT 9-CF68 (BN/RD) FOR A SHORT TO POWER	
• Disconnect: ABS Module C135. • Key in ON position. • Measure the voltage between brake booster solenoid C149-3 circuit 9-CF68 (BN/RD), harness side, and ground.	**Yes** REPAIR circuit 9-CF68 (BN/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** GO to I6 .

 • **Is voltage present?**	
I6 CHECK THE BRAKE BOOSTER SOLENOID FOR CORRECT OPERATION	
• Connect: Brake Booster C149. • Key in START position. • Wait a few minutes to create engine vacuum in the brake booster and then place the ignition switch in the OFF position. • Connect a fused (10A) jumper wire between ABS module C135-31, circuit 9-CF68 (BN/RD), harness side, and ground; and connect a fused (10A) jumper wire for several seconds between ABS module C135-17, circuit 8-CF68 (WH/RD), harness side, and the positive battery post, while observing the brake pedal for movement. • **Does the brake pedal move?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test. **No** INSTALL a new brake booster. REFER to Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. REPEAT the self-test.

Pinpoint Test J: DTC C1287 Brake Booster Pedal Force Switch Circuit Failure

Normal Operation

The active brake booster has a normally open (NO), and a normally closed, (NC) pedal force switch that operates according to driver brake applications.

The NO pedal force switch circuit is 8-CF51 (WH/GN). The NC pedal force switch circuit is 10-CF51 (GY/OG).

Possible Causes
- NO pedal force switch circuit 8-CF51 (WH/GN).
- NC pedal force switch circuit 10-CF51 (GY/OG).
- Active brake booster.
- ABS module.

PINPOINT TEST J: DTC C1287 BRAKE BOOSTER PEDAL FORCE SWITCH CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
J1 CARRY OUT THE RECALIBRATION PROCEDURE	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear DTCs. • Carry out the brake booster recalibration procedure using the scan tool.	**Yes** If DTC C1287 is retrieved or recalibration procedure indicates a fault, GO to J2 . If any other DTC, GO to the ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble

• Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Are any DTCs retrieved or does the recalibration procedure indicate a fault?**	Code (DTC) Index. **No** The system is operating correctly.
J2 CHECK THE NORMALLY CLOSED RELEASE SWITCH	
• Key in OFF position. • Disconnect: Brake Booster C149. • Measure the resistance between brake booster 149-2 (component side) and brake booster C149-5 (component side), while depressing and releasing the brake pedal.  A0057772 • **Is the resistance less than 5 ohms with the brake pedal released and greater than 10,000 ohms with the brake pedal pressed?**	**Yes** GO to J3 . **No** INSTALL a new brake booster. REFER to Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
J3 CHECK THE NORMALLY OPEN RELEASE SWITCH	
• Measure the resistance between brake booster C149-1 (component side) and brake booster C149-5 (component side), while pressing and releasing the brake pedal.  A0057375 • **Is the resistance less than 5 ohms with the brake pedal pressed and greater than 10,000 ohms with the brake pedal released?**	**Yes** GO to J4 . **No** INSTALL a new brake booster. REFER to Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
J4 CHECK THE BRAKE BOOSTER CIRCUITRY FOR A SHORT TO POWER	
• Disconnect ABS Module C135 • Key in ON position. • Measure the voltage between brake booster C149 pins, harness side, and ground, as follows:	**Yes** REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. REPEAT the self-test. **No**

	GO to J5 .

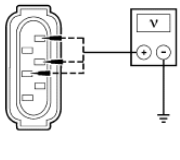
5	9-CF51 (BN/GN)

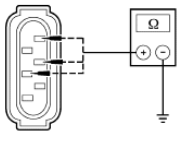


A0057770

- **Is voltage present?**

J5 CHECK THE BRAKE BOOSTER CIRCUITRY FOR A SHORT TO GROUND	
• Measure the resistance between the brake booster C149 pins and ground as follows:	**Yes** GO to J6 . **No** REPAIR the circuit in question. CLEAR the DTC(s). REPEAT the self-test.

Brake Booster Pin	Circuit
1	8-CF51 (WH/GN)
2	10-CF51 (GY/OG)
5	9-CF51 (BN/GN)

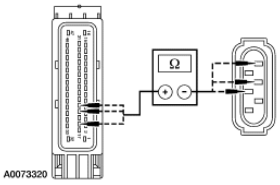


A0057771

- **Is the resistance greater than 10,000 ohms?**

J6 CHECK THE BRAKE BOOSTER CIRCUITRY FOR AN OPEN	
• Key in OFF position. • Measure the resistance between ABS module C135 pins, harness side, and brake booster C149 pins, harness side, as follows:	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

ABS Module C135 Pin	Brake Booster C149 Pin	Circuit
27	1	8-CF51 (WH/GN)
28	5	9-CF51 (BN/GN)
30	2	10-CF51 (GY/OG)



- **Are the resistances less than 5 ohms?**

Pinpoint Test K: DTC C1288 Brake Pressure Transducer Input Circuit Failure

Normal Operation

The brake pressure transducer sends current to the ABS module proportional to the driver's brake pedal application.

Reference voltage is supplied by circuit 7-CF64 (YE/BK). Ground is provided through circuit 9-CF64 (BN/YE). The transducer current is supplied by circuit 8-CF64 (WH/BK).

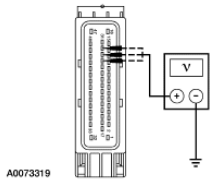
Possible Causes

- Reference voltage circuit 7-CF64 (YE/BK).
- Ground circuit 9-CF64 (BN/YE).
- Transducer signal circuit 8-CF64 (WH/BK).
- Brake pressure transducer.
- ABS module.

PINPOINT TEST K: DTC C1288 BRAKE PRESSURE TRANSDUCER INPUT CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
K1 CHECK THE BRAKE PRESSURE TRANSDUCER CIRCUITRY FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: ABS Module C135. • Disconnect: Brake Pressure Transducer C147. • Key in ON position. • Measure the voltage between ABS module C135 pins, harness side, and ground as follows:	**Yes** REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test. **No** GO to K2 .

ABS Module C135 Pin	Circuit
18	7-CF64 (YE/BK)
19	9-CF64 (BN/YE)
20	8-CF64 (WH/BK)

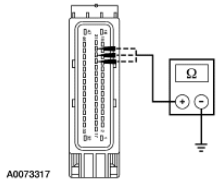


- **Is voltage present?**

K2 CHECK THE BRAKE PRESSURE TRANSDUCER CIRCUITRY FOR A SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between ABS module C135 pins, harness side, and ground, as follows:

ABS Module C135 Pin	Circuit
18	7-CF64 (YE/BK)
19	9-CF64 (BN/YE)
20	8-CF64 (WH/BK)



- **Are the resistances greater than 10,000 ohms?**

Yes
GO to K3 .

No
REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.

K3 CHECK THE BRAKE PRESSURE TRANSDUCER CIRCUITRY FOR AN OPEN

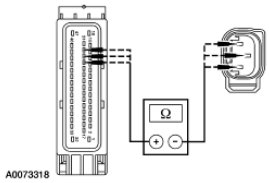
- Measure the resistance between ABS module C135 pins, harness side, and brake pressure transducer C147 pins, harness side, as follows:

ABS Module C135 Pin	Brake Pressure Transducer C147 Pin	Circuit
19	1	

Yes
GO to K4 .

No
REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.

		9-CF64 (BN/YE)
20	2	8-CF64 (WH/BK)
18	3	7-CF64 (YE/BK)



- **Are the resistances less than 5 ohms?**

K4 CHECK THE ABS MODULE OUTPUT	
• Connect: ABS Module C135. • Key in ON position. • Measure the voltage between brake pressure transducer C147-3, circuit 7-CF64 (YE/BK), harness side, and brake pressure transducer C147-1, circuit 9-CF64 (BN/YE), harness side.  • **Is the voltage approximately 5 volts?**	**Yes** GO to K5 . **No** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test.
K5 CHECK THE BRAKE PRESSURE TRANSDUCER OUTPUT	
• Connect: Brake Pressure Transducer C147. • Disconnect: ABS Module C135. • Remove the ABS module C135-20, circuit 8-CF64 (WH/BK) from the harness connector. • Connect: ABS Module C135. • Key in ON position. • Measure the voltage between ABS module with C135-20, with circuit 8-CF64 (WH/BK) removed from the harness connector and ground, while depressing and releasing the brake pedal. • **Is the voltage between 0.125 and 0.375 volt with the brake pedal released and between 0.125 and 5 volts with the brake pedal pressed?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test. **No** INSTALL a new brake booster. REFER to Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. REPEAT the self-test.

Pinpoint Test L: DTC C1730 Reference Voltage Out Of Range (+5 V)

Normal Operation

The 5-volt reference voltage is supplied by the Anti-Lock Brake Module (ABS).

Reference voltage is supplied by circuit 7-CF64 (YE/BK). The reference voltage circuit returns to the ABS module through the PTS switch circuit 9-CF65 (BN/WH) and the brake pressure transducer circuit 9-CF64 (BN/YE).

Possible Causes

- Circuit 7-CF64 (YE/BK).
- Ground circuit 9-CF65 (BN/WH).
- Ground circuit 9-CF64 (BN/YE).
- ABS module.
- IVD input/output components:
  - ♦ PTS switch
  - ♦ Brake pressure transducer

PINPOINT TEST L: DTC C1730 REFERENCE VOLTAGE OUT OF RANGE (+5 V)

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
L1 CHECK CIRCUIT 7-CF64 (YE/BK) FOR A SHORT TO BATTERY	
• Key in OFF position. • Disconnect: ABS Module C135. • Disconnect: Brake Pressure Transducer C147. • Key in ON position. • Measure the voltage between ABS module C135-18, circuit 7-CF64 (YE/BK), harness side, and ground.  • **Is voltage present?**	**Yes** REPAIR circuit 7-CF64 (YE/BK). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** GO to L2 .
L2 CHECK CIRCUIT 7-CF64 (YE/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between ABS module C135-18, circuit 7-CF64 (YE/BK), harness side, and ground.  	**Yes** GO to L3 . **No** REPAIR circuit 7-CF64 (YE/BK). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.

• **Is the resistance greater than 10,000 ohms?**	
L3 CHECK CIRCUIT 8-CF68 (WH/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between ABS module C135-17, circuit 8-CF68 (WH/RD), harness side, and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to L4 . **No** REPAIR circuit 8-CF68 (WH/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
L4 CHECK CIRCUIT 7-CF67 (YE/RD) FOR A SHORT TO BATTERY	
• Disconnect: Yaw Rate Sensor C3073. • Key in ON position. • Measure the voltage between ABS module C135-7, circuit 7-CF67 (YE/RD), harness side, and ground.  • **Is voltage present?**	**Yes** REPAIR circuit 7-CF67 (YE/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** GO to L5 .
L5 CHECK CIRCUIT 7-CF67 (YE/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between ABS module C135-7, circuit 7-CF67 (YE/RD), harness side, and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to L6 . **No** REPAIR circuit 7-CF67 (YE/RD). CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test.
L6 CHECK THE ABS MODULE	
• Connect: ABS Module C135. • Key in ON position.	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in

• Enter the following diagnostic mode on the diagnostic tool: Clear DTCs. • Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Is DTC C1730 retrieved?**	this section. REPEAT the self-test. **No** GO to L7 .
L7 CHECK THE IVD COMPONENTS	
• Reconnect the brake pressure transducer C147 and the PTS C278 while clearing the DTCs and retrieving the DTCs in between each component being reconnected. • **Is DTC C1730 retrieved?**	**Yes** INSTALL a new brake booster. REFER to Section 206-00 . CLEAR the DTC. RECALIBRATE the ABS module. FOLLOW the scan tool directions for the calibration procedure. REFER to Section 418-00 . REPEAT the self-test. **No** System is OK. REPEAT the self-test.

Pinpoint Test M: DTC C1960 Driver Brake Apply Circuit Fault

Normal Operation

The 12-volt driver brake apply (DBA) signal is sent from the ABS module during brake application to the trailer tow relay (if equipped).

Voltage is supplied by circuit 29S-CF2 (OG/BU).

Possible Causes

- DBA signal circuit 29S-CF2 (OG/BU).
- ABS module.

PINPOINT TEST M: DTC C1960 DRIVER BRAKE APPLY CIRCUIT FAULT

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
M1 CHECK FOR OTHER DTCs	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Clear DTCs. • Enter the following diagnostic mode on the diagnostic tool: Retrieve DTCs. • **Is DTC C1960 retrieved?**	**Yes** GO to M2 . **No** If a different DTC is retrieved, GO to the ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble Code (DTC) Index. If no DTCs are retrieved, system is OK.
M2 CHECK CIRCUIT 29S-CF2 (OG/BU) FOR SHORT TO POWER	

• Key in OFF position. • Disconnect: ABS Module C135. • Measure the voltage between ABS module C135-44, circuit 29S-CF2 (OG/BU) and ground.  • **Is the voltage greater than 0 volts?**	**Yes** REPAIR circuit 29S-CF2 (OG/BU). CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test.

Pinpoint Test N: The Advance Trac®/IVD Is Inoperative

Normal Operation

Engine torque modulation is achieved by regulating fuel and spark to the cylinders. The Advance Trac®/IVD system operates using the ABS module to interact with the PCM to reduce engine torque if one or both rear wheels lose traction and begin to spin during acceleration.

Voltage is supplied by circuit 20-CF54 (PK/WH).

Possible Causes
- Advance Trac®/IVD switch C3208.
- Power circuit 20-CF54 (PK/WH).
- Module.

PINPOINT TEST N: THE Advance Trac®/IVD IS INOPERATIVE

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
N1 CHECK FOR DTCs	
• Connect the diagnostic tool. • Retrieve and document continuous DTCs. • **Are any DTCs retrieved?**	**Yes** GO to the ABS (With or Without Advance Trac®/IVD) Module Diagnostic Trouble Code (DTC) Index. **No** GO to N2 .
N2 CHECK THE Advance Trac®/IVD SWITCH	
• Disconnect: Advance Trac®/IVD Switch C3208. • Key in OFF position. • Press the Advance Trac®/IVD switch to the ON position. • Measure the resistance between the Advance Trac®/IVD switch C3208-2 and C3208-1.	**Yes** GO to N3 . **No** INSTALL a new Advance Trac®/IVD switch. TEST the system for normal operation.GO to N3 .

 A0057765 • **Is the resistance less than 5 ohms?**	
N3 CHECK CIRCUIT 8-CF54 (WH/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: ABS Module C135 . • Measure the resistance between ABS module C135-38, circuit 8-CF54 (WH/VT), harness side and Advance Trac®/IVD switch connector C3208-2, circuit 8-CF54 (WH/VT).  A0073333 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. **No** REPAIR circuit 8-CF54 (WH/VT). TEST the system for normal operation.

Pinpoint Test O: Advance Trac®/IVD Switch Indicator Is Always On/Cannot Be Disabled

Normal Operation

The traction control switch is a momentary switch and when pressed, disables or enables the traction control or Advance Trac®/IVD.

Voltage to the traction control switch is supplied by circuit 8-CF54 (WH/VT). The switch illumination off circuit is 31S-CF45 (BK/GN).

Possible Causes
- Advance Trac®/IVD switch C3208.
- Power circuit 8-CF54 (WH/VT).
- Illumination circuit 31S-CF45 (BK/GN).
- ABS module.

PINPOINT TEST O: Advance Trac®/IVD CANNOT BE DISABLED/SWITCH INDICATOR IS ALWAYS ON

Test Step	Result / Action to Take
O1 CHECK THE Advance Trac®/IVD SWITCH	
• Disconnect: Advance Trac®/IVD Switch C3208. • Key in OFF position. • Measure the resistance between Advance Trac®/IVD switch C3208-1 and C3208-4.	**Yes** GO to O2 . **No** INSTALL a new Advance Trac®/IVD switch. REFER to Traction Control Actuator in this section. TEST the system for normal operation.

 A0057768 • **Is the resistance greater than 10,000 ohms?**	
O2 CHECK CIRCUIT 8-CF54 (WH/VT) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: ABS Module C135. • Key in ON position. • Measure the voltage between ABS module C135-38, circuit 8-CF54 (WH/VT), harness side, and ground.  A0073310 • **Is voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. **No** GO to O3 .
O3 CHECK CIRCUIT 31S-CF45 (BK/GN) FOR SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between ABS module C135-13, circuit 31S-CF45 (BK/GN), harness side and ground.  A0073309 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. REPEAT the self-test. **No** REPAIR circuit 31S-CF45 (BK/GN). REPEAT the self-test.

Pinpoint Test P: DTC C1440 Pressure Transducer Input Circuit Failure

Normal Operation

The pressure transducer transforms brake fluid pressures in the master cylinder to an electrical signal which the ABS module receives through circuit 8-CF64 (WH/BK). The transducer receives a five-volt reference from the ABS module through circuit 7-CF64 (YE/BK). Circuit 9-CF64 (BN/YE) provides ground for the transducer.

Possible Causes

- Power circuit 7-CF64 (YE/BK).

- Ground circuit 9-CF64 (BN/YE).
- Transducer signal circuit 8-CF64 (WH/BK).
- Pressure transducer.
- ABS module.

PINPOINT TEST P: DTC C1440 PRESSURE TRANSDUCER INPUT CIRCUIT FAILURE

Test Step	Result / Action to Take
NOTE: Excessive clearance between brake pad and rotor, leaks, or air in the hydraulic brake system can also set DTC 1440.	
P1 CHECK FOR DTCs	
• Key in ON position. • Connect the diagnostic tool. • Retrieve the DTCs. • **Is DTC C1483, C1287, B2734, B2736, B2737, B2738 or B2740 present?**	**Yes** SERVICE these DTCs first. GO to the appropriate pinpoint test for each DTC received. **No** GO to P2 .
P2 CHECK FOR 5 VOLT REFERENCE VOLTAGE TO THE PRESSURE TRANSDUCER	
• Key in OFF position. • Disconnect: Pressure Transducer C147. • Key in ON position. • Measure the voltage at the pressure transducer C147 between pin 1, circuit 9-CF64 (BN/YE) and pin 3, circuit 7-CF64 (YE/BK), harness side. • **Does the meter show 5 volts?**	**Yes** GO to P6 . **No** GO to P3 .
P3 CHECK CIRCUITS FOR SHORT TO POWER	
• Key in OFF position. • Disconnect: ABS Module C135. • Key in ON position. • Check the voltage between pressure transducer pin 3, circuit 7-CF64 (YE/BK) and ground, between pin 1, circuit 9-CF64 (BN/YE) and ground, and between pin 2, circuit 8-CF64 (WH/BK) and ground. • **Is voltage present?**	**Yes** REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test. **No** GO to P4 .
P4 CHECK CIRCUITS FOR A SHORT TO GROUND	
• Key in OFF position. • Check the resistance between pressure transducer pin 3, circuit 7-CF64 (YE/BK) and ground, between pin 1, circuit 9-CF64 (BN/YE) and ground, and between pin 2, circuit 8-CF64 (WH/BK) and ground. • **Is the resistance greater than 10,000 ohms in each test?**	**Yes** GO to P5 . **No** REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.
P5 CHECK CIRCUIT RESISTANCE	

<table>
<tr><td>
• Check the resistance between ABS module C135 and pressure transducer C147 pins.
<table>
<tr><th>ABS Module C135</th><th>Pressure Transducer C147</th><th>Circuit</th></tr>

</td><td>Yes
GO to P6 .

No
REPAIR the circuit in question. CLEAR the DTC. REPEAT the self-test.</td></tr>
<tr><td>P6 CHECK THE SIGNAL FROM THE PRESSURE TRANSDUCER</td><td></td></tr>
<tr><td>• Connect: Pressure Transducer C147.
• Disconnect: ABS Module C135 Pin 20, Circuit 8-CF64 (WH/BK).
• Connect: ABS Module C135.
• Key in ON position.
• Measure the voltage between C135 pin 20, circuit 8-CF64 (WH/BK) and ground while pressing and releasing the brake pedal.
• Is voltage present?</td><td>Yes
INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section.

No
INSTALL a new pressure transducer. REFER to Section 206-00 . CLEAR the DTC. REPEAT the self-test.</td></tr>
</table>

Pinpoint Test Q: DTC C1969 Traction Control/Yaw Rate Control Switch Circuit

Normal Operation

The traction control switch is a momentary switch and when pressed, disables or enables the traction control or Advance Trac®/IVD.

Power is supplied by circuit 20-CF54 (PK/WH). Circuit 8-CF54 (WH/VT) provides the switch input signal to the ABS module. Current to the disable LED lamp from the ABS module is supplied by circuit 31S-CF45 (BK/GN).

Possible Causes

- Traction control/Advance Trac®/IVD switch.
- Power circuit 20-CF54 (PK/WH).
- Switch signal circuit 8-CF54 (WH/VT).
- LED lamp circuit 31S-CF45 (BK/GN).
- ABS module.

PINPOINT TEST Q: DTC C1969 TRACTION CONTROL/YAW CONTROL SWITCH CIRCUIT FAULT

Test Step	Result / Action to Take
Q1 CHECK FOR DTCs	

• Connect the diagnostic tool. • Retrieve and document continuous DTCs. • **Are any DTCs retrieved?**	**Yes** GO to the ABS Module Diagnostic Trouble Code (DTC) Index. **No** GO to Q2 .
Q2 CHECK THE Advance Trac®/IVD SWITCH	
• Disconnect: Advance Trac®/IVD Switch C3208. • Key in OFF position. • Press and hold the Advance Trac®/IVD switch in the ON position. • Measure the resistance between Advance Trac®/IVD switch C3208-4, circuit 8-CF54 (WH/VT), and C3208-3, circuit 20-CF54 (PK/WH). • **Is the resistance greater than 5 ohms?**	**Yes** INSTALL a new Advance Trac®/IVD switch. REFER to Traction Control Actuator in this section. TEST the system for normal operation. **No** GO to Q3 .
Q3 CHECK THE POWER TO THE Advance Trac®/IVD SWITCH	
• Key in ON position. • Measure the voltage between Advance Trac®/IVD switch C3208-3 circuit 20-CF54 (PK/WH), harness side and ground. • **Is the voltage greater than 10 volts?**	**Yes** GO to Q4 . **No** REPAIR circuit 20-CF54 (PK/WH). TEST the system for normal operation.
Q4 CHECK THE Advance Trac®/IVD SWITCH INPUT	
• Key in OFF position. • Connect: Advance Trac®/IVD Switch C3208. • Disconnect: ABS Module C135. • Key in ON position. • Measure the voltage between ABS module C135-38 circuit 8-CF54 (WH/VT) and ground while pressing the Advance Trac®/IVD switch ON. • **Is the voltage greater than 10 volts?**	**Yes** RELEASE the Advance Trac®/IVD switch. If the voltage drops to less than 2 volts, INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. GO to Q5 . **No** REPAIR circuit 8-CF54 (WH/VT). TEST the system for normal operation.
Q5 CHECK CIRCUIT 8-CF54 (WH/VT) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: ABS Module 135. • Key in ON position. • Measure the voltage between ABS module C135-38, circuit 8-CF54 (WH/VT), harness side, and ground. • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTC. REPEAT the self-test. **No** GO to Q6 .

Q6 CHECK CIRCUIT 31S-CF45 (BK/GN) FOR SHORT TO POWER	
• Measure the voltage between ABS module C135-13, circuit 31S-CF45 (BK/GN), harness side and ground; and between Advance Trac®/IVD switch C3208-1, circuit 31S-CF45 (BK/GN) and ground. • **Is voltage present?**	**Yes** REPAIR the circuit(s). TEST the system for normal operation. **No** GO to Q7 .
Q7 CHECK CIRCUIT 31S-CF45 (BK/GN) FOR A SHORT TO GROUND	
• Measure the resistance between ABS module C135-13 circuit 31S-CF45 (BK/GN) and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. TEST the system for normal operation. **No** REPAIR circuit 31S-CF45 (BK/GN). TEST the system for normal operation.

Pinpoint Test R: DTC C1998 Module Calibration Not Complete

Normal Operation

The Advance Trac®/IVD system needs to be recalibrated whenever a component specific to the system is disconnected or a new component is installed.

Possible Causes

- Disconnected/reconnected Advance Trac®/IVD component:
  - ♦ module.
  - ♦ yaw rate sensor/accelerometer.
  - ♦ steering wheel rotation sensor.
- Clearing of Advance Trac®/IVD component related DTCs. (Refer to the Calibration List of DTCs).

PINPOINT TEST R: DTC C1998 MODULE CALIBRATION NOT COMPLETE

Test Step	Result / Action to Take
NOTE: The Advance Trac®/IVD lamp will flash when a system calibration is required. Calibration is required after certain DTCs are cleared.	
R1 CHECK FOR DTCs	
• Connect the diagnostic tool. • Key in ON position. • Retrieve DTCs. • **Is any other DTC retrieved with C1998?**	**Yes** GO to the appropriate pinpoint test for the DTC. Some of the pinpoint tests recommend IVD calibration prior to any further diagnostics, in this case, GO to R2 . **No** GO to R2 .
R2 IVD CALIBRATION	
	Yes

• Connect the diagnostic tool. • Key on, engine running. • **NOTE:** Be sure to rotate the steering wheel lock-to-lock during the calibration of the ABS system. • Carry out IVD calibration per the diagnostic tool instructions. • **Did calibration complete for all IVD sensors? And did the Advance Trac®/IVD lamp stop flashing and go off?**	GO to R3 . **No** GO to R1 . Some concerns will cause a calibration not complete. If sent here from another pinpoint test, return to that pinpoint test for further diagnostics.
R3 CLEAR DTC C1998	
NOTE: You must clear DTC C1998 after the completion of the calibration. • Connect the diagnostic tool. • Key in ON position. • Clear the DTC. • **Did the DTC clear?**	**Yes** TEST DRIVE the vehicle. REPEAT the self-test. If sent here from another pinpoint test, return to that pinpoint test for further diagnostics. **No** GO to R1 .

Pinpoint Test S: DTC C2777 and DTC C2778 Sensor Cluster Bus Failure

Normal Operation

The yaw rate sensor and accelerometer are part of the sensor cluster which sends various signals about the vehicle's dynamics through a two-wire bus CAN HI 8-CF66 (WH/BU) and CAN LOW 9-CF66 (BN/BU). The CAN bus receives a twelve-volt input through circuit 7-CF67 (YE/RD) in series with the steering wheel rotation sensor circuitry. Ground is provided through circuit 9-CF67 (BN/RD).

Possible Causes

- Power circuit 7-CF67 (YE/RD).
- Ground circuit 9-CF67 (BN/RD).
- Steering wheel rotation sensor.
- CAN HI 8-CF66 (WH/BU).
- CAN LOW 9-CF66 (BN/BU).
- Sensor cluster.
- ABS module.

PINPOINT TEST S: DTC C2777 AND DTC C2778 SENSOR CLUSTER BUS FAILURE

Test Step	Result / Action to Take
NOTE: Check all pins of the sensor cluster and ABS module when removing connectors. Care should be taken when reinstalling these connectors.	
S1 CHECK THE VOLTAGE TO THE SENSOR CLUSTER	
• Disconnect: Sensor Cluster C3073. • Key in OFF position. • Measure the voltage between sensor cluster C3073-3, circuit	**Yes** INSTALL a new sensor cluster. REFER to Yaw Rate Sensor in this section. CLEAR the DTCs. RECALIBRATE the system. REPEAT the self-test. **No**

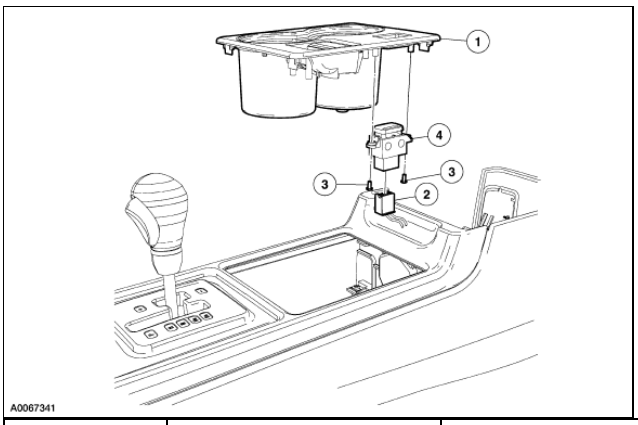
7-CF67 (YE/RD), harness side and ground. • **Is the voltage greater than 10 volts?**	GO to S2 .
S2 CHECK THE STEERING WHEEL ROTATION SENSOR	
• Disconnect: Steering Wheel Rotation Sensor C226. • Measure the voltage between sensor cluster C3073-3, circuit 7-CF67 (YE/RD), harness side and ground. • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new steering wheel rotation sensor. REFER to Steering Wheel Rotation Sensor in this section. CLEAR the DTCs. RECALIBRATE the system. REPEAT the self-test. **No** GO to S3 .
S3 CHECK CIRCUIT 7-CF67 (YE/RD) FOR A SHORT TO GROUND	
• Disconnect: ABS Module C135. • Measure the resistance between sensor cluster C3073-3 circuit 7-CF67 (YE/RD), harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to S4 . **No** REPAIR the circuit. CLEAR the DTCs. RECALIBRATE the system. REPEAT the self-test.
S4 CHECK CIRCUIT 7-CF67 (YE/RD) FOR AN OPEN FROM THE SENSOR CLUSTER	
• Measure the resistance between steering wheel rotation sensor C226-1, harness side and ABS module C135-7, harness side, circuit 7-CF67 (YE/RD). • **Is the resistance less than 5 ohms?**	**Yes** GO to S5 . **No** REPAIR the circuit. CLEAR the DTCs. RECALIBRATE the system. REPEAT the self-test.
S5 CHECK THE CAN BUS CIRCUITS FOR A SHORT TO POWER	
• Measure the voltage between sensor cluster C3073-1, circuit 9-CF66 (BN/BU), harness side and ground. • Measure the voltage between sensor cluster C3073-2, circuit 8-CF66 (WH/BU), harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 8-CF66 (WH/BU) or circuit 9-CF66 (BN/BU). CLEAR the DTC. RECALIBRATE the system. REPEAT the self-test. **No** GO to S6 .
S6 CHECK THE CAN BUS CIRCUITS FOR A SHORT TO GROUND	

• Measure the resistance between sensor cluster C3073-1, circuit 9-CF66 (BN/BU), harness side and ground. • Measure the resistance between sensor cluster C3073-2, circuit 8-CF66 (WH/BU), harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to S7 . **No** REPAIR circuit 8-CF66 (WH/BU) or circuit 9-CF66 (BN/BU). CLEAR the DTC. RECALIBRATE the system. REPEAT the self-test.
S7 CHECK THE CAN BUS CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between sensor cluster C3073-1, circuit 9-CF66 (BN/BU), harness side and sensor cluster C3073-2, circuit 8-CF66 (WH/BU), harness side. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to S8 . **No** REPAIR circuit 8-CF66 (WH/BU) and circuit 9-CF66 (BN/BU). CLEAR the DTC. RECALIBRATE the system. REPEAT the self-test.
S8 CHECK THE CAN BUS CIRCUITS FOR AN OPEN	
• Measure the resistance between sensor cluster C3073-1, harness side and ABS module C135-25, harness side, circuit 9-CF66 (BN/BU). • Measure the resistance between sensor cluster C3073-2, harness side and ABS module C135-29, harness side, circuit 8-CF66 (WH/BU). • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new sensor cluster. REFER to Yaw Rate Sensor in this section. CLEAR the DTCs. RECALIBRATE the system. TEST DRIVE the vehicle. REPEAT the self-test. If DTC C2777 or C2778 is retrieved, INSTALL a new ABS module. REFER to Anti-Lock Brake System (ABS) Module in this section. CLEAR the DTC. RECONFIGURE the ABS module. RECALIBRATE the system. REPEAT the self-test. **No** REPAIR circuit 8-CF66 (WH/BU) or circuit 9-CF66 (BN/BU). CLEAR the DTC. RECALIBRATE the system. REPEAT the self-test.

Traction Control Actuator

Printable View (62 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	54044D90	Floor console cup holder
2		Connector
3		Screws
4	2C335	Traction control actuator

3. To install, reverse the removal procedure.

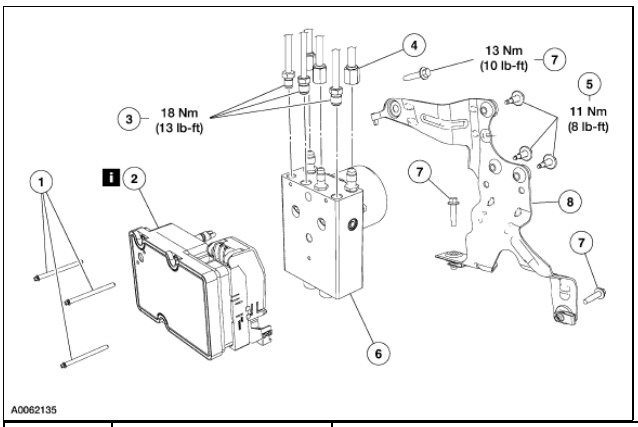
Hydraulic Control Unit (HCU) Printable View (91 KB)

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .

2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	2M101	Bolts
2	2C219	Anti-lock brake system (ABS) module Removal Note
3	2C292	Brake tubes (M10)
4	2C326	Brake tubes (M12)
5	3B676	Bolts
6	2C286	Hydraulic control unit (HCU)
7		Bolts
8	2C304	Bracket

3. To install, reverse the removal procedure.

Item 2: Anti-Lock Brake System (ABS) Module Removal Note

1. Position the battery junction box (BJB) aside.
    1. Release the clips.
    2. Position the BJB aside.

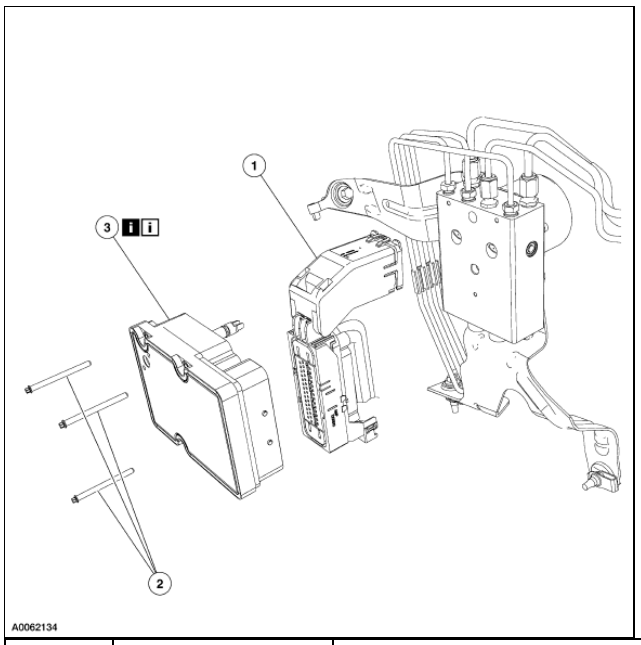
Anti-Lock Brake System (ABS) Module

Printable View (114 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order indicated in the following illustration and table.

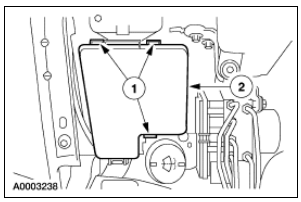


Item	Part Number	Description
1		Connector
2	2M101	Bolts
3	2C219	Anti-lock brake system (ABS) module Removal Note
3	2C219	Anti-lock brake system (ABS) module Installation Note

3. To install, reverse the removal procedure.

Item 3: Anti-Lock Brake System (ABS) Module Removal Note

1. Position the battery junction box (BJB) aside.
    1. Release the clips.
    2. Position the BJB aside.



Item 3: Anti-Lock Brake System (ABS) Module Installation Note

1. Use the diagnostic tool to reconfigure the ABS module. For additional information, refer to Section 418-00 .

Front Wheel Speed Sensor and Sensor Ring

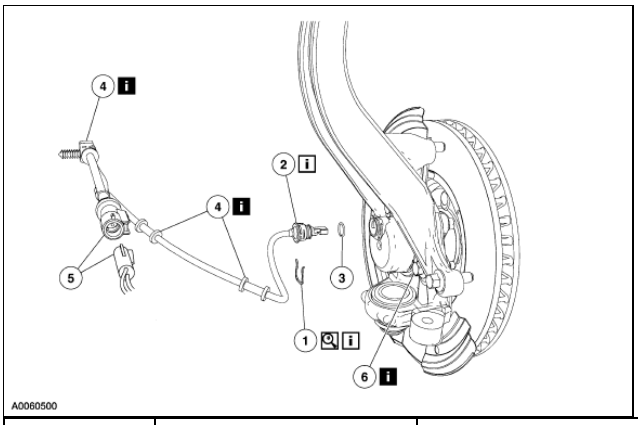
Printable View (135 KB)

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA	WSE-M4G323-A4

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table.

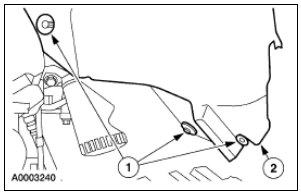


Item	Part Number	Description
1	2C204	Clip Installation Note
2	2C204	Wheel speed sensor Installation Note
3	2C204	O-ring
4		Wheel speed sensor harness Removal Note
5		Connector
6	1104	Wheel speed sensor ring Removal Note

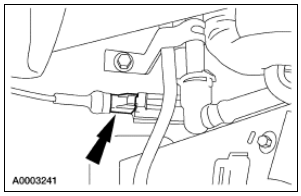
3. To install, reverse the removal procedure.

Item 4: Wheel Speed Sensor Harness Removal Note

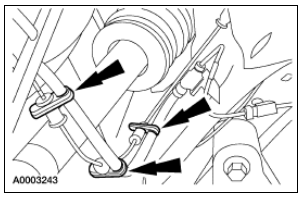
1. Position the inner splash shield aside.
    1. Remove the pin-type retainers.
    2. Position the inner splash shield aside.



2. Disconnect the wheel speed sensor electrical connector.



3. Unclip the wheel speed sensor harness.



Item 6: Wheel Speed Sensor Ring Removal Note

1. The wheel speed sensor ring is integral to the wheel hub assembly and is not serviced separately. For additional information, refer to Section 204-00 .

Item 2: Wheel Speed Sensor Installation Note

1. Apply a 2.5 mm (0.1 in) bead of sealant to the outside diameter of the wheel speed sensor.

Item 1: Clip Installation Note

1. Make sure the wheel speed sensor is fully seated before installation of the new clip.

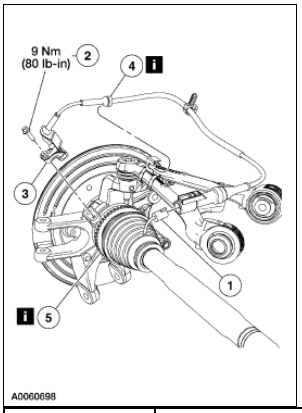
Rear Wheel Speed Sensor and Sensor Ring

Printable View (75 KB)

NOTE: Clean off all dirt and foreign material that may have collected around the rear anti-lock brake sensor before removal.

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table.

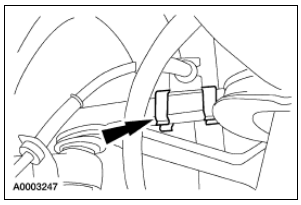


Item	Part Number	Description
1		Connector
2		Bolt
3	2C190	Wheel speed sensor
4	2C190	Wheel speed sensor harness Removal Note
5	4K138	Wheel speed sensor ring Removal Note

3. To install, reverse the removal procedure.

Item 4: Wheel Speed Sensor Harness Removal Note

1. Remove the rear anti-lock brake sensor harness from the upper control arm clip.



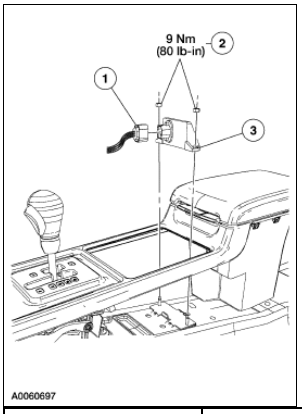
Item 5: Wheel Speed Sensor Ring Removal Note

1. The wheel speed sensor ring is not serviceable and must be replaced as part of the rear halfshaft assembly. For additional information, refer to Section 205-00 .

Yaw Rate Sensor

Printable View (44 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the front floor console cup holder. For additional information, refer to Section 501-01 .
3. Remove the components in the order indicated in the following illustration and table.



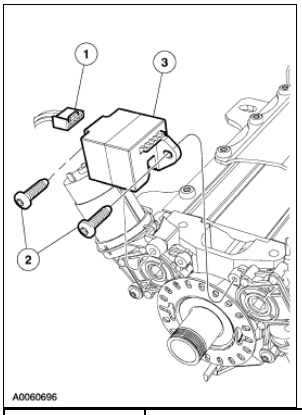
Item	Part Number	Description
1		Connector
2	N806564-S43	Nuts
3	3C296	Yaw rate sensor

4. To install, reverse the removal procedure.

Steering Wheel Rotation Sensor

Printable View (57 KB)

1. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Connector
2		Screws
3	3F818	Steering wheel rotation sensor

Accelerometer

Printable View (8 KB)

NOTE: The accelerometer is located in the same component as the yaw rate sensor and is not serviced separately.

For additional information, refer to Yaw Rate Sensor in this section.

Transmission Component Index Printable View (299 KB)

Transmission Description

Printable View (29 KB)

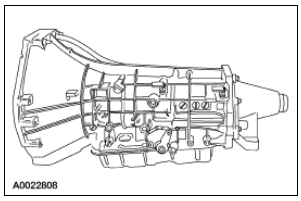
The 5R55S has the following features:

- five forward speeds
- electronic shift, pressure, and torque converter clutch controls
- three compound planetary gearsets
- three bands
- three multi-plate clutches
- two one-way clutches

All hydraulic functions are directed by electronic solenoids. The solenoids control:

- static engagement feel.
- shift feel.
- shift scheduling.
- modulated torque converter clutch (TCC) applications.
- engine braking utilizing the coast clutch and band.
- manual first and second timing.
- reverse inhibit timing.

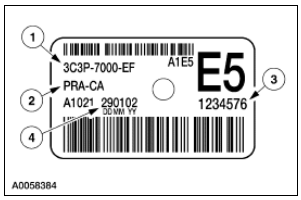
Transmission View



Identification Tags

Printable View (18 KB)

I. D. Tag Located on Transmission Case



Item	Description
1	Assembly part number prefix and suffix
2	Transmission model
3	Serial number
4	Build date (year, month and day)

All vehicles are equipped with a Vehicle Certification Label, located on the driver side door lock post. Refer to the code in the space marked TR. For model, service ID level or build date information, refer to the transmission service ID tag located on the transmission case.

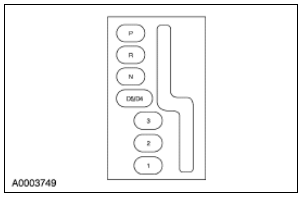
Range Selection

Printable View (26 KB)

Depending on the vehicle options selected the transmission range selector may have different range positions.

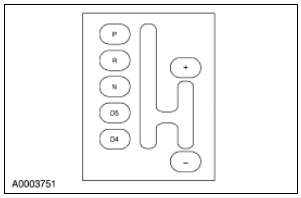
The standard range selector has eight positions: P, R, N, D5, D4, 3, 2, and 1.

Base Range Shifter



The optional Select Shift Transmission (SST) range selector has seven positions P, R, N, D5, or D4, + and -. This option will allow the driver to manually upshift and downshift into any gear range.

Optional Range Shifter



Park

In the PARK position:

- there is no power flow through the transmission.
- the parking pawl locks the output shaft to the case.
- the engine may be started.
- the ignition key may be removed.

Reverse

In the REVERSE position:

- the vehicle may be operated in a rearward direction, at a reduced gear ratio.
- backup lamps are illuminated.

Neutral

In the NEUTRAL position:

- there is no power flow through the transmission.
- the output shaft is not held and is free to turn.
- the engine may be started.

D5 (Overdrive)

D5 (overdrive) is the normal position for most forward driving.

The D5 (overdrive) position provides:

- automatic shift 1-5 and 5-1.
- apply and release of the torque converter clutch.
- maximum fuel economy during normal operation.
- engine braking in 5th gear.

D4 (Overdrive Canceled)

The D4 (overdrive) position provides:

- automatic shift 1-4 and 4-1.
- apply and release of the torque converter clutch.
- engine braking in 4th gear.

Third Position 3rd Gear (Base Shifter)

The 3rd position provides:

- third gear start and hold.
- the torque converter clutch may apply and release.
- improved traction on slippery roads.
- engine braking.

Second Position 2nd Gear (Base Shifter)

The 2nd position provides:

- second gear start and hold.
- the torque converter clutch may apply and release.
- improved traction on slippery roads.
- engine braking.

First Position 1st Gear (Base Shifter)

If this position is selected at normal road speeds, the transmission will downshift into the next lower gear and continue downshifting until the vehicle reaches first gear.

This position provides:

- first gear operation only.
- engine braking for descending steep grades.

+ and - Position Operation (Optional Shifter)

These positions allow the driver to manually select the appropriate upshift (+) or downshift (-) and gear range.

- Can only be entered from the D5 position.
- Gear ranges 1-5 provide the same function and ratio as found in the D5 or D4 automatic mode positions.
- Transmission will not upshift or downshift unless the selector lever is moved forward or rearward.
- One tap forward (+) will command the transmission to upshift one gear range.

- One tap rearward (-) will command the transmission to downshift one gear range.
- Upshifts are allowed at any vehicle speed.
- A second gear start up is normal. A third gear start up will be allowed only if selected. All other selections will revert to second gear.
- If the driver starts in second gear and does not pass 60% throttle, the transmission will remain in second gear. No automatic shift will occur.
- If the driver passes 60% throttle, then a 2-1 automatic kickdown will occur, scheduled by the PCM as used in D5. Once this has occurred, first gear will hold until second gear is selected by the driver moving the shift handle. No automatic upshift is possible under this condition.
- Once a kickdown has occurred, manual shifting in and out of first gear is allowed until the next time the vehicle stops.
- A shift to first gear with the vehicle at rest is never allowed.
- When downshifting at normal road speeds, the transmission will only allow a downshift into the next lower gear.
- If the shifter (-) is tapped more than once in rapid succession, the transmission will downshift only into the next lower gear. Then when the vehicle reaches a speed below a calibrated entry speed, the transmission will allow a downshift into the next lower gear, if again selected by the driver. This is to prevent engine and transmission damage and to keep the engine and transmission within allowable rpm ranges.
- An electronic indicator on the instrument cluster will display the selected gear.

Park Sense Switch

The park sense switch prevents the redundant PRNDL from displaying "P" until the shifter is in the park position.

Electronic Transmission Error Indicator

The vehicle is equipped with a redundant electronic gearshift indicator. This character appears with the key in the run position and displays the same gear selection as shown on the range selector floor console next to the range selector lever. If an "E" character flashes or remains on this indicates a transmission malfunction.

Shift Patterns Printable View (9 KB)

Upshifts

Transmission upshifting is controlled by the powertrain control module (PCM). The PCM receives inputs from various engine or vehicle sensors and driver demands to control shift scheduling, shift feel and torque converter clutch (TCC) operation.

The PCM has an adaptive learn strategy to electronically control the transmission which will automatically adjust the shift feel. When the battery has been disconnected, or a new battery installed, certain transmission operating parameters may be lost. The PCM must relearn these parameters. During this learning process you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Downshifts

Under certain conditions the transmission will downshift automatically to a lower gear range (without moving the range selector lever). There are three categories of automatic downshifts: coastdown, torque demand and forced or kickdown shifts.

Coastdown

The coastdown downshift occurs when the vehicle is coasting down to a stop.

Torque Demand

The torque demand downshift occurs (automatically) during part throttle acceleration when the demand for torque is greater than the engine can provide at that gear ratio. If applied, the transmission will disengage the TCC to provide added acceleration.

Kickdown

For maximum acceleration, the driver can force a downshift by pressing the accelerator pedal to the floor. A forced downshift into a lower gear is possible below calibrated speeds. Specifications for downshift speeds are subject to variations due to tire size and engine and transmission calibration requirements.

151	W705559-S300	Transmission fluid pan filter screws
152	7L027	Transmission fluid pan magnet
153	7A191	Transmission fluid pan gasket
154	7A194	Transmission fluid pan
155	7A010	Transmission fluid pan drain tube
156	W500213-S1309	Transmission fluid pan screw
157	W704999-S309	Transmission fluid pan drain tube plug (short hex)
A		Overdrive/coast clutch assembly
B		Direct clutch assembly
C		Forward clutch assembly

Torque Converter

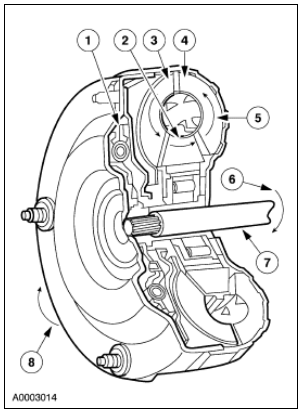
Printable View (53 KB)

The torque converter transmits and multiplies torque. The torque converter is a four-element device:

- impeller assembly
- turbine and damper assembly
- reactor assembly
- clutch

The standard torque converter components operate as follows:

- Rotation of the converter housing and impeller set the fluid in motion.
- The turbine reacts to the fluid motion from the impeller, transferring rotation to the geartrain through the input shaft.
- The reactor redirects fluid going back into the impeller, allowing for torque multiplication.
- The clutch and damper assembly dampens powertrain torsional vibration and provides a direct mechanical connection for improved efficiency.
- Power is transmitted from the torque converter to the planetary gearsets and other components through the input shaft.



Item	Description
1	Converter clutch and ring assembly (part of 7902)
2	Reactor (part of 7902)
3	Turbine and damper assembly (part of 7902)
4	Impeller (part of 7902)
5	Fluid motion
6	Transmission input rotation
7	Input shaft
8	Engine rotation

Geartrain Printable View (12 KB)

Power is transmitted from the torque converter to the planetary gearsets through the input shaft. Bands and clutches are used to hold and drive certain combinations of gearsets. This results in five forward ratios and one reverse ratio, which are transmitted to the output shaft and differential.

Gear Ratio	
1st	3.22 to 1
2nd	2.29 to 1
3rd	1.55 to 1
4th	1.00 to 1
5th	0.71 to 1
Reverse	3.07 to 1

Planetary Gearset Overdrive

For component location, refer to Disassembled Views in this section.

The planetary gear overdrive carrier is driven by the input shaft.

- The overdrive planetary gearset carrier drives the center shaft via the overdrive one-way clutch in first, third, fourth, and reverse gears.
- In second and fifth gears the overdrive sun gear is held causing the pinion gears to rotate around the overdrive sun gear.
- The pinion gears, in turn, drive the overdrive ring gear resulting in the fifth (overdrive) gear ratio.
- The overdrive planetary gearset is internally splined to the coast clutch for engine braking.

Planetary Gearset Forward

For component location, refer to Disassembled Views in this section.

The forward planetary gearset is splined to the output shaft.

- The forward planetary gearset is driven by the forward ring gear when the forward clutch is applied.
- The forward planetary gearset pinions drive the forward sun gear.
- The forward sun gear is splined to the input shell.
- The forward carrier is splined to the output shaft.

Planetary Gearset Low/Reverse

For component location, refer to Disassembled Views in this section.

The low/reverse planetary gearset is connected to the reverse brake drum by lugs from the low/reverse brake drum to the lugs of the low/reverse planetary gearset.

- The low/reverse planetary gearset is driven by the forward sun gear which is splined to the input shell.

- The forward sun gear drives the pinions in the low/reverse planetary gearset.
- The pinions of the low/reverse planetary gearset drive the output shaft ring gear and output shaft hub which is splined to the output shaft.
- The low/reverse planetary gearset can be held by the low one-way clutch in the low/reverse brake drum, or by the low/reverse band.

Input Shaft

For component location, refer to Disassembled Views in this section.

- The radial positioning of the input shaft is controlled by two bushings in the stator support.
- Axial positioning of the input shaft is controlled by the splines in the converter turbine hub and the retaining ring in the overdrive planetary carrier.

Output Shaft

For component location, refer to Disassembled Views in this section.

The output shaft is supported by a bearing in the case and by a bearing in the extension housing. End positioning is controlled by the parking gear and by the reverse ring gear hub and snap ring.

Apply Components

Printable View (15 KB)

Band Overdrive

For component location, refer to Disassembled Views in this section.

During 2nd and 5th gear operation, hydraulic pressure is applied to the overdrive servo.

- This pressure causes the piston to move and apply force to the band.
- This action causes the overdrive band to hold the overdrive drum.
- This causes the overdrive sun gear to be held stationary through the adapter plate and the overdrive drum.

Band Low/Reverse

For component location, refer to Disassembled Views in this section.

During second gear operation, first gear operation and reverse, hydraulic pressure is applied to the low/reverse servo.

- This pressure causes the servo to move and apply force to the low/reverse band.
- This action causes the low/reverse brake drum to be held.
- This action causes the low/reverse planetary assembly to be held stationary.

Band Intermediate

For component location, refer to Disassembled Views in this section.

During third gear operation, hydraulic pressure is applied to the intermediate servo.

- This pressure causes the servo to move and apply force to the intermediate band.
- This action causes the direct clutch drum to be held.
- The intermediate band holds the intermediate brake and direct clutch drum to the case in 3rd gear.
- This causes the input shell and forward sun gear to be held stationary.

Clutches Direct

For component location, refer to Disassembled Views in this section.

The direct clutch is a multi-disc clutch made up of steel and friction plates.

- The direct clutch is applied with hydraulic pressure and disengaged by return springs and the exhaust of the hydraulic pressure.
- It is housed in the direct clutch drum.
- During 4th, 5th, and reverse gear application, the direct clutch is applied transferring torque from the forward clutch cylinder to the direct clutch drum.
- This action causes the forward sun gear to drive the pinions of the low/reverse planetary carrier.

Clutches Forward

For component location, refer to Disassembled Views in this section.

The forward clutch is a multi-disc clutch made up of steel and friction plates.

- The forward clutch is applied with hydraulic pressure and disengaged by return springs and the exhaust of the hydraulic pressure.
- The forward clutch is applied in all forward gears.
- When applied, the forward clutch provides a direct mechanical coupling between the center shaft and the forward ring gear and hub.

Clutches Coast

For component location, refer to Disassembled Views in this section.

The coast clutch is a multi-disc clutch made up of steel and friction plates.

- The coast clutch is applied with hydraulic pressure and disengaged by return springs and the exhaust of the hydraulic pressure.
- The coast clutch is housed in the overdrive drum.
- The coast clutch is applied when in first, third, D, and reverse positions.
- When applied, the coast clutch locks the overdrive sun gear to the overdrive planetary carrier, thus preventing the one-way clutch from overrunning when the vehicle is coasting.
    - ♦ This allows the use of engine compression to help slow the vehicle and provide engine braking.

One-Way Clutch Direct

For component location, refer to Disassembled Views in this section.

The direct one-way clutch is a sprag-type one-way clutch that is pressed into the center shaft.

- The direct one-way clutch is driven by the ring gear of the overdrive planetary carrier.
- The direct one-way clutch holds and drives the outer splines of the center shaft in first, third, fourth and reverse gears.
- The direct one-way clutch overruns during all coast operations and at all times in 2nd and fifth gear.

One-Way Clutch Low/Reverse

For component location, refer to Disassembled Views in this section.

The low/reverse one-way clutch is a sprag-type one-way clutch.

- The low/reverse one-way clutch holds the low/reverse drum and low/reverse planetary assembly to the case in first and second gear.
- In all other gears the low/reverse one-way clutch overruns.

Hydraulic System Printable View (9 KB)

Fluid Pump

For component location, refer to Disassembled Views in this section.

- The fluid pump provides the fluid pressure necessary to charge the torque converter, main control assembly, transmission cooling system, lubrication system and apply devices.
- The fluid pump is a positive displacement, gear type pump.
    - The fluid pump is driven by the torque converter impeller hub.

Filter

For component location, refer to Disassembled Views in this section.

- All fluid drawn from the transmission fluid pan by the fluid pump passes through the fluid filter.
- The transmission fluid filter and its accompanying seals are part of the fluid path from the sump (pan) to the fluid pump.
    - The transmission fluid filter has a bypass section which allows fluid vented at the main regulator valve to be recirculated to the fluid pump, without passing through the transmission fluid filter.

Main Control

For component location, refer to Disassembled Views in this section.

- The main control assembly and related components are part of the pressure side of the hydraulic system.
- The main control assembly consists of the solenoids, the valve body assembly and the separator plate.
- These components combine to convert electrical signals into hydraulic actions.
    - All valves in the main control assembly are anodized aluminum and cannot be sanded, filed, or dressed in any other way. If there is any damage to the valves that prevents or restricts their movement, install a new main control assembly.

Transmission Electronic Control System Printable View (18 KB)

Electronic System Description

The powertrain control module and its input/output network control the following transmission operations:

- shift timing.
- line pressure (shift feel).
- torque converter clutch.

The transmission control strategy combined with the engine control provides optimum powertrain operation under all conditions. When determining the best operating strategy for transmission operation, the PCM uses input information from certain engine-related and driver-demand related sensors and switches.

In addition, the PCM receives input signals from certain transmission-related sensors and switches. The PCM also uses these signals when determining transmission operating strategy.

Using all of these input signals, the PCM can determine when the time and conditions are right for a shift, or when to apply or release the torque converter clutch. It will also determine the pressure needed to optimize shift feel. To accomplish this the PCM uses three pressure controls, one torque converter clutch and four shift solenoids to control transmission operation.

The following provides a brief description of each of the sensors and actuators used to control transmission operation.

Powertrain Control Module

The operation of the transmission is controlled by the powertrain control module. Many input sensors provide information to the powertrain control module. The powertrain control module then controls the actuators which determine transmission operation.

Air Conditioning (A/C) Clutch

An electromagnetic clutch is energized when the clutch cycling pressure switch closes. The switch is located on the suction accumulator/drier. The closing of the switch completes the circuit to the clutch and draws it into engagement with the compressor driveshaft. When the A/C is engaged, operating pressures are adjusted to compensate for additional load on the engine.

Brake Pedal Position (BPP) Switch

The brake pedal position (BPP) switch tells the powertrain control module (PCM) when the brakes are applied. The torque converter clutch disengages when the brakes are applied. The BPP switch closes when the brakes are applied and opens when they are released. The BPP is also used to disengage the brake shift interlock.

Engine Coolant Temperature (ECT) Sensor

The engine coolant temperature (ECT) sensor detects engine coolant temperature and supplies the information to the PCM. The ECT sensor is used to control torque converter clutch (TCC) operation.

Electronic Ignition (EI) System

The electronic ignition consists of a crankshaft position sensor, two four-tower ignition coils and the powertrain control module. The ignition control module operates by sending crankshaft position information from the crankshaft position sensor to the ignition control module. The ignition control module generates a profile ignition pickup (PIP) signal (engine rpm) and sends it to the PCM. The PCM uses PIP signal in the transmission strategy, wide-open throttle (WOT) shift control, torque converter clutch control and operating pressures.

Intake Air Temperature (IAT) Sensor

The intake air temperature (IAT) sensor provides the sequential fuel injection (SFI) system mixture temperature information. The IAT sensor is used both as a density corrector for air flow calculation and to proportion cold enrichment fuel flow. The IAT sensor is installed in the air cleaner outlet tube. The IAT sensor is also used in determining control pressures.

Mass Air Flow (MAF) Sensor

The mass air flow sensor measures the mass of air flowing into the engine. The MAF sensor output signal is used by the powertrain control module (PCM) to calculate injector pulse width. For transmission strategies, the MAF sensor is used to regulate electronic pressure control, shift and torque converter clutch scheduling.

Transmission Control Switch (TCS)

The transmission control switch (TCS) sends a signal to the powertrain control module (PCM) when the driver selects the D4 position, canceling operation of 5th (overdrive) gear.

The TCS is located within the range selector assembly (base shifter only).

The PCM uses this signal to control the shift solenoids to disengage/disable 5th gear operation and activates coast clutch. At the same time, the PCM changes the instrument panel indicator to display D4.

When the driver moves the range selector lever back to the D5 position, 5th gear operation is enabled, the coast clutch is released and the instrument panel indicator changes to display D5.

Throttle Position (TP) Sensor

The throttle position (TP) sensor is a potentiometer mounted on the throttle body. The TP sensor detects the position of the throttle plate and sends this information to the powertrain control module. The TP sensor is used for shift scheduling, electronic pressure control and torque converter clutch (TCC) control.

Digital Transmission Range (TR) Sensor

The digital transmission range (TR) sensor is located on the outside of the transmission at the manual lever. The digital TR sensor completes the start circuit in PARK, NEUTRAL, and the back-up lamp circuit in REVERSE. The digital TR sensor also opens and closes a set of four switches that are monitored by the powertrain control module to determine the position of the manual lever (P, R, N, D5, 3, 2, 1).

Turbine Shaft Speed (TSS) Sensor

The turbine shaft speed (TSS) sensor is a magnetic pickup that sends the powertrain control module torque converter turbine speed information.

The TSS sensor is mounted externally on the case.

The PCM uses TSS information to help determine appropriate operating pressures and torque converter clutch

(TCC) operation.

Output Shaft Speed (OSS) Sensor

The output shaft speed (OSS) sensor is a magnetic pickup, located at the park gear, that sends a signal to the powertrain control module to indicate transmission output shaft speed. The OSS sensor is mounted externally on the case. The OSS is used for torque converter clutch control, speed scheduling and to determine electronic pressure control.

Intermediate Shaft Speed Sensor

The intermediate shaft speed sensor is a magnetic pickup that sends planetary sun gear speed information to the PCM. The sensor is mounted externally on the center of the case.

The PCM uses the sensors information to aid in determining pressure requirements.

Pressure Control Solenoids (PCA, PCB, PCC)

The pressure control (PC) solenoids are a variable-force style (VFS) solenoid. The VFS-type solenoid is an electrohydraulic actuator combining a solenoid and a regulating valve.

The line pressure tap is used to verify output pressure from PC A or PC B by turning either one off while verifying the output from the other solenoid. The second pressure tap is used to verify the output from the PC C solenoid.

There are three PC solenoids located in the solenoid body assembly used to control line pressure, band and clutch application pressure within the transmission.

The powertrain control module varies the current to the PC solenoid.

The PCM has an adaptive learn strategy to electronically control the transmission which will automatically adjust the shift feel. When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The Powertrain Control Module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Torque Converter Clutch (TCC) Solenoid

The torque converter clutch (TCC) solenoid is a pulse-width-modulating type solenoid that is used to control the apply and release of the TCC.

Shift Solenoids (SSA, SSB, SSC, SSD)

Four On/Off shift solenoids allow the powertrain control module to control shift scheduling.

- The solenoids are three-way, normally open style.
- The shift solenoids SSA, SSB, SSC and SSD provide gear selection of 1st through 5th and reverse gears by directing PC pressures to the appropriate elements.

Coast braking and manual gears are also controlled by the shift solenoids.

Transmission Fluid Temperature (TFT) Sensor

- The transmission fluid temperature (TFT) sensor is a thermistor-type sensor that varies a reference voltage signal. The resistance in the TFT varies with temperature. The powertrain control module (PCM) monitors the voltage signal across the TFT, and uses this information to determine the transmission fluid temperature.
- The TFT is located on the solenoid body.
- The PCM uses the TFT signal to help determine shift scheduling, torque converter clutch operation and pressure control requirements.

It sends a voltage signal to the powertrain control module. The voltage signal varies with transmission fluid temperature. The PCM uses this signal to determine whether a cold start shift schedule is necessary. The shift schedule is compensated when the transmission fluid temperature is cold. The PCM also inhibits torque converter clutch (TCC) operation at low transmission fluid temperatures and determines pressure control (PC) solenoid operations.

Reverse Pressure (RP) Switch

The reverse pressure (RP) switch is a simple open or closed switch that is used to detect the presence of pressure in the main control valve body. The switch is mounted on the main control valve body. When pressure is not present, the switch is opened and the voltage reading is high. When pressure is present, the switch is closed and the voltage reading will be near zero.

Instrument Panel Range Selector Indicator

This indicator is an electronic readout in the instrument cluster which will match the position of the range selector (P, R, N, D4, D5, 3, 2, 1). If an error in the range selector assembly occurs, an "E" (error) will be displayed on the instrument panel.

Select Shift Transmission (SST) Switches (+ and -)

The positions indicated by a (+) or a (-) allow the driver to manually select the appropriate upshift (+) or downshift (-) and gear range.

The SST switches are located within the transmission range selector assembly and are momentary contact switches that send a signal to the PCM each time the driver moves the selector lever into the upshift or downshift gear range.

The PCM uses the input signals from the SST+ and the SST- switches, along with other vehicle inputs to determine which gear should be commanded.

Transmission Cooling

Printable View (7 KB)

The transmission fluid cooler is an oil-to-air (OTA) fluid cooler. The fluid cooler is mounted between the radiator and the A/C condenser.

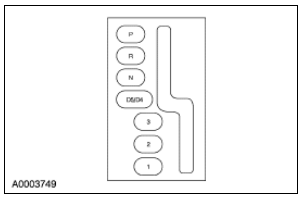
- When the transmission fluid is cold and the thermostatic valve is closed, the transmission fluid does not circulate through the fluid cooler.
- As the transmission fluid temperature increases, the thermostatic bypass valve opens and allows the transmission fluid to circulate through the fluid cooler.

External Controls Printable View (16 KB)

The transmission shift cable transfers the transmission operating mode from the transmission range selector lever to the automatic transmission. The indicated position of the lever is transferred to the transmission through the cable and down to the manual control lever on the transmission.

The lever has eight positions: P, R, N, D5, D4, 3, 2 and 1.

Base Range Shifter



Brake Shift Interlock System

The shift interlock system prevents shifting the transmission out of the PARK position unless the brake pedal is depressed. The shift interlock system consists of a shift lock actuator mounted on the ignition switch. The actuator is energized when the ignition switch is turned to RUN, locking the transmission range selector lever in the PARK position. When the brake pedal is applied and the brake pedal position (BPP) switch activated, the shift lock actuator is deactivated, allowing the selector lever to move out of the PARK position.

The ignition shift interlock cable locks the selector lever in the PARK position when the ignition switch is in the lock position. It also requires the selector lever to be in the PARK position in order to turn the ignition switch to the lock position.

Transmission Control Switch (TCS)

The TCS is a momentary contact switch that sends a signal to the PCM when the driver selects the D4 position, canceling operation of fifth (overdrive) gear.

The TCS is located within the range selector assembly.

The PCM uses this signal to control the shift solenoids to disengage/disable fifth gear operation and activate coast clutch. At the same time, the PCM changes the instrument panel indicator to display D4.

When the driver moves the selector lever back to the D5 position, fifth gear operation is enabled, the coast clutch is released and the instrument panel indicator displays D5.

Park Sense Switch

The park sense switch prevents the redundant PRNDL from displaying "P" until the shifter is in the PARK position.

Electronic Transmission Error Indicator

The vehicle is equipped with a redundant electronic gearshift indicator. This character appears with the key in the RUN position and displays the same gear selection as shown on the selector lever floor console next to the range selector lever. If an "E" character flashes or remains on, this indicates that a transmission malfunction

has occurred.

Preliminary Inspection

Printable View (16 KB)

The following items must be checked prior to beginning the diagnostic procedures:

Know and Understand the Concern

In order to correctly diagnose a concern, first understand the customer complaint or condition. Customer contact may be necessary in order to begin to verify the concern. Understand the condition as to when the concern occurs, for example:

- hot or cold vehicle temperature.
- hot or cold ambient temperature.
- vehicle driving conditions.
- vehicle loaded/unloaded.

After understanding when and how the concern occurs, proceed to verify the concern.

Verification of Condition

This section provides information that must be used in both determining the actual cause of customer concerns and executing the appropriate procedures.

The following procedures must be used when verifying customer concerns for the engine.

Determine Customer Concern

NOTE: Some transmission conditions can cause engine concerns. An electronic pressure control short circuit can cause engine misfiring. The torque converter clutch not disengaging will stall the engine.

Determine customer concerns relative to vehicle use and dependent driving conditions, paying attention to the following items:

- hot or cold vehicle operating temperature
- hot or cold ambient temperatures
- type of terrain
- vehicle loaded/unloaded
- city/highway driving
- upshift
- downshift
- coasting
- engagement
- noise/vibration check for dependencies, either rpm dependent, vehicle speed dependent, shift dependent, gear dependent, range dependent, or temperature dependent.

Check Fluid Level and Condition

Fluid Level Check

⚠ **CAUTION: The vehicle should not be driven if the fluid level is low or internal failure could result.**

NOTE: If the vehicle has been operated for an extended period of time at highway speeds, in city traffic, in hot weather, or pulling a trailer, the fluid must cool down 30 minutes to obtain an accurate reading.

This vehicle is not equipped with a fluid level indicator. An incorrect level may affect the transmission operation and can result in transmission damage. To correctly check and add fluid to the transmission, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

High Fluid Level

A fluid level that is too high can cause the fluid to become aerated due to the churning action of the rotating internal parts. This will cause erratic control pressure, foaming, loss of fluid from the vent tube and possible transmission damage. If an overfill reading is indicated, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

Low Fluid Level

A low fluid level can result in poor transmission engagement, slipping or damage. It can also indicate a leak in one of the transmission seals or gaskets.

Adding Fluid

⚠ CAUTION: The use of any type of transmission fluid other than specified can result in transmission damage.

If fluid must be added, add fluid in 0.25L (0.5 pint) increments through the fluid pan level check screw opening. Do not overfill the fluid, refer to Transmission Fluid Level Check in this section. For fluid type, refer to the General Specification chart in this section.

Fluid Condition Check

1. Check the fluid level. For additional information, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.
2. Observe the color and the odor of the fluid. Under normal circumstances, the color should be dark reddish, not brown or black.
3. Allow the fluid to drip onto a facial tissue and examine the stain.
4. If evidence of solid material is found, the transmission fluid pan should be removed for further inspection.
5. If fluid contamination or transmission failure is confirmed by the sediment in the bottom of the transmission fluid pan, the transmission must be disassembled and completely cleaned.
6. Carry out diagnostic checks and adjustments. For additional information, refer to Diagnosis By Symptom in this section.

Road Testing Vehicle

Printable View (8 KB)

NOTE: Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.

NOTE: When the battery has been disconnected, or a new battery installed certain transmission operating parameters may be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

The Shift Point Road Test and Torque Converter Clutch Operation Test provide diagnostic information on transmission shift controls and torque converter operation.

Shift Point Road Test

Printable View (8 KB)

This test verifies that the shift control system is operating correctly.

1. Bring engine and transmission up to normal operating temperature.
2. Operate the vehicle with the selector lever in the D5 position.
3. Apply minimum throttle and observe the speeds at which upshift occurs and torque converter engages. Refer to the following Shift Speeds chart.
4. Stop the vehicle. Select the D4 position. Repeat Step 3. The transmission will make all upshifts except 4-5 and torque converter clutch should apply above 46 km/h (27 mph).
5. Press the accelerator pedal to the floor, wide open throttle (WOT). The transmission should shift from third to second, or third to first, depending on vehicle speed, and torque converter clutch should release.
6. With vehicle speed above 48 km/h (30 mph), move the transmission range selector lever from D4 position to first position and release the accelerator pedal. The transmission should immediately downshift to third gear. When vehicle speed drops below 32 km/h (20 mph), the transmission should downshift into first gear.
7. If transmission fails to upshift/downshift or torque converter clutch does not apply/release, refer to Diagnosis By Symptom for possible causes.

Shift Speeds 3.0L/3.9L Engines

Throttle Position	D5 Position Shift	Shift Speed Axle Ratio
Closed	5-5	35-42 km/h (22-26 mph)
	4-3	22-27 km/h (14-17 mph)
	3-1	11-17 km/h (7-9 mph)
Minimum	1-3	13-16 km/h (8-10 mph)
Monitor PID:	3-4	21-26 km/h (13-16 mph)
TP volt 1.25	4-5	40-45 km/h (25-28 mph)
Wide	1-2	64-71 km/h (40-44 mph)
Open	2-3	93-101 km/h (58-63 mph)
	3-4	140-148 km/h (87-92 mph)
	4-5	195 km/h (121 mph)

Torque Converter Diagnosis

Printable View (10 KB)

Prior to installing a new torque converter, all diagnostic procedures must be followed. This is to prevent the unnecessary installation of good torque converters. Only after a complete diagnostic evaluation can the decision be made to install a new or remanufactured torque converter.

Begin with the normal diagnostic procedures as follows:

1. Preliminary Inspection.

2. Know and Understand the Customer Concern.

3. Verify the Concern Carry out the Torque Converter Clutch Operation Test; refer to Torque Converter Operation Test in this section.

4. Carry out Diagnostic Procedures.

- Run on-board diagnostics. See On-Board Diagnostics with NGS. Refer to Diagnostics in this section.
  - ♦ Repair all non-transmission related DTCs first.
  - ♦ Repair all transmission DTCs.
  - ♦ Rerun on-board diagnostic to verify repair.
- Carry out the Line Pressure Test. Refer to Special Testing Procedures in this section.
- Carry out the Stall Speed Test. Refer to Special Testing Procedures in this section.
- Carry out the Diagnosis by Symptom Index. Refer to Diagnosis By Symptom in this section.
  - ♦ Use the index to locate the appropriate routine that best describes the symptom(s). The routine will list all possible components that may cause or contribute to the symptom. Check each component listed, diagnose and service as necessary before servicing the torque converter.

Torque Converter Operation Test

This test verifies that the torque converter clutch control system and the torque converter are operating correctly.

5. Carry out the Quick Test. See On-Board Diagnostics with NGS. Refer to Diagnostics in this section. Check for DTCs. Refer to the Diagnostic Trouble Code Charts in this section.

6. Connect a tachometer to the engine.

7. Bring the engine to normal operating temperature by driving the vehicle at highway speeds for approximately 15 minutes in (D) position.

8. After normal operating temperature is reached, maintain a constant vehicle speed of about 80 km/h (50 mph) and tap brake pedal with the left foot.

9. The engine rpm should increase when brake pedal is tapped, and decrease about five seconds after pedal is released. If this does not occur, refer to Torque Converter Operation Concerns in Diagnosis By Symptom .

10. If the vehicle stalls in (D) or manual 2 at idle with vehicle at a stop, move the transmission range selector lever to manual 1 position. If the vehicle stalls, refer to Diagnosis By Symptom , Torque

Converter Operation Concerns in this section. Repair as necessary. If the vehicle does not stall in (D), refer to Diagnosis By Symptom in this section.

Visual Inspection

Printable View (9 KB)

This inspection will identify modifications or additions to the vehicle operating system that may affect diagnosis. Inspect the vehicle for non-Ford factory add-on devices such as:

- electronic add-on items:
  - ♦ air conditioning
  - ♦ generator (alternator)
  - ♦ engine turbo
  - ♦ cellular telephone
  - ♦ cruise control
  - ♦ CB radio
  - ♦ linear booster
  - ♦ backup alarm signal
  - ♦ computer
- Vehicle modification:

These items, if not installed correctly, will affect the powertrain control module (PCM), or transmission function. Pay particular attention to add-on wiring splices in the PCM harness or transmission wiring harness, abnormal tire size, or axle ratio changes.

- Leaks; refer to Leakage Inspection in this section.
- Correct linkage adjustments; refer to Selector Lever Cable Adjustment in this section.

Shift Linkage Check

Check for a misadjustment in shift linkage by matching the detents in the transmission range selector lever with those in the transmission. If they match, the misadjustment is in the indicator. Do not adjust the shift linkage.

Hydraulic leakage at the manual control valve can cause delay in engagements and/or slipping while operating if the linkage is not correctly adjusted. Refer to Selector Lever Cable Adjustment in this section for shift linkage adjustment.

Check TSBs and OASIS

Refer to all Technical Service Bulletins and OASIS messages which pertain to the transmission concern and follow the procedure as outlined.

Carry Out On-Board Diagnostics (KOEO, KOER)

After a road test, with the vehicle warm and before disconnecting any connectors, carry out the Quick Test using New Generation Star (NGS) Tester. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the powertrain control system.

Diagnostics

Printable View (47 KB)

Special Tool(s)

 ST1300-A	UV Leak Detector 164-R0756 or equivalent
ST1565-A	Pressure Gauge, Transmission Fluid 307-004 (T57L-77820-A)
 ST1633-A	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)
ST2538-A	Transmission Test Plate and Gasket 307-433-01, 307-433-02, 307-433-03
ST1137-A	73 III Automotive Meter 105-R0057 or equivalent
	Trans Tester TR/MLP Overlay and Manual 007-00131 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation Star (NGS) Tester 418-F205 or equivalent scan tool
ST1632-A	MLP-TR Cable 418-F107 (007-00111) or equivalent
ST1389-A	Transmission Tester 307-F016 (007-00130) or equivalent

Diagnosing electronically controlled automatic transmissions is simplified using the following procedures. It is important to remember that there is a definite procedure to follow. Do not take shortcuts or assume that critical checks or adjustments have already been made. Follow the procedures as written to avoid missing critical components or steps. By following the diagnostic sequence, the technician will be able to diagnose and repair the concern the first time.

On-Board Diagnostics with NGS

NOTE: For detailed instruction and other diagnostic methods using the NGS, refer to the NGS tester and the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

These quick tests should be used to diagnose the powertrain control module (PCM) and should be carried out in order.

- Quick Test 1.0 Visual Inspection
- Quick Test 2.0 Set Up
- Quick Test 3.0 Key On, Engine Off
- Quick Test 4.0 Continuous Memory
- Quick Test 5.0 Key On, Engine Running
- Special Test Mode
    - Wiggle Test Mode
    - Output Test Mode
- PCM Reset Mode
- Clearing DTCs
- OBD II Drive Cycle
- Other NGS Features

For further information on other diagnostic testing features using the NGS or generic scan tool, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. Other diagnostic methods include the following:

- Parameter Identification (PID) Access Mode
- Freeze Frame Data Access Mode
- Oxygen Sensor Monitor Mode

Output State Control (OSC) Mode

Printable View (25 KB)

Output state control (OSC) allows the technician to take control of certain parameters to function the transmission. For example, OSC allows the technician to shift the transmission only when commanding a gear change. If the technician commands first gear in OSC, the transmission will remain in first gear until the technician commands the next gear. For another example, the technician can command a shift solenoid to turn on or off when carrying out an electrical circuit check. OSC has two modes of operation for transmission, the BENCH MODE and the DRIVE MODE. Each mode/parameter has a unique set of vehicle operating requirements that the technician must meet before being allowed to operate OSC.

NOTE: To operate OSC the digital transmission range (TR) sensor and the vehicle speed sensor (VSS) must be operational. No diagnostic trouble codes (DTCs) related to the digital TR sensor or the VSS can be present.

- The vehicle requirements MUST BE MET when SENDING the OSC value. Refer to vehicle requirements for each individual test.
- If the vehicle requirements are NOT MET when SENDING the OSC value, an ERROR MESSAGE will appear. When the ERROR MESSAGE is received, OSC is aborted and must be restarted.
- If after a sent value is substituted and the vehicle requirements are no longer met, the PCM will cancel the OSC value and resume normal operation. No error message will be sent.
- The OSC value XXX may be sent anytime to cancel OSC.

Output State Control (OSC) Procedures

- Carry out visual inspection and vehicle preparation as necessary.
- Select "Vehicle and Engine Selection" menu.
- Select appropriate vehicle and engine.
- Select "Diagnostic Data Link."
- Select "Powertrain Control Module."
- Select "Diagnostic Test Mode."
- Select "KOEO On-Demand Self Test and KOER On-Demand Self Tests."
- Carry out test and record DTCs.
- Repair all NON-Transmission DTCs.
- Repair all VSS and digital TR sensor DTCs.
- Make sure that VSS and digital TR sensors are functional.
- Select "Active Command Modes."
- Select "Output State Control."
- Select "Trans - Bench Mode or Trans - Drive Mode."

OSC Transmission Bench Modes

The following Transmission Bench Modes may be used as necessary during diagnostics.

SSA, SSB, SSC, SSD and TCC in BENCH MODE

⚠ CAUTION: The parking brake must be set prior to carrying out this procedure.

The BENCH MODE allows the technician to carry out electrical circuit checks on the following components:

- SSA - Activates SS A OFF or ON.
- SSB - Activates SS B OFF or ON.
- SSC - Activates SS C OFF or ON.

- SSD - Activates SS D OFF or ON.
- TCC - Activates TCC OFF or ON.

OSC "SSA, SSB, SSC, SSD, TCC" BENCH MODE Operates ONLY when:

- VSS and digital TR sensor are operational.
- No VSS and digital TR sensor DTCs.
- Transmission range selector lever in P or N.
- Key ON.
- Engine OFF.

OSC Command Values

- OFF - turns solenoid OFF.
- ON - turns solenoid ON.
- XXX - cancels OSC value sent.
- SEND - sends the values to PCM.

BENCH MODE Procedure for SSA, SSB, SSC, SSD, and TCC

Follow operating instructions from the NGS menu screen:

- Select "Output State Control."
- Select "Trans - Bench Mode."
- Select "PIDs" to be monitored.
- Monitor all selected PIDs during test.
- Select "Parameters - SSA, SSB, SSC, SSD, or TCC."
- Select "ON" to turn solenoid ON.
- Press "SEND" to send command ON.
- Select "OFF" to turn solenoid OFF.
- Press "SEND" to send command OFF.
- Select "XXX" to cancel at any time.
- Press "SEND."

PCA, PCB, PCC in BENCH MODE

⚠ CAUTION: The parking brake must be set prior to carrying out this procedure.

The BENCH MODE is also used to test the functionality of the transmission electronic pressure control. During BENCH MODE, the PCx solenoids can be commanded in increments of 15 psi from 0 to 90 psi and 90 to 0 psi.

The line pressure tap is used to verify output pressure from PC A or PC B by turning either one off while verifying the output from the other solenoid. The second pressure tap is used to verify the output from the PC C solenoid.

The OSC functions for the parameter PCx allows the technician to choose the following options:

- PCx - Activates PCx to selected values.
- 00 - sets PCx pressure to 00 psi.
- 15 - sets PCx pressure to 15 psi.
- 30 - sets PCx pressure to 30 psi.
- 45 - sets PCx pressure to 45 psi.
- 60 - sets PCx pressure to 60 psi.

- 75 - sets PCx pressure to 75 psi.
- 90 - sets PCx pressure to 90 psi.

OSC "PCx" Bench Mode should ONLY be operated to check PRESSURE FUNCTIONALITY using an installed pressure gauge (300 psi) when:

- VSS and digital TR sensor are operational.
- No VSS and digital TR sensor DTCs.
- Transmission range selector lever in P or N.
- Pressure gauge installed.
- Key ON.
- Engine ON.
- Engine rpm at least 1500.

OSC "PCx" Bench Mode should ONLY be operated to complete PCx SOLENOID CIRCUIT PINPOINT TESTS when:

- VSS and Digital TR Sensor are operational.
- No VSS and Digital TR Sensor DTCs are present.
- Transmission range selector lever is in "P" or "N".
- Key "ON".
- Engine "OFF".

OSC Command Values

- 00 - sets PCx pressure to 00 psi.
- 15 - sets PCx pressure to 15 psi.
- 30 - sets PCx pressure to 30 psi.
- 45 - sets PCx pressure to 45 psi.
- 60 - sets PCx pressure to 60 psi.
- 75 - sets PCx pressure to 75 psi.
- 90 - sets PCx pressure to 90 psi.
- XXX - cancels OSC value sent.
- SEND - sends the values to PCM.

BENCH MODE Procedure for PCx

Following operating instructions from the NGS menu screen:

- Select "Output State Control."
- Select "Trans - Bench Mode."
- Select "PIDs" to be monitored.
- Monitor all selected PIDs during test.
- Select "Parameters - PCx."
- Select Value "0 - 90 psi."
- Press "SEND" to send command.
- Select "XXX" to cancel at any time.
- Press "SEND."

OSC Transmission DRIVE MODES

The DRIVE MODE allows control of three transmission parameters. Each mode/parameter has a unique set of vehicle operating requirements that the technician must meet before being allowed to operate OSC. The recommended procedure, when using the DRIVE MODE, is to control one parameter at a time.

The DRIVE MODE allows the technician to carry out the following functions on the transmission:

- GEAR - allows upshifts or downshifts.
- TCC - engages or disengages the torque converter clutch.
- FIRM_SFT - Commands a higher control pressure during upshift.

The pressure control (PCx) solenoids for this transmission are not directly controlled during DRIVE MODE testing. Pressures may be raised during an upshift via the harsh shift control channel (FIRM_SFT)

GEAR in DRIVE MODE

This OSC function is used to test the transmission shift functions.

The OSC functions for the GEAR parameter allow the technician to choose the following options:

- 1 - PCM selects 1st gear.
- 2 - PCM selects 2nd gear.
- 3 - PCM selects 3rd gear.
- 4 - PCM selects 4th gear.
- 5 - PCM selects 5th gear.

OSC "GEAR" Mode operates ONLY when:

- VSS and digital TR sensor are operational.
- No VSS and digital TR sensor DTCs.
- Engine ON.
- TCC "OFF" (TCC cannot be engaged)
- Transmission range selector lever in (D).
- Vehicle speed is greater than 3 km/h (2 mph).

OSC Command Values

- 1 - PCM selects 1st gear.
- 2 - PCM selects 2nd gear.
- 3 - PCM selects 3rd gear.
- 4 - PCM selects 4th gear.
- 5 - PCM selects 5th gear.
- XXX - cancels OSC value sent.
- SEND - sends the values to PCM.

DRIVE MODE Procedure for GEAR

Follow operating instructions from the NGS menu screen.

- Select "Output State Control."
- Select "Trans - DRIVE MODE."
- Select "PIDs" to be monitored.
- Monitor all selected PIDs during test.
- Select "Parameters - GEAR."
- Select Value "1-5."
- Press "SEND" to send command.
- Reselect Value "1-5."
- Press "SEND" to send command.
- Select "XXX" to cancel at any time.

- Press "SEND."

TCC in DRIVE MODE

This OSC function is used to test whether the torque converter clutch is engaging and disengaging correctly.

The OSC functions for the TCC parameter allows the technician to choose the following:

- TCC - activates TCC OFF and ON.
- ON - turns TCC solenoid ON.
- OFF - turns TCC solenoid OFF.

OSC "TCC OFF" DRIVE MODE operates ONLY when:

- VSS and digital TR sensors are operational.
- No VSS and digital TR sensor DTCs present.
- Engine ON.
- Transmission range selector lever in (D).
- Vehicle speed is greater than 3 km/h (2 mph).

OSC "TCC ON" DRIVE MODE operates ONLY when:

- VSS and digital TR sensors are operational.
- No VSS and digital TR sensor DTCs present.
- Engine ON.
- Transmission range selector lever in (D).
- Vehicle speed is greater than 3 km/h (2 mph).
- Transmission in 2nd gear or higher.
- TFT is between 33-153°C (60-275° F).
- Brake not applied "OFF" below 32 km/h (20 mph).
- Maintain steady speed.

OSC Command Values

- OFF - turns TCC OFF.
- ON - turns TCC ON.
- XXX - cancels OSC value sent.
- SEND - sends the values to PCM.

Drive Mode Procedures for TCC

Follow operating instructions from the NGS menu screen.

- Select "Output State Control."
- Select "Trans-drive Mode."
- Select "PIDs" to be monitored.
- Monitor all selected PIDs during test.
- Select "Parameters - TCC."
- Select "ON" to turn solenoid ON.
- Press "SEND" to send command ON.
- Select "OFF" to turn solenoid OFF.
- Press "SEND" to send command OFF.
- Select "XXX" to cancel at any time.
- Press "SEND."

FIRM_SFT in DRIVE MODE

This OSC function is used to raise pressure during an upshift to determine whether the pressure control system is functioning correctly. Harsher shifts indicate that the pressure control system works at higher pressure. The best test for isolating pressure control system problems is to carry out the PCA, PCB, PCC in BENCH MODE using a hydraulic pressure gauge.

The OSC functions for the parameter FIRM_SFT allows the technician to choose the following options:

- FIRM_SFT - activates the harsh shift channel.
  - ♦ ON - sets control pressure higher for all upshifts (determined by the PCM)
  - ♦ OFF - sets control pressure to normal for all upshifts (determined by the PCM)
  - ♦ XXX - cancel OSC for FIRM_SFT

OSC "FIRM_SFT" DRIVE MODE operates ONLY when:

- VSS and digital TR sensor are operational.
- No VSS and digital TR sensor DTCs.
- Transmission range selector lever in O/D.
- Pressure gauge installed (optional).
- Key ON.
- Engine ON.
- Vehicle speed greater than 3 km/h (2 mph).
- TCC is OFF (TCC is not engaged).

OSC Command Values

- ON - sets control pressure high for all upshifts (determined by the PCM)
- OFF - sets control pressure to normal for all upshifts (determined by the PCM)
- XXX - cancel OSC for FIRM_SFT
- SEND - sends the values to the PCM

DRIVE MODE Procedure for FIRM_SFT

Follow operating instructions from the NGS menu screen.

- Select "Output State Control."
- Select "Trans - Drive Mode."
- Select "PIDs" to be monitored.
- Monitor all selected PIDs during test.
- Select "Parameters - FIRM_SFT.
- Press "SEND" to send command.
- Select "XXX" to cancel at any time.
- Press "SEND."

Using Output State Control (OSC) and Accessing PIDs

To confirm that the OSC value was sent by the NGS and the PCM has accepted the OSC substitution, a corresponding PID for each OSC parameter must be monitored. Additional PIDs should be monitored to help the technician adequately diagnose the transmission.

The following is a list of OSC parameters and their corresponding PID:

Corres-ponding PID	PID Description
BPP	Brake Pedal Position Switch On/Off
PCA	Pressure Control Solenoid A Commanded Pressure
PCB	Pressure Control Solenoid B Commanded Pressure
PCC	Pressure Control Solenoid C Commanded Pressure
FIRMST	Firm Shift Control (FMC) status requested by OSC; 0 = FSC not commanded by OSC, NGS PID output = OFF; 1 = FSC commanded by OSC, NGS PID output = ON
GEAR	Commanded Transmission Gear (use in drive only)
RPM	Engine revolutions per minute
SSA	Shift solenoid A commanded ON
SSB	Shift solenoid B commanded ON
SSC	Shift solenoid C commanded ON
SSD	Shift solenoid D commanded ON
TCC	Torque converter commanded duty cycles (%)
TCCRAT	Torque converter speed ratio (RPM and or TSS)
TFT	Transmission fluid temperature (degrees F)
VSS	Vehicle speed (mph)

To confirm that the OSC substitution occurred, SEND the OSC value and monitor the corresponding PID value. If no ERROR MESSAGE was received and the value of the corresponding PID is the same as the value sent from OSC, then the OSC substitution was successful.

Transmission Drive Cycle Test

Printable View (11 KB)

NOTE: Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.

NOTE: The Transmission Drive Cycle Test must be followed exactly. Transmission failure must occur four times consecutively for shift error DTC code to be set, and five times consecutively for continuous torque converter clutch code to set.

NOTE: When carrying out the Transmission Drive Cycle Test, use the Solenoid Operation Chart for proper solenoid operation. Refer to Pinpoint Tests OSC Equipped Vehicles in this section.

After carrying out the Quick Test, use the Transmission Drive Cycle Test for checking continuous codes.

1. Record and then erase Quick Test codes.
2. Warm engine to normal operating temperature.
3. Make sure transmission fluid level is correct.
4. With transmission in (D) position, moderately accelerate from stop to 80 km/h (50 mph). This allows the transmission to shift into fifth gear. Hold speed and throttle open steady for a minimum of 15 seconds.
5. With transmission in fifth gear and maintaining steady speed and throttle opening, lightly apply and release brake to operate stop lamps. Then hold speed and throttle steady for a minimum of five seconds.
6. Brake to a stop and remain stopped for a minimum of 20 seconds.
7. Repeat steps 4 through 6 at least five times.
8. Carry out Quick Test and record continuous DTCs.

After On-Board Diagnostics

NOTE: The vehicle wiring harness, powertrain control module (PCM) and non-transmission sensors may affect transmission operations. Repair these concerns first.

After the on-board diagnostic procedures are completed, repair all DTCs.

Begin with non-transmission related DTCs, then repair any transmission related DTCs. Refer to the Diagnostic Trouble Code Charts in this section for information on condition and symptoms. This chart will be helpful in referring to the correct manual(s) and aids in diagnosing internal transmission concerns and external non-transmission inputs. The pinpoint tests are used in diagnosing transmission electrical concerns. Make sure that the vehicle wiring harness and the PCM are diagnosed as well. The Powertrain Control/Emissions Diagnosis (PC/ED) manual will aid in diagnosing non-transmission electronic components.

Before Pinpoint Tests

NOTE: Prior to entering pinpoint tests, check the powertrain control module (PCM) wiring harness for correct connections, bent or broken pins, corrosion, loose wires, correct routing, correct seals and their

condition. Check the PCM, sensors and actuators for damage. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

NOTE: If a concern still exists after electrical diagnosis, refer to Diagnosis By Symptom in this section.

If DTCs appear while carrying out the on-board diagnostics, refer to the Diagnostic Trouble Code Charts in this section for the appropriate repair procedure. Prior to entering pinpoint tests, refer to any TSBs and OASIS messages for transmission concerns.

Diagnostic Trouble Code Chart

**May also be generated by some other non-electric transmission hardware system.					
*Output circuit check, generated only by electrical symptoms.					
Five Digit DTC	**Com-ponent**	**Description**	**Condition**	**Symptom**	**Action**
P0102, P0103, P1100, P1101	MAF	MAF concerns	MAF system inoperative which may cause a transmission concern.	High/low EPC pressure, incorrect shift schedule. Incorrect torque converter clutch engagement scheduling. Symptoms similar to a TP failure.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0112	IAT	IAT indicates 125°C (254°F) (grounded)	Voltage drop across IAT exceeds scale set for temperature 125°C (254°F).	Incorrect EPC pressure. Either high or low which will result in harsh or soft shifts.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0113	IAT	IAT indicates -40°C (-40°F) (open circuit)	Voltage drop across IAT exceeds scale set for temperature -40°C (-40°F).	Incorrect EPC pressure. Either high or low which will result in harsh or soft shifts.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0114	IAT	IAT out of on-board diagnostic range	IAT temperature higher or lower than expected during KOEO and KOER.	Rerun on-board diagnostic at normal operating temperature.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1116	ECT	ECT out of on-board diagnostic range	ECT temperature higher or lower than expected during KOEO and KOER.	Rerun on-board diagnostic at normal operating temperature.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0117	ECT	ECT indicates 125°C (254°F)	Voltage drop across ECT exceeds scale set for temperature 125°C (254°F) (grounded).	Torque converter clutch will always be off, resulting in reduced fuel economy.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0118	ECT	ECT indicates -40°C (-40°F)	Voltage drop across ECT exceeds scale set for temperature -40°C (-40°F)	Torque converter clutch will always be off, resulting in reduced fuel economy.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

			(open circuit).		
P0121, P0122, P0123, P1120, P1121, P1125, P1124	TP	TP concern	PCM has detected an error. This error may cause a transmission concern.	Harsh engagements, firm shift feel, abnormal shift schedule, torque converter clutch does not engage. Torque converter clutch cycling.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0300-P0308, P0320, P0340, P1351-P1364	EI	EI concerns	EI system is inoperative which may cause a transmission concern.	Harsh engagements and shifts, late WOT shifts, no torque converter clutch engagement.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0503, P0500,	ABS	Insufficient VSS input from ABS through SCP link.	PCM detected a loss of vehicle speed signal through SCP link from ABS.	No transmission symptom. I.P. speedometer may be affected.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0705	Digital TR sensor	Digital TR circuit failure	Digital TR circuits, indicating an invalid pattern in TR_D. Condition caused by a short to ground or an open in TR4, TR3A, TR2, and or TR1 circuits. This DTC cannot be set by an incorrectly adjusted digital TR sensor.	Increase in control pressure (harsh shifts). Defaults to D5 or invalid position.	Go To Pinpoint Test C .
P0708	Digital TR sensor	Digital TR sensor circuit TR3A open	Digital TR sensor circuit TR3A reading 2.6v - 5.0v (open circuit). This DTC cannot be set by an incorrectly adjusted digital TR sensor.	Increase in PC pressure. Defaults to D5 for all gear positions.	Go To Pinpoint Test C .
P0712	TFT	157°C (315°F) indicated TFT sensor circuit grounded	Voltage drop across TFT sensor exceeds scale set for temperature of 157°C (315°F).	Firm shift feel.	Go To Pinpoint Test B .
P0713	TFT	-40°C (-40°F) indicated TFT sensor circuit open	Voltage drop across TFT sensor exceeds scale set for temperature -40°C (-40°F).	Firm shift feel.	Go To Pinpoint Test B .

P0715	TSS	Insufficient input from turbine shaft speed sensor	PCM detected a loss of TSS signal during operation.	May turn on MIL.	Go To Pinpoint Test E .
P0717	TSS	Turbine shaft speed sensor signal intermittent.	PCM has detected an intermittent TSS signal.	May flash TCIL.	Go To Pinpoint Test E .
P0718	TSS	Turbine shaft speed sensor signal noisy.	PCM has detected a noisy TSS signal.	May flash TCIL.	Go To Pinpoint Test E .
P0720	OSS	Insufficient input from OSS sensor	PCM detected a loss of OSS signal during operation.	Abnormal shift schedule, harsh shifts.	Go To Pinpoint Test E .
P0721	OSS	Output shaft speed sensor signal noisy	PCM has detected an erratic OSS signal.	Abnormal shift schedule, harsh shifts.	Go To Pinpoint Test E .
P0722	OSS	Output shaft speed sensor signal intermittent	PCM has detected an intermittent OSS signal.	Abnormal shift schedule, harsh shifts.	Go To Pinpoint Test E .
P0731**	SSA, SSB, SSC or internal parts	1st gear error	No 1st gear.	Incorrect gear selection depending on failure or mode and manual lever position. Shift errors may also be due to other internal transmission concerns (stuck valves, damaged friction material). Engine rpm could be higher or lower than expected.	REFER to the Solenoid On/Off Charts. Go To Pinpoint Test A .
P0732**	SSA, SSB, SSC or internal parts	2nd gear error	No 2nd gear.	Incorrect gear selection depending on failure or mode and manual lever position. Shift errors may also be due to other internal transmission concerns (stuck valves, damaged friction material). Engine rpm could be higher or lower than expected.	REFER to the Solenoid On/Off Charts. Go To Pinpoint Test A .
P0733**	SSA, SSB, SSC or internal parts	3rd gear error	No 3rd gear.	Incorrect gear selection depending on failure or mode	REFER to the Solenoid On/Off Charts. Go To Pinpoint Test A .

				and manual lever position. Shift errors may also be due to other internal transmission concerns (stuck valves, damaged friction material). Engine rpm could be higher or lower than expected.	
P0734**	SSA, SSB, SSC or internal parts	4th gear error	No 4th gear.	Incorrect gear selection depending on failure or mode and manual lever position. Shift errors may also be due to other internal transmission concerns (stuck valves, damaged friction material). Engine rpm could be higher or lower than expected.	REFER to the Solenoid On/Off Charts. Go To Pinpoint Test A .
P0735	SSA, SSB, SSC, SSD or internal parts	5th gear error	No 5th gear.	Incorrect gear selection depending on failure or mode and manual lever position. Shift errors may also be due to other internal transmission concerns (stuck valves, damaged friction material etc.). Engine rpm could be higher or lower than expected.	REFER to the Solenoid On/Off Chart. Go To Pinpoint Test A .
P1744**	TCC	TCC slippage detected	The PCM picked up an excessive amount of TCC slippage during normal vehicle operation.	TCC slippage/erratic or no torque converter clutch operation.	REFER to the Diagnosis by Symptom Index in Diagnosis By Symptom .
P0743*	TCC	TCC solenoid circuit failure during on-board diagnostic	TCC solenoid circuit fails to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board	Open or short to battery power: harsh shifts or engagements, engine rpm higher than expected. Short to ground: vehicle stall when in drive gear at	Go To Pinpoint Test A .

			diagnostics.	idle, harsh shifts or engagements, of engine rpm lower than expected. Will turn on MIL.	
P0962**	PCA	PCA solenoid circuit failure, short to ground	Voltage through PCA solenoid is checked. An error will be noted if tolerance is exceeded.	Short circuit causes minimum PCA pressure (minimum capacity) and limits engine torque (alternate firm). Slips in gear and third gear incorrect. May turn on MIL	Go To Pinpoint Test D .
P0750*	SSA	SSA solenoid circuit failure	SSA circuit failed to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostic.	No fourth or fifth gear (short) or no first gear (open). May turn on MIL.	Go To Pinpoint Test A .
P0753*	SSA	SSA solenoid circuit failure	SSA circuit failed to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostic.	No fourth or fifth gear (short) or no first gear (open). Will flash TCIL.	Go To Pinpoint Test A .
P0755*	SSB	SSB solenoid circuit failure	SSB circuit fails to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostic.	No first gear (short) or no third gear (open). Will flash MIL.	Go To Pinpoint Test A .
P0758*	SSB	SSB solenoid circuit failure	SSB circuit fails to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostic.	No first gear (short) or no third gear (open). Will flash TCIL.	Go To Pinpoint Test A .
P0760*	SSC	SSC solenoid circuit failure	SSC circuit failed to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure	Open or short to battery power: second and fifth gear ratio incorrect. Short to ground: first gear ratio incorrect or no	Go To Pinpoint Test A .

			during on-board diagnostic.	gear ratio errors. Will turn on MIL.	
P0763*	SSC	SSC solenoid circuit failure	SSC circuit failed to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostic.	Open or short to battery power: second and fifth gear ratio incorrect. Short to ground: first gear ratio incorrect or no gear ratio errors. Will turn on MIL.	Go To Pinpoint Test A .
P0765	SSD	SSD solenoid circuit failure	SSD circuit failed to provide voltage drop across solenoid. Circuit open, shorted or PCM driver circuit failure during on-board diagnostics.	No engine braking in manual gears. Will flash MIL.	Go To Pinpoint Test A .
P0768	SSD	SSD solenoid circuit failure	SSD circuit failed to provide voltage drop across solenoid. Circuit open, shorted or PCM driver circuit failure during on-board diagnostics.	No engine braking in manual gears. Will flash TCIL.	Go To Pinpoint Test A .
P0966	PCB	PCB solenoid circuit failure, short to ground	Voltage through PCB solenoid is checked. An error will be noted if tolerance is exceeded.	Short circuit causes minimum PCB pressure (minimum capacity) and limits engine torque (alternate firm). Zero PCB no second and fifth gear.	Go To Pinpoint Test D .
P0967	PCB	PCB solenoid intermittent short to ground or to battery power	Voltage through PCB solenoid is checked. An error will be noted if tolerance is exceeded.	Short circuit causes minimum PCB pressure (minimum capacity) and limits engine torque (alternate firm). Zero PCB no second and fifth gear.	Go To Pinpoint Test D .
P0791	Intermediate shaft speed sensor	Intermediate shaft speed sensor signal failure.	PCM has detected a loss of the Intermediate shaft speed sensor signal.	Possible harsh shifts.	Go To Pinpoint Test E .
P0794	Intermediate shaft speed	Intermediate shaft speed	PCM has detected an intermittent	Possible harsh shifts.	Go To Pinpoint Test E .

	sensor	sensor signal intermittent	Intermediate shaft speed sensor signal.		
P0970	PCC	PCC solenoid circuit failure, short to ground	Voltage through PCC solenoid is checked. An error will be noted if tolerance is exceeded.	Incorrect gear ratio in fourth and fifth gear.	Go To Pinpoint Test D .
P0968	PCC	PCC solenoid circuit open	Voltage through PCC solenoid is checked. Error is noted if tolerance is exceeded.	Open circuit causes maximum PCC pressure, harsh engagements and shifts.	Go To Pinpoint Test D .
P0971	PCC	PCC solenoid intermittent short to ground	Voltage through PCC solenoid is checked. An error will be noted if tolerance is exceeded.	Short to battery power. Harsh shifts or engagements. A short to ground causes incorrect gear ratio in fourth and fifth gear.	Go To Pinpoint Test D .
P0815	SST +/-	SST +/- circuit input signal failed.	PCM has detected an incorrect voltage SST input.	May not be able to shift in manual mode.	Go To Pinpoint Test K .
P1124	TP	TP voltage high/low for on-board diagnostic.	TP was not in the correct position for on-board diagnostic.	Rerun at appropriate throttle position per application.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1460	A/C	A/C clutch cycling pressure switch error	A/C or defrost ON condition may result from A/C clutch being ON during on-board diagnostic.	DTC set during on-board diagnostic rerun with A/C OFF. Failed ON EPC pressure slightly low with A/C OFF.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1636	SSx	SSx ISIG communication error	PCM has detected an error with the ISIG chip.		INSTALL a new PCM.
P1700	TRANS	Transmission indeterminate failure	Internal component failure. Direct one-way clutch failure.	Failed a neutral condition. FMEM becomes active engine rpm limited to 4000 rpms. No 1st, 3rd, or 4th gear in automatic mode. Other DTCs that may set P1700: P0745, P1747, P1760, P1714, P1715, P0750, P0755.	If other solenoid DTCs are present, diagnose and repair them first. CLEAR DTCs and drive vehicle. If P1700 returns, disassemble transmission and inspect the direct one-way clutch. Repair as required. CLEAR DTC. Drive vehicle and verify repair.

P1702	Digital TR	Digital TR signal intermittent, code P0705, P0708 are set.	See P0705, P0708 conditions.	See P0705, P0708 symptoms.	Go To Pinpoint Test C .
P1703	BPP	Brake not actuated during on-board diagnostic KOER	Brake not cycled during KOER.	Failed ON or not connected torque converter clutch will not engage at less than 1/3 throttle. Failed OFF or not connected torque converter clutch will not disengage when brake is applied.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1703	BPP	BPP switch circuit failed	Brake ON circuit failure during KOEO.	Failed ON or not connected torque converter clutch will not engage at less than 1/3 throttle. Failed OFF or not connected torque converter clutch will not disengage when brake is applied.	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1704	Digital TR	Digital TR not in P or N positions during KOEO/KOER.	Digital TR sensor or shift cable incorrectly adjusted or digital TR circuit failure.	DTC is set.	Go To Pinpoint Test C .
P1705	Digital TR	Digital TR not in PARK or NEUTRAL during KOEO/KOER.	KOEO/KOER not run in PARK or NEUTRAL, or digital TR circuit failure.	DTC is set.	RERUN KOEO/KOER in PARK or NEUTRAL or Go To Pinpoint Test C .
P1711	TFT	TFT out of on-board diagnostic range	Transmission not at operating temperature during on-board diagnostic.	DTC set vehicle cold or overheated.	Warm or cool vehicle to normal operating temperature. Go To Pinpoint Test B .
P0711	TFT	No change in TFT	PCM has detected no TFT change during operation.	DTC is set. May flash TCIL.	Go To Pinpoint Test B .
P1714	SSA	SSA inoperative	Mechanical failure of the solenoid detected.	No fourth or fifth gear (short) or no first gear (open).	Go To Pinpoint Test F .
P1715	SSB	SSB inoperative	Mechanical failure of the solenoid detected.	No first gear (short) or no third gear (open)	Go To Pinpoint Test F .
P1716	SSC	SSC inoperative	Mechanical failure of the solenoid detected.	No first gear (short), or not second and fifth gear (open).	Go To Pinpoint Test F .
P1717	SSD	SSD inoperative			Go To Pinpoint Test F .

			Mechanical failure of the solenoid detected.	No engine braking (short).	
P1740**	TCC	TCC solenoid inoperative	TCC not commanded. Mechanical failure of the solenoid detected.	Stuck OFF: Harsh shifts or engagements, engine rpm higher than expected. Stuck ON: Vehicle stall when in drive gear at idle, harsh shifts or engagements, engine rpm lower than expected. Will turn on MIL.	Go To Pinpoint Test A and Go To Pinpoint Test D .
P0740*	TCC	TCC solenoid circuit failure during on-board diagnostic	TCC solenoid circuit fails to provide voltage drop across solenoid. Circuit open or shorted or PCM driver failure during on-board diagnostics. May flash TCIL.	Open or short to battery power: harsh shifts or engagements, engine rpm higher than expected. Short to ground: Vehicle stall when in drive gear at idle, harsh shifts or engagements, engine rpm lower than expected. May turn on MIL.	Go To Pinpoint Test A .
P0745	PCA	Incorrect shift pattern indicating mechanical or hydraulic failure of the transmission.		PCA functional fault low pressure. Will turn on MIL.	Go To Pinpoint Test D .
P0748	PCA	PCA solenoid inoperative	Mechanical failure of the solenoid detected.	Possible slip in gear and/or third gear ratio. Will turn on MIL.	Go To Pinpoint Test D .
P0960	PCA	PCA solenoid circuit open	Voltage through PCA solenoid is checked. Error is noted if tolerance is exceeded.	Open circuit causes maximum PCA pressure, harsh engagements and shifts.	Go To Pinpoint Test D .
P0963	PCA	PCA solenoid intermittent short to ground or battery power	Voltage through PCA solenoid is checked. An error will be noted if tolerance is exceeded.	Short to ground causes no third gear (minimum capacity). Short to battery power causes possible harsh shifts or engagements.	Go To Pinpoint Test D .
P0775	PCB	Incorrect shift pattern indicating mechanical or		PCB functional fault low pressure. Will turn on MIL.	Go To Pinpoint Test D .

		hydraulic failure of the transmission.			
P0778	PCB	PCB solenoid inoperative	Mechanical failure of the solenoid detected.	No second and fifth gear. Will turn on MIL.	Go To Pinpoint Test D .
P0795	PCC	Incorrect shift pattern indicating mechanical or hydraulic failure of the transmission.		PCC functional fault low pressure. Will turn on MIL.	Go To Pinpoint Test D .
P0798	PCC	PCC solenoid inoperative	Mechanical failure of the solenoid detected.	Incorrect gear ratio in fourth and fifth gear. Will turn on MIL.	Go To Pinpoint Test D .
P1780	TCS	TCS input incorrect per selected position	TCS voltage incorrect.	No overdrive cancel when range selector is moved	Go To Pinpoint Test H .
P1783	TFT	Transmission overtemp condition indicated	Transmission fluid temperature exceeded 127°C (270°F).	Increase in control pressure.	Go To Pinpoint Test B .
P0964	PCB	PCB solenoid circuit open	Voltage through PCB solenoid is checked. Error is noted if tolerance is exceeded.	Open circuit causes maximum PCB pressure, harsh engagements and shifts.	Go To Pinpoint Test D .

Rotunda Transmission Tester

The Rotunda Transmission Tester is used to diagnose electronically controlled transmissions and is used in conjunction with the pinpoint tests. The tests should be carried out in order. Installing the Rotunda Transmission Tester allows separation of the vehicle electronics from transmission electronics. Refer to the Rotunda Transmission Tester manual for these tests.

- Digital Transmission Range (TR) Sensor Testing
- Resistance/Continuity Test
- Switch Test - Park/Neutral, Backup Lamp, and Optional Circuits

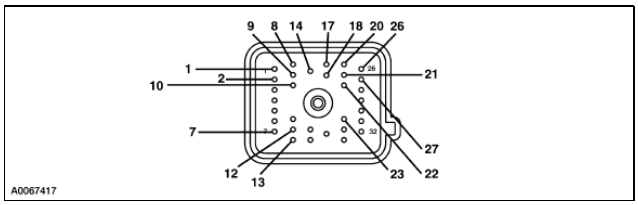
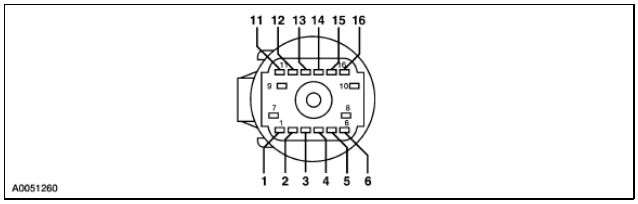
Connector Reference and Terminal Readings

Powertrain Control Module (PCM) C175b



Pin Number	Circuit Description
1	Shift Solenoid A (SSA)
2	Shift Solenoid B (SSB)
7	Pressure Control Solenoid A (PC A)
8	Shift Solenoid C (SSC)
9	Digital Transmission Range sensor TR3A to (PCM)
10	Digital Transmission Range sensor TR4 to (PCM)
12	Pressure Control Solenoid C (PC C)
13	Pressure Control Solenoid B (PC B)
14	Signal return
17	Shift Solenoid D (SSD)
18	Digital Transmission Range sensor TR2 to (PCM)
20	Torque Converter Clutch (TCC) Solenoid
21	Intermediate shaft speed sensor signal input
22	Digital Transmission Range sensor TR1 to (PCM)
23	Transmission Fluid Temperature (TFT) Sensor
26	Output Shaft Speed (OSS) sensor signal input
27	Turbine Shaft Speed (TSS) sensor signal input

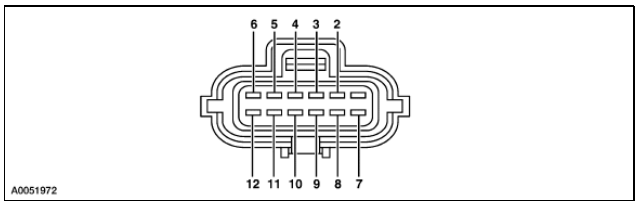
Transmission Solenoid Body C199



Pin Number	Circuit Description
1	Pressure control (PCB) solenoid B
2	Transmission fluid temperature (TFT) sensor input

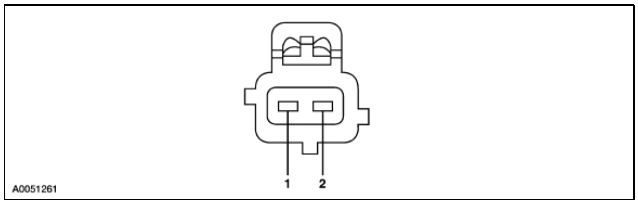
3	Voltage supplied in start and run (overload protected), solenoid power
4	Pressure control (PCC) solenoid C
5	Shift solenoid D (SSD)
6	Shift solenoid C (SSC)
11	Pressure control (PCA) solenoid A
12	Signal return
14	Torque converter clutch (TCC) solenoid
15	Shift solenoid B (SSB)
16	Shift solenoid A (SSA)

Digital Transmission Range (TR) Sensor C167



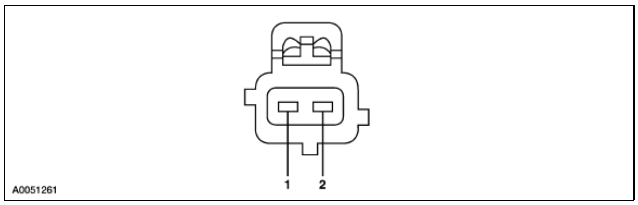
Pin Number	Circuit Description
2	Signal return
3	Digital transmission range (TR) sensor TR3A
4	Digital transmission range (TR) sensor TR1
5	Digital transmission range (TR) sensor TR2
6	Digital transmission range (TR) sensor TR4
7	Ground
8	Neutral switch sense input
9	Fused power feed
10	Starter solenoid central power
11	Reverse lamps
12	Starter relay (overload protected)

Turbine Shaft Speed (TSS) Sensor C143



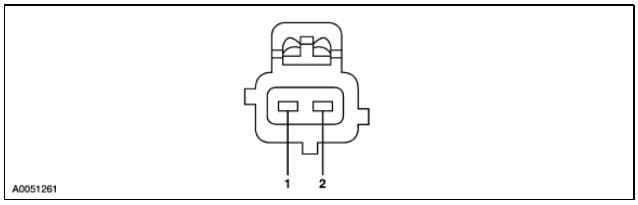
Pin Number	Circuit Description
1	Turbine shaft speed (TSS) sensor signal
2	Signal return

Output Shaft Speed (OSS) Sensor C193



Pin Number	Circuit Description
1	Output shaft speed (OSS) sensor signal
2	Signal return

Intermediate Shaft Speed Sensor Harness Connector



Pin Number	Circuit Description
1	Intermediate shaft speed sensor signal
2	Signal return

Digital Transmission Range (TR) Sensor Diagnosis Chart

Selector Position	Base Shift Lever Indicator	Select Shift Lever Indicator	PID: TR_D				PID: TR_V (volts)
			TR4	TR3A	TR2	TR1	TR3A (PCM pin 64 to sigrtn)
PARK	P	P	0	0	0	0	0.0 Volts
REVERSE	R	R	1	1	0	0	1.3 - 1.8 Volts
NEUTRAL	N	N	0	1	1	0	1.3 - 1.8 Volts
OVERDRIVE	D5/D4	D5	1	1	1	1	1.3 - 1.8 Volts
Manual 3	3	D4	1	0	1	0	0.0 Volts
Manual 2	2		1	0	0	1	0.0 Volts
Manual 1	Man 1		0	0	1	1	0.0 Volts

A. TR_V is the voltage at the PCM pin 64 (TR3A Circuit) to signal return.
B. TR_D: 1= Open digital TR switch, 0= Closed digital TR switch.
C. EEC-V Control System Breakout Box Readings: Taken from PCM signal pins for TR1, TR2, TR3A, TR4 to signal return.
- **Voltages for TR1, TR2, TR4:**
- 0 = 0.0 volts.
- 1 = 9.0 - 14.0 volts.
- **Voltage for TR3A:**

- 0 = 0.0 volts.
- 1 = 1.3 - 1.8 volts.

Wiggle Test Information for Open/Shorts

A. TR4, TR3A, TR2, and TR1 are all closed in PARK. PARK is a good position to check for intermittent open circuits (with scan tool monitoring TR_D).

B. TR4, TR3A, TR2, and TR1 are all open in OVERDRIVE, so OVERDRIVE is a good position to check for shorts to ground. To determine the shorted components while observing TR_D, unplug the TR and see if the short goes away. If the short is still present unplug the transmission harness and see if the short goes away. If the short is still present, then the short is in the PCM or vehicle harness. Remove the suspect circuit(s) wire terminal from the PCM connector. If the short is still present, then the PCM has an internal failure, otherwise the failure is in the vehicle harness.

Shift Solenoid Pre-Diagnosis

Any time an electrical connector or solenoid body is disconnected, inspect the connector for terminal condition, corrosion and contamination. Also inspect the connector seal for damage. Clean, repair or install new as necessary.

Use the following shift solenoid operation information when carrying out Pinpoint Test A.

Solenoid Operation Chart

Base Gearshift Selector Position	PCM Comm- anded Gear	5R55S Solenoid States

Pinpoint Tests

PINPOINT TEST A: SHIFT AND TORQUE CONVERTER CLUTCH SOLENOIDS

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td colspan="2">NOTE: Refer to the Transmission Vehicle Harness Connector illustration preceding these pinpoint tests.</td></tr>
<tr><td colspan="2">NOTE: Read and record all DTCs. All Digital TR Sensor and VSS DTCs must be repaired before entering Output State Control (OSC).</td></tr>
<tr><td>A1 ELECTRONIC DIAGNOSTICS</td><td></td></tr>
<tr><td>• Key in OFF position.
• Select PARK.
• Check to make sure the transmission harness connector is fully seated, terminals are fully engaged in connector and in good condition before proceeding.
• Connect the diagnostic tool. NGS Tester
• Key in ON position.
• Enter the following diagnostic mode on the diagnostic tool: Diagnostic Data Link.
• Enter the following diagnostic mode on the diagnostic tool: PCM.
• Enter the following diagnostic mode on the diagnostic tool: Active Command Modes.
• Enter the following diagnostic mode on the diagnostic tool: Output State Control (OSC).
• Enter the following diagnostic mode on the diagnostic tool: Trans-Bench Mode.
• Does vehicle enter Trans-Bench Mode?</td><td>Yes
REMAIN in Trans-Bench Mode. GO to A2 .

No
REPEAT procedure to enter Trans-Bench Mode. If vehicle did not enter Trans-Bench Mode, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis of PCM or NGS.</td></tr>
<tr><td>A2 WIGGLE TEST</td><td></td></tr>
<tr><td>• Remain in Trans-Bench Mode.
• Select PIDs to be monitored.

<table><tr><th>PID Command</th><th>PID Actual</th></tr><tr><td>SSA</td><td>SSA</td></tr><tr><td>SSB</td><td>SSB</td></tr><tr><td>SSC</td><td>SSC</td></tr><tr><td>SSD</td><td>SSD</td></tr><tr><td>TCC</td><td>TCC</td></tr></table>
• Select "ON" to turn suspect solenoid on.
• Press "SEND".
• Wiggle all wiring and connectors to the transmission. Monitor the solenoid state for changes.</td><td>Yes
REPAIR the circuit. TEST the system for normal operation.

No
GO to A3 .</td></tr>
</table>

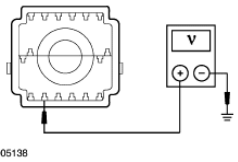
• Select "OFF" to turn solenoid off. • Press "SEND". • **Does the suspect solenoid(s) fault state change?**	
A3 SOLENOID FUNCTIONAL CHECK	
• Monitor each solenoid state. • Turn each solenoid ON and OFF. • **Does the solenoid turn ON and OFF when commanded and can solenoid activation be heard?**	**Yes** GO to A4 . **No** GO to A5 .
A4 OSC TRANS-DRIVE MODE (GEAR OR TCC)	
• Carry out OSC Trans-Drive Mode. • Select GEAR for shift solenoids or follow procedures for GEAR as listed in this section. • Select TCC for Torque Converter Clutch Solenoid. Follow procedures of TCC in Drive Mode as listed in this section. • **Does the transmission upshift and downshift or torque converter engage/disengage when commanded?**	**Yes** CLEAR all DTCs. ROAD TEST to verify if concern is still present. If concern is still present, REFER to Diagnosis By Symptom to diagnose shift or torque converter concern. **No** GO to A5 .
A5 CHECK FOR BATTERY VOLTAGE	
• Disconnect: Transmission Vehicle Harness Connector. • Visually inspect all wires and connectors for damage. • Key in ON position. • Measure the voltage on pin 3 harness side and ground.  A0005135 • **Is the voltage greater than 10 volts?**	**Yes** GO to A6 . **No** REPAIR the circuit. TEST for normal operation.
A6 ELECTRICAL SIGNAL CHECK	
• Leave positive lead connected to pin 3 and connect negative lead to pin 5, 6, 14, 15 and 16.	**Yes** GO to A7 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0037986 • Enter the following diagnostic mode on the diagnostic tool: Trans-Bench Mode. • Select Parameter SSA, SSB, SSC, SSD or TCC. • Select "ON". • Press "SEND". • Measure the voltage while cycling the solenoids ON and OFF. • Select "OFF", press "SEND". • **Does the voltage change?**	
A7 CHECK SOLENOID RESISTANCE AT SOLENOID	
• Measure the resistance between pin 3 and pin 5, 6, 14, 15, and 16 solenoid side. **Solenoid / Resistance (ohms)** SSA 16-45 SSB 16-45 SSC 16-45 SSD 16-45 TCC 9-16  A0039133 • **Is the resistance within specification?**	**Yes** GO to A8 . **No** INSTALL a new solenoid body assembly. TEST the system for normal operation.
A8 CHECK SOLENOID FOR SHORT TO GROUND	
• Measure the resistance between pin 3 and pin 5, 6, 14, 15, and 16 solenoid side and ground.  A0005137	**Yes** INSTALL a new solenoid body assembly. **No** REFER to Diagnosis By Symptom in this section for diagnosis of shift or torque converter concerns.

• **Is the resistance less than 5 ohms?**	

PINPOINT TEST B: TRANSMISSION FLUID TEMPERATURE (TFT) SENSOR

Test Step	Result / Action to Take
NOTE: Refer to the Transmission Vehicle Harness Connector illustration preceding these pinpoint tests.	
B1 ELECTRONIC DIAGNOSTICS	
• Key in OFF position. • Select PARK. • Check to make sure the transmission harness connector is fully seated, terminals are fully engaged in connector and in good condition before proceeding. • Connect the diagnostic tool. NGS Tester • Key in ON position. • Select Diagnostic Data Link. • Select PCM. • Select PID/Data Monitor and Record. • Enter the following diagnostic mode on the diagnostic tool: PIDs; TFT, TFTV. • **Does the vehicle enter PID/Data Monitor and Record?**	**Yes** REMAIN in PID/Data Control. GO to B2 . **No** REPEAT procedure to enter PID. If vehicle did not enter PID, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis of PCM and NGS.
B2 WARM-UP/COOL-DOWN CYCLE	
• While monitoring the TFT PIDs, carry out the following test: If transmission is cold, run transmission to warm it up. If transmission is warm, allow transmission to cool down. • **Do the TFT PIDs increase as the transmission is warmed up or decrease as the transmission is cooled or does the TFT or TFTV drop in and out of range?**	**Yes** If the TFT PIDs increase as the transmission is warmed or decrease as the transmission is cooled, CLEAR all DTCs. ROAD TEST to verify if concern is still present. If concern is still present, REFER to Diagnosis By Symptom in this section to diagnose transmission overheating. If the TFT or TFTV drop in and out of range, INSPECT for intermittent concern in the internal/external harness, sensor or connector. **No** GO to B3 .
B3 ELECTRICAL SIGNAL CHECK	
• Disconnect: Transmission Harness Connector. • Visually inspect all wires and connectors for damage. • Measure the voltage between pin 2 harness side and ground.	**Yes** GO to B4 . **No** REPAIR the circuit. TEST the system for normal operation.



- **Is the voltage between 4.5 and 5.0 volts?**

B4 CHECK RESISTANCE OF TFT SENSOR	
• Measure the resistance between pin 2 and 12 at the solenoid body connector.  • Record the resistance. • Resistance should be approximately in the following ranges: Transmission Fluid Temperature °C / °F / Resistance (Ohms) -40 to -20 / -40 to -4 / 967K - 284K -19 to -1 / -3 - 31 / 284K - 100K 0 - 20 / 32 - 68 / 100K - 37K 21 - 40 / 69 - 104 / 37K - 16K 41 - 70 / 105 - 158 / 16K - 5K 71 - 90 / 159 - 194 / 5K - 2.7K 91 - 110 / 195 - 230 / 2.7K - 1.5K 111 - 130 / 231 - 266 / 1.5K - 0.8K 131 - 150 / 267 - 302 / 0.8K - 0.54K • **Is the resistance in the range?**	**Yes** REFER to Diagnosis By Symptom in this section to diagnose an overheating concern. **No** INSTALL a new solenoid body assembly.

PINPOINT TEST C: DIGITAL TRANSMISSION RANGE (TR) SENSOR

Test Step	Result / Action to Take
NOTE: Refer to the Digital Transmission Range (TR) Sensor Connector illustration and Digital Transmission Range TR) Sensor Diagnosis Chart preceding these pinpoint tests.	
C1 VERIFY DIAGNOSTIC TROUBLE CODES	
• Key in OFF position. • Select PARK. • Carry out on-board diagnostic test.	**Yes** GO to C4 . **No**

• **Are only DTC codes P0705, P0708 present?**	GO to C2 .
C2 VERIFY DIGITAL TRANSMISSION RANGE SENSOR ALIGNMENT	
• Key in OFF position. • Select PARK. • Check to make sure the digital TR sensor harness connector is fully seated, terminals are fully engaged in connector and in good condition before proceeding. • Apply the parking brake. • Select NEUTRAL. • Disconnect the shift cable/linkage from the manual lever. • Verify that the TR Sensor Alignment Gauge fits in the appropriate slots. • **Is the digital TR sensor correctly adjusted?**	**Yes** GO to C3 . **No** ADJUST the digital TR sensor; REFER to Digital Transmission Range (TR) Sensor in this section. PLACE transmission range selector lever into PARK and CLEAR DTCs. RERUN OBD Tests. GO to C3 .
C3 VERIFY SHIFT CABLE/LINKAGE ADJUSTMENT	
• Place the range selector in D5. • Connect the shift cable/linkage. • Verify that the shift cable/linkage is correctly adjusted. Refer to Selector Lever Cable Adjustment in this section. • **Is the shift cable/linkage is correctly adjusted?**	**Yes** GO to C4 . **No** ADJUST the shift cable/linkage. REFER to Selector Lever Cable Adjustment in this section. GO to C4 .
C4 CHECK ELECTRICAL SIGNAL OPERATION	
• Select PARK. • Disconnect: Digital TR Sensor. • ⚠ **CAUTION: Do not pry on connector. This will damage the connector and result in a transmission concern.** • Inspect both ends of the connector for damage or pushed out pins, corrosion, loose wires and missing or damaged seals. • **Is there damage to the connector, pins or harness?**	**Yes** REPAIR as necessary. CLEAR DTCs and RERUN OBD Tests. **No** If diagnosing a DTC, GO to C5 . If diagnosing a starting concern or a backup lamp concern, GO to C10 .
C5 CHECK ELECTRICAL SYSTEM OPERATION (DIGITAL TR AND PCM)	
• Key in OFF position. • Connect the diagnostic tool. NGS Tester • Connect: Digital TR Sensor. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: TR PIDS TR_D, TR_V. • Move transmission range selector lever into each gear and stop. • Observe the PIDs, TR_D, and TR_V (vehicle-dependent) while wiggling harness, tapping on sensor, or driving the vehicle. Use PIDs TR_D for DTCs P0705, P1704, and P1705. Use PIDs TR_V for DTC P0708. • Compare the PIDs to the Digital Transmission Range (TR) Sensor Diagnosis Chart.	**Yes** The problem is not in the digital TR sensor system. REFER to Diagnosis By Symptom in this section for further diagnosis. **No** If TR_D changes when wiggling harness, tapping on the sensor or driving the vehicle, the problem may be intermittent. GO to C6 .

• **Do the PIDs TR_D and TR_V match the Digital Transmission Range (TR) Sensor Diagnosis chart, and does the TR_D PID remain steady when the harness is wiggled, the sensor is tapped on, or the vehicle driven?**	
C6 CHECK DIGITAL TRANSMISSION RANGE SENSOR OPERATION	
• Disconnect: Digital TR Sensor. • Connect: TR-E Cable to Transmission Tester. • Connect: TR-E Cable to Digital TR Sensor. • Place the DIGITAL TR Overlay onto Transmission Tester. • Carry out SENSOR Test as instructed on the digital TR Overlay. • **Does the status lamp on the tester TRS-E cable match the selected gear positions?**	**Yes** Concern is not in the digital TR sensor. GO to C7 . **No** INSTALL a new digital TR sensor and ADJUST. REFER to Digital Transmission Range (TR) Sensor in this section. CLEAR DTCs and RERUN OBD Tests.
C7 CHECK PCM HARNESS CIRCUITS FOR OPENS	
• Key in OFF position. • Disconnect: 150 Pin PTEC Module Connector "B". • Inspect for damaged or pushed out pins, corrosion or loose wires. • Disconnect: Digital TR Sensor. • ⚠ **CAUTION: Do not pry the connector. This will damage the connector and result in a transmission concern.** • Measure the resistance between pin 2 harness side and signal return pin 14 harness side.  A0067418 • Measure the resistance between pin 22 and pin 4 harness side.  A0003752 • Measure the resistance between pin 18 and pin 5 harness side.	**Yes** GO to C8 . **No** REPAIR the circuits. TEST the system for normal operation.

 A0005029 • Measure the resistance between pin 10 and pin 6 harness side.  A0005030 • Measure the resistance between pin 9 and pin 3 harness side.  A0005031 • **Are the resistances less than 5 ohms?**	
C8 CHECK PCM HARNESS CIRCUITS FOR SHORT TO GROUND OR POWER	
• Measure the resistance between pin 14 and pin 10 harness side and ground; and pin 12 harness side.  A0067419 • Measure the resistance between pin 22 harness side and ground; and pin 14 harness side and ground.  A0067420 • Measure the resistance between pin 18 harness side and ground; and pin 14 harness side and ground.	**Yes** GO to C9 . **No** REPAIR the circuits. TEST the system for normal operation. CLEAR DTCs. RERUN OBD Tests.

 A0067421 • Measure the resistance between pin 10 harness side and ground; and pin 14 harness side and ground.  A0067422 • Measure the resistance between pin 9 harness side and ground; and pin 14 harness side and ground.  A0067423 • **Are the resistances greater than 10,000 ohms?**	
C9 CHECK FOR SHORT BETWEEN TR/PCM INPUT SIGNAL CIRCUITS	
• Measure the resistance between pin 9 harness side and pin 22; pin 18; pin 10 harness side.  A0036188 • Measure the resistance between pin 22 harness side and pin 9; pin 18; pin 10 harness side.  A0005032 • Measure the resistance between pin 18 harness side and pin 22; pin 9; pin 10 harness side.	**Yes** INSTALL a new PCM. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 A0005033 • Measure the resistance between pin 10 harness side and pin 22; pin 18; pin 9 harness side.  A0005034 • **Are the resistances greater than 10,000 ohms?**	
C10 CHECK THE NON-PCM INTERNAL CIRCUITS OF SENSOR	
• Connect: TRS-E Cable to Transmission. • Connect: TRS-E Cable to Digital TR Sensor. • Place the Digital TR Overlay onto Transmission Tester. • Carry out Switch Test as instructed on the digital TR Overlay. • **Does the status lamp on the tester indicate RED for the correct gear position?**	**Yes** Concern is not in the digital TR sensor. For start system concerns, REFER to Section 303-04A or Section 303-04B . For backup lamp concerns, REFER to Section 417-01 . **No** INSTALL a new digital TR sensor and ADJUST; REFER to Digital Transmission Range (TR) Sensor in this section. CLEAR DTCs and RERUN OBD Tests.

PINPOINT TEST D: PRESSURE CONTROL (PC) SOLENOIDS (PCA, PCB, PCC)

Test Step	Result / Action to Take
NOTE: Refer to the Transmission Vehicle Harness Connector illustration preceding these pinpoint tests.	
NOTE: Read and record all DTCs. All digital TR Sensor and VSS DTCs must be repaired before entering Output State Control (OSC).	
D1 ELECTRONIC DIAGNOSTICS	
• Key in OFF position. • Select PARK. • Check to make sure the transmission harness connector is fully seated, terminals are fully engaged in the connector and in good condition before proceeding. • Install 300 psi pressure gauges into Line and PC C tap. • Connect the diagnostic tool. NGS Tester • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Diagnostic Data Link.	**Yes** REMAIN in Trans-Bench Mode. GO to D2 . **No** REPEAT procedure to enter Trans-Bench Mode. If vehicle did not enter OSC, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis of PCM or NGS.

• Enter the following diagnostic mode on the diagnostic tool: PCM. • Enter the following diagnostic mode on the diagnostic tool: Active Command Modes. • Enter the following diagnostic mode on the diagnostic tool: Output State Control (OSC). • Enter the following diagnostic mode on the diagnostic tool: Trans-Bench Mode. • **Does the vehicle enter the Trans-Bench Mode?**	
D2 SOLENOID FUNCTIONAL TEST	
• Monitor pressure gauges. • Enter the following diagnostic mode on the diagnostic tool: Parameter; PCx. • **NOTE:** Make sure that the solenoids not being tested are off or at zero. • Select PC A, PC B, or PC C. • Select value - 15, 30, 45, 60, 70 or 90 psi. • Press "SEND". • Select another value "0-90 psi". • Press "SEND". • Enter the following diagnostic mode on the diagnostic tool: XXX. • Press "SEND". • **For PC A and PC B: Does the pressure reading for A or B follow the commanded pressure, (actual A and B pressures will be higher than the commanded pressure)? For PC C: Does the pressure reading match the commanded pressure?"**	**Yes** CLEAR DTCs. **No** GO to D3 .
D3 CHECK FOR BATTERY VOLTAGE	
• Disconnect: Transmission Harness Connector. • Visually inspect all wires and connectors for damage. • Key in ON position. • Measure the voltage between pin 3 harness side and ground.  A0005135 • **Is the voltage greater than 10 volts?**	**Yes** GO to D4 . **No** REPAIR the circuit. TEST the system for normal operation.
D4 ELECTRICAL SIGNAL CHECK	
• Leave positive lead connected pin 3 and connect negative lead to pins 1, 4 and 11 harness side.	**Yes** GO to D5 . **No** CHECK for open or short circuit in harness or PCM.

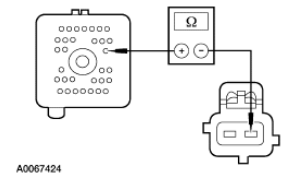
 A0035164 • Activate solenoids (ON and OFF) while monitoring the voltage reading. • Enter the following diagnostic mode on the diagnostic tool: Trans-Bench Mode. • Enter the following diagnostic mode on the diagnostic tool: Parameter; PCx. • Select a value "0-90 psi". • Press "SEND". • Select another value "0-90 psi". • Press "SEND". • Enter the following diagnostic mode on the diagnostic tool: XXX. • Press "SEND". • **Does the voltage and solenoid state change?**	
D5 CHECK SOLENOID RESISTANCE AT SOLENOID	
• Measure and record the resistance between PC solenoid pin 3 and pins 1, 4, and 11. Resistance should be between 3.3 and 7.5 ohms.  A0005068 • **Is the resistance within specifications?**	**Yes** GO to D6 . **No** INSTALL a new solenoid body assembly.
D6 CHECK SOLENOID FOR SHORT TO GROUND	
• Measure and record the resistance between the PC solenoid pins 1, 4, 11, and ground solenoid side.  A0037992 • **Is the resistance less than 10,000 ohms?**	**Yes** INSTALL a new solenoid body assembly. TEST the system for normal operation. **No** REFER to Diagnosis By Symptom in this section for diagnosis of pressure concerns. TEST the system for normal operation.

PINPOINT TEST E: TURBINE SHAFT SPEED (TSS), INTERMEDIATE SHAFT SPEED, AND OUTPUT SHAFT SPEED (OSS) SENSORS

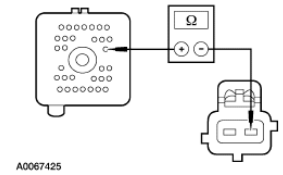
Test Step	Result / Action to Take

NOTE: Refer to the turbine shaft speed (TSS), intermediate shaft speed, and output shaft speed (OSS) sensor connector illustrations preceding these pinpoint tests.

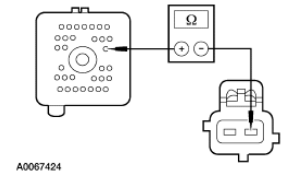
E1 ELECTRONIC DIAGNOSTICS	
• Check to make sure the transmission harness connectors are fully seated, terminals are fully engaged in connector and in good condition before proceeding. • Connect the diagnostic tool. NGS Tester • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Diagnostic Data Link. • Enter the following diagnostic mode on the diagnostic tool: PCM. • Select PID/Data Monitor and Record. • Select the following PIDs: TSS, intermediate shaft speed or OSS. • **Does vehicle enter PID/Data Monitor and Record?**	**Yes** REMAIN in PID/Data. GO to E2 . **No** REPEAT procedure to ENTER PID. If vehicle did not enter PID, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis of PCM or NGS.
E2 DRIVE CYCLE TEST	
• While monitoring the appropriate sensor PID, drive the vehicle so that the transmission upshifts and downshifts through all gears. • **Does the TSS, intermediate shaft speed, or OSS Speed PID increase and decrease with engine and vehicle speed?**	**Yes** GO to E3 . **No** If the TSS, intermediate shaft speed, or OSS Speed PID does not increase and decrease with engine and vehicle speed, INSPECT for open or short in vehicle harness, sensor, a PCM concern, or internal hardware concern. GO to E4 .
E3 DRIVE CYCLE TEST ERRATIC	
• While monitoring the appropriate sensor PID, drive the vehicle so that the transmission upshifts and downshifts through all gears. • **Is the TSS, intermediate shaft speed, or OSS Speed PID signal erratic (drop to zero or near zero and return to normal operation)?**	**Yes** If the sensor signal is erratic, INSPECT for intermittent concern in the harness, sensor, or connector. GO to E4 . **No** CLEAR all DTCs. RERUN OBD.
E4 CHECK PCM HARNESS CIRCUITS FOR OPENS	
• Key in OFF position. • Disconnect: 150 Pin PTEC Module Connector "B". • Inspect for damaged or pushed out pins, corrosion or loose wires. • For OSS, measure the resistance between pin 14 and the appropriate sensor connector pin 2 harness side.	**Yes** GO to E5 . **No** REPAIR the circuit. TEST the system for normal operation.



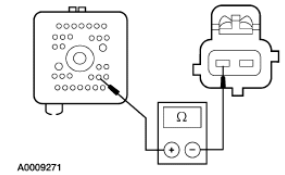
- For intermediate shaft speed, measure the resistance between pin 14 and the appropriate sensor connector pin 2 harness side.



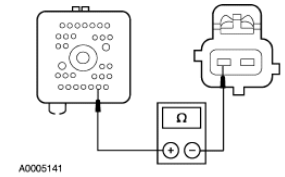
- For TSS, measure the resistance between pin 14 and the appropriate sensor connector pin 2 harness side.



- For intermediate shaft speed, measure the resistance between pin 21 and the appropriate sensor connector pin 1 harness side.



- For TSS, measure the resistance between pin 27 and the appropriate sensor connector pin 1 harness side.



- For OSS, measure the resistance between pin 26 and the appropriate sensor connector pin 1 harness side.

 A0005035 • **Are all resistances less than 5 ohms?**	
E5 CHECK PCM HARNESS CIRCUITS FOR SHORT TO GROUND	
• For OSS, measure the resistance between pin 26 and sensor connector pin 1 harness side and ground.  A0030976 • For intermediate shaft speed, measure the resistance between PCM pin 21 and sensor connector pin 1 harness side and ground.  A0030974 • For TSS, measure the resistance between PCM pin 27 and sensor connector pin 1 harness side and ground.  A0030975 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to E6 . **No** REPAIR the circuits. TEST the system for normal operation. CLEAR DTCs. RERUN OBD Tests.
E6 CHECK RESISTANCE OF TSS, INTERMEDIATE SHAFT SPEED or OSS SENSOR	
• Disconnect the appropriate vehicle harness connector from the TSS, intermediate shaft speed or OSS sensor. • Connect ohmmeter negative lead to one pin of the sensor and the positive lead to the other pin on the sensor.	**Yes** GO to E7 . **No** INSTALL a new sensor.

 A0005211 • Record the resistance. Resistance should be as follows: **Resistance (ohms) / Temperature °C (°F)** 266-390 / -20° (4°) 325-485 / 21° (70°) 492-738 / 150° (302°) • **Is the resistance within specification for the appropriate sensor?**	
E7 CHECK SENSORS FOR SHORT TO GROUND	
• Measure the resistance between pin 1 and 2 of each sensor and ground.  A0005501 • **Is the resistance less than 10,000 ohms?**	**Yes** INSTALL a new sensor. **No** REFER to Diagnosis By Symptom for diagnosis of shift or torque converter concerns in this section.

PINPOINT TEST F: SOLENOID MECHANICAL FAILURE

Test Step	Result / Action to Take
NOTE: Repair all other DTCs before repairing the following DTCs: P1714, P1715, P1716, P1717, P1740.	
F1 ELECTRONIC DIAGNOSIS	
• Connect the diagnostic tool. NGS Tester • Select PARK. • Key in ON position. • Carry out KOEO test until continuous DTCs have been displayed. • If any of the following DTCs are present, continue with this test: P1714, P1715, P1716, P1717, P1740. • **Are other DTCs present for TFT or shift solenoids?**	**Yes** REPAIR the DTCs for TFT or shift solenoids first. CLEAR DTCs and CARRY OUT transmission Drive Cycle test. RERUN Quick Test. **No** INSTALL a new solenoid and/or body. REFER to the Diagnostic Trouble Code Charts for code description. GO to F2 .

F2 TRANSMISSION DRIVE CYCLE TEST	
• Carry out transmission drive cycle test. Refer to Transmission Drive Cycle Test in this section. • **Does the vehicle upshift and downshift OK?**	**Yes** GO to F3 . **No** REFER to Diagnosis By Symptom in this section to diagnose shift concerns.
F3 RETRIEVE DTCS	
• Connect the diagnostic tool. NGS Tester • Select PARK. • Key in ON position. • Carry out KOEO test until continuous DTCs have been displayed. • **Are DTCs P1714, P1715, P1716, P1717, P1740 still present?**	**Yes** INSTALL a new PCM. ROAD TEST and RERUN Quick Test. **No** Testing completed. If a concern still exists, REFER to Diagnosis By Symptom in this section for concern diagnosis.

Special Testing Procedures

Printable View (90 KB)

Special Tool(s)

 ST2408-A	Air Test Plate, Transmission 307-405
 ST1565-A	Transmission Fluid Pressure Gauge 307-004 (T57L-77820-A)

The special tests are designed to aid the technician in diagnosing the hydraulic and mechanical portion of the transmission.

Engine Idle Speed Check

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the engine idle speed.

Line Pressure Test

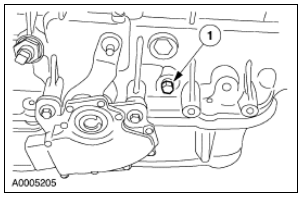
⚠ CAUTION: Carry out Line Pressure Test prior to carrying out Stall Speed Test. If line pressure is low at stall, do not carry out the Stall Speed Test or further transmission damage will occur. Do not maintain wide open throttle in any gear range for more than five seconds.

NOTE: Certain sensor failures may cause high PC, FMEM (Failure Mode Effect Management) actions. Be sure that self test and electrical repairs have been carried out, or test results may be incorrect.

NOTE: The line pressure tap is used to verify output pressure from PC A or PC B by turning either one off while verifying the output from the other solenoid. The second pressure tap is used to verify the output from the PC C solenoid.

This test verifies that the line pressure is within specifications.

1. Connect pressure gauge to the line pressure tap.



Item	Part Number	Description
1		Line Pressure Tap

2. Start engine and check line pressures. Refer to the following Line Pressure Chart to determine if line pressure is within specifications.

Line Pressure Chart 3.0L Engine

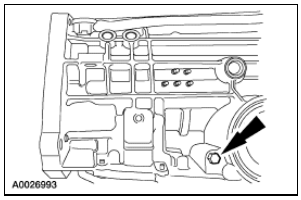
Range	Idle Pressure		WOT Stall Pressure	
	PC C	Line	PC C	Line
P/N	0-69 kPa (0-10 psi)	758-827 kPa (110-120 psi)	0-69 kPa (0-10 psi)	758-827 kPa (110-120 psi)
R	345-414 kPa (50-60 psi)	896-965 kPa (130-140 psi)	2,151-2,289 kPa (312-332 psi)	2,172-2,310 kPa (315-335 psi)
D5	0-69 kPa (0-10 psi)	827-896 kPa (120-130 psi)	0-69 kPa (0-10 psi)	1,517-1,586 kPa (220-230 psi)
D4	0-69 kPa (0-10 psi)	827-896 kPa (120-130 psi)	0-69 kPa (0-10 psi)	1,551-1,620 kPa (225-235 psi)
M5/M4	0-69 kPa (0-10 psi)	827-896 kPa (120-130 psi)	0-69 kPa (0-10 psi)	1,551-1,620 kPa (225-235 psi)
M3	0-69 kPa (0-10 psi)	827-896 kPa (120-130 psi)	0-69 kPa (0-10 psi)	1,551-1,620 kPa (225-235 psi)
M2/M1	0-69 kPa (0-10 psi)	827-896 kPa (120-130 psi)	0-69 kPa (0-10 psi)	1,551-1,620 kPa (225-235 psi)

Line Pressure Chart 3.9L Engine

Range	Idle Pressure		WOT Stall Pressure	
	PC C	Line	PC C	Line
P/N	0-69 kPa (0-10 psi)	483-620 kPa (70-90 psi)	0-69 kPa (0-10 psi)	483-620 kPa (70-90 psi)
R	345-414 kPa (50-60 psi)	689-827 kPa (100-120 psi)	2,151-2,289 kPa (312-332 psi)	2,151-2,289 kPa (312-332 psi)
D5	0-69 kPa (0-10 psi)	689-827 kPa (100-120 psi)	0-69 kPa (0-10 psi)	1,482-1,620 kPa (215-235 psi)
D4	0-69 kPa (0-10 psi)	689-827 kPa (100-120 psi)	0-69 kPa (0-10 psi)	1,482-1,620 kPa (215-235 psi)
M5/M4	0-69 kPa (0-10 psi)	689-827 kPa (100-120 psi)	0-69 kPa (0-10 psi)	1,482-1,620 kPa (215-235 psi)
M3	0-69 kPa (0-10 psi)	689-827 kPa (100-120 psi)	0-69 kPa (0-10 psi)	1,482-1,620 kPa (215-235 psi)
M2/M1	0-69 kPa (0-10 psi)	689-827 kPa (100-120 psi)	0-69 kPa (0-10 psi)	1,482-1,620 kPa (215-235 psi)

3. If line pressure is not within specifications, check PC C pressure.

4. Connect Pressure Gauge to PC C pressure tap.



Item	Part Number	Description
1		Pressure Control (PC C) Tap

5. Start engine and check PC C pressure. Refer to Line Pressure Diagnosis Chart in this section for specification.

6. If PC C pressure is not within specification, Go To Pinpoint Test D to diagnose PC C operation. If PC C operation is OK, refer to Line Pressure Diagnosis Chart in this section for line pressure concern causes.

   Line Pressure Diagnosis Chart

Test Results	Possible Source
High at Idle All Ranges	• Wiring Harnesses • PC C Boost Valve • PC C Solenoid • Main Regulator Valve
Low at Idle All Ranges	• Low Fluid Level • Fluid Inlet Filter/Seal • Main Control Body • Cross Leaks • Gaskets • Pump • Separator Plate
Low All Forward Ranges	• Forward Clutch • Main Control • Overdrive Servo • Intermediate Servo
Low in Park Only	• Valve Body
Low in Reverse Only	• Separator Plate • Rear Servo Piston, Cover Seal • Reverse Clutch • Overdrive Servo • Intermediate Servo • Valve Body • Forward Clutch
Low in Neutral Only	• Valve Body • Overdrive Servo • Intermediate Servo
Low in D5 Only	• Forward Clutch • Overdrive Servo • Intermediate Servo • Valve Body
Low in D4 Only (O/D Cancelled)	• Forward Clutch

	• Overdrive Servo • Intermediate Servo • Valve Body
Low in First Position	• Forward Clutch • Valve Body
Low in Second Position	• Intermediate Servo • Overdrive Servo • Intermediate Servo • Forward Clutch
Low in Third Position	• Intermediate servo • Overdrive servo • Forward clutch

Stall Speed Test

This test checks operation of the following items:

- torque converter clutch
- forward clutch
- low-one way clutch (OWC) assembly
- engine operation
- overdrive one-way clutch assembly

⚠ **WARNING: Apply the parking brake firmly while carrying out each stall test.**

⚠ **CAUTION: Always carry out the Line Pressure Test procedures prior to carrying out the Stall Speed Test. If line pressure is low at stall, do not carry out the Stall Speed Test or further transmission damage will occur.**

NOTE: The Stall Speed Test should be carried out with the engine and transmission at normal operating temperatures.

1. Connect tachometer to the engine.
2. ⚠ **CAUTION: After testing each of the following ranges D5, D4, 3, 2, 1, and R, move the transmission range selector lever to N (NEUTRAL) and run the engine at 1,000 rpm for about 15 seconds to allow the torque converter to cool before testing the next range.**

   ⚠ **CAUTION: Do not maintain wide open throttle in any range for more than five (5) seconds.**

   ⚠ **CAUTION: If the engine rpm recorded by the tachometer exceeds maximum specified rpm, release the accelerator pedal immediately. Clutch or band slippage is indicated.**

   NOTE: Prolonged use of this procedure may set Diagnostic Trouble Code P0712, P1783. After Carrying out Stall Speed Test run OBD Test and clear DTCs from memory.

   Press accelerator pedal to floor (WOT) in each range. Record rpm reached in each range. Stall speeds should be as follows:

   Stall Speed Chart

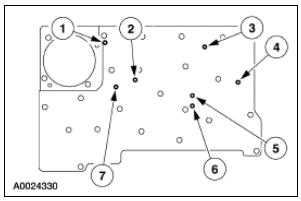
Vehicle	Engine	RPM
Lincoln LS	3.0L	2,511-2,989
Lincoln LS	3.9L	2,298-2,688

If stall speeds were too high, refer to the following Stall Speed Diagnosis Chart. If stall speeds were too low, first check the engine idle speed. If engine idle is OK, remove torque converter and check the torque converter one-way clutch for slippage.

Stall Speed Diagnosis Chart

Transmission Range Selector Lever Position	Stall Speeds High	Stall Speeds Low
D5, D4, and 1	Overdrive One-Way Clutch, Rear One-Way Clutch	
D4, 2 and 1	Forward Clutch, Overdrive One-Way Clutch	
D5	Forward Clutch, Overdrive One-Way Clutch	
D5, D4, 3, 2, 1 and R	General Pressure Concerns, Forward Clutch, Overdrive One-Way Clutch	Converter One-Way Clutch or Engine Driveability Concerns
R Only	High/Reverse, High Clutch, Low and Reverse Band/Servo	
2 Only	Intermediate Band/Servo	
1 Only	Low/Reverse Band/Servo	

Air Pressure Tests



Item	Part Number	Description
1		Reverse servo
2		Intermediate servo
3		Overdrive servo
4		Coast clutch
5		Forward clutch
6		Direct clutch
7		Reverse servo modulator

A no-drive or erratic shift condition may be due to inoperative bands and clutches. To diagnose these conditions a series of checks can be made by substituting air pressure for fluid to determine the location of the damaged or obstructed component.

Follow the procedure to determine the location of the inoperative clutch or band by substituting air pressure into the various test plate passages.

NOTE: Use only dry, regulated 276 kPa (40 psi) maximum air pressure.

1. Remove the main control valve body. Refer to Main Control Valve Body in this section.
2. Install the Transmission Test Plate and gasket. Tighten screws to 10 Nm (89 lb-in).
3. **NOTE:** Do not apply air to the test plate vent hole.

   Apply air to the appropriate clutch or servo port (refer to plate layout diagram). Refer to the Air Pressure Test Diagnostic Chart for conditions, possible causes and actions.
4. After the testing is completed, remove the Air Test Plate and Gasket and proceed with any repairs that are needed.
5. After the repairs are completed, install the Main Control Valve Body. Refer to Main Control Valve Body in this section.

Air Pressure Test Diagnostic Chart

Condition	Possible Causes	Actions
Dull thud heard or movement felt when air is applied and released	Clutches, bands and fluid passages are OK	Concerns may not be in the transmission. Check the Powertrain Control Module (PCM), wiring harness and non transmission related components.
No Drive	Clutches and bands inoperative	Disassemble the transmission, clean and inspect to locate area of concern.
Erratic Shifts	Clutches and bands inoperative due to incorrect pressures	Disassemble the transmission, clean and inspect to locate area of concern.
No dull thud heard	Clutches, bands and fluid passages may be damaged or obstructed	Disassemble the transmission, clean and inspect to locate area of concern.
No movement felt	Clutches, bands and fluid passages may be damaged or obstructed	Disassemble the transmission, clean and inspect to locate area of concern.
Hissing sound heard	Clutch seals or check ball may be damaged or leaking	Disassemble the transmission, clean and inspect to locate area of concern.
Servos do not operate	Seals and pistons may be damaged. Supply and release ports may be obstructed. Spring may be broken	Disassemble the transmission, clean and inspect to locate area of concern.
Multiple clutches are applied	Fluid passages in the center support or the clutch cylinders may be obstructed.	Disassemble the transmission, clean and inspect to locate area of concern. Check fluid passages in the center support for obstructions.

Leakage Inspection

Printable View (128 KB)

⚠ CAUTION: Do not try to stop the fluid leak by increasing the torque beyond specifications. This may cause damage to the case threads.

Use the following chart to inspect and correct any external transmission fluid leaks.

External Fluid Leaks

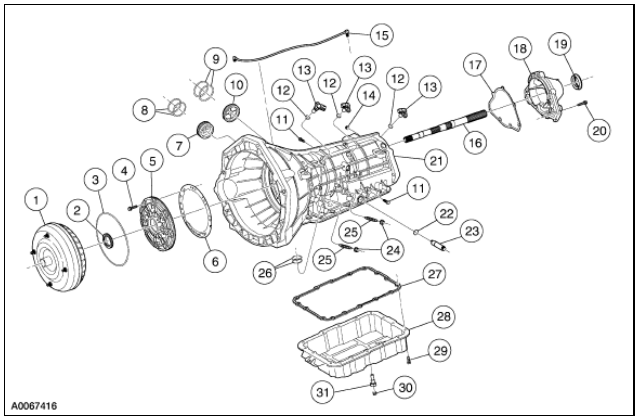
Description	Action
Leaks at the fluid pan to case	Tighten to specification or install a new gasket.
Filler plug leaks	Install a new plug
Fluid cooler lines or fittings leaking	Tighten to specification or install new fluid cooler tubes. Refer to Transmission Fluid Cooler in this section.
Fluid cooler line nut to case fittings leaking	Inspect for damaged or missing O-ring seals. Tighten to specification, install new fluid cooler tubes or install new O-ring seals. Refer to Transmission Fluid Cooler in this section.
Leaks at the fluid cooler	Inspect the fluid cooler for damage, if damaged install a new fluid cooler. Refer to Transmission Fluid Cooler in this section.
Leaks at the manual control lever seal	Install a new manual control lever seal.
Leaks at the solenoid body harness connector	Install a new solenoid body harness connector O-ring seal. Either on the harness end or the solenoid body.

External Sealing

The transmission has the following parts to prevent external fluid leakage:

- gaskets
- lip-type seals
- O-ring seals
- seal rings
- seal grommets
- thread sealant

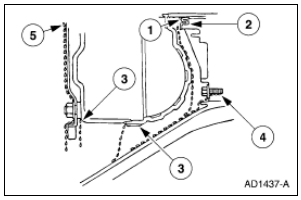
External Sealing



Item	Part Number	Description
1	7902	Torque converter assembly
2	7A248	Front pump fluid seal
3	7D441	Front pump fluid seal
4	W704892-S1300	Screw and washer assembly
5	7G187	Cover assembly fluid pump
6	7A136	Gasket front fluid pump
7	7D027	Overdrive servo cover
8	W703119-S300	Overdrive servo cover seal
9	W702969-S300	Intermediate servo cover seal
10	7D027	Intermediate servo cover
11	390318-S2	Pipe plug
12	W702981-S300	Speed sensor O-ring seal
13	7H103	Turbine shaft speed, intermediate shaft speed, and output shaft speed sensors
14	6026	Fluid fill access plug
15	7034	Vent assembly (4x2)
16	7060	Output shaft assembly
17	7086	Extension housing gasket
18	7A039	Extension housing
19	7052	Extension housing seal
20	W500311-S1427	Extension housing to case screw
21	7005	Case
22	7B498	Manual control lever seal
23	7C493	Manual control lever
24	3888307-S100	locking nut
25	7C492	Band adjuster lock screw
26	W705928-S300	Solenoid body connector O-ring seal
27	7A191	Fluid pan gasket
28	7A194	Fluid pan
29	W500213-S1309	Fluid pan screws
30	7A010	Fluid fill drain tube
31	W704999-S309	Short hex plug

Fluid Leakage in Torque Converter Area

In diagnosing and correcting fluid leaks in the front pump support and gear and torque converter area, use the following procedures to locate the exact cause of the leakage. Leakage at the front of transmission, as evidenced by fluid around the torque converter housing, may have several sources. By careful observation it is possible, in many instances, to pinpoint the source of leak before removing the transmission from the vehicle. The paths which the fluid takes to reach the bottom of the torque converter housing are shown in the illustration.



Leak Path	Symptom	Possible Source
1,2 and 4	Leak at front of trans	Pump lip seal
1,2 and 4	Leak at front of trans	Vent
1,2 and 4	Leak at front of trans	Converter hub weld
1,2 and 4	Leak at front of trans	External pump seal (large)
1,2 and 4	Leak at front of trans	Pump to case screws
1,2 and 4	Leak at front of trans	Pump gasket
3	Leak at front of trans	Torque converter seal weld
3	Leak at front of trans	Torque converter stud
5	Leak at front of trans	Engine oil leak; rear main seal
5	Leak at front of trans	Engine valve cover
5	Leak at front of trans	Oil galley
5	Leak at front of trans	Engine oil pressure sensor

Leak Check Test

Fluid soluble aniline or fluorescent dyes premixed at the rate of 2.5ml (1/2 teaspoon) of dye powder to 0.24L (1/2 pint) of automatic transmission fluid have proven helpful in locating the source of fluid leakage. Such dyes may be used to determine whether an engine fluid or transmission fluid leak is present. An ultraviolet light must be used to detect the fluorescent dye solution.

1. With the vehicle in NEUTRAL, position it on a hoist. Refer to Section 100-00 .
2. Loosen the fluid drain plug to allow the fluid to drip. Note the color of the fluid.
3. Tighten the drain plug.
4. Using a suitable nonflammable solvent clean off any fluid from the top and bottom of the torque converter housing, flexplate, case and the rear face of the engine and oil pan. Blow dry with compressed air.
5. Lower the vehicle.
6. Start and run the engine until the transmission reaches its normal operating temperature.

7. Observe the back of the cylinder block and the top of the torque converter housing for evidence of fluid leakage. Run the engine at fast idle, then at engine idle, occasionally shifting to the (D) and REVERSE.

8. With the vehicle in NEUTRAL, position it on a hoist. Refer to Section 100-00 .

9. Observe the front of the flexplate, back of the cylinder block, inside the torque converter housing and front of the case.

10. Continue to run the engine until fluid leakage is evident and the probable source of leakage can be determined.

11. Lower the vehicle.

12. Turn the vehicle off.

13. If any leaks are evident repair as necessary.

Transmission Fluid Cooler Printable View (91 KB)

Special Tool(s)

 ST2581-A	Adapter, Fluid Level and Fill Plug 307-437

⚠ CAUTION: Whenever a transmission has been disassembled to install new parts, the installation of a new transmission fluid cooler must be installed and the transmission fluid cooler tubes must be cleaned and backflushed.

NOTE: Cleaning and backflushing the transmission fluid cooling system along with normal cleaning and inspection procedures, as outlined in this section during disassembly and reassembly, will keep contamination from re-entering the transmission and causing a repeat repair.

When internal wear or damage has occurred in the transmission, metal particles, clutch plate material, or band material may have been carried into the torque converter and transmission fluid cooler. These contaminants are a major cause of recurring transmission troubles and must be removed from the system before the transmission is put back in use.

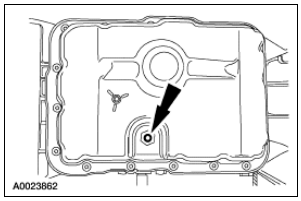
Transmission Fluid Cooler Flow Test

NOTE: The engine idle, transmission linkage/cable adjustment, fluid level and line pressure must be within specification before carrying out this test. For additional information on transmission linkage/cable adjustment, refer to Selector Lever Cable Adjustment in this section for adjustments. For additional information on engine idle diagnosis, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. For additional information on fluid level check, refer to Transmission Fluid Level Check in this section. For additional information on line pressure, refer to Special Testing Procedures in this section.

1. Place the transmission range selector lever into PARK.

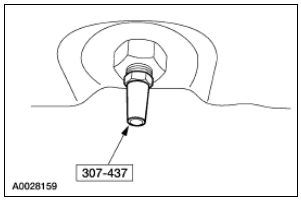
2. With the vehicle in NEUTRAL position it on a hoist. For additional information, refer to Section 100-00 .

3. Prior to carrying out the Transmission Fluid Cooler Flow Test check to see if the vehicle is equipped with a in-line fluid filter. If the vehicle is equipped with a in-line fluid filter it must be removed and discarded prior to carrying out the Transmission Fluid Cooler Flow Test and any system flushing.

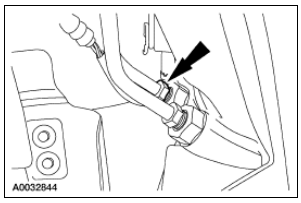


A0023862

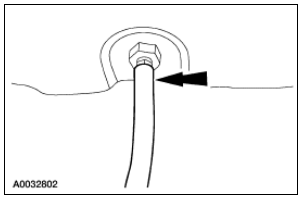
4. Using a 3/16 inch Allen key, hold the large drain plug with a wrench and remove the small (center) fluid level indicating plug.



5. Install the special tool into the pan.



6. Remove the cooler return line (upper line) from the fitting on the transmission case.



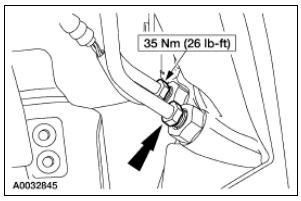
7. Connect one end of a clear hose to the cooler return line and route the other end of the hose to the special tool in the pan.

8. Lower the vehicle.

9. Start the engine and run it at idle.

10. With the engine running, the vehicle in PARK position it on a hoist. For additional information, refer to Section 100-00 .

11. Once a steady flow of fluid (without air bubbles) is observed, remove the hose from the special tool and place the hose in a measuring container for 15 seconds. After 15 seconds, place the hose back onto the special tool. Lower the vehicle and turn the engine off. Measure the amount of fluid in the container. If adequate flow is observed, approximately 208 ml (7 oz) will be in the measuring container. The test is now complete. Reconnect the cooler line and install the fluid fill plug.



12. Once an adequate flow has been established, install a new in-line fluid filter, if previously removed.

13. Once the fluid filter has been installed, check to see if fluid will flow out of the fluid filter.

14. If the flow is not liberal, disconnect the hose from the cooler return line and connect the hose to the cooler inlet (lower fitting) on the transmission case. Reconnect the cooler return line to the case (upper fitting).

15. Repeat Steps 8-10. If the flow is now approximately 208 ml (7 oz) in 15 seconds, the cooler lines and auxiliary cooler must be cleaned. For additional information, refer to Transmission Fluid Cooler Backflushing and Cleaning in this section. Carry out this entire test after carrying out the backflushing and cleaning procedure. If the flow is still not adequate after carrying out the backflushing and cleaning procedure, install new cooler lines and/or an auxiliary cooler. If the flow from the case is still not adequate after the installation of new cooler lines and/or an auxiliary cooler (208 ml 7 oz in 15 seconds) the pump and/or torque converter may be at fault. Carry out the appropriate procedures for diagnosis and repair in this section.

The Diagnosis by Symptom Index gives the technician diagnostic information and direction, and suggests possible components, using a symptom as a starting point.

Diagnosis by Symptom Index Directions

1. Using the Symptom Index, select the Concern/Symptom that best describes the condition.

2. Refer to the routine indicated in the Diagnosis by Symptom Index.

3. Always begin diagnosis of a symptom with:
    1. Preliminary inspections.
    2. Verifications of condition.
    3. Checking the fluid levels.
    4. Carrying out other test procedures as directed.

4. **NOTE:** Not all concerns and conditions with electrical components will set a diagnostic trouble code (DTC). Be aware that the components listed may still be the cause.

NOTE: When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Begin with the ROUTINE, if indicated. Follow the reference or action statements. Always carry out the on-board diagnostic tests as necessary. Never skip steps. Repair as necessary.

5. These components are listed in the removal sequence and by most probable cause. All components listed must be inspected to ensure correct repair.

• No 2nd and 5th Gears	284
• No 3rd, 4th and 5th gears	285

Diagnostic Routines

Engagement Concern: No Forward in D5 or D4 Only

Possible Component	Reference/Action
201A ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Main Control	
· Screw not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearing damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damage	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.

· Return springs damaged	· Inspect for damage. Repair as necessary.
Forward Planetary Assembly	
· Planetary damage	· Inspect for damage. Repair as necessary.
Low One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Engagement Concern: No Forward

Possible Component	Reference/Action
201B ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid B	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out the Fluid Condition Check in this section.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Case	
· Damaged	· Inspect for damage. Repair as necessary.

Engagement Concern: No Reverse

Possible Component	Reference/Action
202 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid C (PC C), Shift Solenoid B (SSB)	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck, or bore damage	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect or damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
Reverse Drum Assembly	
· One-way clutch damaged	· Inspect for damage. Install a new drum assembly.
· Bearing damaged	· Inspect for damage. Install a new drum assembly.

Engagement Concern: Harsh Reverse ONLY

Possible Component	Reference/Action
203 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid C (PC C)	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .

	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test, refer to procedure in this section. Follow pressure diagnosis and repair as required.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, spring damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
Reverse Drum Assembly	
· One-way clutch damaged	· Inspect for damage. Install a new drum assembly.
· Bearing damaged	· Inspect for damage. Install a new drum assembly.

Engagement Concern: Harsh Forward ONLY

Possible Component	Reference/Action
204A ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid A (PC A), Pressure Control Solenoid C (PC C)	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High Pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearing damage	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damage	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Engagement Concern: Harsh Manual 1st Gear ONLY

Possible Component	Reference/Action
204B ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid B (PC B), Turbine Shaft Speed (TSS) sensor	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.

Engagement Concern: Delayed or Soft Reverse ONLY

Possible Component	Reference/Action
205 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid C (PC C)	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect pressures	
· Low pressure	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
	· Inspect for damage. Repair as necessary.

· Servo retaining ring damaged	
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.

Engagement Concern: Delayed/Soft Forward ONLY

Possible Component	Reference/Action
206 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid B (PC B)	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· Low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, spring damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged.	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearing	· Inspect for damage. Repair as necessary.

damaged	
· Outside diameter of case bore damage	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction element damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Engagement Concern: No Forward and No Reverse

Possible Component	Reference/Action
207 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoid B (PC B)	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Shift Cable/Digital TR Sensor	
· Cable system or digital TR sensor damaged, misaligned	· Inspect and repair as necessary. Refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Main Control	
· Screws not tightened to specification	· Tighten screws to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Input Shaft	
· Damaged	· Inspect for damage. Repair as necessary.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.

· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
OD Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Center Shaft Assembly	
· Damaged. One-way clutch damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Forward Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Reverse Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Output Shaft	
· Damage	· Inspect for damage. Repair as necessary.
Torque Converter	
· Damaged flexplate or adapter plate	· Inspect for damage. Carry out the Torque Converter Diagnosis, refer to Torque Converter Diagnosis in this section. Repair as necessary.
· Damaged impeller hub	
· Damaged turbine hub	
Direct One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Engagement Concern: Harsh Forward and Harsh Reverse

Possible Component	Reference/Action
208 ROUTINE	
Powertrain Control System	
· PCM, vehicle wring harnesses, digital TR sensor, Transmission Fluid (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test B and Go To Pinpoint Test C .

	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust to the correct level. For additional information, refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. For additional information, refer to Preliminary Inspection .
Incorrect Pressures	
· High pressures.	· Check line pressure at line and PC C taps.
	· Carry out Line Pressure Test, refer to Special Testing Procedures in this section. Follow pressure diagnosis and repair as required.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Engagement Concern: Delayed Forward and Delayed Reverse

Possible Component	Reference/Action
209 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test B .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust to the correct level. For additional information, refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. For additional information, refer to Preliminary Inspection .
Incorrect Pressures	
· High pressures	· Check line pressure at line and PC C taps.

	· Carry out Line Pressure Test, refer to Special Testing Procedures in this section. Follow pressure diagnosis and repair as required.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves and springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file, or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.

Shift Concern: Some/All Shifts Missing (Automatic Mode Only)

Possible Component	Reference/Action
210 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Torque Converter Clutch (TCC) solenoid, Pressure Control Solenoids A, B, C, Output Shaft Speed (OSS) sensor, digital TR sensor, IAT sensor, VSS input	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM, IAT, and VSS.
	· Go To Pinpoint Test A , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Some Shifts Missing ONLY	
	· If only some shifts are missing, determine which shift(s) is missing.
	· Refer to the following routine(s) for further No Shift concerns: ♦ No 1-2 Shift, Routine 220 ♦ No 2-3 Shift, Routine 221 ♦ No 3-4 Shift, Routine 222 ♦ No 4-5 Shift, Routine 270

	♦ No 5-4 Shift, Routine 271 ♦ No 4-3 Shift, Routine 223 ♦ No 3-2 Shift, Routine 224 ♦ No 2-1 Shift, Routine 225
Fluid	
· Incorrect level	· Adjust fluid to correct level, refer to the in this section.
· Condition	· Carry out Fluid Condition Check. For additional information, refer to Preliminary Inspection in this section.
Shift Cable/Digital TR Sensor	
· Cable system or digital TR sensor damaged, misaligned	· Inspect and repair as necessary. For additional information, refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
OD Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearing damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damaged	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.

· Return springs damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Timing Concerns Early/Late

Possible Component	Reference/Action
211 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Output Shaft Speed (OSS) sensor, IAT sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM and IAT.
	· Go To Pinpoint Test E .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Some Shifts Early/Late ONLY	
	· If only some shifts are early/late, determine which shift(s) is missing.
	· Refer to the following routine(s) for further No Shift concerns: ♦ Soft/Slipping 1-2 Shift, Routine 226 ♦ Soft/Slipping 2-3 Shift, Routine 227 ♦ Soft/Slipping 3-4 Shift, Routine 228 ♦ Soft/Slipping 4-5 Shift, Routine 272 ♦ Soft/Slipping 5-4 Shift, Routine 273 ♦ Soft/Slipping 4-3 Shift, Routine 229 ♦ Soft/Slipping 3-2 Shift, Routine 230 ♦ Soft/Slipping 2-1 Shift, Routine 221
Fluid	
· Incorrect level	· Adjust to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.

	· Not adjusted correctly	· Inspect for damage. Repair as necessary.

Shift Concern: Timing Concerns Erratic/Hunting (Some/All)

Possible Component		Reference/Action
212 ROUTINE		
Powertrain Control System		
	· PCM, vehicle wiring harnesses, Output Shaft Speed (OSS) sensor, IAT sensor	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM and IAT.
		· Go To Pinpoint Test E .
		· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid		
	· Incorrect level	· Adjust to the correct level. Refer to Transmission Fluid Level Check in this section.
	· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Main Control		
	· Screws not tightened to specification	· Tighten to specification.
	· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
	· Contamination	· Disassemble and clean.
	· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Further Diagnosis		
	· For further diagnosis for timing issues, refer to Reference/Actions	· Refer to the following routine(s) for specific diagnosis: • No 1-2 Shift, Routine 220 • No 2-3 Shift, Routine 221 • No 3-4 Shift, Routine 222 • No 4-5 Shift, Routine 270 • No 5-4 Shift, Routine 271 • No 4-3 Shift, Routine 223 • No 3-2 Shift, Routine 224 • No 2-1 Shift, Routine 225 • Soft/Slip 1-2 Shift, Routine 226 • Soft/Slip 2-3 Shift, Routine 227 • Soft/Slip 3-4 Shift, Routine 228 • Soft/Slip 4-5 Shift, Routine 272 • Soft/Slip 5-4 Shift, Routine 273 • Soft/Slip 4-3 Shift, Routine 229 • Soft/Slip 3-2 Shift, Routine 230 • Soft/Slip 2-1 Shift, Routine 231

		• Harsh 1-2 Shift, Routine 232 • Harsh 2-3 Shift, Routine 233 • Harsh 3-4 Shift, Routine 234 • Harsh 4-5 Shift, Routine 274 • Harsh 5-4 Shift, Routine 275 • Harsh 4-3 Shift, Routine 235 • Harsh 3-2 Shift, Routine 236 • Harsh 2-1 Shift, Routine 237

Engagement Concern: Feel Soft/Slipping (Some/All)

Possible Component	Reference/Action
213 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Pressure Control Solenoids A, B, C, D, Intermediate Shaft Speed sensor, Transmission Fluid Temperature (TFT) sensor, IAT Sensor, VSS input	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM, IAT, and VSS.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Some Shifts Soft/Slipping ONLY	
	· If only some of the shifts are soft/slipping, determine which shift(s) is missing.
	· Refer to the following routine(s) for further Soft/Slipping concerns: ♦ Soft/Slipping 1-2 Shift, Routine 226 ♦ Soft/Slipping 2-3 Shift, Routine 227 ♦ Soft/Slipping 3-4 Shift, Routine 228 ♦ Soft/Slipping 4-5 Shift, Routine 272 ♦ Soft/Slipping 5-4 Shift, Routine 273 ♦ Soft/Slipping 4-3 Shift, Routine 229 ♦ Soft/Slipping 3-2 Shift, Routine 230 ♦ Soft/Slipping 2-1 Shift, Routine 231
Fluid	
· Incorrect level	· Adjust to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.

· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Coast Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearings damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damage	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Case	
· Damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Feel Harsh (Some/All)

Possible Component	Reference/Action
214 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Pressure Control Solenoids A, B, C, D, Intermediate Shaft Speed sensor, digital TR sensor, Transmission Fluid Temperature (TFT) sensor, IAT sensor, VSS input	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM, IAT, and VSS.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Some Shifts Harsh ONLY	
	· If only some of the shifts are harsh, determine which shift(s) is missing.
	· Refer to the following routine(s) for further No Shift concerns: ♦ Harsh 1-2 Shift, Routine 232 ♦ Harsh 2-3 Shift, Routine 233 ♦ Harsh 3-4 Shift, Routine 234 ♦ Harsh 4-5 Shift, Routine 274 ♦ Harsh 5-4 Shift, Routine 275 ♦ Harsh 4-3 Shift, Routine 235 ♦ Harsh 3-2 Shift, Routine 236 ♦ Harsh 2-1 Shift, Routine 237
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test, refer to Special Testing Procedures in this section. Follow pressure diagnosis and repair as required.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.

· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Input Shaft	
· Damaged	· Inspect for damage. Install new as necessary.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Center Shaft Assembly	
· Center shaft assembly damaged	· Inspect for damage. Repair as necessary.
· One-way clutch damaged	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Output Shaft	
· Damaged	· Inspect for damage. Install new as necessary.
Case	
· Damaged	· Inspect for damage. Repair as necessary.

Shift Concern: No 1st and 2nd Gear in Drive, Engages in a Higher Gear

Possible Component	Reference/Action
215 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test C .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check which pressures are on at line and PC C taps.
	· Refer to the Band/Clutch Chart in this section to determine which gears are on. Follow the diagnostic routines to repair the missing gears.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file, or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Low One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Engagement Concern: No 1st Gear in Manual 1 Position

Possible Component	Reference/Action
216 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, Pressure Control Solenoids B, C	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Direct One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Low One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Shift Concern: No 2nd Gear in Manual 2 Position

Possible Component	Reference/Action
217 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Pressure Control Solenoid B	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.

Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification.	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves, springs damaged, misassembled, missing, stuck or bore damaged	· If damaged or parts are missing, install a new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Low One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Torque Converter Operation Concerns: Does Not Apply

Possible Component	Reference/Action
240 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Torque Converter Clutch (TCC) solenoid, Transmission Fluid Temperature (TFT) sensor and Engine Coolant Temperature (ECT) sensor	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test B .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing

	Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Torque Converter Assembly	
· Torque Converter internal failure preventing engagement, piston application	· Remove transmission. Inspect for damage. Carry out Torque Converter checks, refer to Torque Converter Diagnosis in this section. If the torque converter fails to pass the checks or is damaged, install a new or remanufactured torque converter.

Torque Converter Operation Concern: Always Applied/Stalls Vehicle

Possible Component	Reference/Action
241 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Torque Converter Clutch (TCC) solenoid	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
· Low one-way clutch	· Inspect for damage. Repair as necessary.

Torque Converter Assembly	
· Torque Converter internal failure preventing engagement, piston release	· Remove transmission. Inspect for damage. Carry out Torque Converter checks, refer to Torque Converter Diagnosis in this section. If the torque converter fails to pass the checks or is damaged, install a new or remanufactured torque converter.

Torque Converter Operation Concern: Cycling/Shudder/Chatter

Possible Component	Reference/Action
242 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Torque Converter Clutch (TCC) solenoid	· Carry out on-board diagnostic tests. For additional information, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A .
	· Repair as necessary. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Condition contaminated, degraded	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section. If contaminated, locate source of contamination. If burnt, inspect mechanical bands, clutches. Repair as necessary. Change fluid. Carry out drain and refill procedure. Refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section. Carry out fluid cooler and torque converter cleaning procedure. For additional information, refer to Transmission Fluid Cooler Backflushing and Cleaning in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve, springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Torque Converter Assembly	
· Torque converter internal leakage, clutch material damaged	· Remove transmission. Inspect for damage. Carry out torque converter checks, refer to Torque Converter Diagnosis in this section. If torque converter fails to pass the checks or is damaged, install a new or remanufactured converter.

Other Concerns: Shift Lever Efforts High

Possible Component	Reference/Action
251 ROUTINE	
Powertrain Control System	

· PCM, vehicle wiring harnesses, digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test C .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Shift Cable, Digital TR sensor	
· Cable system or digital TR sensor damaged, misaligned	· Inspect and repair as necessary. For additional information, refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Case	
· Manual control lever assembly damage, manual valve inner lever pin bent, manual valve inner lever damaged, spring rod damaged	· Inspect for damage. If damaged, install a new part.
· Manual valve lever shaft retaining pin damaged	· Inspect for damage. If damaged, repair as necessary.

Other Concerns: External Leaks

Possible Component	Reference/Action
252 ROUTINE	
Powertrain Control System	
· Output Shaft Speed (OSS) sensor, Intermediate Shaft Speed, Turbine Shaft Speed (TSS) sensor, digital TR sensor	· Inspect for leakage. If areas around sensor show signs of leakage, install a new sensor O-ring seal. If area behind digital TR sensor shows signs of a leak, a new manual lever shaft seal may need to be installed.
Fluid	
· Incorrect level	· Adjust to correct level. Refer to Transmission Fluid Level Check in this section.
Case	
· Case vent damaged	· Inspect for damage. If damaged, repair as necessary.
Seals/Gaskets	
· Leakage at gaskets, seals, etc.	· Refer to Leakage Inspection in this section for potential leak locations.
	· Remove all traces of lubricant on exposed surfaces of the transmission. Check vent for free breathing. Operate the vehicle at normal temperatures and carry out leak check test, refer to Leakage Inspection in this section. Repair as necessary.

Other Concern: Vehicle Driveability

Possible Component	Reference/Action
253 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Pressure Control Solenoids A, B, C, Output Shaft Speed (OSS) sensor, Turbine Shaft Speed (TSS) sensor, Transmission Fluid Temperature (TFT) sensor, digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust to correct level. Refer to Transmission Fluid Level Check in this section.
Input Shaft	
· Damaged	· Inspect for damage. Repair as necessary.
Center Shaft Assembly	
· Damaged. One-way clutch damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Piston check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Torque Converter Assembly	
· Torque converter one-way clutch slipping	· Carry out torque converter one-way clutch check, refer to Torque Converter One-Way Clutch Check in this section. If one-way clutch fails the check, install a new or remanufactured torque converter.
· Incorrect torque converter used in rebuild	· Inspect for correct torque converter assembly. If not correct, install the correct torque converter for this application.

Other Concern: Noise/Vibration Forward or Reverse

Possible Component	Reference/Action
254 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Torque Converter Clutch (TCC) solenoid, Pressure	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis

Control Solenoids A, B, C	and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Low One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Flexplate or Adapter Plate	
· Damaged	· Inspect for damage. Repair as necessary.
· Adapter plate not aligned correctly	· Remove transmission and using special service tool and procedure in this section, align adapter plate.

Other Concern: Engine Will Not Crank

Possible Component	Reference/Action
255 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test C .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Shift Cable/Digital TR Sensor	
· Cable or digital TR Sensor damaged, misaligned	· Inspect and repair as necessary. For additional information, refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Main Control/Park System/TR Sensor Alignment	
· Detent spring, rooster comb, manual lever and TR sensor are not correctly aligned together.	· Disconnect TR sensor electrical connector. Remove outer manual lever nut. Loosen TR sensor screws. Loosen detent spring screw. Move manual lever through all gear ranges. Place manual lever into the NEUTRAL position. Tighten the detent spring screw to correct specification. Install TR sensor alignment tool. Tighten the TR sensor screws alternating sequence until correct tightening specification is obtained. Remove tool. Install outer manual lever and nut. Tighten nut to correct specification. Install TR sensor connector. Verify that the vehicle will start in PARK and NEUTRAL. Verify that the reverse backup lamps illuminate in REVERSE.

Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Flexplate or Adapter Plate	
· Damaged	· Inspect for damage. Repair as necessary.

Other Concern: No Park Range

Possible Component	Reference/Action
256 ROUTINE	
Shift Cable/Digital TR sensor	
· Cable system or digital TR sensor damaged, misaligned	· Inspect and repair as necessary. For additional information, refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Case	
· Manual control lever assembly damage, manual valve inner lever pin bent, manual valve inner lever damaged, spring rod damaged	· Inspect for damage. If damaged, repair as necessary.
· Manual valve lever shaft retaining pin damaged	· Inspect for damage. If damaged, repair as necessary.
Park System	
· Park gear, parking pawl, parking pawl return spring, park or guide plate, parking actuating rod, parking pawl shaft, manual lever, manual lever detent spring damaged or misassembled	· Inspect for damage. If damaged, repair as necessary.
· External linkages/brackets damaged	· Inspect for damage. If damaged, repair as necessary.

Other Concern: Transmission Overheating

Possible Component	Reference/Action

257 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Torque Converter Clutch (TCC) solenoid, Pressure Control Solenoids A, B, C, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust to correct level. Refer to Transmission Fluid Level Check in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged, thermostatic bypass valve damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Case	
· Case vent damaged	· Inspect for damage. If damaged, repair as necessary.
Torque Converter Assembly	
· Seized torque converter one-way clutch	· Remove transmission. Inspect for damage. Carry out torque converter checks, refer to the Torque Converter Diagnosis in this section. If torque converter fails to pass the checks or is damaged, install a new or remanufactured converter.
· Excessive slip detected	
Other	
· Restriction in the transmission cooling system	· Refer to Transmission Cooling in this section for information and diagnosis of cooling issues.
· Excessive trailer tow load	· Refer to the owner guide for specifications on trailer towing.
· Engine driveability concerns	· Check engine. Refer to Section 303-00 .

Other Concern: No Engine Braking in Manual 3rd Position

Possible Component	Reference/Action
280 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, shift solenoids A, B, C, reverse pressure (RP) switch, pressure control solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Coast Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.

· Seals rings or bearing damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damaged	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Low One-Way Clutch	
· Worn, damaged, or assembled incorrectly	· Inspect for damage. Repair as necessary.

Other Concern: No Engine Braking in Manual 4th (D) Position

Possible Component	Reference/Action
281 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid D, Reverse Pressure (RP) switch, Pressure Control Solenoid B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.

· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Coast Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Other Concerns: No Engine Braking in Manual 2nd Position

Possible Component	Reference/Action
258 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, C, D, Pressure Control Solenoid A	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.

Other Concern: No Engine Braking in Manual 1st Position

Possible Component	Reference/Action
259 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, C, D, Pressure Control Solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to the correct level, refer to Transmission Fluid Level Check in this section.
Incorrect pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
Coast Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.

Other Concerns: Fluid Venting/Foaming

Possible Component	Reference/Action

261 ROUTINE	
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Case	
· Case vent damaged	· Inspect for damage. If damaged, repair as necessary.
Other	
· Transmission overheating	· Refer to 257 routine in this section.

Other Concern: Vehicle Movement with Gear Selector in "N" Position

Possible Component	Reference/Action
262 ROUTINE	
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
Shift Cable/Digital TR sensor	
· Cable system or digital TR sensor damaged, misaligned	· Inspect and repair as necessary. For additional information, refer to Transmission Range (TR) Sensor Adjustment or Selector Lever Cable Adjustment in this section.
Incorrect pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Case	
· Manual control lever assembly damage, manual valve inner lever pin bent, manual valve inner lever damaged, spring rod damaged	· Inspect for damage. If damaged, repair as necessary.

	· Manual valve lever shaft retaining pin damaged	· Inspect for damage. If damaged, repair as necessary.

Other Concern: Slips/Chatters in Manual 1st Position

Possible Component	Reference/Action
263 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
	· Inspect for mislocation, poor seating, damage. Install a new cylinder.

· Check ball damaged, missing, not seating, off location	
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
Direct One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Low One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Other Concern: Slips/Chatters in Manual 2nd Position

Possible Component	Reference/Action
264 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.

· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
OD Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
Low One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Other Concern: Slip/Chatters in Manual 3rd Position

Possible Component	Reference/Action
282 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to the correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.

Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Direct One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.
Low One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Other Concern: Engine Braking in ALL Gears

Possible Component	Reference/Action
283 ROUTINE	

Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid D	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
No Hydraulic/Mechanical Concerns	

Other Concern: No 2nd and 5th Gears

Possible Component	Reference/Action
284 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoids B, C	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.

Other Concern: No 3rd, 4th and 5th Gears

Possible Component	Reference/Action
285 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Pressure Control Solenoids A, B	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid Pump Assembly	
· Screws not tightened to specification	· Tighten screws to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or seized	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seals damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.

OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
OD Planetary Assembly	
· Planetary damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Harsh 1-2 Shift

Possible Component	Reference/Action
232 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Control Solenoid C, Pressure Control Solenoids B, Turbine Shaft Speed (TSS) sensor, Digital TR sensor, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.

· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Harsh 2-3 Shift

Possible Component	Reference/Action
233 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Control Solenoid B, Pressure Control Solenoids A, Turbine Shaft Speed (TSS) sensor, Intermediate Shaft Speed sensor, Digital TR sensor, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.

· Return springs damaged	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct One-way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Shift Concern: Harsh 3-4 Shift

Possible Component	Reference/Action
234 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Control Solenoid A, Pressure Control Solenoids C, Digital TR sensor, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test C , and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Center Support	
· Screws not tightened to specification	· Tighten to specification.
· Seal rings or bearing damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damaged	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.

· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.

Shift Concerns: Harsh 4-5 Shift

Possible Component	Reference/Action
274 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid C, Pressure Control Solenoid B, Turbine Shaft Speed (TSS) sensor, Digital TR sensor, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. 	· Go To Pinpoint Test A , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.

Shift Concern: No 3-2 Shift

Possible Component	Reference/Action
224 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid C, Pressure Control Solenoid B, Output Shaft Speed (OSS) sensor, digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.

Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.

Shift Concern: No 2-1 Shift

Possible Component	Reference/Action
225 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid C, Pressure Control Solenoid B, Output Shaft Speed (OSS) sensor, Digital TR sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test C , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone,

damaged	file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.

Shift Concern: Soft/Slipping 1-2 Shift

Possible Component	Reference/Action
226 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid C, Pressure Control Solenoid B, Transmission Fluid Temperature (TFT) sensor, VSS input	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Fluid	
· Incorrect level	· Adjust fluid to correct level. Refer to Transmission Fluid Level Check in this section.
· Condition	· Carry out Fluid Condition Check. Refer to Preliminary Inspection in this section.
Incorrect Pressures	
· High/low pressures	· Check pressure at line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may

	result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.

Shift Concern: Soft/Slipping 2-3 Shift

Possible Component	Reference/Action
227 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid A, Pressure Control Solenoid A, Intermediate Shaft Speed sensor, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , Go To Pinpoint Test D and Go To Pinpoint Test E .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valve/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct One-Way Clutch	
· Worn, damaged or assembled incorrectly	· Inspect for damage. Repair as necessary.

Shift Concern: Soft/Slipping 3-4 Shift

Possible Component	Reference/Action
228 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid A, Pressure Control Solenoid C, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearing damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damaged	· Inspect for damage. Repair as necessary.
· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Soft/Slipping 4-5 Shift

Possible Component	Reference/Action
272 ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoid C, Pressure Control Solenoid B, Transmission Fluid Temperature (TFT) sensor	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the PCM.
	· Go To Pinpoint Test A , Go To Pinpoint Test B , and Go To Pinpoint Test D .
	· Repair as required. Clear DTCs, road test and rerun on-board diagnostic test.
Incorrect Pressures	
· High/low pressures	· Check pressure at Line and PC C taps.
	· Carry out Line Pressure Test. Refer to Special Testing Procedures in this section.
Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.
OD Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
OD Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.

Main Control	
· Screws not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves/springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This will remove the anodized finish and may result in further main control or transmission damage.

Transmission Cooling

Printable View (10 KB)

⚠ CAUTION: Whenever a transmission has been disassembled to install new parts, the transmission fluid cooler must be replaced and the transmission fluid cooler tubes must be cleaned and backflushed.

NOTE: Cleaning and backflushing the transmission fluid cooling system, along with normal cleaning and inspection procedures as outlined in this section during disassembly and reassembly, will keep contamination from reentering the transmission and causing a repeat repair.

When internal wear or damage has occurred in the transmission, metal particles, clutch plate material, or band material may have been carried into the torque converter and transmission fluid cooler. These contaminants are a major cause of recurring transmission troubles and must be removed from the system before the transmission is put back in use.

Inspection and Verification

When fluid leakage is found in the fluid cooler, install a new fluid cooler.

When there is evidence of transmission assembly or fluid contamination due to the following transmission failure modes, install a new fluid cooler.

- major metallic failure
- multiple clutches or clutch plate failure
- sufficient component wear which results in metallic contamination

External Controls Printable View (138 KB)

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Inspection and Verification

1. Verify the customer concern by operating the transmission external control.
2. Visually inspect for obvious signs of mechanical and electrical damage. For additional information, refer to the following chart:

   Visual Inspection Chart

Mechanical	Electrical
• Shift lock actuator • Transmission control switch (TCS) • SST (+/-) switches • Shift cable and bracket • Park sense switch	• Central junction box (CJB) Fuse: ♦ 204 (5A) ♦ 205 (5A) • Damaged wiring harness • Loose or corroded connections • Powertrain control module (PCM)

3. If the concern is not visually evident, determine the symptom. GO to Symptom Chart .

Symptom Chart

SYMPTOM CHART
Pinpoint Tests

PINPOINT TEST H: OVERDRIVE CANCEL SWITCH NOT WORKING

Test Step	Result / Action to Take
H1 CHECK INPUT TO PCM	

• Key in OFF position. • Disconnect: PCM C175a. • Key in ON position. • Measure the voltage between PCM C175a pin 41, circuit 8-TA21 (WH/GN), harness side and ground.  A0005935 • **Is the voltage greater than 10 volts?**	**Yes** REFER to Section 413-00 . **No** GO to H2 .
H2 CHECK FOR VOLTAGE TO FUSE 205 (5A)	
• Key in ON position. • Measure the voltage between primary junction box fuse 205 (5A) input pin and ground.  A0005936 • **Is the voltage greater than 10 volts?**	**Yes** GO to H3 . **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK FOR VOLTAGE INPUT TO THE SHIFTER	
• Key in OFF position. • Disconnect: Transmission Shift Selector C307. • Key in ON position. • Measure the voltage between transmission shift selector C307 pin 7, circuit 15-TA21 (GN/BK), harness side and ground.  A0005937 • **Is the voltage greater than 10 volts?**	**Yes** GO to H4 . **No** REPAIR circuit 15-DA5 (GN/OG) or 15-TA21 (GN/BK). TEST the system for normal operation.
H4 CHECK CIRCUIT 8-TA21 (WH/GN) FOR SHORT TO GROUND	
• Disconnect: PCM C175a. • Disconnect: Transmission Shift Selector C307. • Measure the resistance between transmission shift selector C307 pin 6, circuit 8-TA21 (WH/GN), harness side and ground.	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0005938 • **Is the resistance greater than 10,000 ohms?**	
H5 CHECK CIRCUIT 8-TA21 (WH/GN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between PCM C175a pin 41, circuit 8-TA21 (WH/GN), harness side and transmission shift selector C307 pin 6, circuit 8-TA21 (WH/GN), harness side.  A0005939 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new shifter harness. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST I: THE PARK SWITCH NOT WORKING

Test Step	Result / Action to Take
I1 CHECK CIRCUIT 15-TA34 (GN/YE) FOR OPEN	
• Disconnect: Transmission Shift Selector C307. • Key in ON position. • Measure the voltage between transmission shift selector C307 pin 3, circuit 15-TA34 (GN/YE), harness side and ground.  A0005940 • **Is the voltage greater than 10 volts?**	**Yes** GO to I2 . **No** REPAIR the circuit. TEST the system for normal operation.
I2 CHECK FOR VOLTAGE ON CIRCUIT 8-TA34 (WH)	
• Connect: Transmission Shift Selector C307. • Disconnect: Instrument Cluster C220b. • Select PARK. • Key in ON position. • Measure the voltage between instrument cluster C220b pin 8, circuit 8-TA34 (WH), harness side and ground.	**Yes** INSTALL a new instrument cluster. REFER to Section 413-00 . TEST the system for normal operation. **No** GO to I3 .

 A0005941 • **Is the voltage greater than 10 volts?**	
I3 CHECK CIRCUIT 8-TA34 (WH) FOR SHORT TO GROUND	
• Key in OFF position. • Disconnect: Transmission Shift Selector C307. • Measure the resistance between transmission shift selector C307 pin 8, circuit 8-TA34 (WH), harness side and ground.  A0005942 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I4 . **No** REPAIR the circuit. TEST the system for normal operation.
I4 CHECK CIRCUIT 8-TA34 (WH) FOR OPEN	
• Measure the resistance between transmission shift selector C307 pin 8, circuit 8-TA34 (WH), harness side and instrument cluster C220b pin 8, circuit 8-TA34 (WH), harness side.  A0005943 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new shifter harness. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST J: BRAKE SHIFT INTERLOCK INOPERATIVE

Test Step	Result / Action to Take
J1 CHECK FOR FEM DTCs	
• Retrieve FEM DTCs. Refer to Section 417-01 . • **Are any DTCs retrieved related to the brake switch?**	**Yes** REFER to Section 417-01 . **No** GO to J2 .
J2 CHECK FOR VOLTAGE ON CIRCUIT 7S-TA33 (YE/VT)	

• Key in OFF position. • Disconnect: Brake Shift Interlock C322. • Key in ON position. • Press and hold the brake pedal. • Measure the voltage between brake shift interlock C322 pin 2, circuit 7S-TA33 (YE/VT), harness side and ground.  A0005948 • **Is the voltage greater than 10 volts?**	**Yes** GO to J5 . **No** GO to J3 .
J3 CHECK CIRCUIT 75-TA33 (YE/VT) FOR SHORT TO GROUND	
• Disconnect: FEM C201f. • Measure the resistance between brake shift interlock C322 pin 2, circuit 7S-TA33 (YE/VT), harness side and ground.  A0005949 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to J4 . **No** REPAIR the circuit. TEST the system for normal operation.
J4 CHECK CIRCUIT 7S-TA33 (YE/VT) FOR OPEN	
• Measure the resistance between brake shift interlock C322 pin 2, circuit 7S-TA33 (YE/VT), harness side and FEM C201f pin 15, circuit 7S-TA33 (YE/VT), harness side.  A0005950 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new FEM. REFER to Section 418-00 . **No** REPAIR the circuit. TEST the system for normal operation.
J5 CHECK CIRCUIT 31-TA33 (BK) FOR AN OPEN	
• Measure the resistance between brake shift interlock C322 pin 1, circuit 31-TA33 (BK), harness side and ground.	**Yes** INSTALL a new brake shift interlock actuator. REFER to Brake Shift Interlock Actuator . TEST the system for normal operation. **No**

 A0005951 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST K: THE TRANSMISSION MANUAL SHIFT (+/-) IS INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK CIRCUITS 8-TA67 (WH/VT) AND 8-TA68 (WH/BK) INPUT TO THE PCM	
• Disconnect: PCM C175a. • Measure the resistance between PCM C175a pin 49, circuit 8-TA67 (WH/VT), harness side and ground; and between PCM C175a pin 50, circuit 8-TA68 (WH/BK), harness side and ground, while activating the shifter to the manual up and down position.  A0005947 • **Are the resistances less than 5 ohms?**	**Yes** GO to K4 . **No** GO to K2 .
K2 CHECK TRANSMISSION SHIFT SELECTOR CIRCUITS 31-TA67 (BK/WH) AND 31-TA68 (BK/RD) FOR OPEN	
• Disconnect: Transmission Shift Selector 307. • Measure the resistance between transmission shift selector C307 pin 9, circuit 31-TA67 (BK/WH), harness side and ground; and between shifter C307 pin 4, circuit 31-TA68 (BK/RD), harness side and ground.  A0008895 • **Are the resistances less than 5 ohms?**	**Yes** GO to K3 . **No** REPAIR the circuits. TEST the system for normal operation.
K3 CHECK CIRCUITS 8-TA67 (WH/VT) AND 8-TA68 (WH/BK) FOR OPEN	
• Measure the resistance between shifter C307 pin 10, circuit 8-TA67 (WH/VT), harness side and PCM C175a pin 49, circuit 8-TA67 (WH/VT) harness side; and C307 pin 5, circuit 8-TA68 (WH/BK), harness side, and PCM C175a pin 50, circuit 8-TA68 (WH/BK), harness side.	**Yes** INSTALL a new shifter harness. TEST the system for normal operation. **No** REPAIR the circuits.

 A0008896 • **Are the resistances less than 5 ohms?**	TEST the system for normal operation.
K4 CHECK CIRCUITS 8-TA67 (WH/VT) AND 8-TA68 (WH/BK) FOR SHORT TO GROUND	
• Disconnect: Shifter C307. • Measure the resistance between PCM C175a pin 49, circuit 8-TA67 (WH/VT), harness side and ground; and between PCM C175a pin 50, circuit 8-TA68 (WH/BK), harness side and ground.  A0005947 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to K5 . **No** REPAIR the circuit. TEST system for normal operation.
K5 CHECK THE TRANSMISSION SHIFT SELECTOR SWITCHES	
• Connect: Transmission Shift Selector C307. • Measure the resistance between PCM C175a pin 49, circuit 8-TA67 (WH/VT), harness side and ground; and between PCM C175a pin 50, circuit 8-TA68 (WH/BK), harness side and ground while activating the manual up and down position.  A0005947 • **Is the resistance less than 5 ohms with the switch on and greater than 10,000 ohms with the switch off?**	**Yes** INSTALL a new PCM. **No** INSTALL a new harness. TEST the system for normal operation.

2	7A010	Fluid level tube
3	W704999-S309	Fluid level and fill plug (small) (in-vehicle)
4	7A010	Fluid drain plug (large)

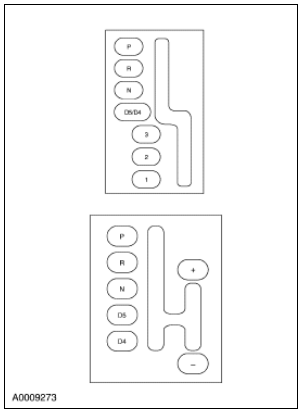
1. Using the scan tool (WDS), monitor the transmission fluid temperature (TFT) using PID: TFT.

2. Start the vehicle.

3. **NOTE:** Engine idle speed is approximately 650 rpm.

   While proceeding with this procedure, run the engine until the transmission fluid temperature is between 27°C - 49°C (80°F - 120°F).

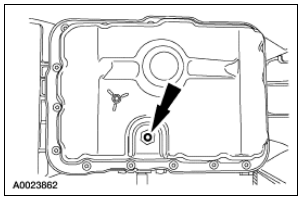
4. Move the range selector lever slowly through each gear, stopping in each position and allowing the transmission to engage.



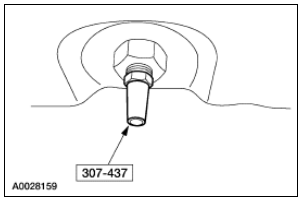
5. Place the range selector lever in the PARK position.

6. With the engine running, position the vehicle on a hoist and set it as close to level as possible. For additional information, refer to Section 100-00 .

7. Hold the larger drain plug with a wrench and remove the small (center) fluid level indicating plug using a 3/16-inch Allen key.

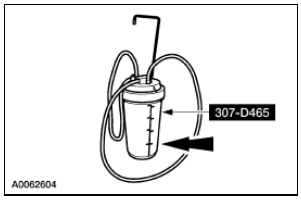


8. Install the special tool into the pan.

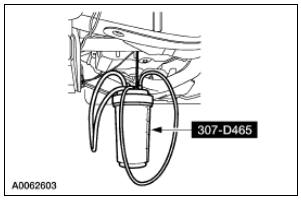


9. **NOTE:** Prior to filling the special tool with clean transmission fluid, make sure that the canister is clean.

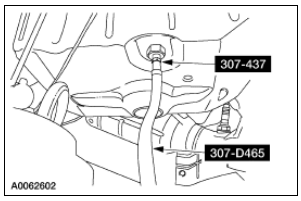
   Fill the special tool with clean automatic transmission fluid.



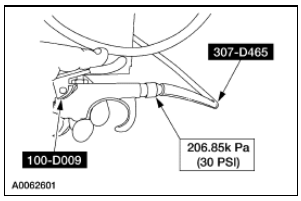
10. Hang the special tool under the vehicle. Position it upright and close to the transmission.



11. Connect the special tools.
    - Connect the open end of the fluid hose from the Fluid Transporter/Evacuator/Injector to the Fluid Level and Fill Plug Adapter at the bottom of the transmission fluid pan.



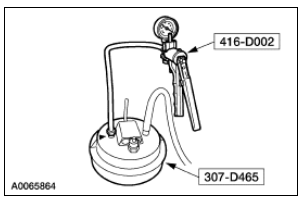
12. Apply a maximum of 206.85 kPa (30 psi) to the open end of the vacuum/pressure hose from the special tool. Fluid will immediately start flowing out of the special tool into the transmission fluid pan.



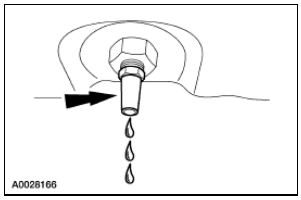
13. Add one pint of transmission fluid into the fluid pan. Stop the process by releasing the air pressure and removing the air nozzle from the end of the hose.

14. Inspect the fluid level in the special tool. If the fluid drains back into the canister, the transmission is full. If no fluid drains back, more fluid will need to be added. Repeat steps 12 and 13.

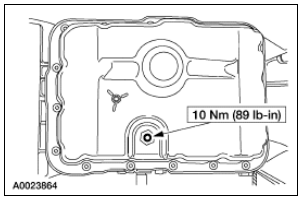
15. Once the transmission is full, place a hand vacuum pump on the open end of the vacuum/pressure hose of the special tool and apply vacuum to the system. This will pull out any extra fluid trapped in the system and direct it into the container.



16. Allow the fluid to drain. Make sure that the fluid temperature is between 27°C - 49°C (80°F - 120°F). When the fluid comes out as a thin stream or drip, the fluid is at the correct level.



17. Reinstall the small (center) fluid level indicating plug using a 3/16-inch Allen key.



18. Check the operation of the transmission by moving the range selector lever slowly through each gear, stopping in each position and allowing the transmission to engage.

Transmission Fluid Drain and Refill Automated Equipment

Printable View (15 KB)

Special Tool(s)

ST2654-A	Automatic Transmission Flush and Fill Machine 211-00018 Automatic Transmission Flush and Fill Machine 199-00010 or equivalent

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Draining

⚠ CAUTION: Use only clean automatic transmission fluid specified for this transmission. Do not use supplemental transmission fluid additives, treatments or clean agents. The use of these materials can affect transmission operation and result in damage to internal transmission components.

⚠ CAUTION: Always refer to the instructions supplied with the flush and fill machine.

1. With the vehicle in PARK, position it on a hoist. For additional information, refer to Section 100-00 .
2. Use a suitable flush and fill machine to change the fluid.
3. When connecting the flush and fill machine, connect the machine to the fluid cooler tube after the fluid cooler on the cooler return line. This will help remove any foreign material trapped in the fluid coolers.

Refill

1. Use only clean automatic transmission fluid.
2. Once the fluid exchange has been completed, disconnect the flush and fill machine. Reconnect any disconnected fluid cooler tubes.
3. With the engine running, check and adjust the transmission fluid level, and check for any leaks. If fluid is needed, add fluid in increments of 0.24-liter (0.5-pint) until the correct level is achieved. For additional information, refer to Transmission Fluid Level Check in this section.

Transmission Fluid Drain and Refill Without Torque Converter Drain Plug

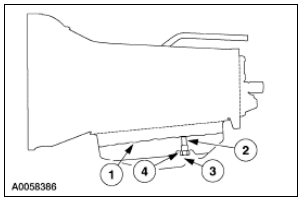
Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Fluid Fill Reference

NOTE: Left side of case is shown.

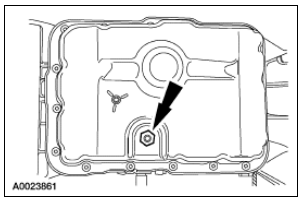


Item	Part Number	Description
1		Fluid level
2	7A010	Fluid level tube
3	W704999-S309	Fluid level and fill plug (small) (in-vehicle)
4	7A010	Fluid drain plug (large)

Draining

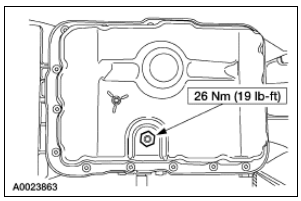
1. With the vehicle in PARK, position it on a hoist. Set the vehicle as close to level as possible. For additional information, refer to Section 100-00 .

2. Remove the drain plug (large plug) and allow the fluid to drain.

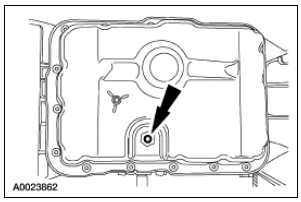


Filling

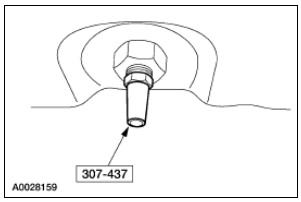
1. Install the fluid drain plug.



2. Hold the larger drain plug with a wrench and remove the small (center) fluid level indicating plug using a 3/16-inch Allen key.

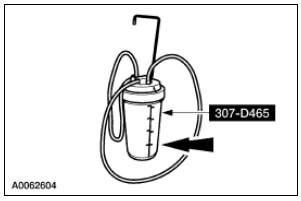


3. Install the special tool into the pan.

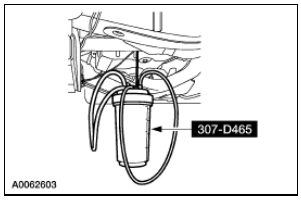


4. **NOTE:** Prior to filling the special tool with clean transmission fluid, make sure that the canister is clean.

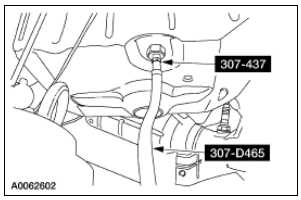
   Fill the special tool with clean automatic transmission fluid.



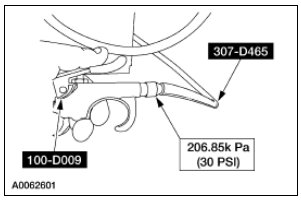
5. Hang the special tool under the vehicle, upright and close to the transmission.



6. Connect the special tools.
    - Connect the open end of the fluid hose from the Fluid Transporter/Evacuator/Injector to the Adapter, Fluid Level and Fill Plug at the bottom of the transmission fluid pan.



7. Apply a maximum of 206.85 kPa (30 psi) to the open end of the vacuum/pressure hose from the special tool. Fluid will immediately start flowing out of the special tool into the transmission fluid pan.



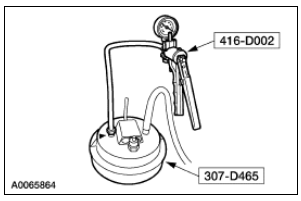
8. Add two or three quarts of transmission fluid into the fluid pan. Stop the process by releasing the air pressure and removing the air nozzle from the end of the hose.

9. **NOTE:** Engine idle speed is approximately 650 rpm.

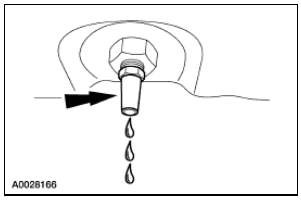
    Start and run the engine until the transmission fluid temperature is between 27°C - 49°C (80°F - 120°F).

10. Inspect the fluid level in the special tool. If the fluid drains back into the canister, the transmission is full. If no fluid drains back, more fluid will need to be added. Repeat steps 9 and 10.

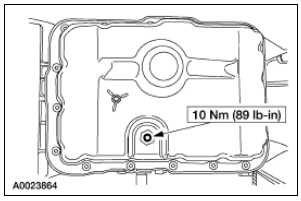
11. Once the transmission is full, place a hand vacuum pump on the open end of the vacuum/pressure hose of the special tool and apply vacuum to the system. This will pull out any extra fluid trapped in the system and direct it into the container.



12. Allow the fluid to drain. When the fluid comes out as a thin stream or drip, the fluid is at the correct level.



13. Reinstall the small (center) fluid level indicating plug using a 3/16-inch Allen key.



Transmission Fluid Cooler Backflushing and Cleaning

Printable View (10 KB)

⚠ CAUTION: Whenever a transmission has been disassembled to install new parts, or because the valve body sticks from foreign material, the transmission fluid cooler must be cleaned using a suitable torque converter/fluid cooler cleaner. Under no circumstances should torque converters be cleaned by hand agitation with solvent.

When internal wear or damage has occurred in the transmission, metal particles, clutch plate material, or band material may have been carried into the transmission cooler. These contaminants are a major cause of recurring transmission concerns and must be removed from the system before the transmission is put back into service.

1. Carry out backflushing with a suitable torque converter/transmission fluid cooler cleaner. Test the equipment to make sure that a vigorous fluid flow is present before proceeding. Install a new system filter if flow is weak or contaminated.

2. To aid in attaching the cleaner to the transmission steel cooler lines, connect two additional rubber hoses to the transmission end of the steel transmission cooler lines as described.
   - Connect the cleaner tank pressure line to the steel transmission cooler return line (longest line).
   - Connect a tank return hose to the steel transmission cooler pressure line (shorter line). Place the outlet end of this hose in the solvent tank reservoir.

3. Turn on pump and allow the clean transmission fluid to circulate a minimum of 5 minutes (cycling switch on and off will help dislodge contaminants in cooler system).

4. Switch off the pump and disconnect the pressure hose from the transmission cooler return line.

5. Use compressed air to blow out the cooler(s) and lines (blow air into the transmission cooler return line) until all fluid is removed.

6. Remove the rubber return hose from the remaining steel cooler line.

Transmission Range (TR) Sensor Adjustment

Printable View (344 KB)

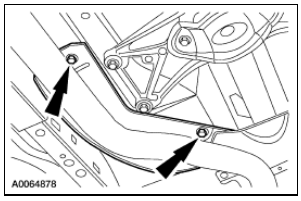
Special Tool(s)

 ST1633-A	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)

Adjust

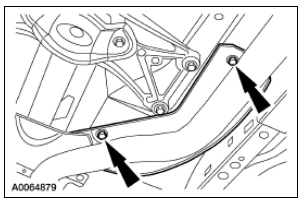
1. With the vehicle in the NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the RH front exhaust heat shield.



A0064878

3. Remove the LH front exhaust heat shield.

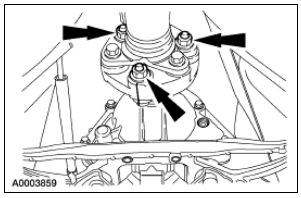


A0064879

4. ⚠ **CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original locations can cause driveshaft imbalance.**

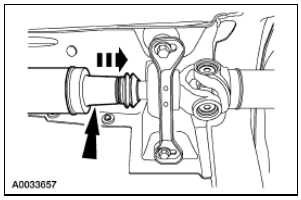
   ⚠ **CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.**

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



A0003859

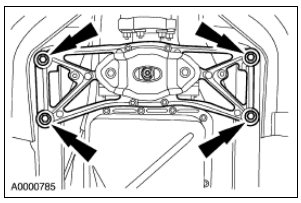
5. Slide the front shaft assembly rearward and support.



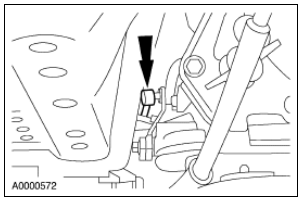
6. ⚠ **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions may result in personal injury.**

   Using a suitable transmission jack, support the transmission.

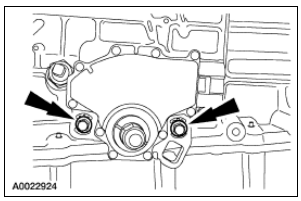
7. Remove the transmission mount and lower the transmission enough to gain access to the digital transmission range (TR) sensor.



8. Disconnect the shift cable from the manual control lever.

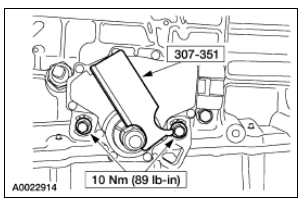


9. Loosen the screws.

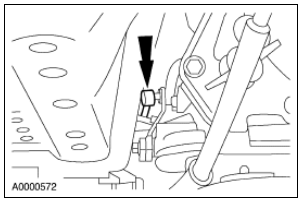


10. ⚠ **CAUTION: The digital TR sensor must fit flush against the case. Tightening one screw before tightening the other may cause the sensor to bind or become damaged.**

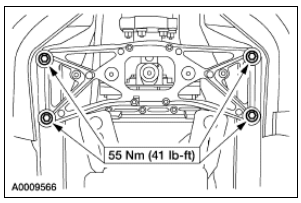
    Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.



11. Install the shift cable to the manual control lever.

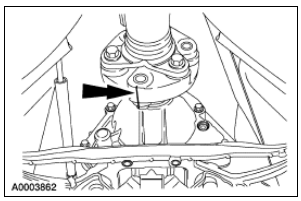


12. Raise the transmission up and install the rear transmission mount bolts.



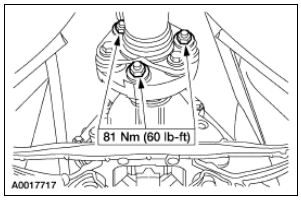
13. Verify that the shift cable is adjusted correctly. For additional information, refer to Selector Lever Cable Adjustment in this section.

14. Install the driveshaft by aligning the index-marks made during removal for correct driveshaft balance.

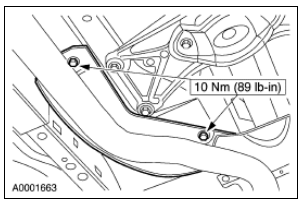


15. ⚠ **CAUTION: Install the bolts, washers, and nuts in their original position or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

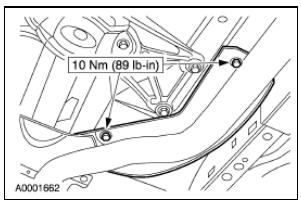
    Install the three nuts, washers and bolts.



16. Install the RH front exhaust heat shield.



17. Install the LH front exhaust heat shield.

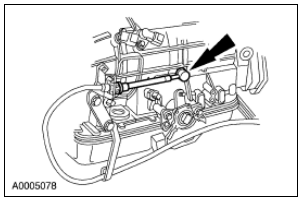


Selector Lever Cable Adjustment

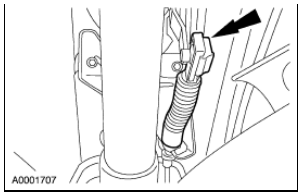
Printable View (89 KB)

Shift Cable

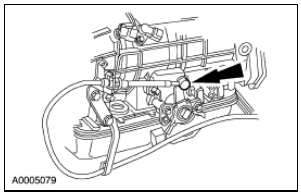
1. Place the selector lever in the D5 position.
2. Raise and support the vehicle. For additional information, refer to Section 100-00 .
3. Disconnect the transmission shift cable from the manual control lever.



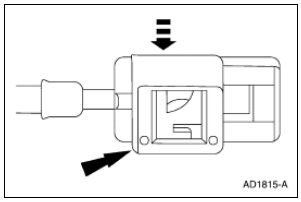
4. Place the manual control lever in the D5 position. This is three positions from the most rearward position.
5. Disconnect the transmission shift cable from the selector lever.



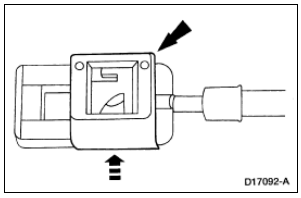
6. Connect the transmission shift cable to the manual control lever.



7. Unlock the adjuster at the end of the cable.



8. Connect the shift cable to the shifter and lock the end of the adjuster.



9. Carefully move the manual control lever from detent to detent and compare with transmission settings. Verify that the vehicle will start in PARK or NEUTRAL, and the backup lamps illuminate in REVERSE. If not, steps may need to be repeated and include digital transmission range (TR) sensor adjustment in NEUTRAL. For additional information on transmission range (TR) sensor adjustment, refer to Transmission Range (TR) Sensor Adjustment in this section.
    - Adjust as necessary.

Fluid Pan, Gasket and Filter

Printable View (223 KB)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Removal and Installation

⚠ CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.

NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

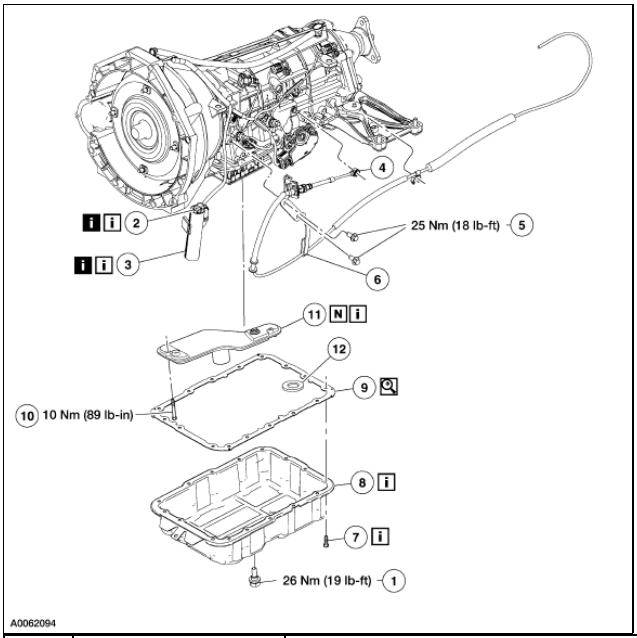
NOTE: The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

NOTE: Install a new transmission fluid filter.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table.

3. To install, reverse the removal procedure.



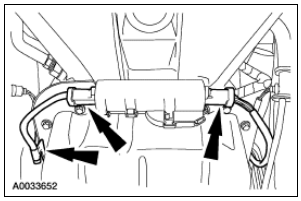
Item	Part Number	Description
1	7A010	Transmission fluid pan drain plug
2	7C078	

		Heated oxygen sensor connectors Removal Note
2	7C078	Heated oxygen sensor connectors Installation Note
3	14A099	Heated oxygen sensor connector retainer Removal Note
3	14A099	Heated oxygen sensor connector retainer Installation Note
4	7E395	Transmission range selector lever cable eyelet
5	N605918-S427	Transmission range selector lever cable bracket bolts
6	7B229	Transmission range selector lever cable and bracket
7	W500213-S1309	Transmission fluid pan screws Installation Note
8	7A194	Transmission fluid pan Installation Note
9	7A191	Transmission fluid pan gasket
10	W705559-S300	Transmission fluid pan filter screws
11	7A098	Transmission fluid pan filter Installation Note
12	7L027	Transmission fluid pan magnet

4. Partially fill the transmission. For additional information, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

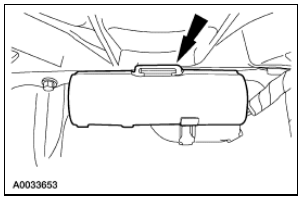
Item 2: Heated Oxygen Sensor Connector Removal Note

1. Disconnect the heated oxygen sensor connectors and remove the sensor wire retaining clip from the right side of the transmission pan rail.



Item 3: Heated Oxygen Sensor Connector Retainer Removal Note

1. Remove the heated oxygen sensor connector from the front of the transmission pan rail and position it out of the way.

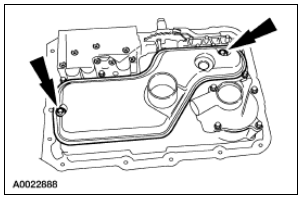


Item 11: Transmission Fluid Pan Filter Installation Note

1. ⚠ **CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.**

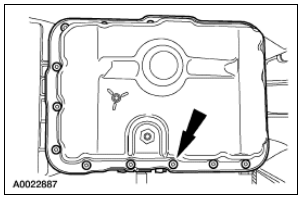
   NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

   Lubricate the seals and install the transmission fluid filter.



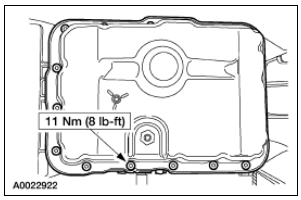
Item 8: Transmission Fluid Pan Installation Note

1. Install the transmission fluid pan and gasket and loosely install the screws.



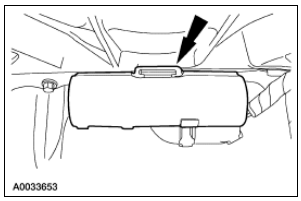
Item 7: Transmission Fluid Pan Screws Installation Note

1. Tighten the screws in a crisscross sequence.



Item 3: Heated Oxygen Sensor Connector Retainer Installation Note

1. Install the heated oxygen sensor connector to the front of the transmission pan rail.



Item 2: Heated Oxygen Sensor Connector Installation Note

1. Connect the heated oxygen sensor connectors and install the sensor wire retaining clip to the right side of the transmission pan rail.

Main Control Valve Body

Printable View (553 KB)

Special Tool(s)

ST1639-A	Aligner, Valve Body (2 req'd) 307-334 (T95L-70010-C)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Removal and Installation

⚠ CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.

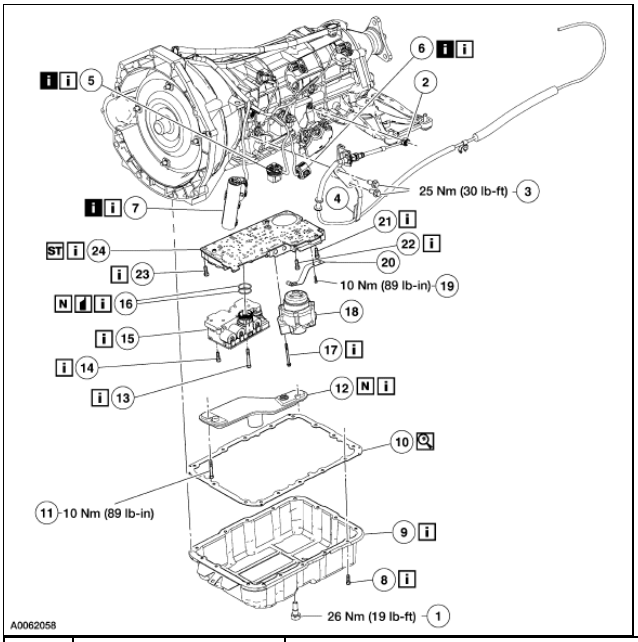
NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

NOTE: When the battery has been disconnected and reconnected, some abnormal drive symptoms can occur while the vehicle relearns its adaptive strategy. The customer needs to be notified that they may experience slightly different upshifts (either soft or firm) and this is a temporary condition and will eventually return to normal operating condition.

NOTE: Clean the area around connector to prevent contamination of the solenoid body connector.

NOTE: The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	7A194	Transmission fluid pan drain plug
2	7E395	Transmission range selector lever cable eyelet

15	7G391	

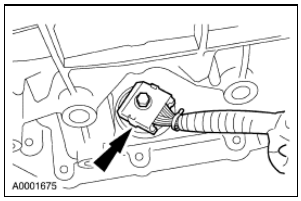
		Solenoid body Installation Note
16	W705928-S300	Solenoid body O-ring seals Installation Note
17	W7022359-S309	Reverse servo screws Installation Note
18	7B193	Reverse servo
19	W500100-S300	Manual control valve detent spring screw
20	7E332	Manual control valve detent spring
21	W500102-S1300	Main control valve body screw Installation Note
22	W500102-S1300	Main control valve body screws (18 req'd) Installation Note
23	W500102-S300	Main control valve body screws Installation Note
24	7A100	Main control valve body Installation Note

5. Partially fill the transmission. For additional information, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

Item 5: Solenoid Body Harness Electrical Connector Removal Note

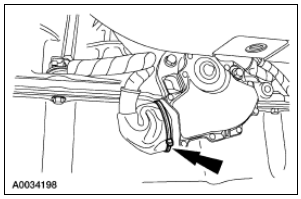
1. **NOTE:** Clean the area around the connector to prevent contamination of the solenoid body connector.

   Disconnect the solenoid body harness electrical connector.

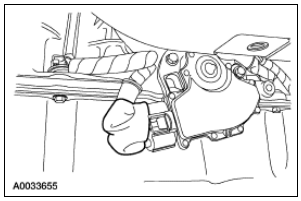


Item 6: Transmission Range Sensor Electrical Connector Removal Note

1. Remove and discard the tie strap from the digital TR sensor connector.

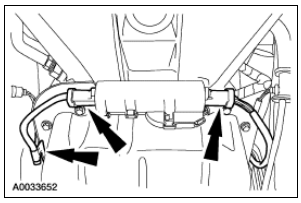


2. Slide the rubber boot back to gain access to the connector and disconnect the digital transmission range TR sensor connector.

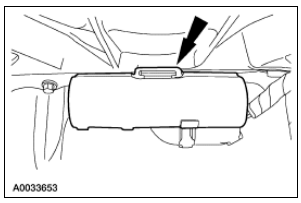


Item 7: Heated Oxygen Sensor Connector Retainer Removal Note

1. Disconnect the heated oxygen sensor connector and remove the sensor wire retaining clip from the right side of the transmission pan rail.

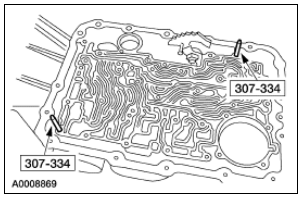


2. Remove the heated oxygen sensor connector from the front of the transmission pan rail.



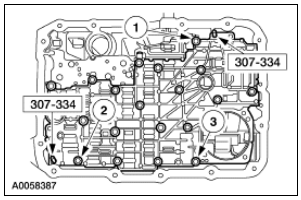
Item 24: Main Control Valve Body Installation Note

1. Install the special tools into the transmission case.

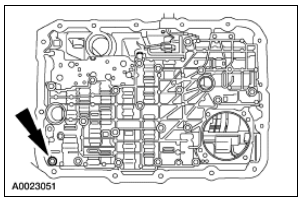


Items 21, 22 and 23: Main Control Valve Body Screws Installation Note

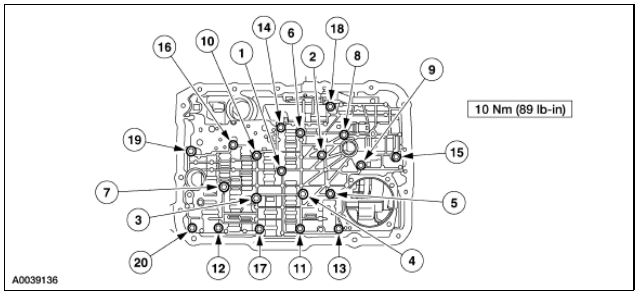
1. Using the special tools, install the main control valve body and loosely install the screws.
    1. Install the short screw.
    2. Install the screw with the larger head.
    3. Install the remaining screws.



2. Remove the special tools, and loosely install the screw.

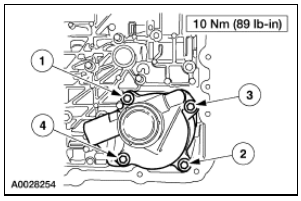


3. Tighten the screws in the sequence shown.



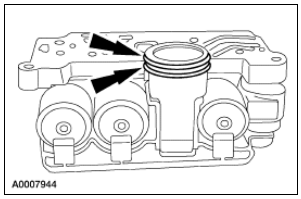
Item 17: Reverse Servo Screws Installation Note

1. Install the reverse servo. Tighten the screws in the sequence shown.



Item 16: Solenoid Body O-Ring Seals Installation Note

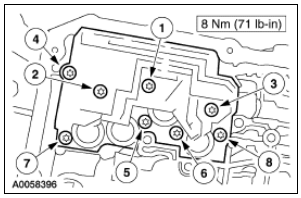
1. Install new O-ring seals on the solenoid body connector. Lubricate the O-ring seals with clean automatic transmission fluid.



Items 15, 14 and 13: Solenoid Body Screws Installation Note

1. ⚠ **CAUTION: Inspect the transmission case bore to make sure it is free of foreign material and not damaged. If it is damaged, transmission leak may occur.**

   Install the solenoid body. Tighten the screws in sequence shown.

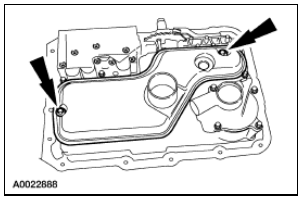


Item 12: Transmission Fluid Pan Filter Installation Note

1. ⚠ **CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.**

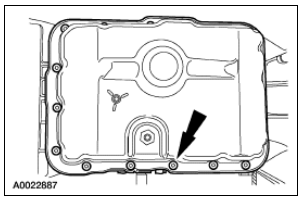
   NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

   Lubricate the seals and install the transmission fluid filter.



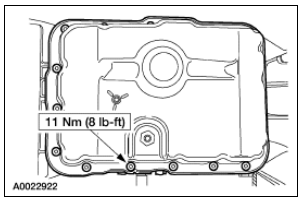
Item 9: Transmission Fluid Pan Installation Note

1. Install the transmission fluid pan and gasket and loosely install the screws.



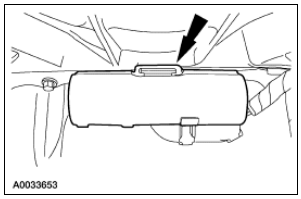
Item 8: Transmission Fluid Pan Screws Installation Note

1. Tighten the screws in a crisscross sequence.

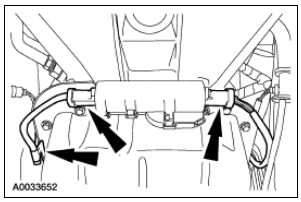


Item 7: Heated Oxygen Sensor Connector Retainer Installation Note

1. Install the heated oxygen sensor connector to the front of the transmission pan rail.

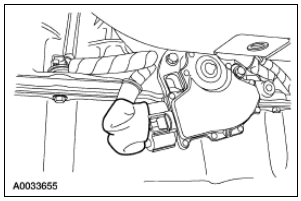


2. Connect the heated oxygen sensor connector and install the sensor wire retaining clip to the right side of the transmission pan rail.

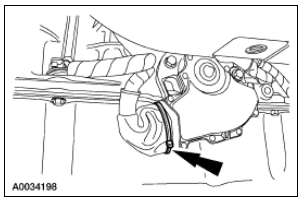


Item 6: Transmission Range Sensor Electrical Connector Installation Note

1. Connect the digital transmission range TR sensor connector and slide the rubber boot back over the connector.



2. Install a new tie strap around the rubber boot connector.



Item 5: Solenoid Body Harness Electrical Connector Installation Note

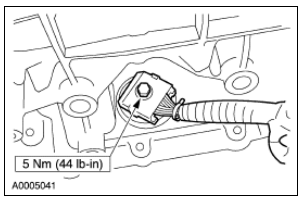
1. ⚠ **CAUTION: Damage will occur to the solenoid body assembly if the screw is tightened above specification.**

   NOTE: Always install new O-ring seals on the vehicle harness connector.

   NOTE: Clean the area around the connector to prevent contamination of the solenoid body connector.

   NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

   Install and lubricate new O-ring seals on the transmission connector and connect the connector.



Extension Housing Seal

Printable View (405 KB)

Special Tool(s)

 ST1185-A	Slide Hammer 100-001 (T50T-100-A)
 ST1758-A	Remover, Torque Converter Fluid Seal 307-309 (T94P-77001-BH)

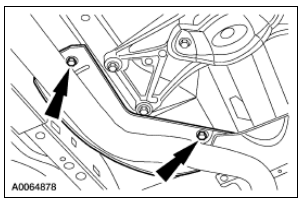
 ST2416-A	Installer, Output Shaft Flange 307-404
 ST2415-A	Remover, Output Shaft Flange 307-408

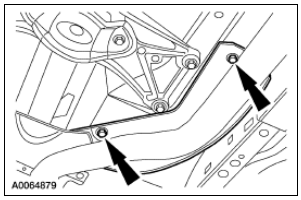
Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the RH front exhaust heat shield.



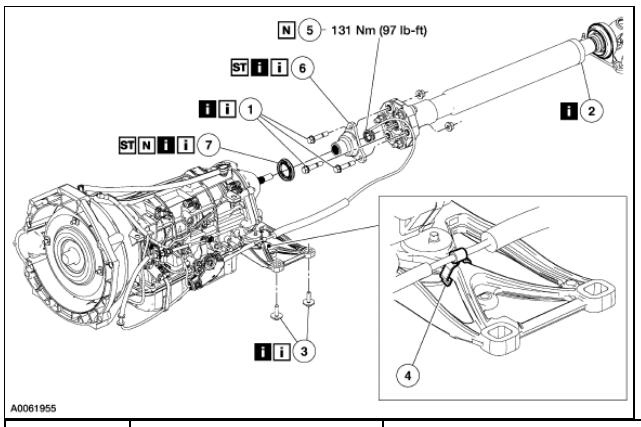
3. Remove the LH front exhaust heat shield.



4. Using a suitable transmission jack, support the transmission.

5. Remove the components in the order indicated in the following illustration and table.

6. To install, reverse the removal procedure.



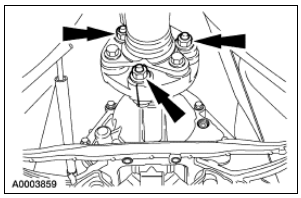
Item	Part Number	Description
1	W701357-S309	Output shaft flange coupler bolts Removal Note
1	W701357-S309	Output shaft flange coupler bolts Installation Note
2	4602	Driveshaft Removal Note
3	W704971-S426	Transmission support screws Removal Note
3	W704971-S426	Transmission support screws Installation Note
4	7E395	Shift cable
5	7089	Output shaft flange nut
6	7089	Output shaft flange Removal Note
6	7089	Output shaft flange Installation Note
7	7052	Output shaft seal Removal Note
7	7052	Output shaft seal Installation Note

Item 1: Output Shaft Flange Coupler Bolts Removal Note

1. **⚠ CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original location can cause driveshaft imbalance.**

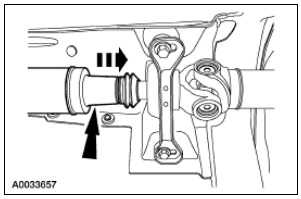
   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



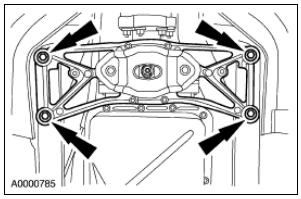
Item 2: Driveshaft Removal Note

1. Slide the front shaft assembly rearward and support.



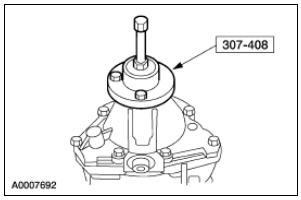
Item 3: Transmission Support Screws Removal Note

1. Remove the transmission mount and lower the transmission enough to gain access to the extension housing seal.



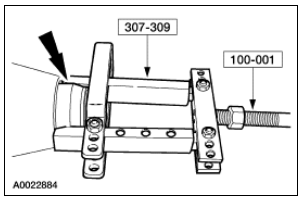
Item 6: Output Shaft Flange Removal Note

1. Using the special tool, remove the output shaft flange.



Item 7: Output Shaft Seal Removal Note

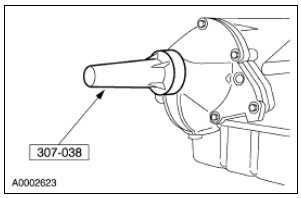
1. Using the special tools, remove the extension housing seal.



Item 7: Output Shaft Seal Installation Note

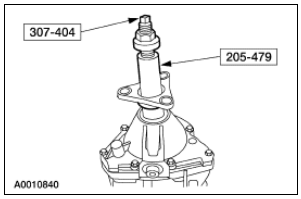
NOTE: Make sure the extension housing seal is correctly installed onto the special tool and the garter spring is in the correct position.

1. Using the special tool, install the extension housing seal.



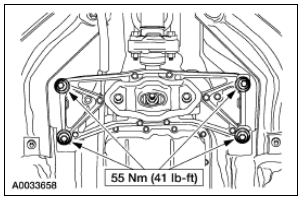
Item 6: Output Shaft Flange Installation Note

1. Using the special tool, install the output shaft flange.



Item 3: Transmission Support Screws Installation Note

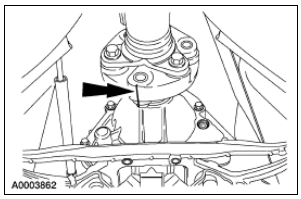
1. Install the rear support screws.



Item 1: Output Shaft Flange Coupler Bolts Installation Note

1. ⚠ **CAUTION: Align the index marks or a driveshaft imbalance can occur.**

   Align the index marks made during removal on the companion flange, and position the driveshaft in place.



2. ⚠ **CAUTION: Install the bolts, washers, and nuts in their original position or drive shaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

   Install the three nuts, washers and bolts.

6. Refill the transmission with the specified fluid.

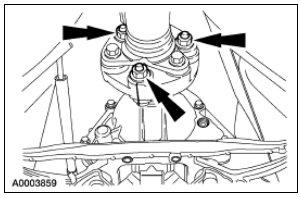
7. Using a suitable transmission jack, support the transmission.

Item 1: Output Shaft Flange Coupler Bolts Removal Note

1. **⚠ CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original location can cause driveshaft imbalance.**

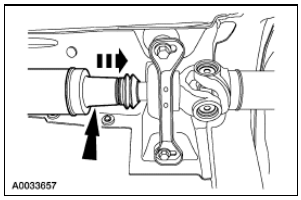
   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



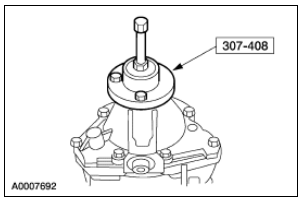
Item 2: Driveshaft Removal Note

1. Slide the front shaft assembly rearward and support.



Item 8: Output Shaft Flange Removal Note

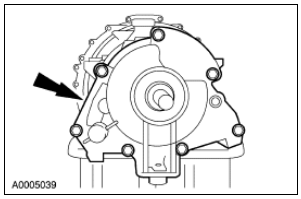
1. Using the special tool, remove the output shaft flange.



Item 10: Extension Housing Removal Note

1. ⚠ **CAUTION: The parking pawl, parking pawl return spring and parking pawl shaft could fall out during removal of the extension housing.**

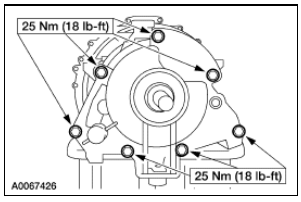
   Remove the extension housing.



Item 9: Extension Housing Screws Installation Note

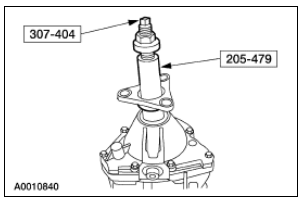
1. ⚠ **CAUTION: Make sure the parking lever actuating rod is correctly seated into the case parking rod guide cup.**

   Install the extension housing.



Item 8: Output Shaft Flange Installation Note

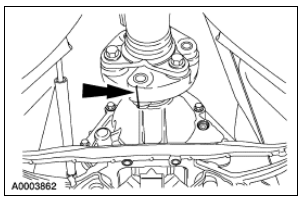
1. Using the special tool, install the output shaft flange.



Item 1: Output Shaft Flange Coupler Bolts Installation Note

1. ⚠ **CAUTION: Align the index marks or a driveshaft imbalance can occur.**

   Align the index marks made during removal on the companion flange, and position the driveshaft in place.



2. ⚠ **CAUTION: Install the bolts, washers, and nuts in their original position or drive shaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

   Install the three nuts, washers and bolts.

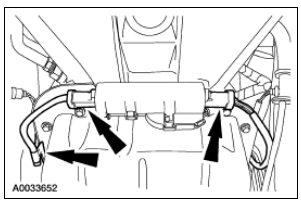
8	W500213-S1309	Transmission fluid pan screws Installation Note
9	7A194	Transmission fluid pan Installation Note
10	7A191	Transmission fluid pan gasket
11	W70559-S300	Transmission fluid pan filter screws
12	7A098	Transmission fluid pan filter
13	W703189-S1430	Solenoid body screws Installation Note
14	W702291-S300	Solenoid body screw Installation Note
15	7G391	Solenoid body
16	W705928-S300	Solenoid body O-ring seals Installation Note

5. Verify that the shift cable is adjusted correctly. For additional information, refer to Selector Lever Cable Adjustment in this section.

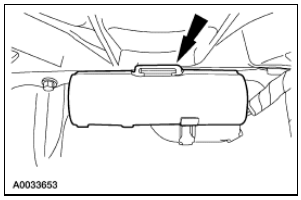
Item 2: Heated Oxygen Sensor Electrical Connector Removal Note

1. Disconnect the heated oxygen sensor connector and remove the sensor wire retaining clip from the right side of the transmission pan rail.



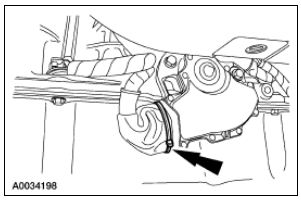
Item 3: Heated Oxygen Sensor Electrical Connector Retainer Removal Note

1. Remove the heated oxygen sensor connector from the front of the transmission pan rail.

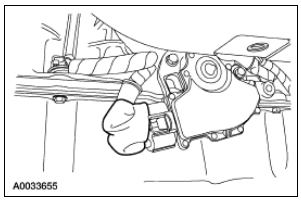


Item 7: Transmission Range TR Sensor Electrical Connector Removal Note

1. Remove and discard the tie strap from the digital TR sensor connector boot.

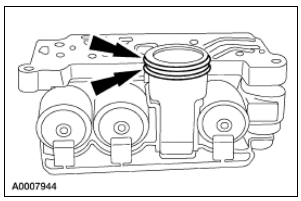


2. Slide the rubber boot back and disconnect the digital TR sensor connector.



Item 16: Solenoid Body O-Ring Seals Installation Note

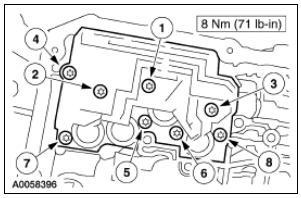
1. Install new O-ring seals on the solenoid body connector. Lubricate the O-ring seals with clean automatic transmission fluid.



Items 13 and 14: Solenoid Body Screws Installation Note

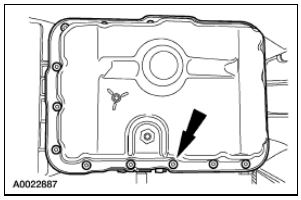
1. ⚠ **CAUTION: Inspect the transmission case bore to make sure it is free of foreign material and not damaged. If it is damaged, transmission leak may occur.**

   Install the solenoid body. Tighten the screws in sequence shown.



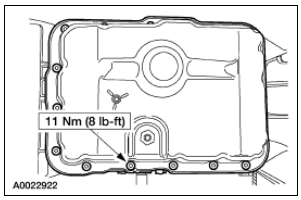
Item 9: Transmission Fluid Pan Installation Note

1. Install the transmission fluid pan and gasket and loosely install the screws.



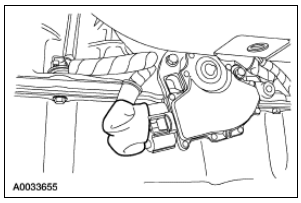
Item 8: Transmission Fluid Pan Screws Installation Note

1. Tighten the screws in a crisscross sequence.

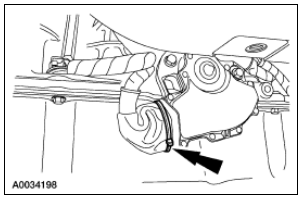


Item 7: Transmission Range TR Sensor Electrical Connector Installation Note

1. Connect the digital TR sensor connector and slide the rubber boot over the connector.



2. Install a new strap on the digital TR sensor connector boot.



Item 6: Solenoid Body Harness Electrical Connector Installation Note

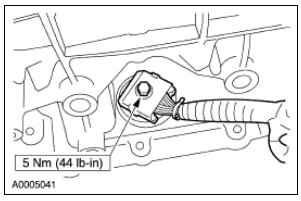
1. ⚠ **CAUTION: Damage will occur to the solenoid body assembly if the screw is tightened above the specification.**

   NOTE: Always install new O-ring seals on vehicle harness connector.

   NOTE: Clean the area around connector to prevent contamination of the solenoid body connector.

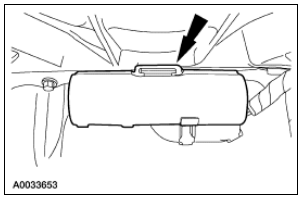
   NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

   Install and lubricate new O-ring seals on the transmission connector and connect the connector.



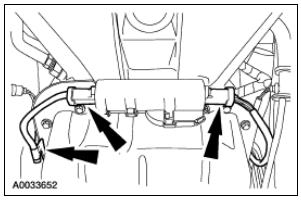
Item 3: Heated Oxygen Sensor Electrical Connector Retainer Installation Note

1. Install the heated oxygen sensor connector from the front of the transmission pan rail.



Item 2: Heated Oxygen Sensor Electrical Connector Installation Note

1. Connect the heated oxygen sensor connector and install the sensor wire retaining clip to the right side of the transmission pan rail.



Digital Transmission Range (TR) Sensor

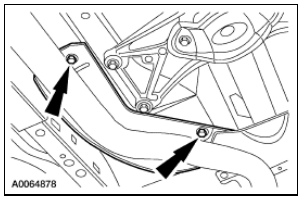
Printable View (437 KB)

Special Tool(s)

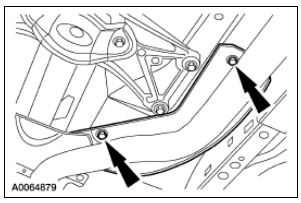
 ST1633-A	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)

Removal and Installation

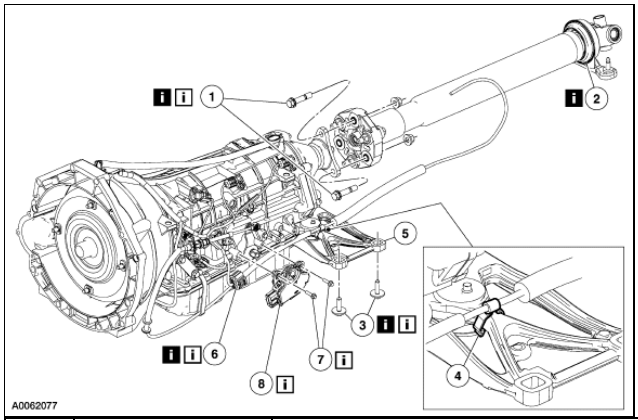
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the RH front exhaust heat shield.



3. Remove the LH front exhaust heat shield.



4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	W701357-S309	Output shaft flange coupler Removal Note
1	W701357-S309	

		Output shaft flange coupler Installation Note
2	4817	Driveshaft Removal Note
3	W704971-S426	Transmission support screws Removal Note
3	W704971-S426	Transmission support screws Installation Note
4	7E395	Shift cable retainer
5	6A023	Transmission support
6	14A646	Transmission range TR sensor electrical connector Removal Note
6	14A646	Transmission range TR sensor electrical connector Installation Note
7	W500015-309	Transmission range TR sensor screws Installation Note
8	7F293	Transmission range TR sensor Installation Note

6. Refill the transmission with the specified fluid.

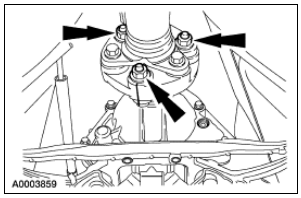
7. Verify that the shift cable is adjusted correctly. For additional information, refer to Selector Lever Cable Adjustment in this section.

Item 1: Output Shaft Flange Coupler Removal Note

1. **⚠ CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original location can cause drive shaft imbalance.**

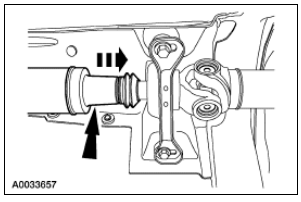
   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



Item 2: Driveshaft Removal Note

1. Slide the front shaft assembly rearward and support.

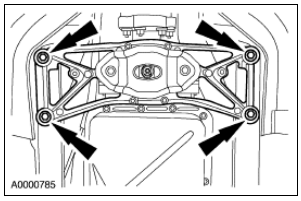


Item 3: Transmission Support Screws Removal Note

1. ⚠ **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions may result in personal injury.**

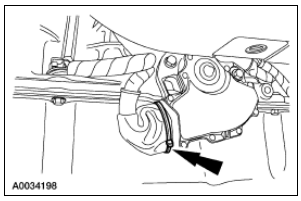
   Using a suitable transmission jack, support the transmission.

2. Remove the transmission mount and lower the transmission enough to gain access to the digital transmission range (TR) sensor.

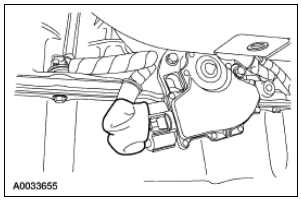


Item 6: Transmission Range TR Sensor Electrical Connector Removal Note

1. Remove and discard the tie strap from the digital TR sensor connector boot.



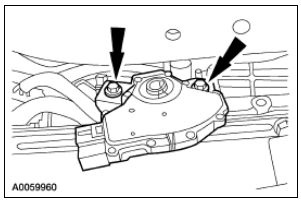
2. Slide the rubber boot back and disconnect the digital TR sensor connector.



Item 8: Transmission Range TR Sensor Installation Note

1. ⚠ **CAUTION: The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.**

   Install the digital TR sensor and loosely install the screws.

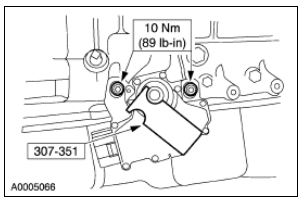


Item 7: Transmission Range TR Sensor Screws Installation Note

1. ⚠ **CAUTION: Tightening one screw before tightening the other may cause the sensor to bind or become damaged.**

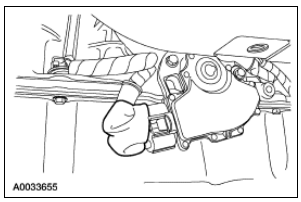
   NOTE: The manual lever must be in the NEUTRAL position.

Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

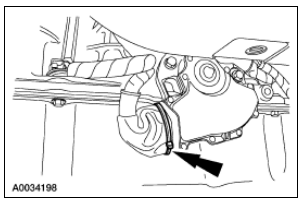


Item 6: Transmission Range TR Sensor Electrical Connector Installation Note

1. Reconnect the digital TR sensor electrical connector.

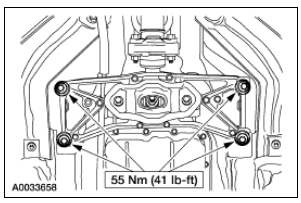


2. Slide the boot over the digital TR sensor connector and install a tie strap.



Item 3: Transmission Support Screws Installation Note

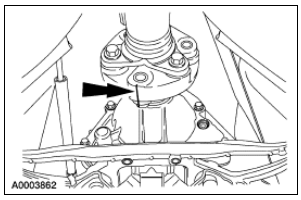
1. Install the rear support screws.



Item 1: Output Shaft Flange Coupler Installation Note

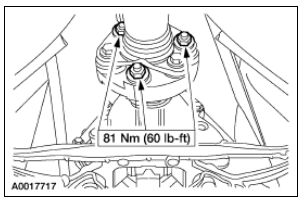
1. ⚠ **CAUTION: Align the index marks or a driveshaft imbalance can occur.**

   Align the index marks on the companion flange made during removal and position the driveshaft in place.



2. ⚠ **CAUTION: Install the bolts, washers, and nuts in their original position or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

Install the three nuts, washers and bolts.



Reverse Servo Assembly

Printable View (219 KB)

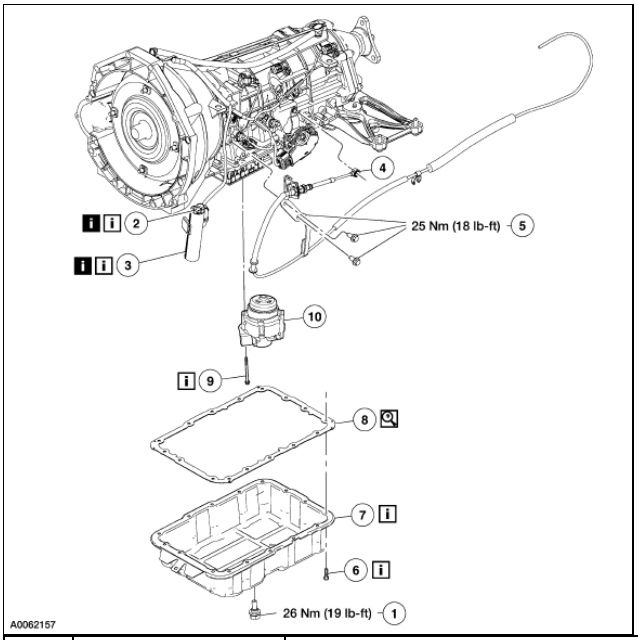
Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Removal and Installation

NOTE: The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.



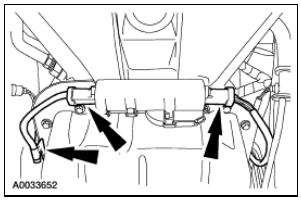
Item	Part Number	Description
1	7A194	Transmission fluid pan drain plug
2		Heated oxygen sensor electrical connector (part of 9F472) Removal Note
2		Heated oxygen sensor electrical connector (part of 9F472) Installation Note
3		Heated oxygen sensor electrical connector retainer (part of 9F472)

		Removal Note
3		Heated oxygen sensor electrical connector retainer (part of 9F472) Installation Note
4	7E395	Transmission selector lever cable eyelet
5	7B229	Transmission selector lever cable screws and bracket
6	W500213-S309	Transmission fluid pan screws Installation Note
7	7A194	Transmission fluid pan Installation Note
8	7A191	Transmission fluid pan gasket
9	W7022359-S309	Reverse servo screws Installation Note
10	7B193	Reverse servo

4. Partially fill the transmission. For additional information, refer to Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

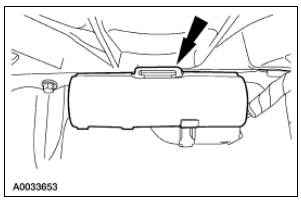
Item 2: Heated Oxygen Sensor Electrical Connector Removal Note

1. Disconnect the heated oxygen sensor connector and remove the sensor wire retaining clip from the right side of the transmission pan rail.



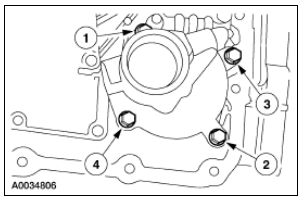
Item 3: Heated Oxygen Sensor Electrical Connector Retainer Removal Note

1. Remove the heated oxygen sensor connector from the front of the transmission pan rail.



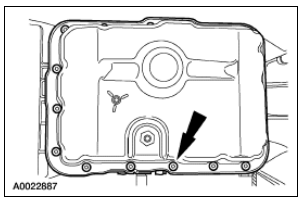
Item 9: Reverse Servo Screws Installation Note

1. Install the reverse servo. Tighten the screws in the sequence shown in two stages.
    - Stage 1: Tighten screws to 5 Nm (44 lb-in).
    - Stage 2: Tighten screws to 11 Nm (8 lb-ft).



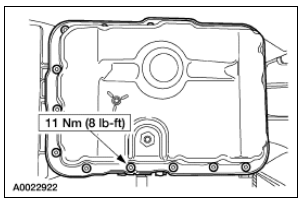
Item 7: Transmission Fluid Pan Installation Note

1. Install the transmission fluid pan and gasket, and loosely install the screws.



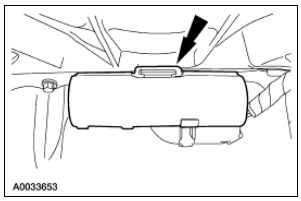
Item 6: Transmission Fluid Pan Screws Installation Note

1. Tighten the screws in a crisscross sequence.



Item 3: Heated Oxygen Sensor Electrical Connector Retainer Installation Note

1. Install the heated oxygen sensor connector from the front of the transmission pan rail.



Item 2: Heated Oxygen Sensor Connector Installation Note

1. Connect the heated oxygen sensor connector and install the sensor wire retaining clip to the right side of the transmission pan rail.

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Removal

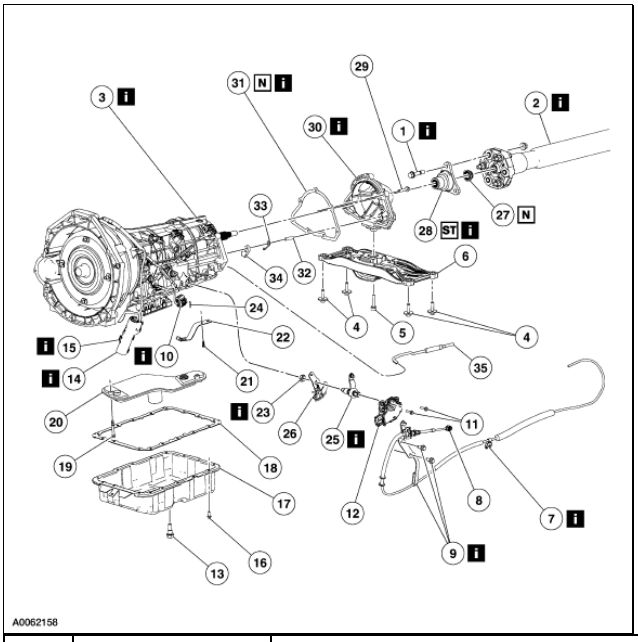
NOTE: If damage to the park gear is found, the transmission must be removed and disassembled to install a new park gear.

NOTE: The park pawl, park pawl return spring and the park pawl shaft may fall out when removing the extension housing.

NOTE: The transmission fluid pan gasket is reusable. Clean and inspect. If damage to the gasket is found, a new gasket must be installed.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W701357-S309	Output shaft flange coupler Removal Note
2	4817	Driveshaft Removal Note
3	7000	Transmission assembly Removal Note
4	W704971-S426	Transmission support outer screws

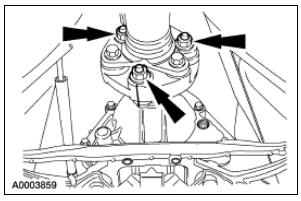
32	7D071	Parking pawl return spring shaft
33	7D070	Parking pawl return spring
34	7A441	Parking pawl
35	7A232	Parking pawl actuating rod

Item 1: Output Shaft Flange Coupler Removal Note

1. **⚠ CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original location can cause driveshaft imbalance.**

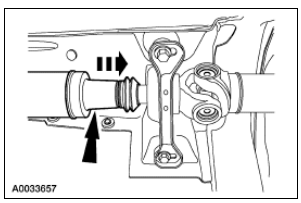
   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



Item 2: Driveshaft Removal Note

1. Slide the front shaft assembly rearward and support.



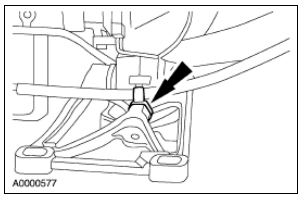
Item 3: Transmission Assembly Removal Note

1. ⚠ **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions may result in personal injury.**

   Using a suitable transmission jack, support the transmission.

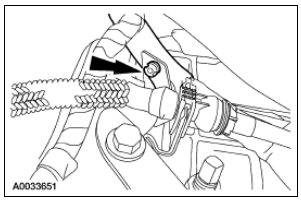
Item 7: Shift Cable Retainer Removal Note

1. Disconnect the shift cable from the transmission support.

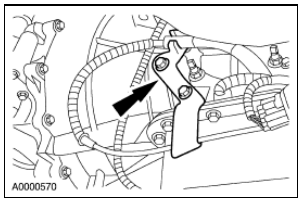


Item 9: Transmission Selector Lever Cable Screws and Bracket Removal Note

1. Disconnect the wire harness from the top of the transmission shift cable bracket.

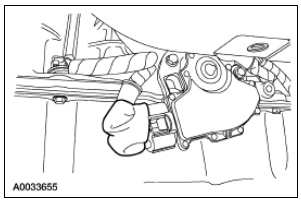


2. Remove the shift cable and bracket.

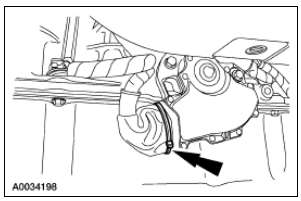


Item 10: Transmission Range TR Sensor Electrical Connector Removal Note

1. Reconnect the digital TR sensor electrical connector.

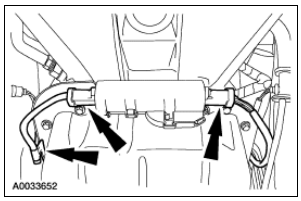


2. Slide the boot over the digital TR sensor connector and install a tie strap.



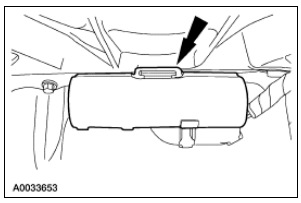
Item 14: Heated Oxygen Sensor Electrical Connector Removal Note

1. Disconnect the heated oxygen sensor connector and remove the sensor wire retaining clip from the right side of the transmission pan rail.



Item 15: Heated Oxygen Sensor Electrical Connector Retainer Removal Note

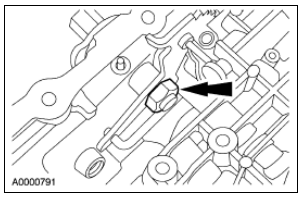
1. Remove the heated oxygen sensor connector from the front of the transmission pan rail.



Item 23: Manual Control Lever Inner Nut Removal Note

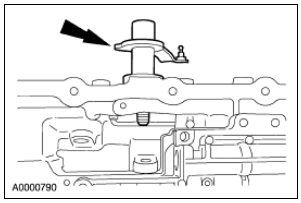
1. ⚠ **CAUTION: To avoid damage, make sure the wrench does not strike the manual valve inner lever pin.**

   Remove the manual valve inner nut.

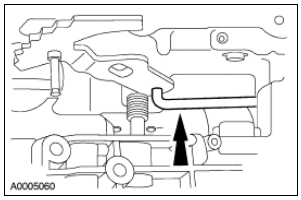


Item 25: Manual Control Lever Shaft Removal Note

1. Partially remove the manual control lever.

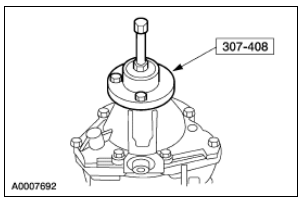


2. Disconnect the manual valve inner lever from the parking lever actuating rod.



Item 28: Output Shaft Flange Removal Note

1. Using the special tool, remove the output shaft flange.

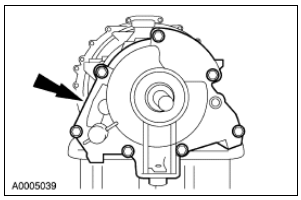


Item 30: Extension Housing Removal Note

1. **NOTE:** If damage to the park gear is found, the transmission will have to be removed and disassembled.

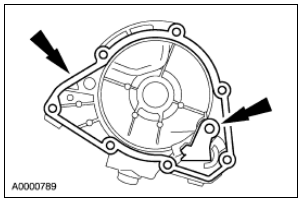
   NOTE: The parking pawl, parking pawl return spring, and parking pawl shaft may fall out during removal of the extension housing.

   Remove the extension housing.



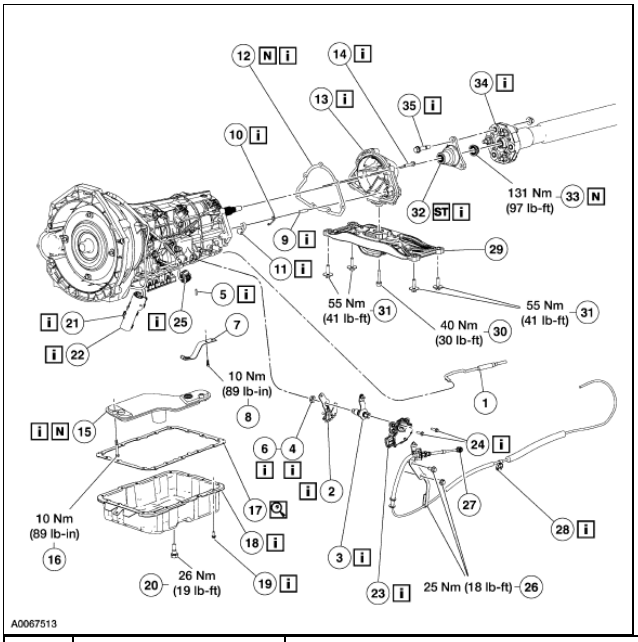
Item 31: Extension Housing Gasket Removal Note

1. Remove and discard the extension housing gasket. Inspect the parking pawl, parking pawl return spring, and parking pawl shaft. Discard any components that are worn or damaged.



Installation

1. Illustration 2 of 2. Assemble the components in the order indicated in the following illustration and table.



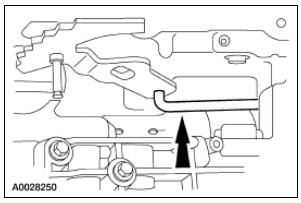
Item	Part Number	Description
1	7A232	Parking pawl actuating rod
2	7A115	Manual control valve detent inner lever Installation Note
3	7C493	Manual control lever shaft Installation Note
4	W703001-S309	Manual control lever inner nut Installation Note
5	7B210	Manual control lever shaft retaining pin Installation Note
6	W703001-S309	Manual control lever inner nut Installation Note
7	7E332	Manual valve detent spring
8	W500102-S300	Manual valve detent spring screw
9	7D071	Parking pawl return spring shaft Installation Note
10	7D070	Parking pawl return spring Installation Note
11	7A441	Parking pawl Installation Note
12	7086	Extension housing gasket Installation Note
13	7A039	Extension housing Installation Note
14	W500311-S309	Extension housing screws Installation Note
15	7A098	Transmission fluid pan filter Installation Note
16	W70559-S300	Transmission fluid pan filter screws
17	7A191	Transmission fluid pan gasket
18	7A194	Transmission fluid pan Installation Note

19	W500213-S1309	Transmission fluid pan screws Installation Note
20	7A194	Transmission fluid pan drain plug
21	9F472	Heated oxygen sensor electrical connector (part of 9F472) Installation Note
22	9F472	Heated oxygen sensor electrical connector retainer (part of 9F472) Installation Note
23	7F293	Transmission range sensor Installation Note
24	W500015-S309	Transmission range sensor screws Installation Note
25	14A646	Transmission range sensor electrical connector Installation Note
26	7B229	Transmission range selector lever cable bracket screws
27	7E395	Transmission selector lever cable eyelet
28	7E395	Shift cable retainer Installation Note
29	6A023	Transmission support
30	W705966-S426	Transmission support center screw
31	W704971-S426	Transmission support outer screws
32	7089	Output shaft flange Installation Note
33	W701357-S309	Output shaft flange nut
34	W701357-S309	Output shaft flange coupler Installation Note
35		Output shaft flange coupler screws Installation Note

2. Partially fill the transmission. For additional information, refer to or Transmission Fluid Drain and Refill Without Torque Converter Drain Plug in this section.

Item 2: Manual Control Valve Detent Inner Lever Installation Note

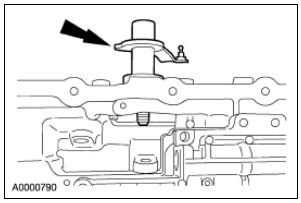
1. Install and assemble the manual valve inner lever and parking lever actuating rod as shown.



Item 3: Manual Control Lever Shaft Installation Note

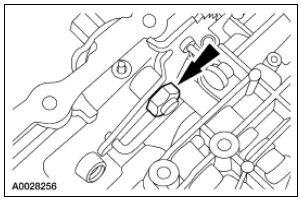
1. ⚠ **CAUTION: Align the flats on the manual valve inner lever with the flats on the manual control lever shaft.**

   Install the manual control lever shaft.



Item 4: Manual Control Lever Inner Nut Installation Note

1. Install the manual valve inner lever onto the manual shaft and loosely install the nut.



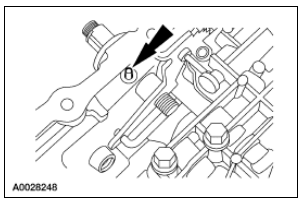
Item 5: Manual Control Lever Shaft Retaining Pin Installation Note

1. ⚠ **CAUTION: Use care not to damage the fluid pan rail surface when installing the retaining pin.**

   NOTE: Align the manual control lever shaft alignment groove with the manual control lever shaft spring pin bore in the transmission case.

   Install the manual control lever shaft spring pin.

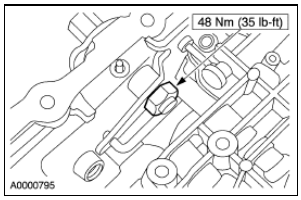
   - Tap the manual control lever shaft spring pin into the transmission case.



Item 6: Manual Control Lever Inner Nut Installation Note

1. ⚠ **CAUTION: To avoid damage, do not allow the wrench to strike the manual valve inner lever pin.**

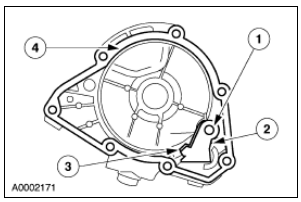
   Tighten the nut.



Items 9, 10, 11 and 12: Parking Pawl Assembly Installation Note

1. Install the parking pawl assembly and gasket.
   1. Install the parking pawl shaft.
   2. Install the parking pawl.
   3. Install the parking pawl return spring.

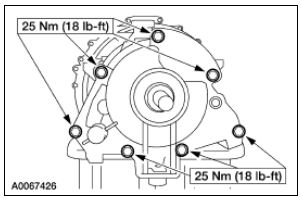
4. Install the gasket.



Items 13 and 14: Extension Housing and Screws Installation Note

1. **⚠ CAUTION: Make sure the parking lever actuating rod is correctly seated into the case parking rod guide cup.**

   Install the extension housing.

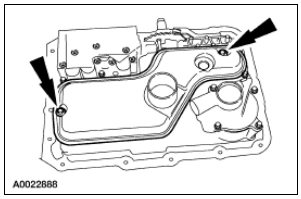


Item 15: Transmission Fluid Pan Filter Installation Note

1. **⚠ CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.**

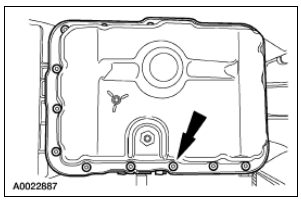
   NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

   Lubricate the seals and install the transmission fluid filter.



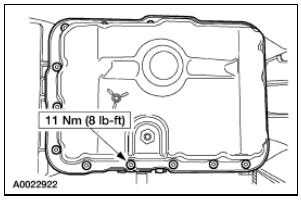
Item 18: Transmission Fluid Pan Installation Note

1. Install the transmission fluid pan and gasket and loosely install the screws.



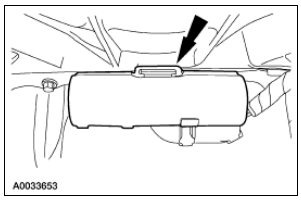
Item 19: Transmission Fluid Pan Screws Installation Note

1. Tighten the screws in a crisscross sequence.



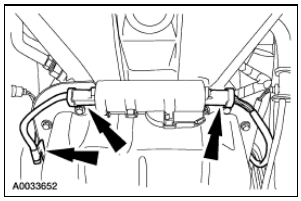
Item 21: Heated Oxygen Sensor Electrical Connector Installation Note

1. Install the heated oxygen sensor connector to the front of the transmission pan rail.



Item 22: Heated Oxygen Sensor Connector Retainer Installation Note

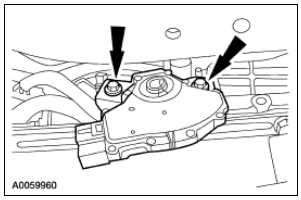
1. Connect the heated oxygen sensor connector and install the sensor wire retaining clip to the right side of the transmission pan rail.



Item 23: Transmission Range Sensor Installation Note

1. ⚠ **CAUTION: The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.**

   Install the digital transmission range (TR) sensor and loosely install the screws.

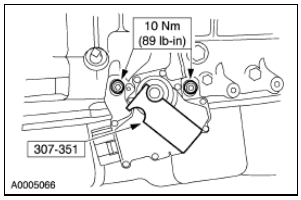


Item 24: Transmission Range Sensor Screws Installation Note

1. ⚠ **CAUTION: Tightening one screw before tightening the other may cause the sensor to bind or become damaged.**

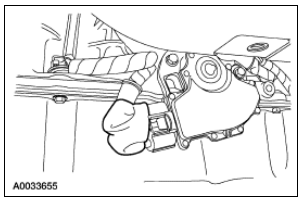
   NOTE: The manual lever must be in the NEUTRAL position.

   Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

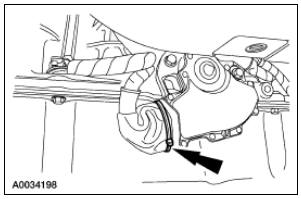


Item 25: Transmission Range Sensor Electrical Connector Installation Note

1. Reconnect the digital TR sensor connector.

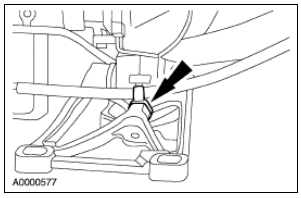


2. Slide the boot over the digital TR sensor connector and install a new tie strap.



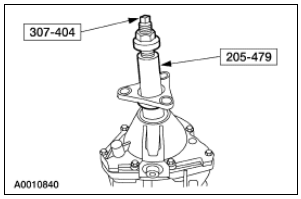
Item 28: Shift Cable Retainer Installation Note

1. Connect the shift cable to the transmission support.



Item 32: Output Shaft Flange Installation Note

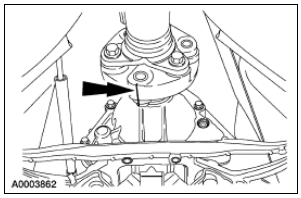
1. Using the special tool, install the output shaft flange.



Item 34: Output Shaft Flange Coupler Installation Note

1. ⚠ **CAUTION: Align the index marks or a driveshaft imbalance can occur.**

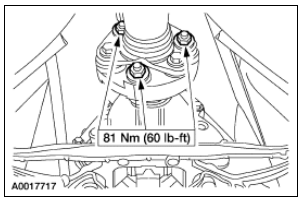
   Align the index marks on the companion flange made during removal and position the driveshaft in place.



Item 35: Output Shaft Flange Coupler Screws Installation Note

1. **⚠ CAUTION: Install the bolts, washers, and nuts in their original position or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

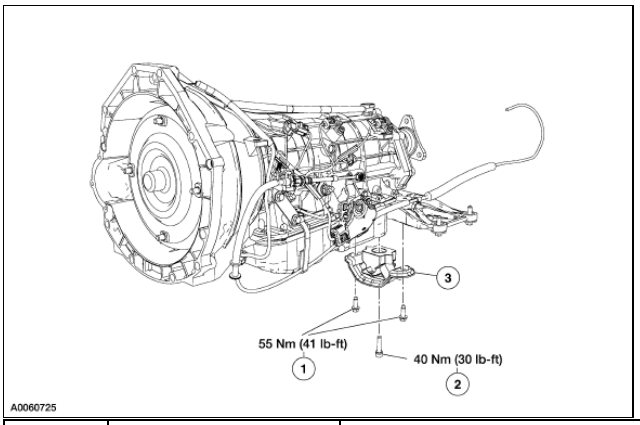
   Install the three nuts, washers and bolts.



Transmission Support Insulator Printable View (88 KB)

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Support the transmission with a transmission jack.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	W704971-S426	Rear transmission mount outer screw
2	W705966-S426	Rear transmission mount center screw
3	6038B	Rear transmission mount

Transmission Fluid Cooler

Printable View (282 KB)

Special Tool(s)

 ST1301-A	Installer, Constant Velocity Joint Boot Clamp 205-343 (T95P-3514-A)

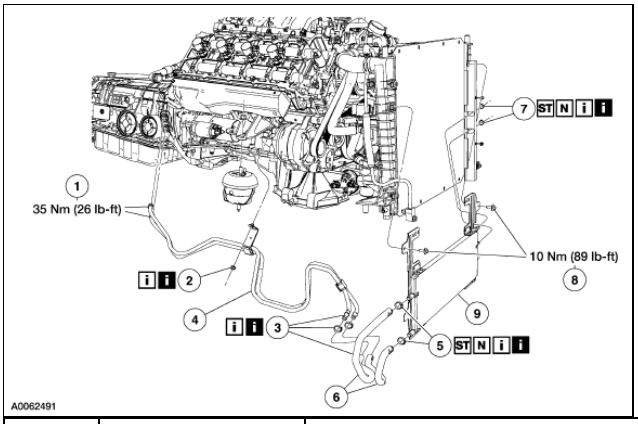
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the A/C condenser. For additional information, refer to Section 412-00 .

3. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out the following steps.

Component	Steps
Transmission fluid cooler	3, 5, 6, 7, 8 and 9
Transmission fluid cooler hoses	3, 5 and 6
Transmission fluid cooler lines	1, 2, 3 and 4

4. To install, reverse the removal procedure.

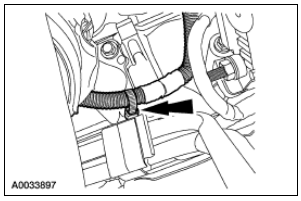


Item	Part Number	Description
1	7A030	Transmission fluid cooler line fittings
2	7N291	Transmission fluid cooler line bracket nut Removal Note
2	7N291	Transmission fluid cooler line bracket nut Installation Note
3	376240-S	Transmission fluid cooler hose clamps Removal Note
3	376240-S	Transmission fluid cooler hose clamps Installation Note
4	7R081	Transmission fluid cooler lines

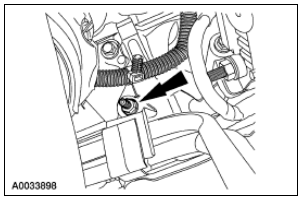
5	376240-S	Transmission fluid cooler hose clamps Removal Note
5	376240-S	Transmission fluid cooler hose clamps Installation Note
6	7B028	Transmission fluid cooler hoses
7	376240-S	Transmission fluid cooler hose clamps Removal Note
7	376240-S	Transmission fluid cooler hose clamps Installation Note
8	N606676-S	Transmission fluid cooler screws
9	7H189	Transmission fluid cooler

Item 2: Transmission Fluid Cooler Line Bracket Nut Removal Note

1. Remove the wire harness retainer from the steel fluid cooling tube support bracket.

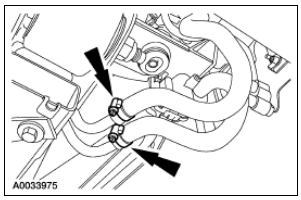


2. Remove the steel fluid cooling tube support bracket.



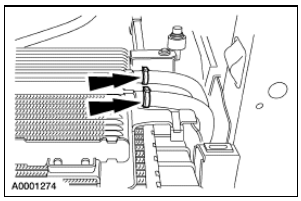
Item 3: Transmission Fluid Cooler Hose Clamps Removal Note

1. Remove the transmission fluid cooler hose clamps.



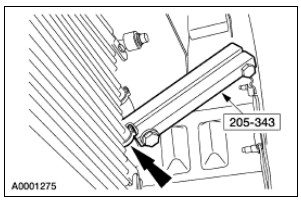
Items 5 and 7: Transmission Fluid Cooler Hose Clamps Removal Note

1. Remove and discard the transmission fluid cooler hose clamps.



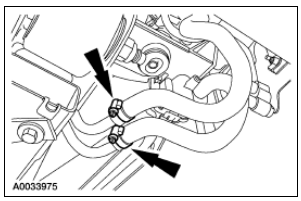
Items 5 and 7: Transmission Fluid Cooler Hose Clamps Installation Note

1. Using the special tool, install new transmission fluid cooler hose clamps.



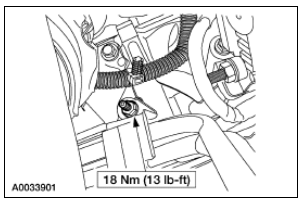
Item 3: Transmission Fluid Cooler Hose Clamps Installation Note

1. Install the transmission fluid cooler hose clamps.

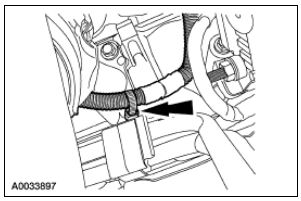


Item 2: Transmission Fluid Cooler Line Bracket Nut Installation Note

1. Install the steel fluid cooling tube support bracket.



2. Install the wire harness retainer to the steel fluid cooling tube support bracket.

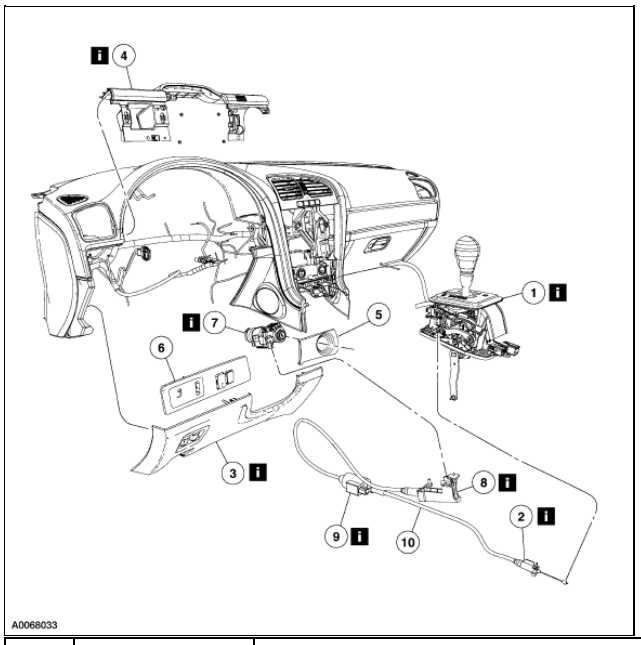


Brake Shift Interlock Actuator

Printable View (388 KB)

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Place the range selector lever in the D5 position.
3. Remove the center console. For additional information, refer to Section 501-01 .
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.

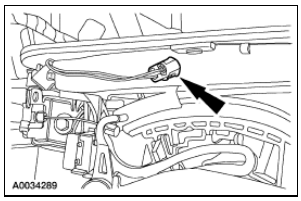


Item	Part Number	Description
1	7E034	Transmission selector lever bezel Removal Note
2	3F719	Transmission brake shift interlock actuator Removal Note
3		Instrument panel steering column cover Removal Note
4		Lower reinforcement panel Removal Note
5	7G550	Ignition switch finish panel
6	7E395	Instrument panel finish panel
7	14A646	Ignition switch Removal Note
8	14A646	Brake shift interlock actuator Removal Note
9		

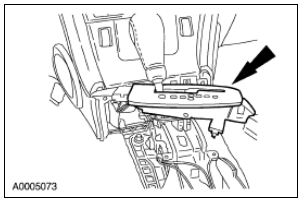
		Brake shift interlock actuator electrical connector Removal Note
10		Brake shift interlock actuator cable

Item 1: Transmission Selector Lever Bezel Removal Note

1. Remove the PRNDL indicator bulb.

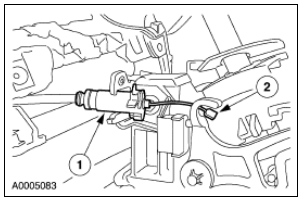


2. Rotate the shifter bezel out of the way.



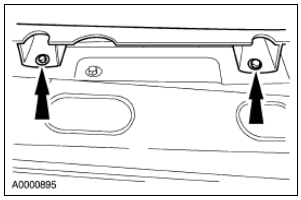
Item 2: Transmission Brake Shift Interlock Actuator Removal Note

1. Disconnect the cable from the lever.
    1. Remove the shift interlock cable from the bracket.
    2. Disconnect the cable from the lever.

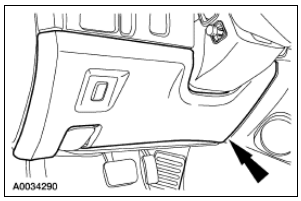


Item 3: Instrument Panel Steering Column Cover Removal Note

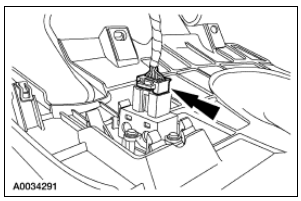
1. Remove the lower steering column cover push pins.



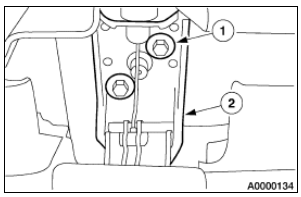
2. Remove the instrument panel steering column cover.



3. Disconnect the electrical connector.

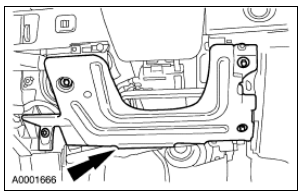


4. Position the hood release cable and bracket aside.
    1. Remove the screws.
    2. Position the hood release cable and bracket aside.



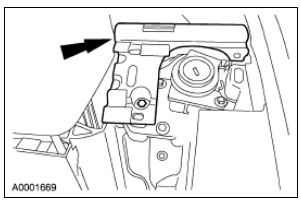
Item 4: Lower Reinforcement Panel Removal Note

1. Remove the lower reinforcement panel.

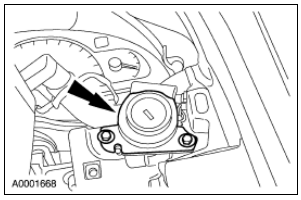


Item 7: Ignition Switch Removal Note

1. Remove the inner trim support panel.

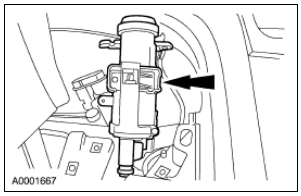


2. Remove the ignition switch
    - Remove the screws.
    - Remove the ignition switch.



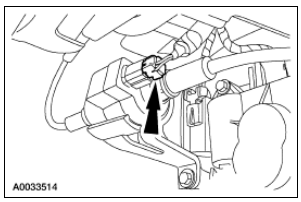
Item 8: Brake Shift Interlock Actuator Removal Note

1. Remove the screws for the brake shift interlock actuator cable.



Item 9: Brake Shift Interlock Actuator Electrical Connector Removal Note

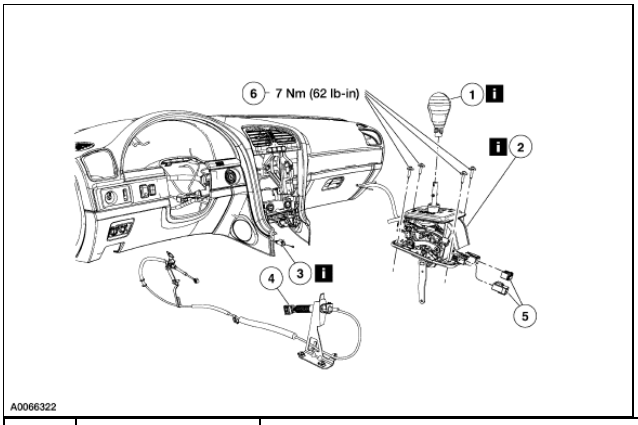
1. Disconnect the electrical connector from the brake shift interlock actuator cable.



Transmission Selector Lever Printable View (190 KB)

Removal and Installation

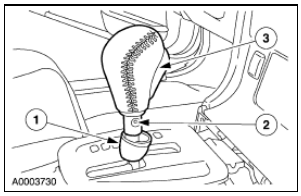
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Place the range selector lever in the D5 position.
3. Remove the center console. For additional information, refer to Section 501-01 .
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	7L010	Transmission selector lever handle Removal Note
2	7E034	Transmission selector lever bezel Removal Note
3	3F719	Transmission brake shift interlock actuator Removal Note
4	7E395	Transmission selector lever cable
5	15A808	Transmission selector lever electrical connector
6	7C453	Transmission selector lever assembly

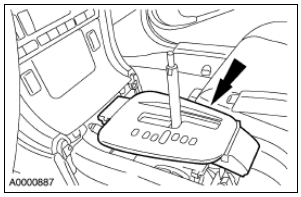
Item 1: Transmission Selector Lever Handle Removal Note

1. Remove the handle and cover.
    1. Slide the cover down.
    2. Remove the two screws.
    3. Remove the handle and the cover.

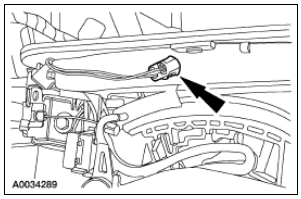


Item 2: Transmission Selector Lever Bezel Removal Note

1. Remove the shifter bezel out of the way.

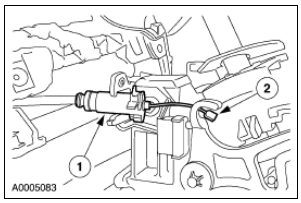


2. Remove the PRNDL indicator bulb.



Item 3: Transmission Brake Shift Interlock Actuator Removal Note

1. Disconnect the cable from the lever.
    1. Remove the shift interlock cable from the bracket.
    2. Disconnect the cable from the lever.

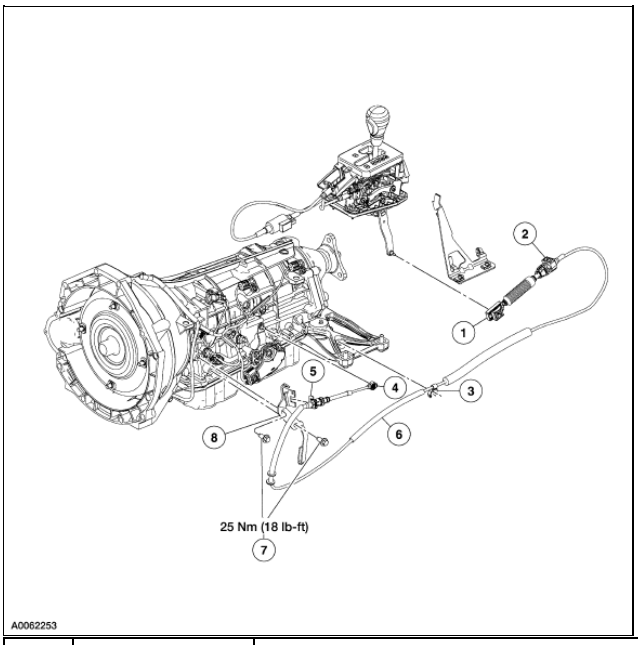


Transmission Selector Cable

Printable View (141 KB)

Removal and Installation

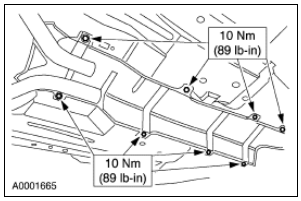
1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Place the range selector lever in the D5 position.
3. Remove the center console. For additional information, refer to Section 501-01 .
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	7E395	Transmission selector lever cable eyelet
2	7E395	Transmission selector lever cable retainer
3	7E395	Transmission selector lever cable retainer
4	7E395	Transmission selector lever cable eyelet
5	7E395	Transmission selector lever cable retainer
6	7E395	Transmission selector lever cable
7	N605918-S	Transmission selector lever cable bracket screws
8	7B229	Transmission selector lever cable bracket

6. **NOTE:** It is not necessary to remove the exhaust.

   Remove the bolts that retain the exhaust heat shield in place and lower the shield onto the exhaust.



7. After installing the shift cable, it will be necessary to adjust the shift cable. For additional information, refer to Selector Lever Cable Adjustment in this section.

Transmission Printable View (457 KB)

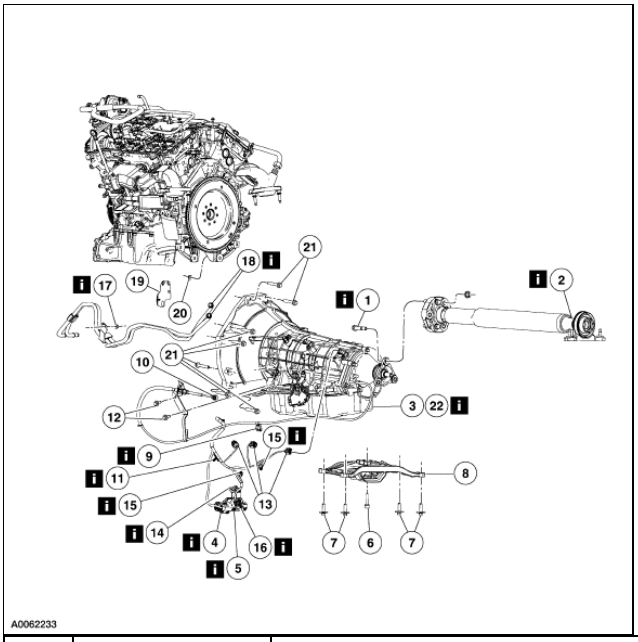
⚠ WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions can result in personal injury.

NOTE: When the battery has been disconnected and reconnected, some abnormal drive symptoms can occur while the vehicle relearns its adaptive strategy. The customer needs to be notified that they can experience slightly different upshifts either (soft or firm) and that this is a temporary condition and will eventually return to normal operating condition.

NOTE: If transmission disassembly or installation of a new transmission is necessary, drain the transmission fluid. Install the drain plug when finished.

NOTE: If the transmission is to be removed for an extended period of time, support the engine with a safety stand and a wood block.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the complete exhaust system and front heat shields. For additional information, refer to Section 309-00 .
4. Remove the components in order indicated in the following illustration and table.



Item	Part Number	Description
1	W701357-S309	Output shaft flange coupler Removal Note
2	4817	Driveshaft Removal Note
3	7000	Transmission assembly

		Removal Note
4	9F472	Heated oxygen sensor electrical connector Removal Note
5	9F472	Heated oxygen sensor electrical connector retainer Removal Note
6	W705966-S426	Transmission support center screw
7	W704971-S426	Transmission support outer screws
8	6A023	Transmission support
9	7E395	Cable retainer Removal Note
10	7E395	Transmission selector lever cable eyelet
11		Wire harness retainer Removal Note
12	7B229	Transmission selector lever cable screws and bracket
13	14A464	Speed sensor connector
14	7C078	Solenoid body harness electrical connector Removal Note
15	14A464	Wire harness retainers Removal Note
16	14A646	Transmission range TR sensor electrical connector Removal Note
17	7A030	Fluid cooler tube bracket Removal Note
18	7A030	Fluid cooler tube nuts Removal Note
19	6C070	Torque converter access cover
20	W705443-S	Torque converter nuts
21	W500128-S	Bell housing screws
22	7000	Transmission assembly Removal Note

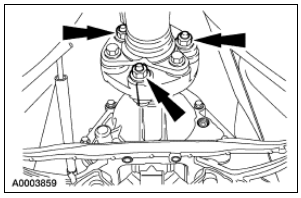
5. If contamination is present, backflush and clean the transmission fluid cooler. For additional information, refer to Transmission Fluid Cooler Backflushing and Cleaning in this section.

Item 1: Output Shaft Flange Coupler Removal Note

1. **⚠ CAUTION: Index-mark (color paint) the bolts, washers, nuts and the flex coupling to the transmission flange to make sure they are installed in the same location. Components that are not assembled in their original location can cause driveshaft imbalance.**

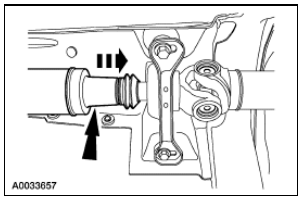
   ⚠ CAUTION: Do not remove the bolts retaining the flex coupling to the driveshaft.

   Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.



Item 2: Driveshaft Removal Note

1. Slide the front shaft assembly rearward and support.



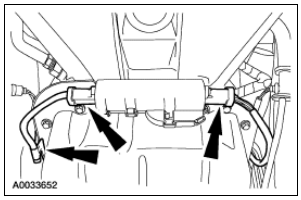
Item 3: Transmission Assembly Removal Note

1. ⚠ **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions may result in personal injury.**

   Using a suitable transmission jack, support the transmission.

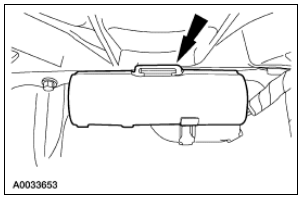
Item 4: Heated Oxygen Sensor Electrical Connector Removal Note

1. Disconnect the heated oxygen sensor connector and remove the sensor wire retaining clip from the right side of the transmission pan rail.



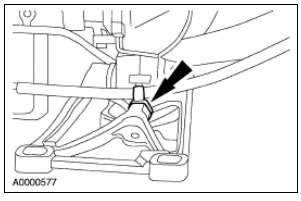
Item 5: Heated Oxygen Sensor Electrical Connector Retainer Removal Note

1. Remove the heated oxygen sensor connector from the front of the transmission pan rail.



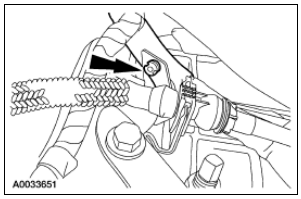
Item 9: Cable Retainer Removal Note

1. Disconnect the shift cable retainer



Item 11: Wire Harness Retainer Removal Note

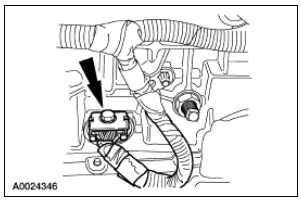
1. Disconnect the wire harness from the top of the transmission shift cable bracket.



Item 14: Solenoid Body Harness Electrical Connector Removal Note

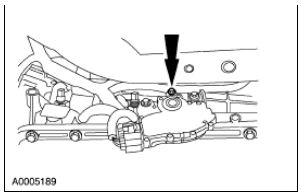
1. **NOTE:** Clean the area around connector to prevent contamination of the solenoid body connector.

   Remove the screw from the solenoid body connector and disconnect the connector.



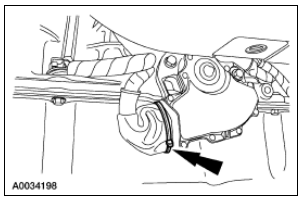
Item 15: Wire Harness Retainers Removal Note

1. Disconnect the wire harness retainers.

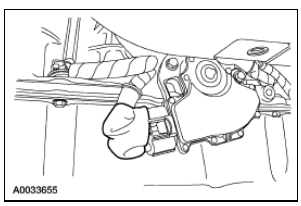


Item 16: Transmission Range TR Sensor Electrical Connector Removal Note

1. Remove and discard the tie strap from the digital TR sensor connector boot.

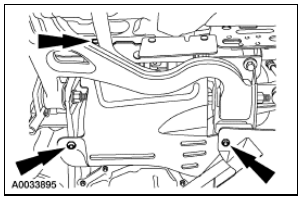


2. Slide the rubber boot back and disconnect the digital TR sensor connector.

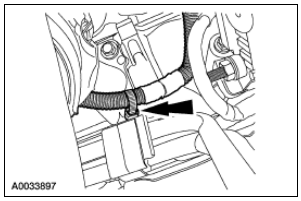


Item 17: Fluid Cooler Tube Bracket Removal Note

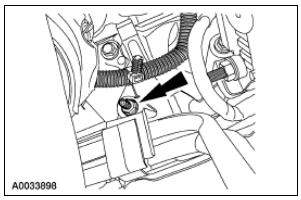
1. Remove the screws and pushpins then remove the splash shield.



2. Disconnect the wire harness from the cooler line bracket.



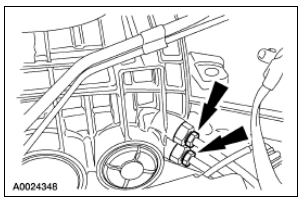
3. Disconnect the transmission cooler line bracket.



Item 18: Fluid Cooler Tube Nuts Removal Note

1. ⚠ **CAUTION: Do not damage the cooler tubes. Hold the transmission case fittings with a wrench.**

   Disconnect the transmission cooler tubes.



Item 22: Transmission Assembly Removal Note

1. Carefully lower the transmission from the vehicle. Make sure the transmission fluid cooler and cooler lines are cleaned at this time.

Transmission Printable View (1488 KB)

Special Tool(s)

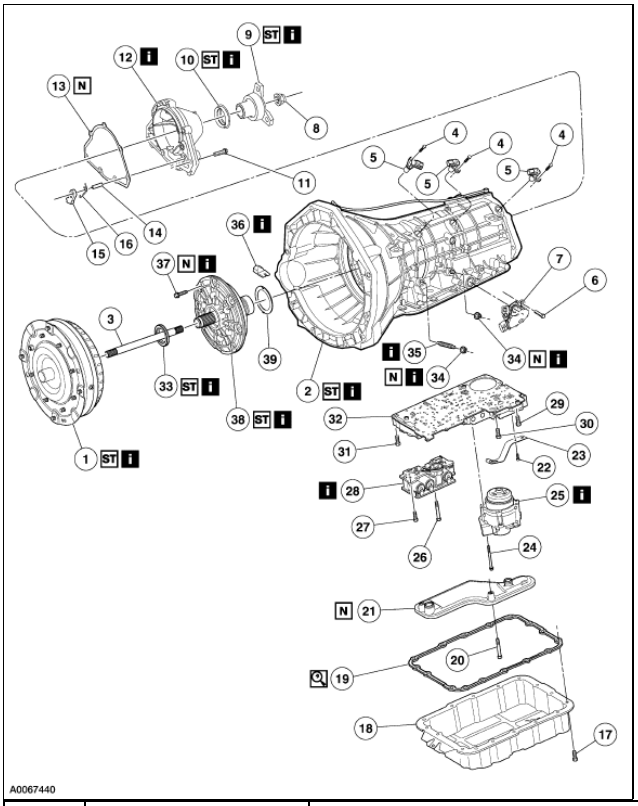
ST2417-A	Remover, Input Shaft Oil Seal 308-375
 ST2418-A	Remover, Transmission Fluid Pump 307-397
ST1186-A	Holding Fixture, Transmission 307-003 (T57L-500-B)
ST1185-A	Slide Hammer 100-001 (T50T-100-A)
 ST1758-A	Remover, Torque Converter Fluid Seal 307-309 (T94P-77001-BH)
 ST2393-A	Compressor, Servo Cover 307-402
 ST1631-A	Handle, Torque Converter 307-091 (T81P-7902-C)
 ST2415-A	Remover, Output Shaft Flange 307-408

⚠ CAUTION: The screws are not reusable for assembly. Discard the screws. If the screws are reused, the housing may become separated from the transmission.

NOTE: The transmission fluid pan gasket is reusable. Clean and inspect the gasket for damage. If not damaged, the gasket should be reused.

NOTE: Tag and identify all parts for reassembly.

1. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	7902	Torque converter Disassembly Note
2	7005	Transmission Disassembly Note
3	7060	Input shaft
4	W702981-S300	Speed sensor screw
5	7H103	Speed sensor
6	W500015-S309	Transmission range sensor screws
7	7F293	Transmission range sensor
8	W701357-S309	Output shaft flange nut
9	7089	Output shaft flange Disassembly Note
10	7052	Output shaft seal Disassembly Note
11	W500311-S309	Extension housing screws
12	7A309	Extension housing Disassembly Note
13	7086	Extension housing gasket
14	7D071	Parking pawl shaft
15	7A441	Parking pawl

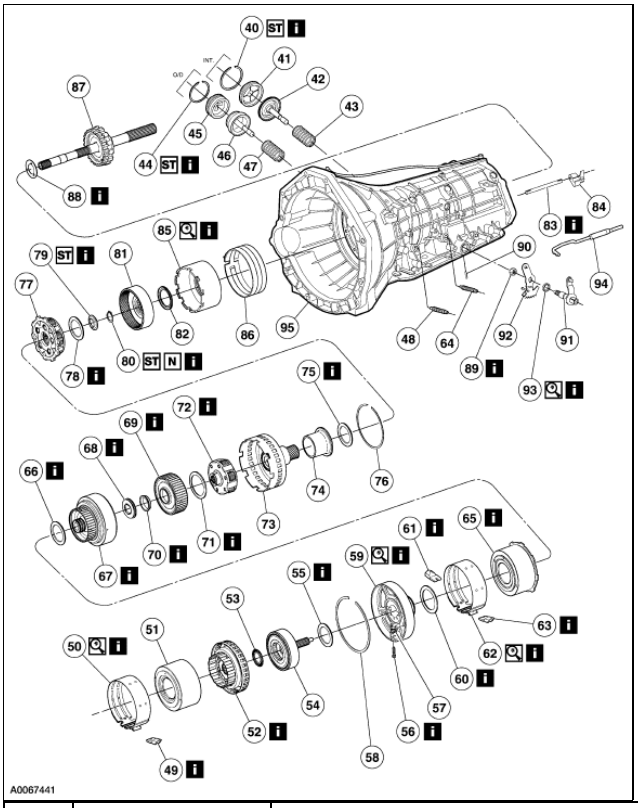
37	W704892-S300	Front pump screws Disassembly Note
38	7A103	Front pump Disassembly Note
39	7D014	Front pump support thrust washer No. 1

2. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
40	W702777-S300	Intermediate servo retaining ring Disassembly Note
41	7D027	Intermediate servo cover
42	7D021	Intermediate servo piston and rod
43	7D028	Intermediate servo piston spring
44	7H074	Overdrive servo cover retaining ring Disassembly Note
45	7D027	Overdrive servo cover
46	7D021	Overdrive servo piston and rod
47	7D028	Overdrive servo piston spring
48	7C492	Band adjusting screw
49	7D029	Band strut Disassembly Note
50	7D034	Intermediate overdrive band Disassembly Note
51	7L669	Overdrive brake drum
52	7B446	Overdrive planetary gear carrier Disassembly Note
53	7L495	Overdrive planetary thrust bearing
54	7L678	Hub and ring gear
55	7M153	Center shaft and forward clutch cylinder bearing assembly No.3 Disassembly Note
56	E804373-S	Center support bolt Disassembly Note
57	E826160-S76	Center support nut and cage assembly

58	W702465-S300	Retaining ring
59	7A130	Center support assembly Disassembly Note
59	7A130	Center support assembly Inspection Note
60	7D014	Intermediate clutch drum bearing (select fit) No. 4 Disassembly Note
61	7D029	Band anchor strut Disassembly Note
62	7D034	Intermediate band Disassembly Note
63	7D029	Band apply strut Disassembly Note
64	7C492	Band adjusting screw
65	7D044	Intermediate brake drum assembly Disassembly Note
66	7M153	Center shaft and forward clutch cylinder bearing assembly No. 5 Disassembly Note
67	7A360	Forward clutch cylinder assembly Disassembly Note
68	7D234	Forward ring gear hub thrust bearing No. 6A Disassembly Note
69	7D392	Forward ring gear and hub assembly Disassembly Note
70	7D090	Forward clutch hub thrust washer No. 6B Disassembly Note
71	7F374	Forward planetary thrust bearing assembly No. 7 Disassembly Note
72	7A398	Forward planet assembly Disassembly Note
73	7A019	Shell and sun gear assembly
74	7C167	Low and reverse gear spacer
75	7M153	Center shaft and forward clutch cylinder bearing assembly No. 8 Disassembly Note
76	W702775-S300	Reverse carrier drum snap ring
77	7D006	Reverse planet assembly
78	7M153	Center shaft and forward clutch cylinder bearing assembly No. 9 Disassembly Note
79	7B176	Output shaft sleeve Disassembly Note
80	E860527-S	Output shaft retaining ring Disassembly Note
81	7D163	Output shaft ring gear

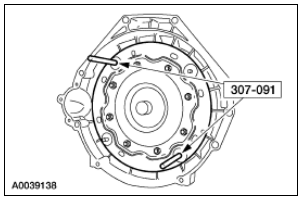
82	7H027	Low/intermediate sun gear bearing assembly
83	7D433	Reverse band actuating lever shaft Disassembly Note
84	7A179	Reverse brake drum lever assembly
85	7C498	Reverse brake drum and clutch assembly Disassembly Note
85	7C498	Reverse brake drum and clutch assembly Inspection Note
86	7D095	Reverse band assembly
87	7060	Output shaft
88	7B368	Output shaft thrust washer Disassembly Note
89	W703001-S309	Manual control lever inner nut Disassembly Note
90	7B210	Manual control lever shaft retaining pin
91	7A256	Manual control lever shaft
92	7A115	Manual valve inner lever
93	7B498	Manual control lever shaft seal Disassembly Note
94	7A232	Parking pawl actuating rod
95	7005	Transmission case

Item 1: Torque Converter Disassembly Note

1. ⚠ **WARNING: The torque converter is heavy, especially when full of fluid.**

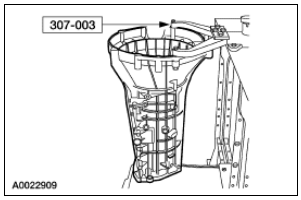
   NOTE: If not installing a new torque converter, leave the adapter plate screwed to the torque converter.

   Using the special tools, remove the torque converter and adapter plate as an assembly.



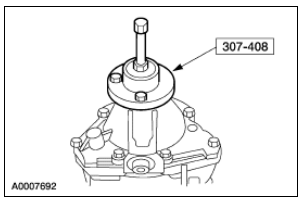
Item 2: Transmission Disassembly Note

1. Using the special tool, install the transmission into the bench with the torque converter housing facing up.



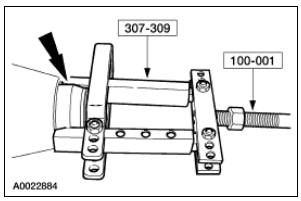
Item 9: Output Shaft Flange Disassembly Note

1. Using the special tool, remove the output shaft flange.



Item 10: Output Shaft Seal Disassembly Note

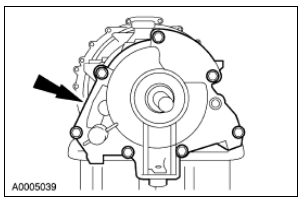
1. Using the special tools, remove the extension housing seal.



Item 12: Extension Housing Disassembly Note

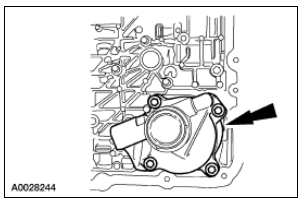
1. ⚠ **CAUTION: The parking pawl, parking pawl return spring and parking pawl shaft could fall out during removal of the extension housing.**

   Remove the extension housing.



Item 25: Reverse Servo Piston Disassembly Note

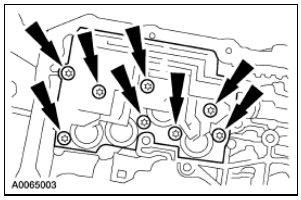
1. ⚠ **WARNING: The upper and lower servo covers are under spring tension. Use care when removing the piston and cover assembly. Failure to follow these instructions may result in personal injury.**



Item 28: Solenoid Body Disassembly Note

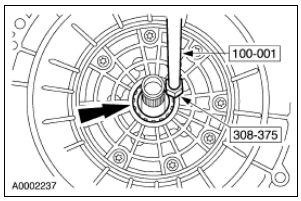
1. ⚠ **CAUTION: Do not damage solenoid body connector pins.**

   Remove the solenoid body assembly by lifting on the body and pushing the connector from the other side of the case.



Item 33: Front Pump Fluid Seal Disassembly Note

1. Using the special tools, remove the converter hub seal.

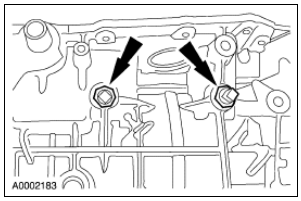


Items 34 and 35: Band Adjusting Locknut and Screw Disassembly Note

1. **⚠ CAUTION: Failure to loosen the OD band adjusting screw prior to pump removal may cause damage to the pump and OD band.**

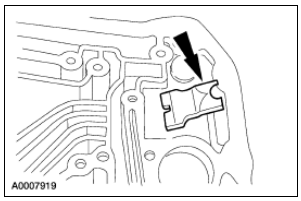
   ⚠ CAUTION: Throw the locknuts away. The locknuts are not reusable for assembly.

   Remove the locknuts, and loosen the OD band adjusting screw.



Item 36: Band Anchor Strut Disassembly Note

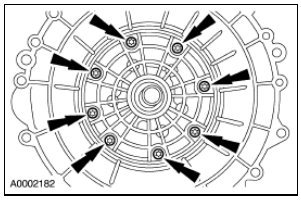
1. Remove and tag part for assembly.



Item 37: Front Pump Screws Disassembly Note

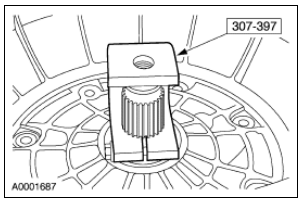
1. **⚠ CAUTION: The screws are not reusable for assembly. Discard the screws. If the screws are reused, the housing may become separated from the transmission.**

   Remove and discard the screws.

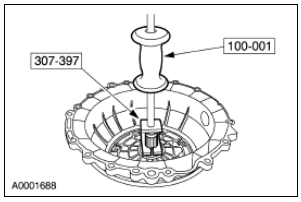


Item 38: Front Pump Disassembly Note

1. Install the special tool.



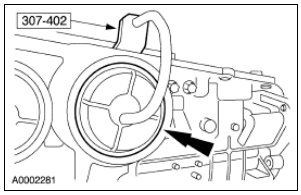
2. Using the special tools, remove the pump.



Item 40: Intermediate Servo Retaining Ring Disassembly Note

1. ⚠ **CAUTION: Servo cover is under spring tension.**

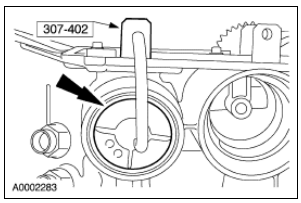
   Using the special tool, remove the intermediate servo cover retaining ring.



Item 44: Overdrive Servo Cover Retaining Ring Disassembly Note

1. ⚠ **CAUTION: Servo cover is under spring tension.**

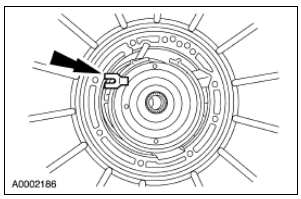
   Using the special tool, remove the overdrive servo cover retaining ring and cover.



Item 49: Band Strut Disassembly Note

1. **NOTE:** Tag and identify parts for reassembly.

Compress the overdrive band and remove the apply strut.



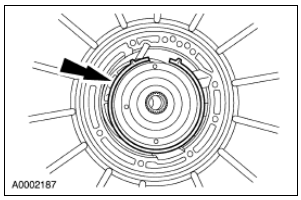
Item 50: Intermediate Overdrive Band Disassembly Note

1. ⚠ **CAUTION: Identify the anchor and apply ends of the overdrive band.**

   NOTE: The overdrive band is new, and dark in color. This is a normal condition of the band. Hairline cracks in the band are also considered normal. Do not install a new band based solely on the color.

   Remove and inspect the overdrive band. Check the following conditions for installing a new band:

   - Inspect for glazing.
   - Inspect for missing friction material.
   - Inspect for material flaking.
   - Inspect for damage to the anchor pins.

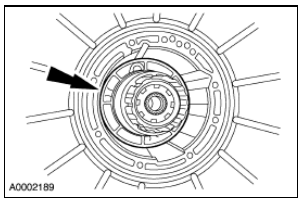


Item 52: Overdrive Planetary Gear Carrier Disassembly Note

1. ⚠ **CAUTION: Do not bend the trigger wheel.**

   NOTE: The No. 12 thrust bearing is in this assembly.

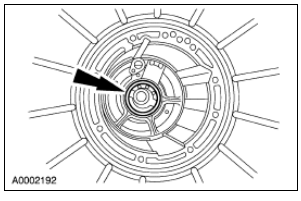
   Remove the planetary gear overdrive carrier.



Item 55: Center Shaft and Forward Clutch Cylinder Bearing Assembly No. 3 Disassembly Note

1. **NOTE:** Tag and identify the center shaft thrust bearing No. 3 for reassembly.

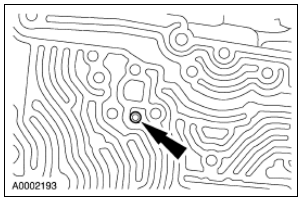
   Remove the No. 3 center shaft thrust bearing.



Item 56: Center Support Bolt Disassembly Note

1. ⚠ **CAUTION: The center support locknut could fall into the remaining assembly if not removed.**

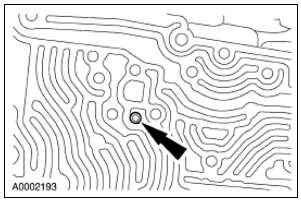
   Remove the bolt.



Item 59: Center Support Assembly Disassembly Note

1. ⚠ **CAUTION: The center support locknut could fall into the remaining assembly if not removed.**

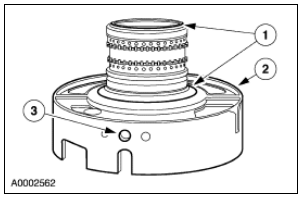
   Remove the screw.



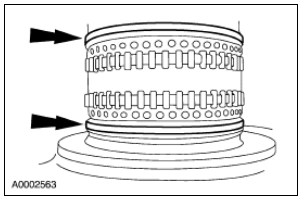
Item 59: Center Support Assembly Inspection Note

NOTE: The center support is repaired as an assembly. Any damage requires installing a new component.

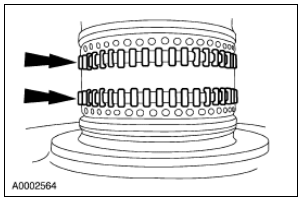
1. Inspect the center support assembly for wear or damage.
   1. Inspect the thrust surfaces for wear, scoring or damage.
   2. Inspect the center support sealing surface.
   3. Inspect the fluid passage for blockage or damage.



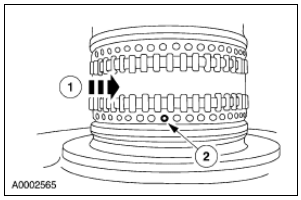
2. Inspect the seal rings for damage.



3. Inspect the bearing for missing rollers or damage.



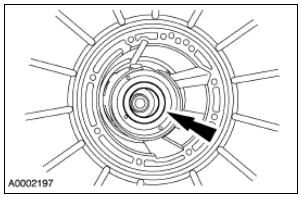
4. Inspect the direct clutch feed hole for blockage or damage.
    1. Rotate center support bearing to locate the direct clutch feed hole.
    2. Inspect the direct clutch feed hole for blockage or damage.



Item 60: Intermediate Clutch Drum Bearing (Select Fit) No. 4 Disassembly Note

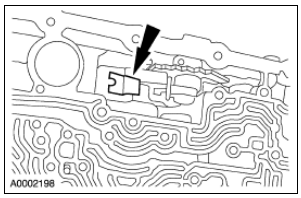
1. **NOTE:** Tag and identify the No. 4 intermediate clutch drum thrust bearing.

   Remove the No. 4 intermediate brake drum thrust bearing.



Item 61: Band Anchor Strut Disassembly Note

1. Remove, tag, and identify the band anchor strut.



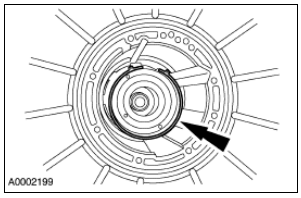
Item 62: Intermediate Band Disassembly Note

1. ⚠ **CAUTION: Identify the anchor and apply ends of the intermediate band.**

   NOTE: The intermediate band is new, and dark in color. This is a normal condition of the band. Hairline cracks in the band are also considered normal. Do not install a new band based solely on the color.

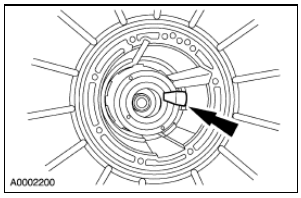
   Remove and inspect the intermediate band. Check the following conditions when installing a new band:

   - Inspect for glazing.
   - Inspect for missing friction material.
   - Inspect for material flaking.
   - Inspect for damage to the anchor pins.



Item 63: Band Apply Strut Disassembly Note

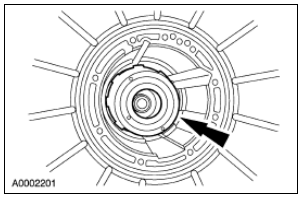
1. Remove, tag, and identify the band apply strut.



Item 65: Intermediate Brake Drum Assembly Disassembly Note

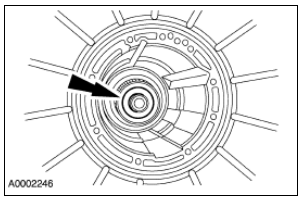
1. **NOTE:** The No. 5 forward clutch cylinder thrust bearing may come out with the intermediate brake and direct clutch drum.

   Remove the direct clutch drum.



Item 66: Center Shaft and Forward Clutch Cylinder Bearing Assembly No. 5 Disassembly Note

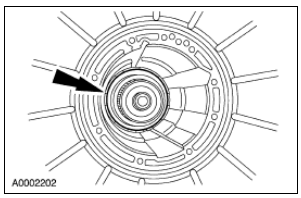
1. Remove the No. 5 forward clutch cylinder thrust bearing, tag and identify.



Item 67: Forward Clutch Cylinder Assembly Disassembly Note

1. **NOTE:** The No. 6A thrust bearing may come out with the cylinder. Tag and identify for reassembly.

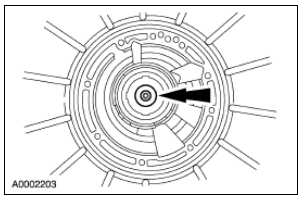
   Remove the forward clutch cylinder.



Item 68: Forward Ring Gear Hub Thrust Bearing No. 6A Disassembly Note

1. **NOTE:** The No. 6A forward ring gear hub thrust bearing may have come out with the forward clutch cylinder.

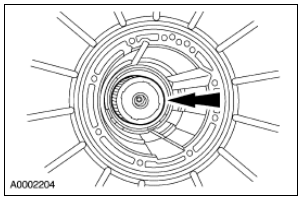
   Remove the No. 6A forward ring gear hub thrust bearing.



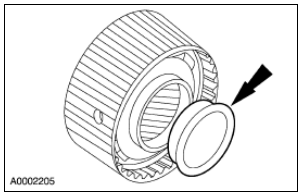
Items 69 and 70: Forward Ring Gear and Hub Assembly and Forward Clutch Hub Thrust Washer No. 6B Disassembly Note

1. **NOTE:** The No. 7 forward planet thrust bearing may come out with the forward ring gear and hub assembly.

   Remove the forward ring gear and hub as an assembly.



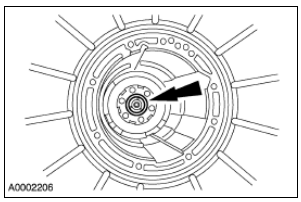
2. Remove the No. 6B forward clutch thrust washer from the forward ring gear hub.



Item 71: Forward Planetary Thrust Bearing Assembly No. 7 Disassembly Note

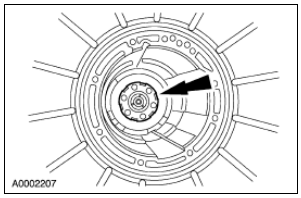
1. **NOTE:** The No. 7 forward planet thrust bearing may come out with the forward ring gear and hub assembly.

   Remove the No. 7 forward planet thrust bearing.



Item 72: Forward Planet Assembly Disassembly Note

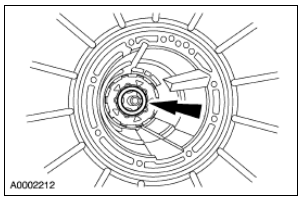
1. Remove the forward planetary assembly.



Item 75: Center Shaft and Forward Clutch Cylinder Bearing Assembly No. 8 Disassembly Note

1. **NOTE:** Tag and identify the No. 8 low/reverse planetary carrier thrust bearing.

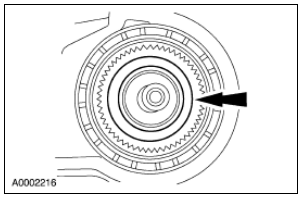
   Remove the thrust bearing.



Item 78: Center Shaft and Forward Clutch Cylinder Bearing Assembly No. 9 Disassembly Note

1. **NOTE:** Tag and identify the No. 9 low/reverse planetary carrier thrust bearing.

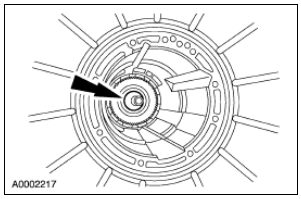
   Remove the thrust bearing.



Item 79: Output Shaft Sleeve Disassembly Note

1. **NOTE:** Use slots located around the outside of the sleeve.

   Using a small pick, remove the output shaft sleeve.

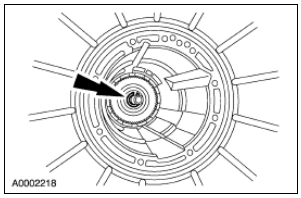


Item 80: Output Shaft Retaining Ring Disassembly Note

1. **⚠ WARNING: The output shaft may fall out after removing the snap ring. Failure to follow these instructions may result in personal injury.**

   ⚠ CAUTION: Discard the output shaft retaining ring. A new retaining ring must be used for assembly.

   While holding the output shaft, remove and discard the output shaft retaining ring.

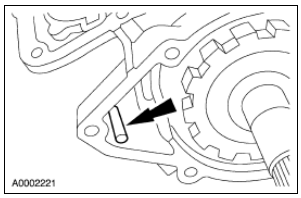


Item 83: Reverse Band Actuating Lever Shaft Disassembly Note

1. ⚠ **CAUTION: Do not pry on the outer edge of the case. Damage to the gasket sealing surface could occur.**

   NOTE: It may be necessary to grind flat spots on the edges of the reverse band actuating lever shaft in order to remove it.

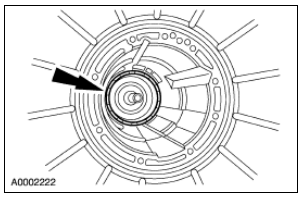
   Using a pair of vice grips, hold the flat spots on the reverse band actuating lever shaft, wiggle it back and forth and remove the reverse band actuating lever shaft.



Item 85: Reverse Brake Drum and Clutch Assembly Disassembly Note

1. **NOTE:** The inner race of the rear one-way clutch is not removable. It is repaired in the case.

   Remove the low/reverse brake drum and one-way clutch assembly by rotating it clockwise.

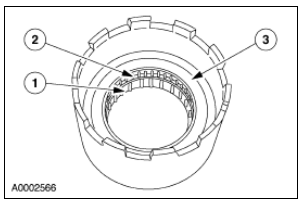


Item 85: Reverse Brake Drum and Clutch Assembly Inspection Note

1. **NOTE:** The reverse one-way clutch is part of the reverse brake drum assembly. Install a new reverse brake drum as an assembly only.

   Inspect the reverse brake drum assembly and install a new reverse brake drum assembly if damaged.

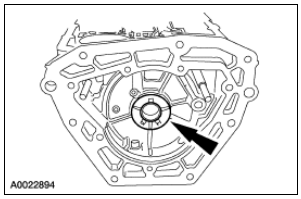
   1. Inspect the reverse brake drum sprags.
   2. Inspect the reverse brake drum rollers.
   3. Inspect the reverse brake drum.



Item 88: Output Shaft Thrust Washer Disassembly Note

1. **NOTE:** Tag and identify the No. 11 output shaft thrust washer.

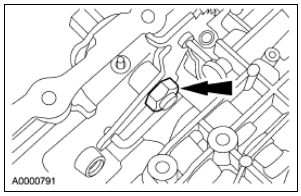
   Remove the output shaft thrust washer.



Item 89: Manual Control Lever Inner Nut Disassembly Note

1. ⚠ **CAUTION: To avoid damage, make sure the wrench does not strike the manual valve inner lever pin.**

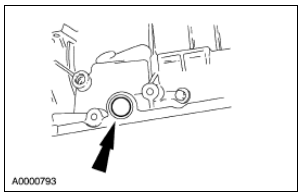
   Remove the nut.



Item 93: Manual Control Lever Shaft Seal Disassembly Note

1. ⚠ **CAUTION: Do not damage the bore.**

   Remove the manual control lever seal.



Main Control Valve Body

Printable View (161 KB)

Special Tool(s)

ST1639-A	Aligner, Valve Body (2 req'd) 307-334 (T95L-70010-C)

⚠ CAUTION: Do not stone, file, or sand the valves. This will remove the anodized finish and may result in further main control or transmission damage.

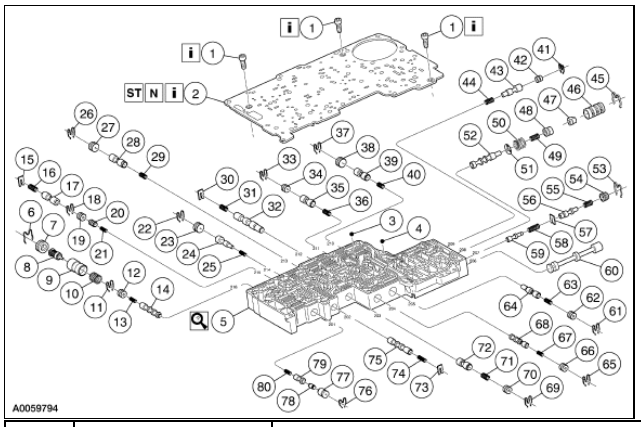
NOTE: The valve body separator plate has a bonded gasket. Do not reuse the gasket, discard.

1. Remove the components in the order indicated in the following illustration and table. To remove, clean and inspect the valves, carry out the steps listed.

Components	Items
Minor overhaul and cleaning	1-5
For removal, cleaning and inspection of the valves	5-80

2. After cleaning the main control valve body, carry out the following.
   - Inspect all valve and plug bores for scoring or burrs.
   - Check all fluid passages for obstructions.
   - Inspect all valves and plugs for burrs.
   - Inspect all mating surfaces for burrs or distortion.
   - Inspect all springs for distortion.
   - Check all valves and plugs for free movement in their respective bores.
     - ♦ Valves and plugs, when dry, must fall from their own weight into their respective bores.
   - Roll the manual valve on a flat surface to check for a bent condition.

3. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	W701099-S430	Separator plate screw Assembly Note

ST2686-A	Transmission Fluid Pump Seal Installer 307-451/3

Material

Item	Specification
Multi-Purpose Grease XG-4	ESR-M1C159-A

Disassembly

NOTE: A rough casting on the pump surface crescent is not a flaw.

NOTE: The fluid pump gears are part of the pump assembly and are not repaired separately.

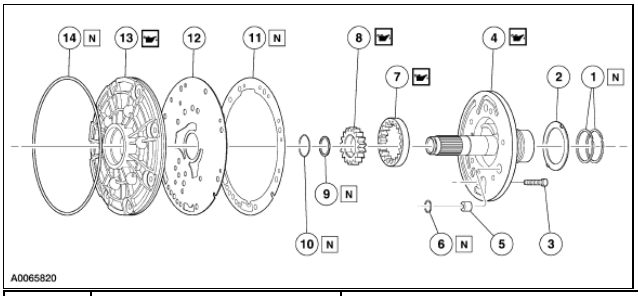
NOTE: Minor burrs and scoring may be removed with crocus cloth. If damage is found, install a new assembly.

NOTE: The No. 1 thrust washer may be stuck to the fluid pump housing. It will need to be removed. This washer will be installed during the assembly of the transmission.

NOTE: The fluid pump gasket may be stuck to the fluid pump housing. It will need to be removed. A new gasket will be installed during the assembly of the transmission.

1. Inspect the fluid pump components for the following:
   - Pump body and case for burrs.
   - Fluid passages for obstructions.

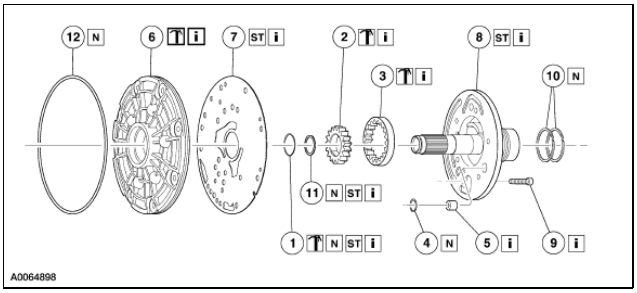
2. Illustration 1 of 2. Disassemble the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	7D025	Overdrive brake drum seal
2	7D014	Front pump support thrust washer No.1
3	W701429- S309M	Fluid pump screws
4	7A108	Front pump support
5	7H411	Fluid pump control valve
6	7H416	Fluid pump control valve O-ring
7	7C011	Front pump driven gear
8	7C010	Front pump drive gear
9	7L323	Stator support seal
10	W701431-S300	Seal ring
11	7A136	Front pump gasket
12	7B472	Fluid pump adapter plate
13	7G187	Fluid pump cover assembly
14	7A248	Fluid pump seal

Assembly

1. Illustration 2 of 2. Assemble the components in the order indicated in the following illustration and table.

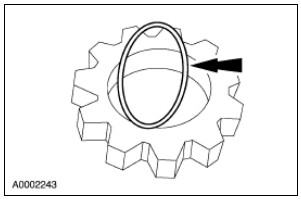


Item	Part Number	Description
1	W701431-S300	Seal ring Assembly Note
2	7C010	Front pump drive gear Assembly Note
3	7C011	Front pump driven gear Assembly Note
4	7H416	Fluid pump control valve O-ring
5	7H411	Fluid pump control valve Assembly Note
6	7G187	Fluid pump cover assembly Assembly Note
7	7B472	Fluid pump adapter plate Assembly Note
8	7A108	Front pump support Assembly Note
9	W701429- S309M	Fluid pump screws Assembly Note
10	7D025	Overdrive brake drum seal
11	7L323	Stator support seal Assembly Note
12	7A248	Fluid pump seal

Item 1: Seal Ring Assembly Note

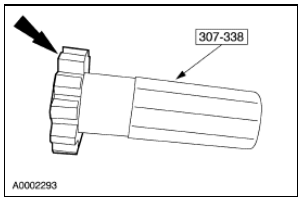
1. **NOTE:** Inspect the fluid pump gears for cracks and scoring.

   Install a new O-ring seal in the fluid pump drive gear.



2. ⚠ **CAUTION: Lubricate the special tool with multi-purpose grease.**

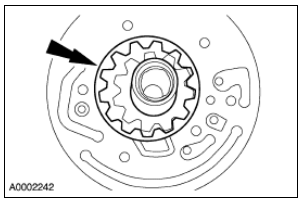
   Using the special tool, seat the O-ring seal in the pump gear.



Items 2 and 3: Front Pump Drive Gear Assembly Note

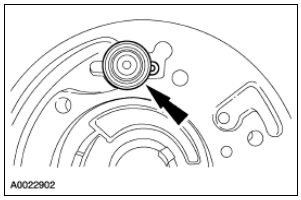
1. ⚠ **CAUTION: The chamber on the inside edge of the small gear must be up when in the pump housing gear pocket. The dimple on the larger gear must be down when in the pump housing gear pocket.**

Install the pump gears into the fluid pump housing. Apply multi-purpose grease to the pump gears to prevent scoring at start up.



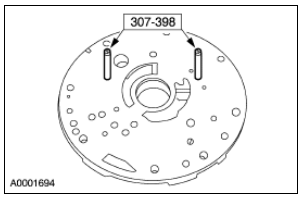
Item 5: Fluid Pump Control Valve Assembly Note

1. Install the valve with the tab facing down.



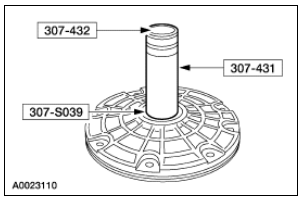
Items 6 and 7: Fluid Pump Adapter Plate Assembly Note

1. First install the special tools in the fluid pump cover, then install the fluid pump adapter plate.



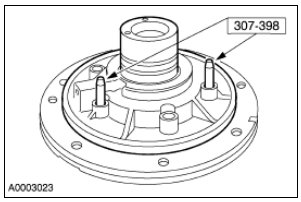
2. ⚠ **CAUTION: The special tools must be used to correctly align the pump with the adapter plate to reduce gear noise, bushing failure, and leakage.**

   Using the special tool, align the fluid pump to the adapter plate.



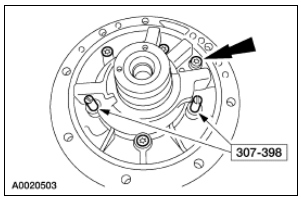
Item 8: Front Pump Support Assembly Note

1. Using the special tools, assemble the pump.

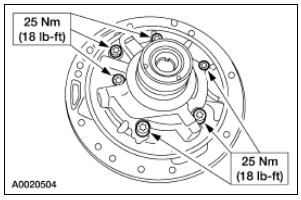


Item 9: Fluid Pump Screws Assembly Note

1. Loosely install the fluid pump housing screws in their correct location and remove the special tools. Install the two remaining screws.



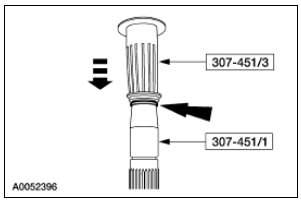
2. Tighten all the fluid pump screws in a star pattern.



Item 11: Stator Support Seal Assembly Note

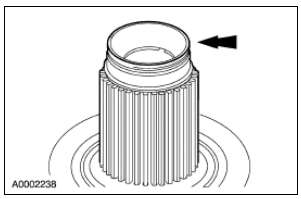
1. ⚠ **CAUTION: Be careful not to overstretch the seal ring past the seal ring groove, or damage to the seal will occur.**

   Using the special tools, install the fluid pump seal ring.



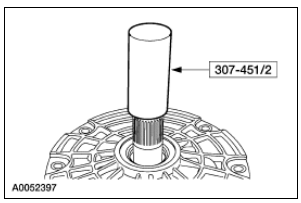
2. ⚠ **CAUTION: Verify correct seal installation. Make sure seal grooves are clean and free of burrs.**

   Install the seal.



3. ⚠ **CAUTION: Failure to correctly size the seal will damage the seal when the torque converter is installed.**

   Using the special tool, size the seal to the correct size. Leave the special tool on the seal for two minutes to obtain the correct seal size.



Overdrive Brake and Coast Clutch Drum Assembly

Printable View (171 KB)

Special Tool(s)

 ST1190-A	Compressor, Clutch Spring 307-015 (T65L-77515-A)
ST2431-A	Protector, Piston Seal 307-049 (T74P-77404-A)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

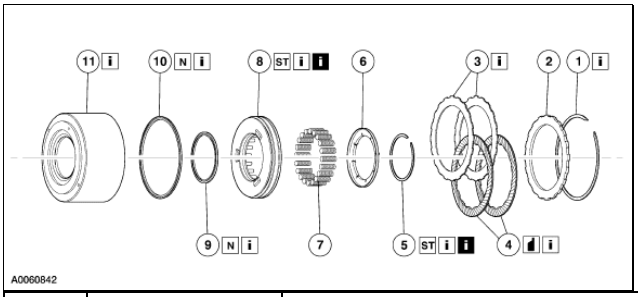
⚠ CAUTION: If new clutch plates are being used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

NOTE: Inspect the coast clutch components for damage or wear. Install new components as necessary.

- Inspect the drum band surface, bushing, and thrust surfaces for damage.
- Inspect the clutch piston bore, and piston.
- Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
- Inspect the clutch plates for damage.
- Inspect the clutch springs.

1. Disassemble the components in the order indicated in the following illustration and table.

2. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	E860126-S	Retaining ring (select fit) Assembly Note
2	7B066	Direct/coast clutch pressure plate
3	7B442	Coast clutch external steel plate (2 req'd) Assembly Note
4	7B164	

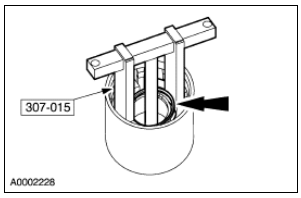
		Coast clutch internal friction plate (2 req'd) Assembly Note
5	E860125-S	Retaining ring Disassembly Note
5	E860125-S	Retaining ring Assembly Note
6	7A527	Direct/coast clutch piston spring retainer
7	7A480	Direct and overdrive piston spring (20 req'd)
8	7A262	Direct and overdrive clutch piston Disassembly Note
8	7A262	Direct and overdrive clutch piston Assembly Note
9	7D404	Direct and overdrive piston inner seal ring Assembly Note
10	7A548	Direct and overdrive piston outer seal ring Assembly Note
11	7L669	Overdrive brake and coast clutch drum Assembly Note

Item 5: Retaining Ring Disassembly Note

1. **⚠ WARNING: Use caution when releasing tool pressure on the rear clutch piston spring. Failure to follow these instructions may result in personal injury.**

   ⚠ CAUTION: Do not fully compress the special tool or damage to the spring retainer may occur.

   Using the special tool, remove the coast clutch piston retaining ring.

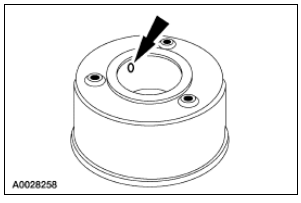


Item 8: Direct and Overdrive Clutch Piston Disassembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure the drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

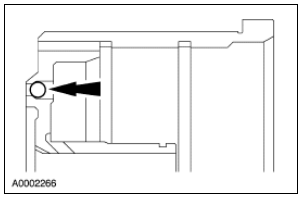
   Remove the coast clutch piston.

   - Apply air pressure to the hole in the drum to remove the coast clutch piston while blocking the other hole with a finger.



Item 11: Overdrive Brake and Coast Clutch Drum Assembly Note

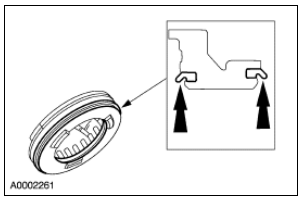
1. Verify the check ball is free to move.



Items 9 and 10: Direct and Overdrive Piston Inner and Outer Seal Ring Assembly Note

1. ⚠ **CAUTION: The lip seals must be positioned as shown. Care must be taken to prevent rollover of the lip seal.**

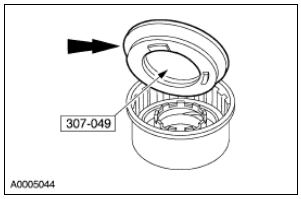
   Install the new coast clutch piston inner and outer seal.



Item 8: Direct and Overdrive Clutch Piston Assembly Note

1. ⚠ **CAUTION: Care must be taken to prevent damage to the seals during installation.**

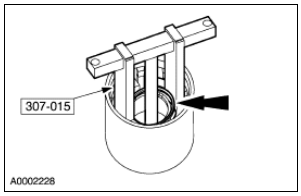
   Lubricate the seals, then, using the special tool, install the coast clutch piston.



Item 5: Retaining Ring Assembly Note

1. ⚠ **CAUTION: Do not fully compress the special tool or damage to the coast clutch piston spring retainer may occur.**

   Using the special tool, install the coast clutch piston spring retainer ring.

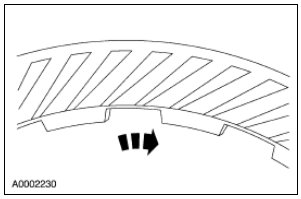


Items 3 and 4: Coast Clutch External Steel Plate and Internal Friction Plate Assembly Note

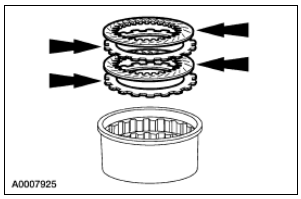
1. ⚠ **CAUTION: Coast clutch friction plates are directional and must be installed with grooves clockwise (I.D. to O.D.). The word "TOP" should face up.**

⚠ CAUTION: If new clutch plates are being used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

When installing friction plates, the word "TOP" should face up. If reusing plates, grooves must be installed clockwise. Install the coast clutch disc pack.



2. Install the two steel clutch plates and two friction clutch plates in an alternating order, starting with a steel clutch plate.

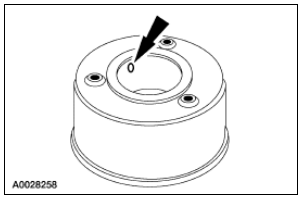


Item 1: Retaining Ring Assembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

   Air check the assembly.

   - Apply air pressure to the hole in the drum while blocking the other hole with a finger to make sure a correct piston seal has been established.



2. Check the coast clutch disc pack free play.
   1. Push down on the coast pressure plate.
   2. Check clearance between the coast clutch retaining ring and coast pressure plate. Clearance should be 1.3-2.0 mm (0.051-0.079 in). If clearance is not within the specification, install a correct coast clutch retaining ring that will provide the correct free play adjustment.

Direct Clutch Drum Assembly

Printable View (192 KB)

Special Tool(s)

 ST1190-A	Compressor, Clutch Spring 307-015 (T65L-77515-A)
ST2431-A	Protector, Piston Seal 307-049 (T74P-77404-A)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

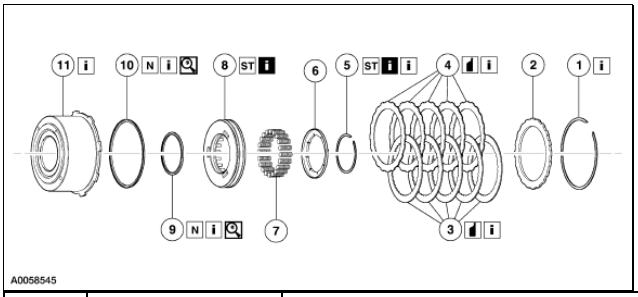
⚠ CAUTION: If new clutch plates are being used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

NOTE: Inspect the clutch components for damage or wear. Install new components as necessary.

- Inspect the drum surface for damage.
- Inspect the clutch piston bore, and piston.
- Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
- Inspect the clutch plates for damage.
- Inspect the clutch springs.

1. Disassemble the components in the order indicated in the following illustration and table.

2. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	E860126-S	Retaining ring (select fit) Assembly Note
2	7B066	Direct/coast clutch pressure plate
3	7B442	Direct clutch external spline steel plate Assembly Note
4	7B164	

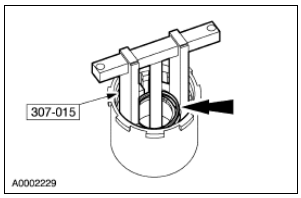
		Direct clutch internal spline friction plate Assembly Note
5	E860125-S	Retaining ring Disassembly Note
5	E860125-S	Retaining ring Assembly Note
6	7A527	Direct/coast clutch piston spring retainer
7	7A480	Direct and overdrive piston spring (20 req'd)
8	7A262	Direct and overdrive clutch piston Disassembly Note
9	7D404	Direct and overdrive piston inner seal ring Assembly Note
9	7D404	Direct and overdrive piston inner seal ring Inspection Note
10	7A548	Direct and overdrive piston outer seal ring Assembly Note
10	7A548	Direct and overdrive piston outer seal ring Inspection Note
11	7D044	Intermediate brake drum assembly Assembly Note

Item 5: Retaining Ring Disassembly Note

1. **⚠ WARNING: After removing the retaining ring, use care when releasing the pressure on the springs. Failure to follow these instructions may result in personal injury.**

   ⚠ CAUTION: Do not fully compress the special tool or damage to the spring retainer may occur.

   Using the special tool, remove the direct clutch piston retaining ring.

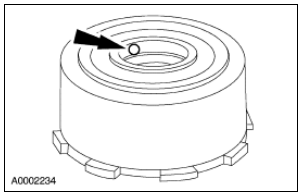


Item 8: Direct and Overdrive Clutch Piston Disassembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure the drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

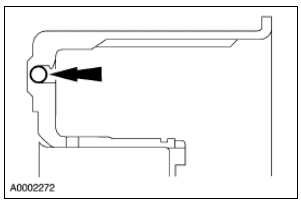
   Using compressed air, remove the direct clutch piston from the direct clutch drum.

   - Apply air pressure to the hole in the drum while blocking the other hole with a finger.



Item 11: Intermediate Brake Drum Assembly Assembly Note

1. Verify the check ball is free to move.



Items 9 and 10: Direct and Overdrive Piston Outer and Inner Seal Ring Inspection Note

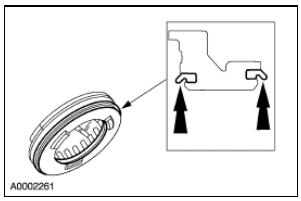
1. Inspect the clutch components for damage or wear. Install new components as necessary.
   - Inspect the drum surface for damage.
   - Inspect the clutch piston bore and piston.
   - Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
   - Inspect the clutch plates for damage.
   - Inspect the clutch springs.

Items 9 and 10: Direct and Overdrive Piston Outer and Inner Seal Ring Assembly Note

1. ⚠ **CAUTION: The lip seals must be positioned as shown. Care must be taken to prevent rollover of the lip seal.**

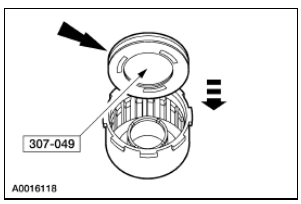
   NOTE: Use new seals to help prevent seal failures.

   Lubricate the seals, then install the new direct clutch piston inner seal and the direct clutch piston outer seal.



2. ⚠ **CAUTION: Care must be taken to prevent damage to the seals during installation.**

   Using the special tool, install the direct clutch piston.

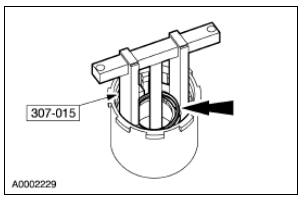


Item 5: Retaining Ring Assembly Note

1. **⚠ WARNING: After removing the retaining ring, use care when releasing the pressure on the springs. Failure to follow these instructions may result in personal injury.**

   ⚠ CAUTION: Do not fully compress the special tool or damage to the spring retainer may occur.

   Using the special tool, install the direct clutch piston retaining ring.

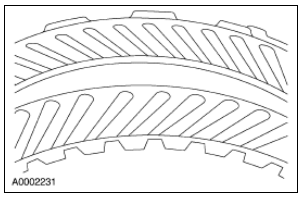


Items 4 and 3: Direct Clutch Internal/External Splined Friction Plate Assembly Note

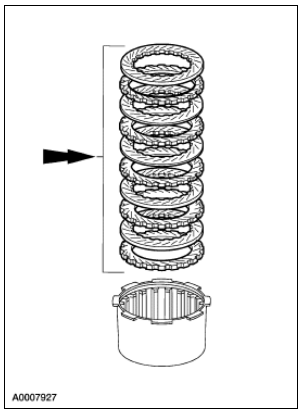
1. **⚠ CAUTION: The direct clutch friction plates are directional and must be installed correctly. Alternate the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates.**

   ⚠ CAUTION: If new plates are used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

   When installing friction plates, alternate the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates. Install the direct clutch disc pack.



2. Install the friction plates. Alternate the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates starting with an externally splined (counterclockwise) clutch plate.

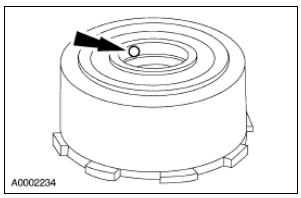


Item 1: Retaining Ring Assembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

Air check the assembly.

- Apply air pressure to the hole in the drum while blocking the other hole with a finger.



2. Push down on direct clutch disc pack and check gap between the direct clutch retaining ring and the direct clutch pressure plate with a feeler gauge.
   - If specifications do not match, use a select fit direct clutch retaining ring to match specifications and verify with a feeler gauge.

   Direct Clutch

Part Number	Thickness		Diameter

ST2534-A	Bonded Piston Seal Sizer 307-434

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

⚠ CAUTION: If new plates are used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

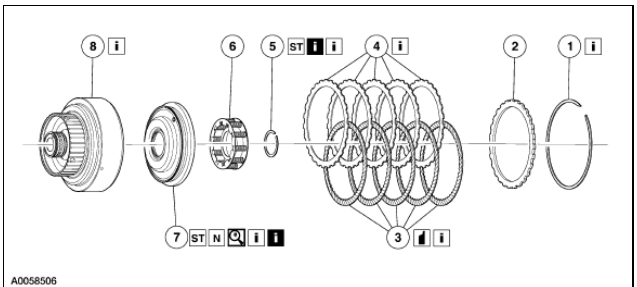
NOTE: If the seals on the forward clutch piston show any signs of damage, a new forward clutch piston must be installed.

NOTE: Inspect the clutch components for damage or wear. Install new components as necessary.

- Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
- Inspect the clutch plates for damage.
- Inspect the clutch springs.
- Inspect the needle bearing and seal rings for damage.
- Check clutch hub thrust surfaces for damage.
- Check clutch plates for flatness and fit on the clutch hub serrations.

1. Disassemble the components in the order indicated in the following illustration and table.

2. To assemble, reverse the disassembly procedure.



Item	Part Number	Description

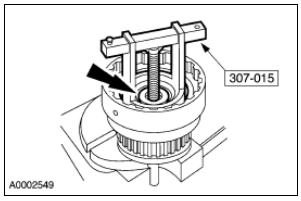
1	7D483	Retaining ring (select fit) Assembly Note
2	7B066	Forward clutch pressure plate
3	7B442	Forward clutch external splined steel plate Assembly Note
4	7B164	Forward clutch internal splined friction plate Assembly Note
5	E860109-S	Retaining ring Disassembly Note
5	E860109-S	Retaining ring Assembly Note
6	7G229	Forward clutch cushion spring
7	7A262	Forward clutch piston Disassembly Note
7	7A262	Forward clutch piston Assembly Note
8	7A360	Forward clutch cylinder assembly Assembly Note

Item 5: Retaining Ring Disassembly Note

1. **⚠ WARNING: Use caution when releasing tool pressure on the clutch piston springs. Failure to follow these instructions may result in personal injury.**

   ⚠ CAUTION: Do not fully depress the special tool or damage to the spring retainer may occur.

   Using the special tool, remove the forward clutch piston retaining ring.

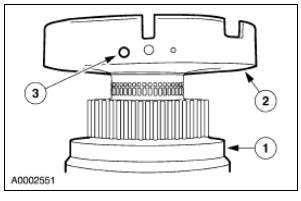


Item 7: Forward Clutch Piston Disassembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air. Make sure the cylinder is facing down as shown. Failure to follow these instructions may result in personal injury.**

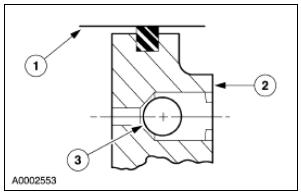
   Remove the forward clutch piston.

   1. Place the forward clutch cylinder with forward clutch piston facing down.
   2. Install the center support on the forward clutch cylinder.
   3. Apply air pressure to the left port of the center support.



Item 8: Forward Clutch Cylinder Assembly Assembly Note

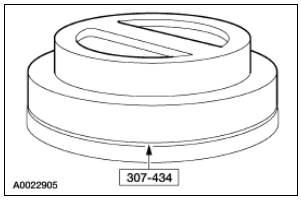
1. Inspect the forward clutch drum assembly.
    1. Inspect the forward clutch cylinder surfaces for scores or burrs.
    2. Inspect forward clutch piston for scores or burrs.
    3. Verify the check ball is free to move in the piston.



Item 7: Forward Clutch Piston Assembly Assembly Note

1. **NOTE:** The special tool must be installed on the forward clutch piston for a couple of minutes prior to installing it into the forward clutch cylinder.

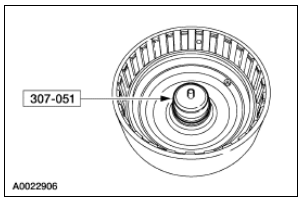
   Install the special tool on the forward clutch piston.



2. ⚠ **CAUTION: Care must be taken to prevent damage to the seals.**

   NOTE: Lubricate the forward clutch piston inner and outer seal with clean automatic transmission fluid.

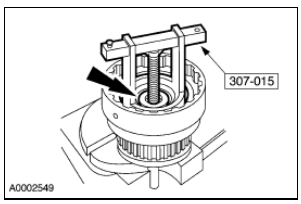
   Using the special tool, install the forward clutch piston assembly into the forward clutch cylinder.



Item 5: Retaining Ring Assembly Note

1. ⚠ **CAUTION: Do not fully depress the clutch spring compressor or damage to the spring retainer may occur.**

   Using the special tool, install the forward clutch piston spring retaining ring.

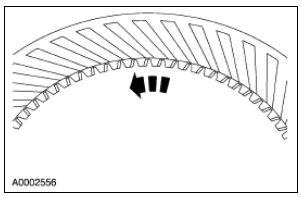


Items 4 and 3: Forward Clutch External/Internal Splined Friction and Steel Plates Assembly Note

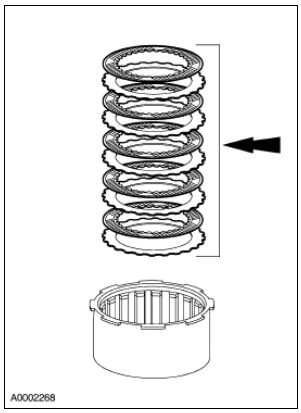
1. **⚠ CAUTION: The forward clutch friction plates are directional and must be installed with grooves pointing counterclockwise.**

   ⚠ CAUTION: If new plates are used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

   If reusing plates, grooves must be installed counterclockwise. Install the direct clutch disc pack.



2. Install the steel clutch plates and friction clutch plates in an alternating order, starting with a steel clutch plate.

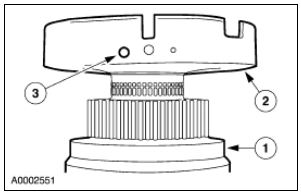


Item 1: Retaining Ring Assembly Note

1. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air. Make sure the cylinder is facing down as shown. Failure to follow these instructions may result in personal injury.**

   Air check the forward clutch piston.

   1. Place the forward clutch cylinder with forward clutch piston facing down.
   2. Install the transmission center support on the forward clutch cylinder.
   3. Apply air pressure to the left port of the center support.



2. Check forward clutch disc pack free play.
   1. Press down on forward clutch disc pack.
   2. Using a feeler gauge, check the gap between the forward clutch retaining ring and the forward clutch pressure plate.

   • If the clearance is not within specifications, install the correct size retaining ring.

Overdrive Planetary and One-Way Clutch Assembly

Printable View (357 KB)

⚠ CAUTION: Do not remove the overdrive one-way clutch. Damage to the clutch may occur if it is removed.

⚠ CAUTION: Do not attempt to remove the No. 12 bearing from behind the pinion gears.

NOTE: Individual parts of the planetary carriers are not serviceable.

NOTE: The overdrive one-way clutch is serviced with the center shaft assembly.

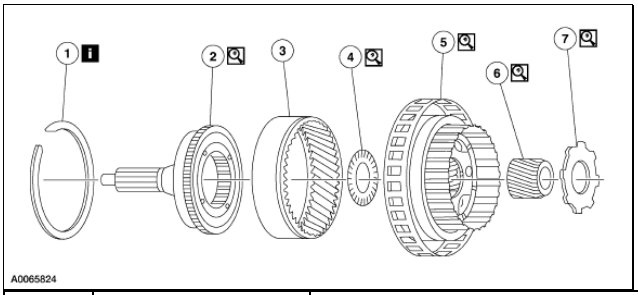
NOTE: Inspect the one-way clutch.

- Temporarily insert the overdrive planetary gear carrier assembly into the one-way clutch rollers for verification of the one-way clutch.
- The planetary gear must rotate counterclockwise and hold when rotated clockwise.
- Remove the planetary gear carrier assembly.
- Inspect for cracks in the roller cage and wear on the roller clutch, and the press fit of the one-way clutch to the center shaft.

NOTE: Inspect the overdrive planetary.

- Inspect the pinion gears for damaged or excessively worn teeth, and for free rotation.
- Check the pins and shafts in the planetary assemblies for loose fit and/or complete disengagement.
- Inspect the overdrive one-way clutch inner race, and the inner and outer races for scored or damaged surface areas where the rollers contact the races.
- Inspect the sun gear for damaged or worn teeth.
- Inspect the No. 2 bearing for damage.
- Thoroughly clean all parts and blow dry with moisture-free compressed air.
- Inspect the sun gear for damaged or worn teeth.

1. Disassemble the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W702037-S300	Retaining ring Disassembly Note
2	7A658	Center shaft Inspection Note
3	7653	Overdrive ring gear
4	7L495	No. 2 overdrive planetary thrust bearing Inspection Note
5	7B446	

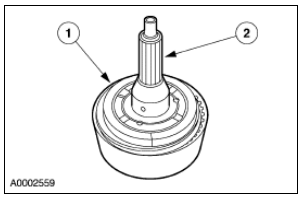
		Overdrive planetary gear carrier assembly Inspection Note
6	7D063	Overdrive sun gear Inspection Note
7	7660	Coast clutch adapter Inspection Note

Item 1: Retaining Ring Disassembly Note

1. **NOTE:** The overdrive one-way clutch is serviced with the center shaft assembly.

   Remove the center shaft from the overdrive ring gear.

   1. Remove the overdrive center shaft retaining ring.
   2. While rotating counterclockwise remove the center shaft from the ring gear.

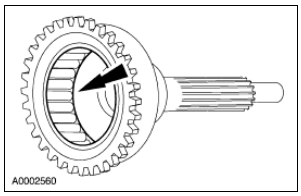


Items 2, 4, 5, 6 and 7 Overdrive Planetary and One-Way Clutch Assembly Inspection Note

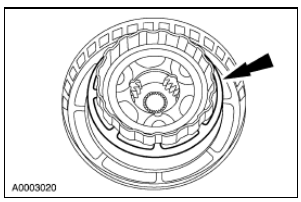
1. ⚠ **CAUTION: Do not remove the overdrive one-way clutch. Damage to the clutch may occur if it is removed.**

   Clean and inspect the overdrive one-way clutch and center shaft.

   - Inspect for cracks in the roller cage and wear on the roller clutch, and the press fit of the one-way clutch to the center shaft.

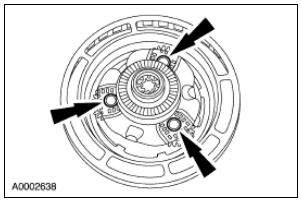


2. Inspect the one-way clutch.
   - Temporarily insert the overdrive planetary gear carrier assembly into the one-way clutch rollers for verification of the one-way clutch.
   - The planetary gear must rotate counterclockwise and hold when rotated clockwise.

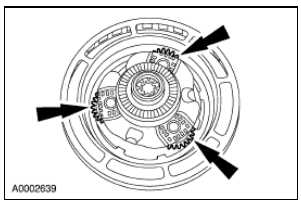


3. **NOTE:** Individual parts of the planetary carriers are not serviceable.

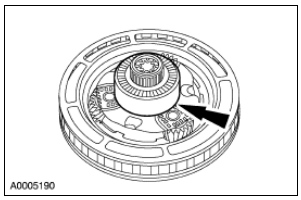
   Check the pins and shafts in the planetary assemblies for loose fit and/or complete disengagement.



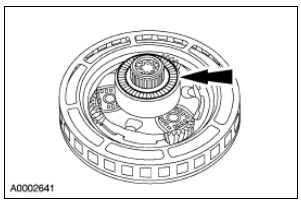
4. Inspect the pinion gears for damaged or excessively worn teeth, and for free rotation.



5. Inspect the overdrive one-way clutch inner race, and the inner and outer races for scored or damaged surface areas where the rollers contact the races.

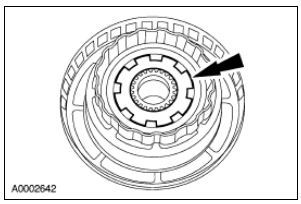


6. Inspect the No. 2 overdrive planetary thrust bearing on the nose of the overdrive planetary gear carrier assembly.

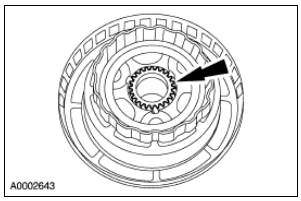


7. **NOTE:** Inspect the sun gear for damaged or worn teeth.

   Remove and inspect the coast clutch-to-overdrive carrier adapter.

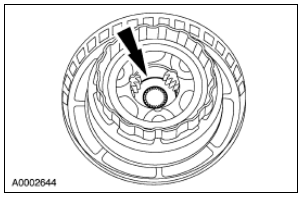


8. Remove and inspect the overdrive sun gear.

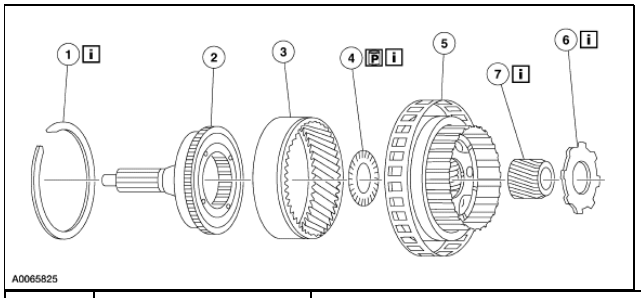


9. ⚠ **CAUTION: Do not attempt to remove the No. 12 bearing from behind the pinion gears.**

Inspect the No. 12 bearing for damage.



10. Assemble the components in the order indicated in the following illustration and table.

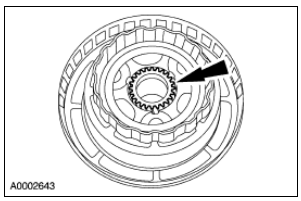


Item	Part Number	Description
1	W702037-S300	Retaining ring Assembly Note
2	7A658	Center shaft
3	7653	Overdrive ring gear
4	7L495	No. 2 overdrive planetary thrust bearing Assembly Note
5	7B446	Overdrive planetary gear carrier assembly
6	7660	Coast clutch adapter Assembly Note
7	7D063	Overdrive sun gear Assembly Note

Item 7: Overdrive Sun Gear Assembly Note

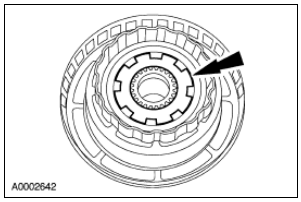
1. ⚠ **CAUTION: Make sure that the No. 12 bearing is in place in the overdrive planetary prior to installing the overdrive sun gear.**

   Install the overdrive sun gear with the recessed gear teeth facing toward the adapter.



Item 6: Coast Clutch Adapter Assembly Note

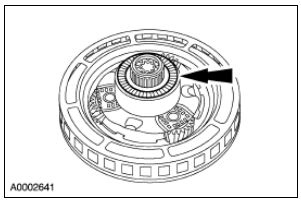
1. Install the coast clutch-to-overdrive carrier adapter.



Item 4: No. 2 Overdrive Planetary Thrust Bearing Assembly Note

1. **NOTE:** Use petroleum jelly to hold the No. 2 overdrive planetary thrust bearing in place.

   Install the No. 2 overdrive planetary thrust bearing.

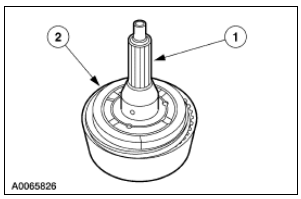


Item 1: Retaining Ring Assembly Note

1. **NOTE:** The overdrive one-way clutch is serviced with the center shaft assembly.

   Install the center shaft and overdrive one-way clutch.

   1. Install the center shaft and overdrive one-way clutch.
   2. Install the overdrive center shaft retaining ring.

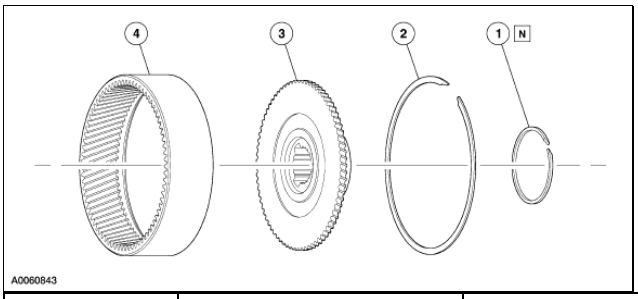


Output Shaft Ring Gear and Hub Shaft Assembly

Printable View (51 KB)

NOTE: Inspect the output shaft ring gear and hub shaft assembly for damage. If repair is necessary, use the following procedure.

1. Disassemble the components in the order indicated in the following illustration and table.
2. To assemble, reverse the disassembly procedure.



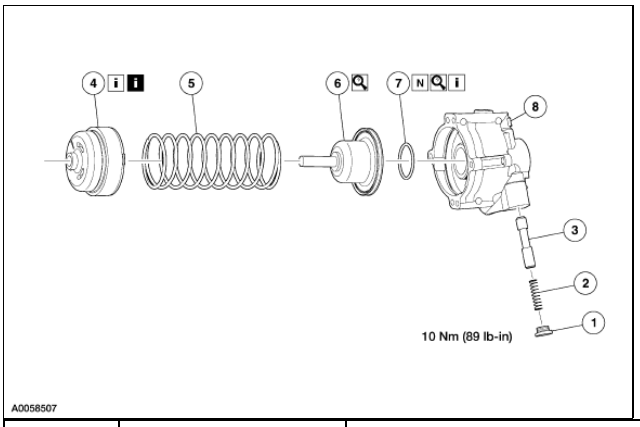
Item	Part Number	Description
1	7D019	Output shaft hub seal
2	7C122	Retaining ring
3	7D164	Output shaft hub
4	7A153	Output shaft ring gear

Reverse Servo Assembly

Printable View (92 KB)

NOTE: Inspect the reverse servo piston seal for damage. If damaged, a new piston and seal assembly will need to be installed.

1. Disassemble the components in the order indicated in the following illustration and table.
2. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	7D321	Control valve spring retainer
2	7A270	Fluid pressure regulator valve spring
3	7D488	Reverse servo check valve
4	7D372	Reverse servo plate Disassembly Note
4	7D372	Reverse servo plate Assembly Note
5	7D466	Reverse servo accumulator spring
6	7D189	Reverse servo piston and seal
7	7423	Reverse servo piston O-ring Assembly Note
8	7D036	Reverse servo cover

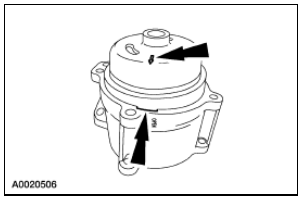
Item 4: Reverse Servo Plate Disassembly Note

1. ⚠ **WARNING: The upper and lower servo covers are under spring tension. Use care when separating the two halves. Failure to follow these instructions may result in personal injury.**

   NOTE: Tabs on servo plate mate with slots on cover every 120 degrees.

   Remove the reverse servo plate by turning in either direction to release.

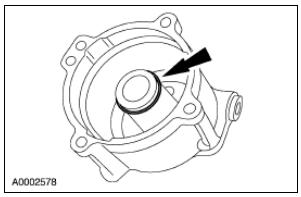
   - Align the arrow on the servo plate with any slot on the cover.



Item 7: Reverse Servo Piston O-Ring Assembly Note

1. **NOTE:** Try not to roll the seal onto the housing when installing the seal or damage to the seal can occur.

   Lubricate and install a new reverse servo piston seal.

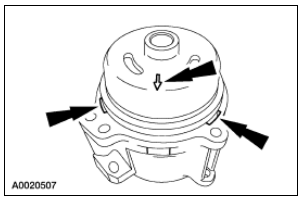


Item 4: Reverse Servo Plate Assembly Note

1. ⚠ **WARNING: The upper and lower servo covers are under spring tension. Use care when separating the two halves. Failure to follow these instructions may result in personal injury.**

   ⚠ **CAUTION: The arrow on the servo plate must be aligned evenly between any two slots on the cover.**

   Install the reverse servo plate.



Torque Converter

Printable View (7 KB)

1. A new torque converter must be installed if one or more of the following statements are true:
   - A torque converter failure has been determined based on complete diagnostic procedures.
   - Converter stud(s), impeller hub or bushing are damaged.
   - Discoloration of the torque converter (due to overheating).
   - The torque converter is found to be out of specification when carrying out one of the following torque converter checks:
     - Torque Converter One-Way Clutch Check
     - Torque Converter End Play Check
     - Torque Converter Turbine to Pump Stator Interference Check
     - Torque Converter Impeller to Pump Stator Interference Check
     - Torque Converter Leak Check
   - Evidence of transmission assembly or fluid contamination due to the following transmission or converter failure modes:
     - major metallic failure
     - multiple clutches or clutch plate failures
     - sufficient component wear which results in metallic contamination

Torque Converter Cleaning And Inspection

Printable View (11 KB)

1. If a new torque converter is being installed, continue with Substep 2 of Step 2.

2. **CAUTION: If equipped, the torque converter drain plug and seal are not reusable. Discard the drain plug and seal, install a new drain plug assembly.**

   If a new torque converter is not being installed, the following procedures must be carried out:

   1. The torque converter must be thoroughly cleaned.
      - Torque converter with drain plugs can be cleaned by using a suitable torque converter fluid cooler cleaner.
      - **CAUTION: Use only clean automatic transmission fluid specified for this transmission. Do not use supplemental transmission fluid additives, treatments or clean agents. The use of these materials can affect transmission operation and result in damage to internal transmission components.**

        A torque converter without drain plugs can be cleaned by hand. Partially fill the torque converter using only recommended transmission fluid for the applicable transmission. Hand-agitate the torque converter and then thoroughly drain the fluid. Fill the torque converter with new fluid specified for the transmission, and install.
   2. All in-tank and auxiliary coolers must be thoroughly cleaned by forward and backward flushing. For additional information, refer to Transmission Fluid Cooler Backflushing and Cleaning in this section.
   3. All cooler tubes must be thoroughly cleaned by backward and forward flushing. For additional information, refer to Transmission Fluid Cooler Backflushing and Cleaning in this section.
   4. All cooler bypass valves (CBV), if equipped, must be thoroughly cleaned.
   5. Carry out the Transmission Fluid Cooler Flow Test. For additional information, refer to Transmission Fluid Cooler in this section.
   6. If the transmission cooling system fails the Transmission Fluid Cooler Flow Test, install new components as necessary.
   7. If new coolers are to be installed, use only factory-approved repair parts. For additional information, refer to Transmission Fluid Cooler in this section.

Torque Converter Flushing

Printable View (39 KB)

Material

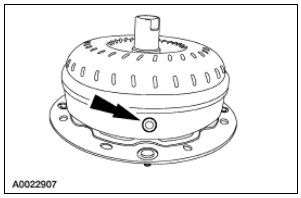
Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

1. **⚠ CAUTION: If equipped, the torque converter drain plug and seal are not reusable. Discard the drain plug and seal, install a new drain plug and seal assembly.**

   ⚠ CAUTION: Use only clean automatic transmission fluid specified for this transmission. Do not use supplemental transmission fluid additives, treatments or clean agents. The use of these materials can affect transmission operation and result in damage to internal transmission components.

   Using a suitable torque converter fluid cooler cleaner, flush the torque converter.

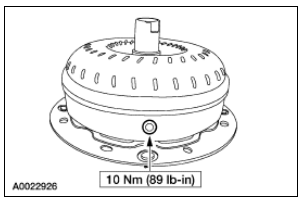
2. After flushing, remove the drain plug and drain the remainder of the fluid.



3. Add 1.9 liter (2 qt.) of clean automatic transmission fluid into the torque converter and agitate by hand.

4. Thoroughly drain the solution.

5. If equipped, install a new torque converter drain plug.



Torque Converter Leak Check

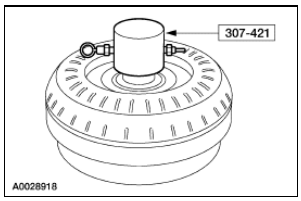
Printable View (87 KB)

Special Tool(s)

 ST1731-A	Leak Tester, Torque Converter 307-421

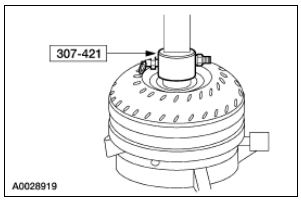
1. Clean the outside surface of the torque converter.

2. Install the special tools into the converter hub.



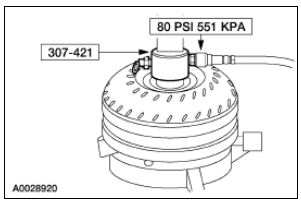
3. **⚠ WARNING: Always follow correct safety procedures while using the press. Failure to follow these instructions may result in personal injury.**

   Install the torque converter with the special tool installed into the arbor press.
   Secure the press. Apply enough force from the press to seal the tool into the torque converter.

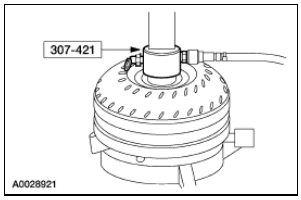


4. **NOTE:** Use clean, dry shop air.

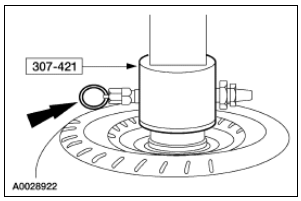
   Apply air pressure to the valve on the special tool.



5. With air pressure applied to the valve, inspect for leaks at the converter hub, the seams, drain plug, and the studs. A soap bubble solution can be applied around those areas to aid in the diagnosis. If a leak is found around the drain plug, install a new drain plug and recheck the torque converter. If any other leaks are present, install a new or remanufactured converter.



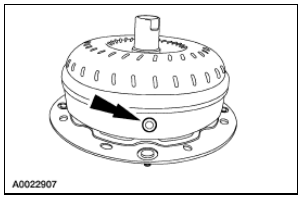
6. Remove the air hose. Release the pressure, and then slowly release the press. Remove the converter. Remove the tool.



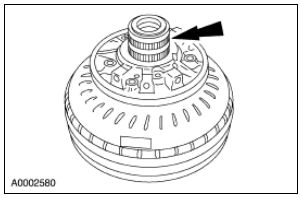
Torque Converter Impeller to Pump Stator Interference Check

Printable View (78 KB)

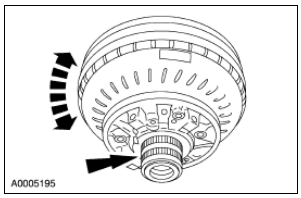
1. If equipped, remove the drain plug and drain the fluid from the torque converter.



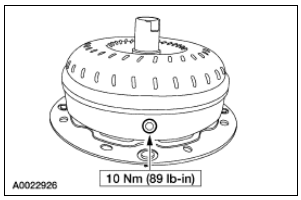
2. Install the fluid pump support into the torque converter. Engage splines of the one-way clutch inner race with the mating splines of the overdrive pump support.



3. While holding the fluid pump support stationary, rotate the torque converter clockwise and counterclockwise. The torque converter should rotate freely with no signs of scraping. If there are signs of scraping, install a new or remanufactured torque converter.



4. If equipped, install a new drain plug in the torque converter.



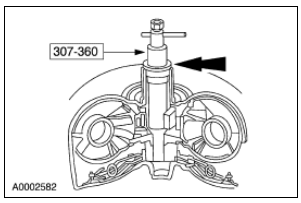
Torque Converter End Play Check

Printable View (78 KB)

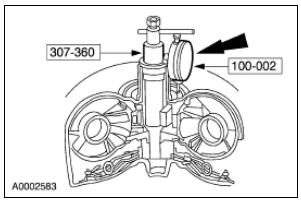
Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent
 ST2128-A	End Play Gauge, Torque Converter 307-360

1. Install the special tool into the torque converter until it bottoms out.
   - Tighten the inner post until the tool is securely locked.



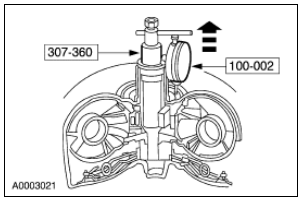
2. Install the special tool on the converter impeller housing and zero the dial.



3. Lift up on the special tool and note the dial indicator reading. If the reading exceeds end play limits, install a new or rebuilt torque converter.

   Torque Converter End Play

New or Rebuilt Torque Converter	Used Torque Converter
0.44 mm (0.017 in)	Max. 0.80 mm (0.031 in)



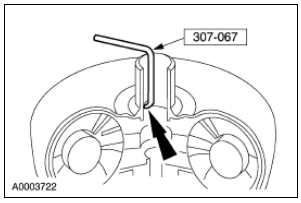
Torque Converter One-Way Clutch Check

Printable View (66 KB)

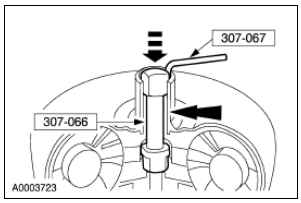
Special Tool(s)

ST1195-A	Holding Tool, Torque Converter Clutch 307-067 (T77L-7902-R)
 ST2383-A	Torque Adapter, Torque Converter Clutch 307-066 (T77L-7902-B)

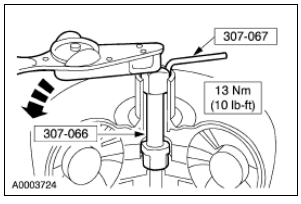
1. Insert the special tool in one of the grooves in the stator bearing retainer.



2. Install the special tools in the converter one-way clutch inner race spline.



3. Use the special tool to hold the stator bearing retainer while using the special tool to turn the converter one-way clutch inner race spline.
   - The torque converter one-way clutch should lock up and hold torque in the counterclockwise direction.
   - The torque converter one-way clutch should rotate freely in the clockwise direction.
   - Try the clutch for lockup and hold in at least five positions.
   - If the converter fails the lockup test torque, install a new or rebuilt torque converter.



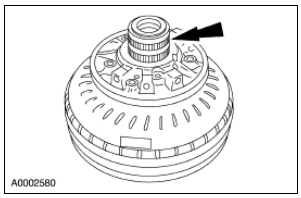
Torque Converter Turbine to Pump Stator Interference Check

Printable View (58 KB)

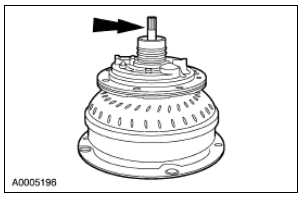
1. **NOTE:** The pump support may remain in the pump assembly during this test.

   Position the torque converter with the pump drive up.

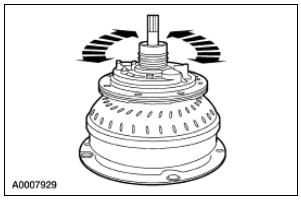
2. Install the pump support into the torque converter. Engage the splines of the one-way clutch inner race with the mating splines of the front pump support.



3. Install the input shaft, engaging the splines with the turbine hub.



4. Check for stator to turbine interference.
   1. Hold the front pump support stationary.
   2. Attempt to rotate the input shaft.
      - The turbine and damper assemblies should rotate in both directions not exceeding maximum torque of 7 Nm (62 lb-in) without any signs of metallic interference or scraping noise.



5. If interference exists, the stator front thrust washer may be worn, allowing the stator to hit the turbine. In such cases, a new or remanufactured torque converter must be installed.
   - The converter crankshaft pilot should be checked for nicks or damaged surfaces that could cause interference when installing the torque converter into the crankshaft. Check the converter front impeller hub for nicks or sharp edges that would damage the pump seal.

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V
Multi-Purpose Grease XG-4	ESR-M1C159-A

NOTE: Inspect the transmission case and extension housing for the following:

- stripped screw hole threads
- gasket and mating surfaces for burrs or nicks
- obstructions to vent and fluid passages
- cracks or warpage

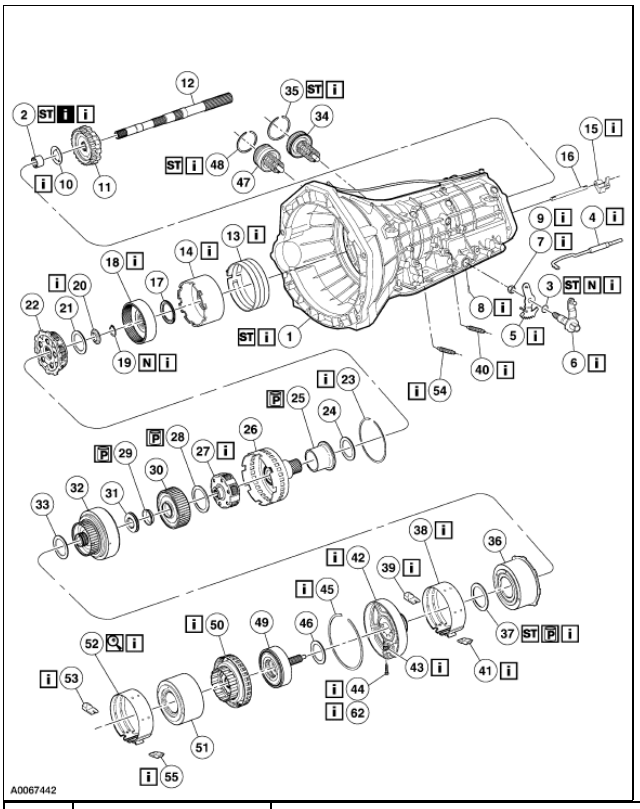
NOTE: Thoroughly clean the transmission case and extension housing in solvent and blow dry with compressed air.

NOTE: Lubricate all seals and the servo bores with clean automatic transmission fluid.

1. If installing a new transmission case bearing, carry out the steps listed.

Component	Items
Rear transmission case bearing	1 and 2
Transmission assembly	1, 3-98

2. Illustration 1 of 2. Assemble the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	7005	Transmission case Assembly Note
2	7R205	Case bearing Disassembly Note
2	7R205	Case bearing Assembly Note
3	7B498	Manual control lever seal Assembly Note
4	7A232	Park pawl actuation rod Assembly Note
5	7A115	Manual control valve inner lever Assembly Note
6	7A256	Manual control lever shaft Assembly Note
7	W703001-S309	Manual control lever inner nut Assembly Note
8	7B210	Manual control lever shaft retaining pin Assembly Note

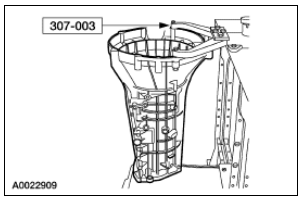
95	6K374	Flexplate adapter plate Assembly Note

96	6441	Flexplate adapter plate nuts Assembly Note
97	7H103	Speed sensors Assembly Note
98	W708389-S426	Speed sensor screws

Item 1: Transmission Case Assembly Note

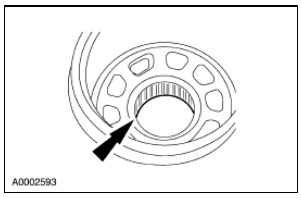
1. ⚠ **WARNING: Make sure the lock pin on the bench-mounted holding fixture is secure. Failure to follow these instructions may result in personal injury.**

   Using the special tool, install the transmission into the bench with the converter housing facing up.

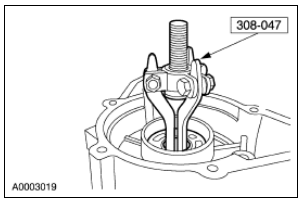


Item 2: Case Bearing Disassembly Note

1. Inspect case bearing for damage. Install a new component as necessary.

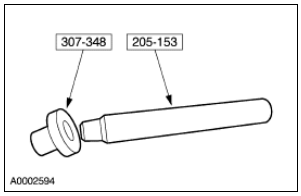


2. Using the special tool, remove the case bearing.
   - Use an oil stone to remove any nicks or burrs in the bearing case bore.



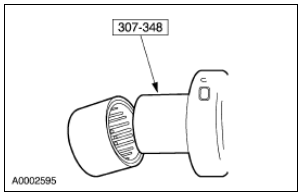
Item 2: Case Bearing Assembly Note

1. Assemble the special tools.

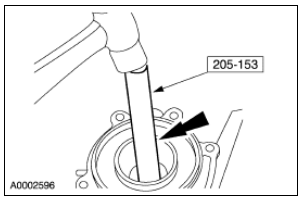


2. ⚠ **CAUTION: Make sure bearing seal ring is facing the drive handle.**

   Install the bearing on the special tools.

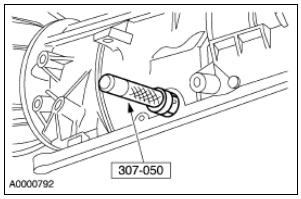


3. Using the special tool, tap case bearing into case bearing bore.



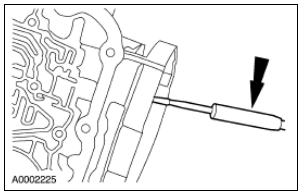
Item 3: Manual Control Lever Seal Assembly Note

1. Using the special tool, install the manual control lever shaft seal and lubricate it with petroleum jelly.



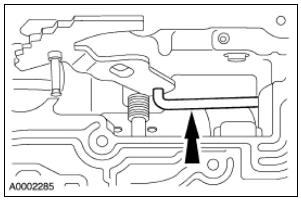
Item 4: Park Pawl Actuating Rod Assembly Note

1. Install the parking lever rod.



Item 5: Manual Control Valve Inner Lever Assembly Note

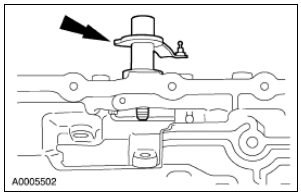
1. Assemble the manual valve inner lever and parking lever actuating rod as shown.



Item 6: Manual Control Lever Shaft Assembly Note

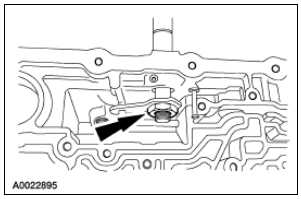
1. ⚠ **CAUTION: Align the flats on the manual valve inner lever with the flats on the manual control lever shaft.**

   Install the manual control lever shaft.



Item 7: Manual Control Lever Inner Nut Assembly Note

1. Install the manual valve inner lever onto the manual shaft and loosely install the nut.



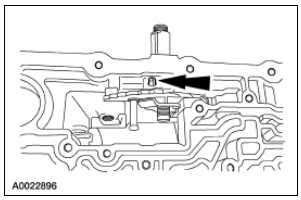
Item 8: Manual Control Lever Shaft Retaining Pin Assembly Note

1. ⚠ **CAUTION: Use care not to damage the fluid pan rail surface when installing the retaining pin.**

   NOTE: Align the manual control lever shaft alignment groove with the manual control lever shaft spring pin bore in the transmission case.

   Install the manual control lever shaft spring pin.

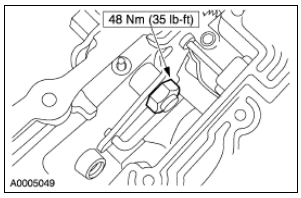
   - Tap the manual control lever shaft spring pin into the transmission case.



Item 9: Manual Control Lever Inner Nut Assembly Note

1. ⚠ **CAUTION: To avoid damage, do not allow the wrench to strike the manual valve inner lever pin.**

   Tighten the nut.

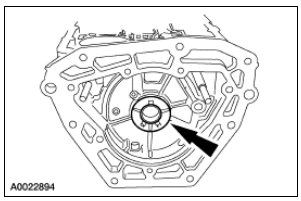


Item 10: Output Shaft Thrust Washer No. 11 Assembly Note

1. ⚠ **CAUTION: The tabs on the output shaft thrust washer (No. 11) point into the case. Make sure the thrust washer is correctly seated.**

   Install the output shaft thrust washer (No. 11).

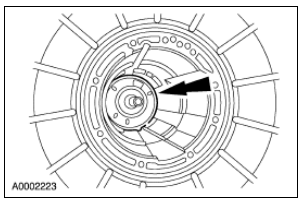
- Coat the output shaft thrust washer with petroleum jelly.



Item 13: Reverse Band Assembly Note

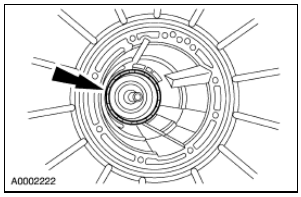
1. ⚠ **CAUTION: Make sure band is resting on the two anchor pins in the case.**

   Install the low/reverse band over the low/reverse brake drum.



Item 14: Reverse Brake Drum and Clutch Assembly Assembly Note

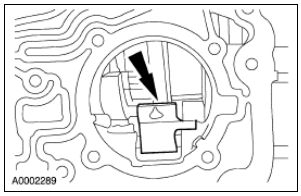
1. Install the low/reverse brake drum.
   - Rotate the low/reverse brake drum clockwise to install.



Item 15: Reverse Brake Drum Lever Assembly Assembly Note

1. **NOTE:** The reverse band actuating lever must fit into the notches in the band.

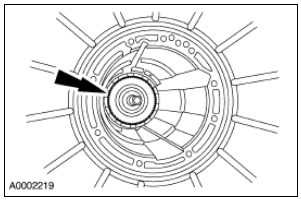
   Install the reverse band actuating lever into the reverse band.



Item 18: Output Shaft Ring Gear Assembly Note

1. ⚠ **CAUTION: Do not damage the seal against the case during assembly.**

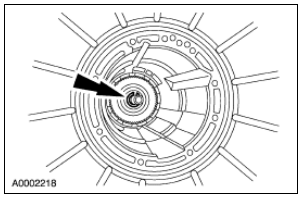
   Install the output shaft ring gear, hub and seal.



Item 19: Output Shaft Retaining Ring Assembly Note

1. ⚠ **CAUTION: Always install a new output shaft retaining ring.**

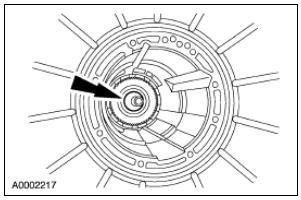
   Install a new output shaft retaining ring.



Item 20: Output Shaft Sleeve Assembly Note

1. **NOTE:** Install the output shaft sleeve with the cone facing up. This sleeve will snap into place when correctly installed.

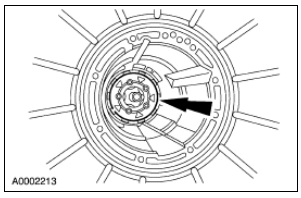
   Install the output shaft sleeve.



Item 23: Reverse Brake Drum Retaining Ring Assembly Note

1. ⚠ **CAUTION: The low/reverse brake drum must be pulled forward to install the low/reverse planet retaining ring.**

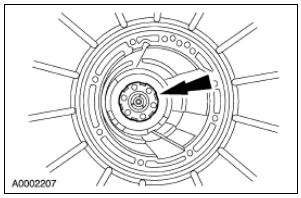
   Install the retaining ring.



Item 27: Forward Planet Assembly Assembly Note

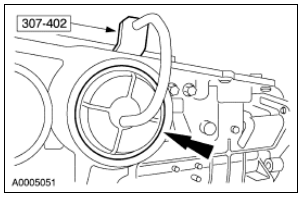
1. **NOTE:** The No. 13 bearing must be correctly seated in the forward planet assembly so the sun gear can be installed correctly.

   Install the forward planetary assembly.



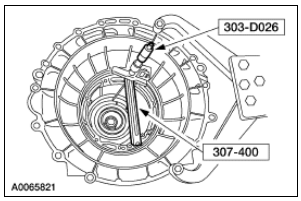
Item 35: Intermediate Servo Retaining Ring Assembly Note

1. Using the special tool, install the retaining ring.



Item 37: Intermediate Clutch Drum Bearing No. 4 Assembly Note

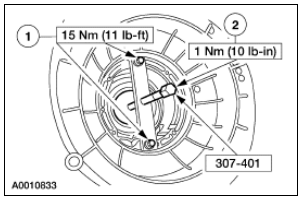
1. Using the special tools, measure from the top of the gauge bar to center support ledge in case at four places 90 degrees apart.
    - Add the four measurements, divide by four, and record as dimension A.



2. ⚠ **CAUTION: The torque specifications are critical for this procedure. Failure to use the correct torque specifications may cause transmission damage.**

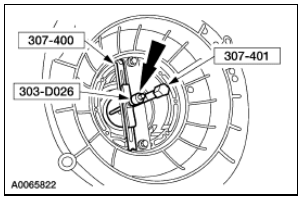
   Install the special tool.

   1. Install the special tool and the screws using the two pump screw locations at approximately 6 and 12 o'clock positions.
   2. Tighten the center screw.



3. **NOTE:** Align the disc holes on special tool with the slot in gauge bar for correct measurement.

   Measure the distance from the top of the gauge bar to the drum bearing surface through the hole in the disc and record as dimension B. Repeat measurement 180 degrees opposite side of the special tool and record as dimension C.



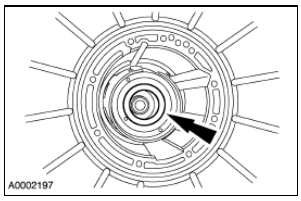
4. Add dimension B to C, divide by two and record as dimension D.

5. Subtract A from D, and record as dimension E.

6. Select bearing from the following chart, using dimension E.

Dimension E	Service Part Number (7D014)	Bearing Thickness	Identification (Notches)
1.69-1.87 mm (0.066-0.074 in)	XW4Z-CA	2.65-2.80 mm (0.104-0.110 in)	None
1.88-2.04 mm (0.073-0.080 in)	XW4X-DA	2.83-2.98 mm (0.111-0.116 in)	One
2.05-2.22 mm (0.081- 0.088 in)	XW4Z-EA	3.01-3.16 mm (0.118-0.124 in)	Two
2.23-2.43 mm (0.088-0.096 in)	XW4Z-FA	3.21-3.36 mm (0.126-0.132 in)	Three

7. Install the selected No. 4 thrust washer on the direct clutch drum.
   - Coat the thrust washer with petroleum jelly.



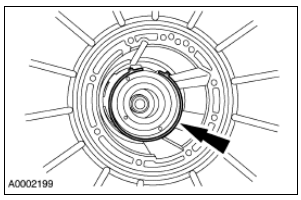
Item 38: Intermediate Brake Band Assembly Note

1. **NOTE:** Make sure that the intermediate band apply strut is aligned with the band notch.

   NOTE: If the intermediate band is reused, it must be installed in the same position as when removed.

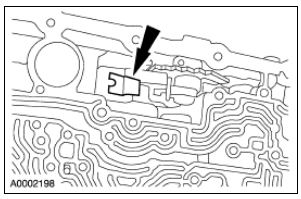
   NOTE: The intermediate band is new, and dark in color. This is a normal condition of the band. Hairline cracks in the band are also considered normal. Do not install a new band based solely on the color.

   Install the intermediate band.



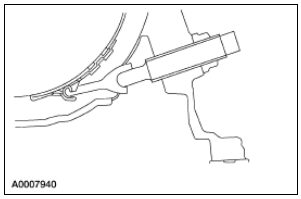
Item 39: Intermediate Brake Band Anchor Strut Assembly Note

1. Install the intermediate band anchor strut.



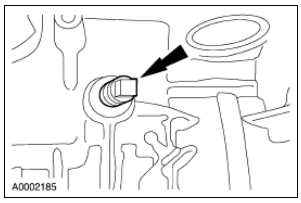
2. ⚠ **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

   Check to make sure that the intermediate band anchor strut is installed in the correct orientation to the case and adjustment screw.



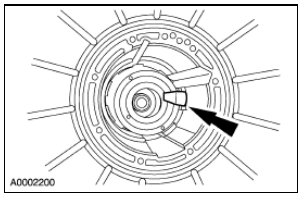
Item 40: Intermediate Brake Band Adjusting Screw Assembly Note

1. Loosely install the screw.



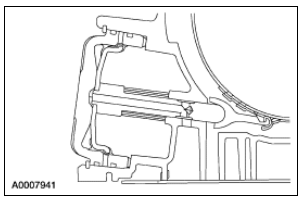
Item 41: Intermediate Brake Band Apply Strut Assembly Note

1. Install the intermediate band apply strut.



2. ⚠ **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

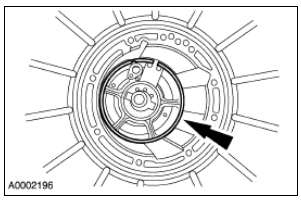
   Check to make sure that the intermediate band apply strut is installed in the correct orientation to the case and piston rod.



Item 42: Center Support Assembly Assembly Note

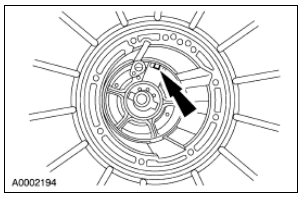
1. **NOTE:** Align the center support screw hole with correct case hole.

Install the center support.



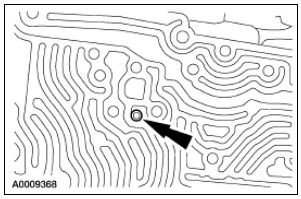
Item 43: Nut and Cage Assembly Assembly Note

1. Install the center support locknut and cage.



Item 44: Bolt Assembly Note

1. Loosely install the screw.



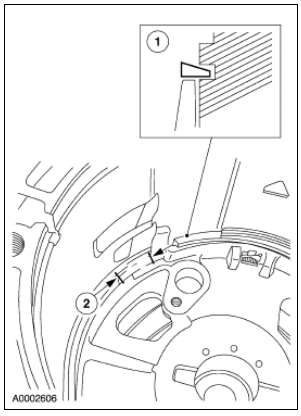
Item 45: Retaining Ring Assembly Note

1. **⚠ CAUTION: Install the center support retaining ring with the tapered side facing up.**

   ⚠ CAUTION: Make sure the notch opening is not obstructed by the center support retaining ring.

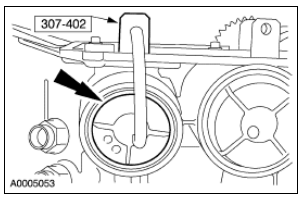
   Install the center support retaining ring.

   1. Make sure the center support retaining ring is installed with the tapered side facing up.
   2. Make sure the opening of the center support retaining ring is positioned correctly.



Item 48: Overdrive Servo Retaining Ring Assembly Note

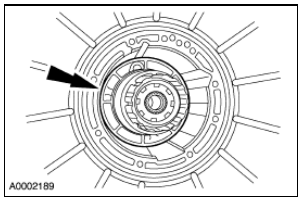
1. Using the special tools, install the retaining ring.



Item 50: Overdrive Planetary Gear Carrier Assembly Assembly Note

1. ⚠ **CAUTION: Do not bend the trigger wheel. Make sure that the No. 2 thrust bearing is in this assembly.**

   Install the planetary gear overdrive carrier.



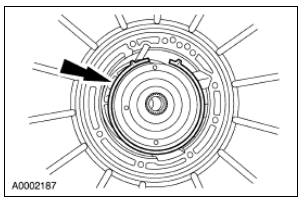
Item 52: Overdrive Brake Band Assembly Note

1. **NOTE:** If the overdrive band is reused, it must be installed in the same position as when removed.

   NOTE: Make sure that the overdrive band apply strut is aligned with the band notch.

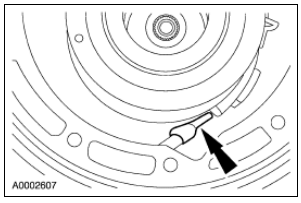
   NOTE: The overdrive band is new, and dark in color. This is a normal condition of the band. Hairline cracks in the band are also considered normal. Do not install a new band based solely on the color.

   Install the overdrive band.



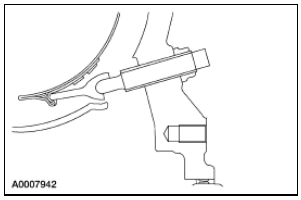
Item 53: Overdrive Brake Band Anchor Strut Assembly Note

1. Install the overdrive anchor strut.



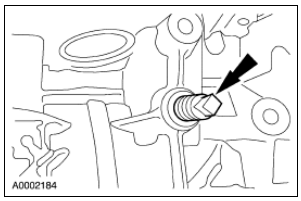
2. ⚠ **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

   Check to make sure that the overdrive band anchor strut is installed in the correct orientation to the case and adjustment screw.



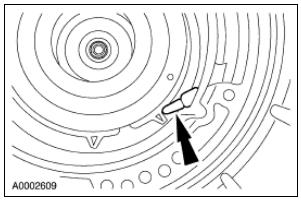
Item 54: Overdrive Brake Band Adjusting Screw Assembly Note

1. Loosely install the screw.



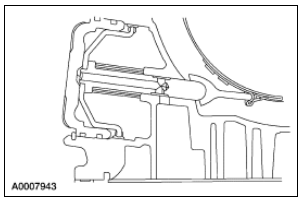
Item 55: Overdrive Brake Band Apply Strut Assembly Note

1. Install the overdrive apply strut.



2. ⚠ **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

   Check to make sure that the overdrive band apply strut is installed in the correct orientation to the case and piston rod.

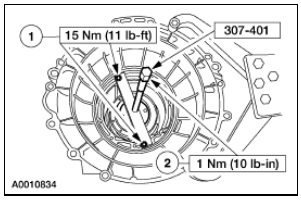


Item 56: Fluid Pump Support Thrust Washer No. 1 Assembly Note

1. ⚠ **CAUTION: The torque specifications are critical for this procedure. Failure to use the correct torque specifications may cause transmission damage.**

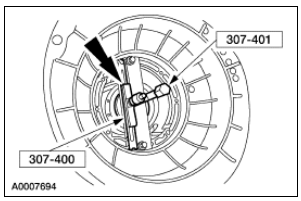
   Install the special tool.

   1. Install the special tool and the screws using the two pump screw locations at approximately 6 and 12 o'clock positions.
   2. Tighten the center screw.



2. **NOTE:** Align the disc holes on special tool with the slot in gauge bar for correct measurement.

   Measure the distance from the top of the gauge bar to the drum bearing surface through the hole in the disc and record as dimension A. Repeat measurement 180 degrees opposite side of the special tool and record as dimension B.



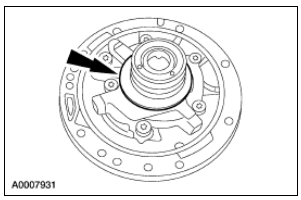
3. Add dimension A to B, divide by two and record as dimension C.

4. Subtract the thickness of the gauge bar 17.78 mm (0.71 in) from dimension C, and record as dimension D.

5. Select the No.1 thrust bearing from the following chart using dimension D.

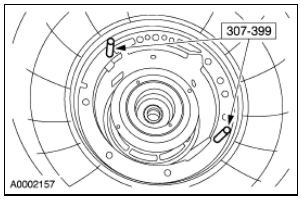
Dimension D	Service Part Number (7D014)	Bearing Thickness	Identification (Color/ID)
38.05-38.24 mm (1.50-1.51 in)	XW4Z-XA	1.70-1.75 mm (0.06 in)	Brown/8
38.25-38.40 mm (1.51 in)	XW4Z-NA	1.85-1.90 mm (0.07 in)	Red/4
38.44-38.59 mm (1.51-1.52 in)	XW4Z-RA	2.05-2.10 mm (0.08 in)	Black/6
38.60-38.76 mm (1.52-1.53 in)	XW4Z-YA	2.20-2.25 mm (0.09 in)	Orange/9
38.77-38.97 mm (1.53 in)	XW4Z-ZA	2.40-2.45 mm (0.10 in)	Purple/10

6. Install the selected No. 1 fluid pump input thrust washer.
   - Coat the fluid pump input thrust washer with petroleum jelly.

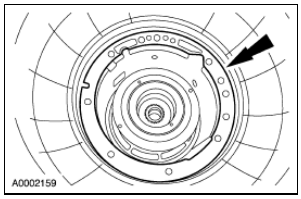


Item 57: Fluid Pump Gasket Assembly Note

1. Install the special tools into the transmission case.



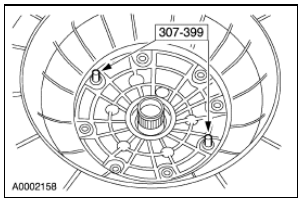
2. Install the pump gasket.



Items 58 and 59: Fluid Pump Assembly Assembly Note

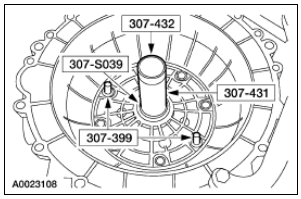
1. ⚠ **CAUTION: Make sure that the fluid pump inlet thrust washer (No. 1), selective thrust washer, fluid pump gasket, and the fluid pump-to-case O-ring seal remain in the correct position throughout this step.**

   Install the fluid pump.

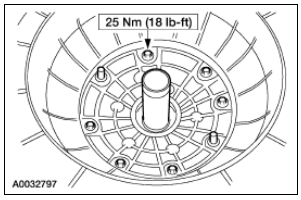


2. ⚠ **CAUTION: The special tools must be used to correctly align the pump with the adapter plate to reduce gear noise, bushing failure, and leakage.**

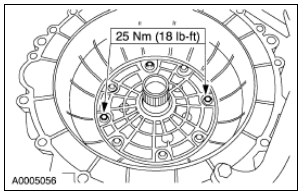
   Using the special tool, align the fluid pump to the adapter plate.



3. Install screws. Tighten the screws in a star pattern.



4. Remove the special tools and install the two remaining screws.

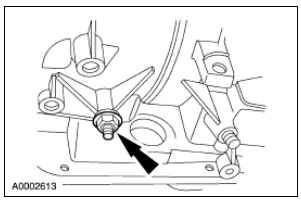


Item 60: Band Adjusting Locknut Assembly Note

1. **⚠ CAUTION: Do not allow overdrive band adjustment screw to back out. Band strut could fall out of position.**

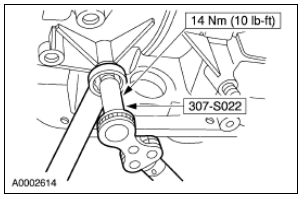
   ⚠ CAUTION: Install, but do not tighten, a new locknut on the band adjustment screw. Apply petroleum jelly to the locknut seal.

   Install a new locknut on the band adjustment screw.

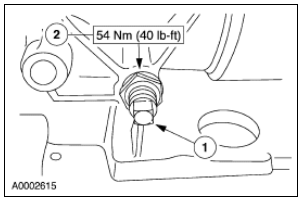


2. **⚠ CAUTION: The overdrive servo must be installed prior to band adjustment.**

   Using the special tool, tighten the overdrive band adjustment screw. Then back off the screw exactly (1.5) turns and hold that position.



3. Tighten the overdrive band locknut.
   1. Hold the overdrive band adjustment screw stationary.
   2. Tighten the overdrive band locknut.

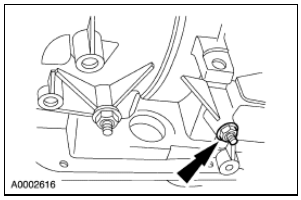


Item 61: Band Adjusting Locknut Assembly Note

1. **⚠ CAUTION: Do not allow the intermediate band adjusting screw to back out. Band strut could fall out of position.**

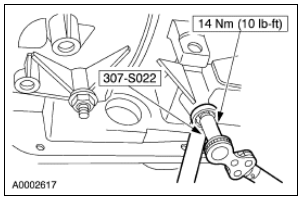
   ⚠ CAUTION: Install, but do not tighten, a new locknut on the band adjustment screw. Apply petroleum jelly to the locknut seal.

   Install new nut on the band adjustment screw.

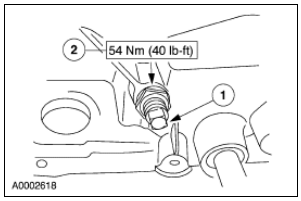


2. ⚠ **CAUTION: The intermediate servo must be installed prior to band adjustment.**

   Tighten the intermediate band adjustment screw. Then back off the screw exactly (1.5) turns and hold that position.

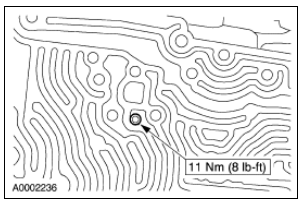


3. Tighten the intermediate band locknut.
   1. Hold the intermediate band adjustment screw stationary.
   2. Tighten the intermediate band locknut.



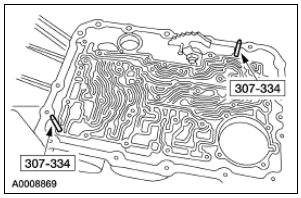
Item 62: Bolt Assembly Note

1. Tighten the center support bolt.

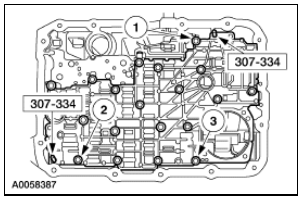


Items 63, 64, 65 and 66: Main Control and Screws Assembly Note

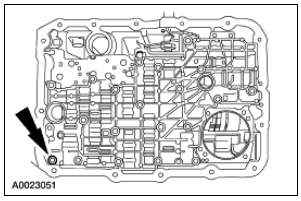
1. Install the special tools into the transmission case.



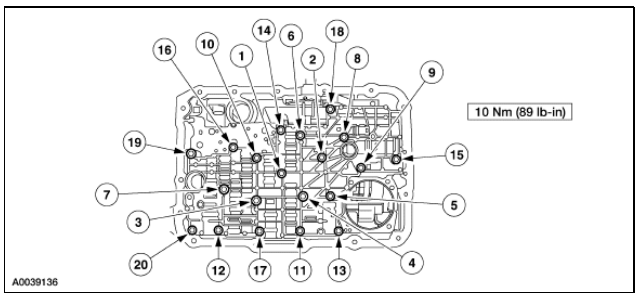
2. Using the special tools, install the main control valve body and loosely install the screws.
   1. Install the short screw.
   2. Install the screw with the larger head.
   3. Install the remaining screws.



3. Remove the special tools, and loosely install the screw.

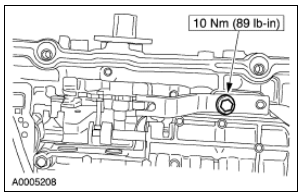


4. Tighten the screws in the sequence shown.



Items 67 and 68: Manual Valve Detent Spring and Screw Assembly Note

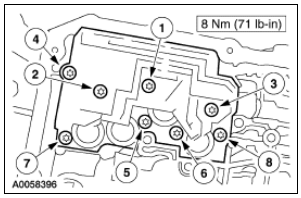
1. With the manual lever in the NEUTRAL position, install the manual valve detent spring.



Items 70, 71 and 72: Solenoid Body Screws Assembly Note

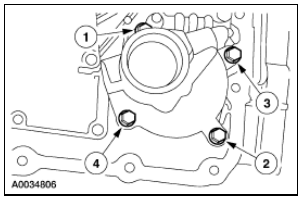
1. ⚠ **CAUTION: Inspect the transmission case bore to make sure it is free of debris and not damaged. If damaged, a transmission leak may occur.**

   Install the solenoid body. Tighten screws in sequence shown.



Item 74: Reverse Servo Screws Assembly Note

1. Install the reverse servo. Tighten the screws in the sequence shown in two stages.
   - Stage 1: Tighten screws to 5 Nm (44 lb-in).
   - Stage 2: Tighten screws to 11 Nm (8 lb-ft).

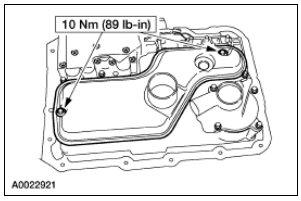


Items 75 and 76: Transmission Fluid Filter and Screws Assembly Note

1. ⚠ **CAUTION: Lubricate the fluid filter seals with clean automatic transmission fluid or they may be damaged.**

   NOTE: Make sure that the fluid filter seals are correctly seated on the filter.

   Lubricate the seals and install the transmission fluid filter.



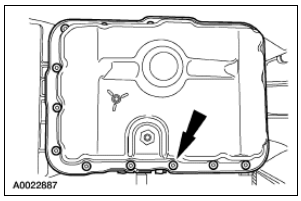
Item 77: Transmission Fluid Pan Gasket Assembly Note

1. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

   Install the transmission fluid pan and gasket.

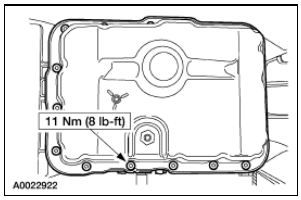
Item 78: Transmission Fluid Pan Assembly Note

1. Install the transmission fluid pan and loosely install the screws.



Item 79: Transmission Fluid Pan Screws Assembly Note

1. Tighten the 16 screws in a crisscross sequence.

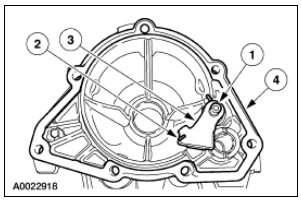


Items 80, 81, 82 and 83: Park Pawl Assembly Note

1. **NOTE:** The 4x2 vehicle is shown, the 4x4 is similar.

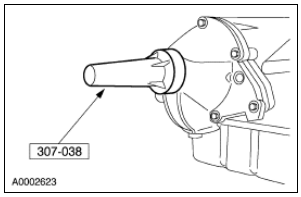
   Install the parking pawl assembly and gasket.

1. Install the parking pawl shaft.
2. Install the parking pawl return spring.
3. Install the parking pawl.
4. Install a new gasket.



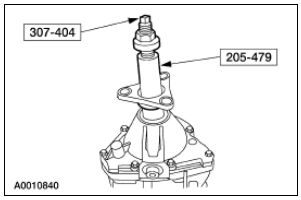
Item 86: Extension Housing Seal Assembly Note

1. Using the special tool, install the extension housing seal.



Item 87: Output Shaft Flange Assembly Note

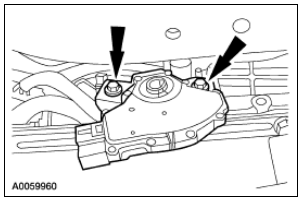
1. Using the special tools, install the output shaft flange.



Items 89 and 90: Transmission Range (TR) Sensor Screws Assembly Note

1. ⚠ **CAUTION: The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.**

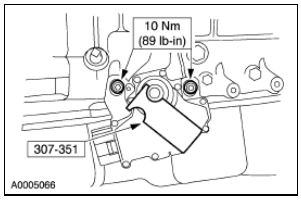
   Install the digital transmission range (TR) sensor and loosely install the screws.



2. ⚠ **CAUTION: Tightening one screw before tightening the other may cause the sensor to bind or become damaged.**

   NOTE: The manual lever must be in the NEUTRAL position.

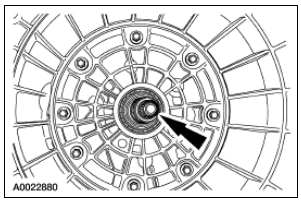
   Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.



Item 91: Input Shaft Assembly Note

1. ⚠ **CAUTION: The splines of the input shaft are not the same length on both ends. The shaft end with the shorter splines goes into the fluid pump.**

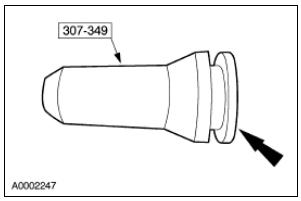
   Install the input shaft.



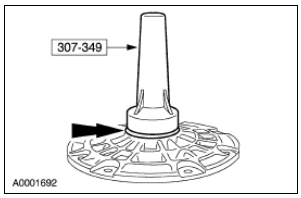
Item 92: Front Fluid Pump Seal Assembly Note

1. **NOTE:** Check and make sure that the garter spring in the seal has not popped off of the converter hub seal.

   Install a new seal onto the special tool.

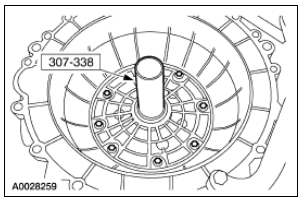


2. Using the special tool, install a new converter hub seal.

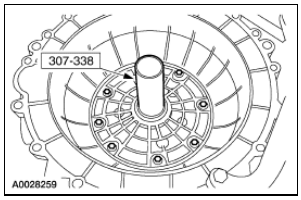


Item 93: Fluid Pump Assembly Assembly Note

1. Using the special tool, make sure that the fluid pump gear seal ring is fully seated.



2. Remove the special tool.



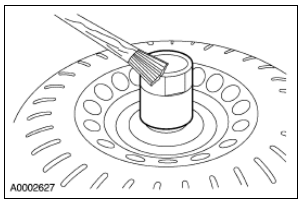
Item 94: Torque Converter Assembly Note

1. **⚠ CAUTION: Do not damage the fluid pump gear O-ring seal when installing the torque converter.**

   ⚠ CAUTION: Make sure the converter hub is fully engaged in the pump support and gear and rotates freely. Do not damage the hub seal.

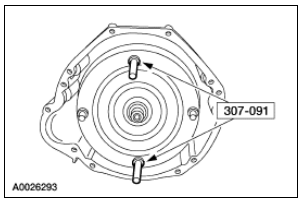
   ⚠ CAUTION: If the torque converter slides out, the hub seal may become damaged.

   Lubricate the converter hub with clean automatic transmission fluid.

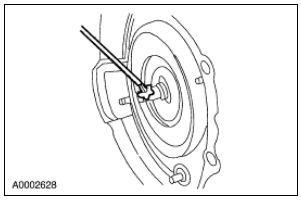


2. **⚠ WARNING: The torque converter can fall out if the transmission is tipped. Failure to follow these instructions may cause personal injury.**

   Using the special tools, install the torque converter by pushing and rotating.



3. Lubricate the torque converter pilot hub with multipurpose grease.



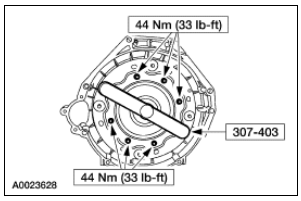
Items 95 and 96: Flexplate Adapter Plate and Nuts Assembly Note

1. **⚠ CAUTION: The special tool must be used to correctly align the adapter plate to the converter or transmission damage could occur.**

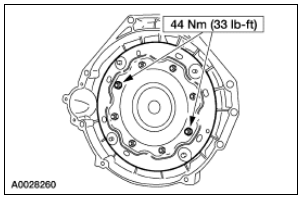
   In order to correctly install the special service tool, it must be installed using one round and one oblong hole. Using two oblong holes will cause damage to the transmission.

   NOTE: Align the identifying mark made on the nut, stud, and adapter plate during disassembly for correct installation.

If the vehicle is equipped, use the special tool to install the torque converter flexplate adapter assembly and eight nuts.

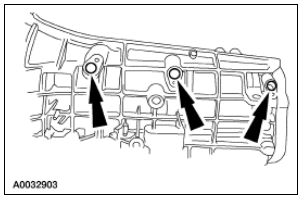


2. Install two torque converter flexplate adapter nuts.



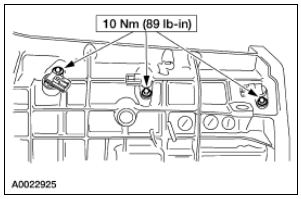
Item 97: Speed Sensor Assembly Note

1. Using one of the speed sensor holes, fill the transmission with 8.5L (9 quarts) of automatic transmission fluid.



2. **NOTE:** Inspect the speed sensor O-ring seals for damage. If damage to the seal is found, install a new seal. Lubricate the O-ring seals with petroleum jelly to prevent damage to the O-ring seals

   Install the speed sensors.



3. Before installing transmission, make sure that the transmission cooling system (tube and cooler) have been thoroughly flushed. If contamination cannot be removed or correct flow cannot be obtained, install a new cooler and/or tubes. For additional information, refer to Transmission Fluid Cooler .

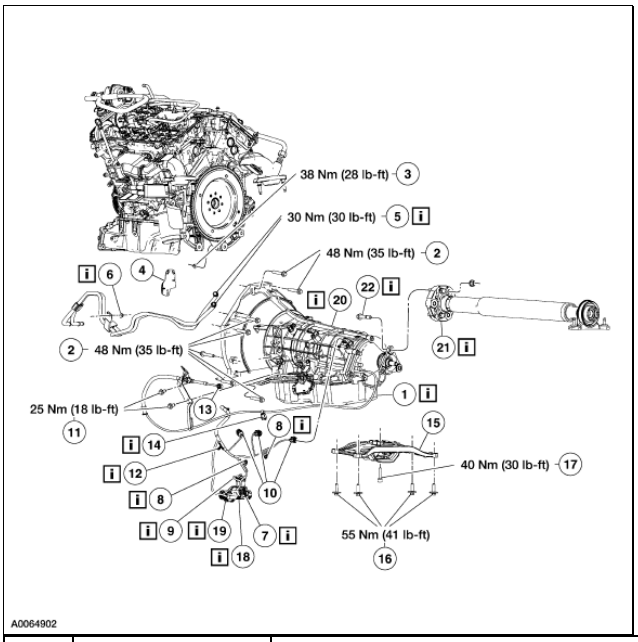
Transmission

Printable View (499 KB)

1. **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions can result in personal injury.**

   Secure the transmission to the transmission jack with a safety chain.

2. Install the components in order indicated in the following illustration and table.



Item	Part Number	Description
1	7000	Transmission assembly Installation Note
2	W500128-S	Bell housing screws
3	W705443-S	Torque converter nuts
4	6C070	Torque converter access plug
5	7A030	Fluid cooler tube nuts Installation Note
6		Fluid cooler tube bracket nut (part of 7A030) Installation Note
7	14A464	Transmission range (TR) sensor electrical connector Installation Note
8	14A464	Wire harness retainers Installation Note
9	7C078	Solenoid body harness connector Installation Note
10	14A464	Speed sensor connectors
11	N605918-S	Shift cable bracket and screws
12	14A464	Wire harness retainer Installation Note

13	7E395	Shift cable eyelet
14	7E395	Shift cable retainer Installation Note
15	6A023	Transmission support
16	W704971-S426	Transmission support outer screws
17	W705966-S426	Transmission support center screw
18	9F472	Heated oxygen sensor electrical connector retainer (part of 9F472) Installation Note
19	9F472	Heated oxygen sensor electrical connector (part of 9F427) Installation Note
20	7005	Transmission assembly Installation Note
21		Output shaft flange coupler Installation Note
22		Output shaft flange coupler screws Installation Note

3. Install the exhaust system and front heat shields. For additional information, refer to Section 309-00 .

4. **NOTE:** When the battery has been disconnected and reconnected, some abnormal drive symptoms can occur while the vehicle relearns its adaptive strategy. The customer needs to be notified that they can experience slightly different upshifts (either soft or firm) and that this is a temporary condition and will eventually return to normal operating condition.

   Connect the battery ground cable. For additional information, refer to Section 414-00 .

5. Carry out the fluid level check. For additional information, refer to Transmission Fluid Level Check in this section.

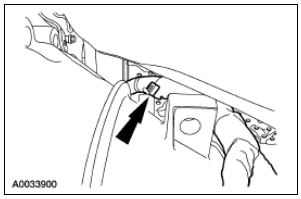
6. Verify that the shift cable is correctly adjusted. For additional information, refer to Selector Lever Cable Adjustment in this section.

7. Check the operation of the transmission and inspect for leaks.

Item 1: Transmission Assembly Installation Note

1. **NOTE:** Align the flexplate-to-converter marks made during the removal procedure.

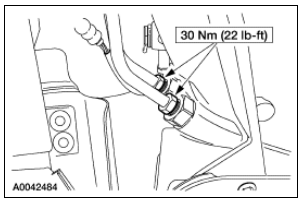
   While raising and positioning the transmission to the engine, install the wire harness to the top of the transmission.



Item 5: Fluid Cooler Tube Nuts Installation Note

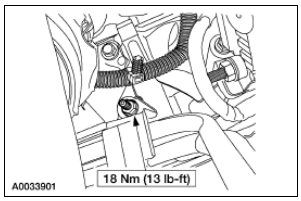
1. **⚠ CAUTION: Use care not to bend or force the cooler tubes otherwise damage to the cooler tubes and the transmission can result.**

   Install the transmission fluid cooler tubes.

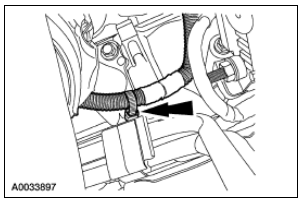


Item 6: Fluid Cooler Tube Bracket Nuts Installation Note

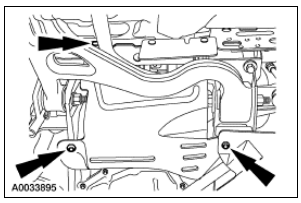
1. Install the transmission fluid cooler line bracket.



2. Connect the wire harness to the cooler line bracket.

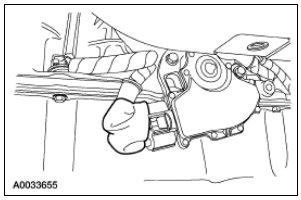


3. Install the splash shield then install the screws and pushpin.

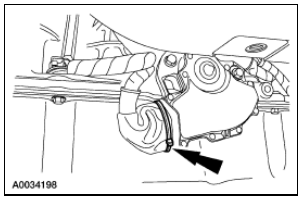


Item 7: Transmission Range (TR) Sensor Electrical Connector Installation Note

1. Reconnect the digital TR sensor connector.

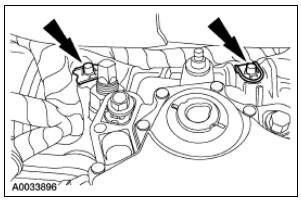


2. Slide the boot over the digital TR sensor connector and install a new tie strap.



Item 8: Wire Harness Retainers Installation Note

1. Connect the wire harness retainers to the transmission.



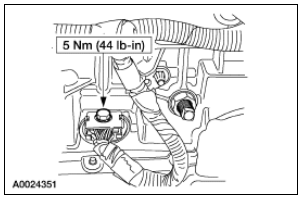
Item 9: Solenoid Body Harness Connector Installation Note

1. ⚠ **CAUTION: Damage will occur to the solenoid body assembly if the screw is tightened above the specification.**

   NOTE: Always install new O-ring seals on the vehicle harness connector.

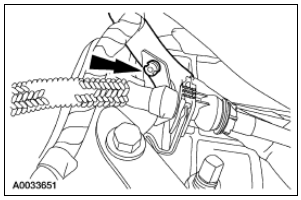
   NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

   Install and lubricate new O-ring seals on the transmission connector and connect the connector.



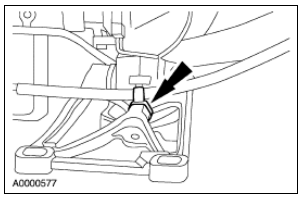
Item 12: Wire Harness Retainer Installation Note

1. Install the wire harness to the top of the transmission shift cable bracket.



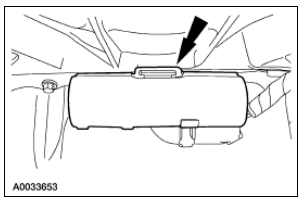
Item 14: Shift Cable Retainer Installation Note

1. Install the shift cable to the rear transmission support.



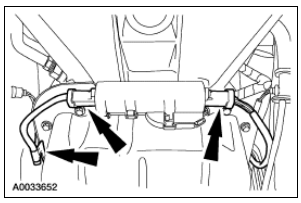
Item 18: Heated Oxygen Sensor Electrical Connector Retainer Installation Note

1. Install the heated oxygen sensor connector to the front of the transmission pan rail.



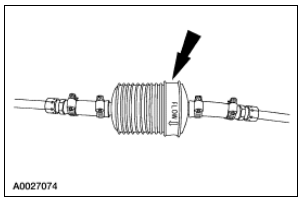
Item 19: Heated Oxygen Sensor Electrical Connector Installation Note

1. Reconnect the heated oxygen sensor connectors and install the sensor wire retaining clip to the right side of the transmission pan rail.



Item 20: Transmission Assembly Installation Note

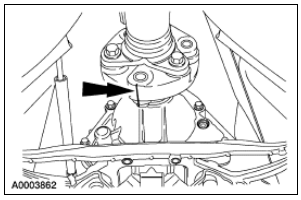
1. Prior to lowering the vehicle, use the following guidelines for the in-line transmission fluid filter:
   - If the transmission was overhauled and the vehicle was equipped with an in-line fluid filter, install a new in-line fluid filter.
   - If the transmission was overhauled and the vehicle was not equipped with an in-line fluid filter, install a new in-line fluid filter kit.
   - If the transmission is being installed for a non-internal repair, do not install an in-line filter or filter kit.
   - If installing a Ford-authorized remanufactured transmission, install the in-line transmission fluid filter that is supplied.
     Prior to lowering the vehicle, install a new in-line transmission filter or a filter kit.



Item 21: Output Shaft Flange Coupler Installation Note

1. ⚠ **CAUTION: Align the index marks made during removal or driveshaft imbalance can occur.**

   Align the index marks and position the bushing on the transmission flange piloting system.



Item 22: Output Shaft Flange Coupler Screws Installation Note

1. **⚠ CAUTION: Install the bolts, washers, and nuts in their original position or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

   Install the three nuts, washers and bolts.

Inspection and Verification

1. Verify the customer concern by running the engine or by road testing the vehicle.
2. Visually inspect for obvious signs of mechanical or electrical damage. Refer to the following chart.

Visual Inspection Chart

Mechanical	Electrical
• Cracked exhaust manifold • Exhaust pipe pinched or crushed • Damaged catalytic converter • Loose or damaged vacuum hose • Damaged exhaust hanger brackets • Leaking fuel injector(s) • Resricted or damaged air inlet passage • Dirty engine air cleaner	• Damaged or loose electrical connector • Misrouted or damaged wiring • Damaged ignition system • Worn or damaged HO2S sensor

3. Inspect the wiring and connectors of the HO2S or catalyst monitor sensors for looseness, corrosion or other damage.
4. If the concern is not visually evident, determine the symptom and proceed to the symptom chart.

Fuel System Printable View (8 KB)

The vehicle:

Fuel Tank and Lines

The vehicle:

- is equipped with a multiport fuel injection (MFI) system.
- uses separately controlled fuel injectors mounted to the intake manifold for each cylinder.
- fuel injectors are supplied with pressurized fuel from the fuel delivery module through the jet pump transfer module, through the fuel injection supply manifold.
- fuel injection supply manifold is controlled by the electronic fuel delivery module which is enabled by the powertrain control module (PCM).
- uses an electronic returnless fuel system.
- has a dual-container (saddle type) fuel tank, each half equipped with a fuel level sensor.
- has a jet pump transfer module in the left fuel tank half to supply fuel to the right, which contains the fuel delivery module that supplies fuel under pressure to the fuel injection supply manifold.
- has an inertia fuel shutoff (IFS) switch, located behind the driver side left foot kick panel, which shuts off the fuel in the event of collision.
- has a fuel system filter, located behind the left front wheel well splash shield.

Acceleration Controls

The engine management system electronically operates the throttle of the engine in response to throttle pedal movements initiated by the driver. In the event of a system failure, the engine management system provides a "limp home" mode which allows the car to be driven with limited performance.

Evaporative Emissions

Printable View (13 KB)

The evaporative emission (EVAP) system:

- is equipped with an on-board refueling vapor recovery (ORVR) system.
- prevents hydrocarbon emissions from reaching the atmosphere.
- stores fuel vapors in the EVAP canister that are generated during vehicle refueling, vehicle operation or hot soak until they can be consumed by the engine.
- routes the stored fuel vapors to the engine during engine operation.
- is controlled by the powertrain control module (PCM) which uses various sensor inputs to calculate the desired amount of purge flow. The PCM regulates the purge flow, induced by the application of intake manifold vacuum, by varying the duty cycle applied to the EVAP canister purge valve.
- has an EVAP test port for test purposes.

The fuel vapors are routed:

- from the fuel tank through the fuel vapor control valve and fuel vapor vent valve.
- to the EVAP canister through a vapor line.
- to the engine when the EVAP canister purge valve is opened by the PCM.

The fuel tank pressure (FTP) sensor:

- monitors the pressure levels in the fuel tank.
- communicates the pressure reading to the PCM during the OBD II leak test.
- is permanently attached to the fuel vapor control valve tube assembly.

The evaporative emission canister assembly:

- is located above the rear subframe.
- contains activated carbon.
- stores fuel vapors.

The fuel tank filler cap:

- relieves system pressure above 17 kPa (68.24 inches H_2O).
- relieves system vacuum below 5.65 kPa (22.68 inches H_2O).

The canister vent solenoid:

- is normally open.
- seals the EVAP system for the inspection and maintenance (I/M 240) test and OBDII leak and pressure tests.
- is mounted on the EVAP canister bracket assembly.
- is repaired as a separate item.

The evaporative emission (EVAP) canister purge valve:

- is normally closed.
- regulates purging of the EVAP canister.
- is controlled by the PCM.
- is located in the engine compartment on the LH strut tower.

The fuel vapor vent (FVV) valve:

- is permanently mounted to the fuel tank.
- prevents suspended liquid fuel from being drawn into the EVAP canister along with the fuel vapors.

The fuel vapor control valve:

- is permanently mounted to the fuel tank.
- controls fuel tank refueling fill level.
- prevents suspended liquid fuel from being drawn into the EVAP canister along with the fuel vapors.
- relieves system pressure above 14 kPa (56.21 inches H_2O).

The underbody fuel supply and vapor tube assembly:

- is located under the LH rocker panel.
- includes both the fuel supply line and the EVAP canister purge outlet tube.
- supplies fuel from the fuel pump to the fuel filter.
- routes fuel vapors from the fuel vapor control valve tube assembly to the engine compartment fuel supply and vapor tube.
- is repaired as an assembly.

The engine compartment fuel supply and vapor tube assembly:

- is located on the LH side of the engine compartment.
- supplies fuel from the fuel filter to the fuel injection supply manifold.
- routes fuel vapors from the underbody fuel supply and vapor tube assembly to the EVAP canister purge valve.
- is repaired as an assembly.

The evaporative emission (EVAP) system monitor:

- is a self-test strategy within the PCM, which tests the integrity of the EVAP system.
- monitors the EVAP system for leaks.
- monitors electronic EVAP components for irrationally high or low voltages.
- monitors for correct EVAP system operation.
- uses negative leak test method to test and activate the EVAP system.

The evaporative emission (EVAP) test port:

- is used to connect the Evaporative Emission System Leak Tester to the EVAP system.
- is located on the EVAP canister purge valve.

The EVAP Running Loss System Leak Test:

- utilizes intake manifold vacuum to test the EVAP system and involves several stages.

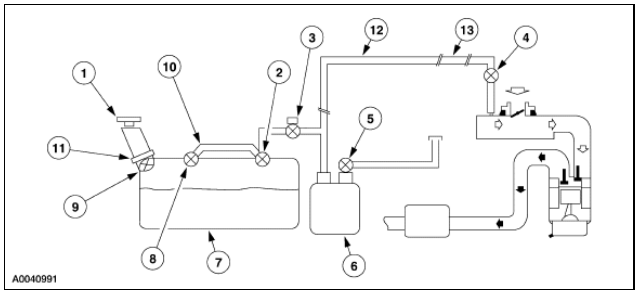
Evaporative Emission System



Item	Part Number	Description
1	9030	Fuel filler cap
2	9B190	Fuel vapor control valve
3	9C052	Fuel tank pressure sensor
4	9G683	Evaporative emission canister purge valve
5	9F945	Canister vent solenoid
6	9E857	Evaporative emission canister assembly
7	9002	Fuel tank
8	9B593	Fuel vapor vent valve
9	9039	Fuel filler pipe check valve
10	9E325	Fuel vapor jumper hose
11	9047	Fuel filler hose
12	9S284	Fuel/vapor line
13	9J280	Fuel/vapor line

Principles of Operation

Fuel Filler Cap

The fuel filler cap is used to prevent fuel spill and to close the EVAP system to the atmosphere.

Fuel Vapor Control Valve

The fuel vapor control valve is normally between the EVAP canister and the fuel vapor vent valve. Its function is to prevent the flow of liquid fuel into the EVAP canister or up to the canister purge valve during refueling, and to prevent the collection of liquid fuel in the fuel vapor hoses by overfilling the fuel tank. The fuel vapor control valve has a pressure relief feature which will vent excessive tank pressure to the atmosphere. The valve cannot be serviced separately; a new fuel tank must be installed.

Fuel Tank Pressure (FTP) Sensor

The fuel tank pressure sensor is used to measure the fuel tank pressure during the EVAP Running Loss System Leak Test. It is also used to control excessive fuel tank pressures by forcing the EVAP system to purge. The fuel tank pressure sensor is permanently mounted in the fuel vapor control valve tube assembly as it crosses over the fuel tank.

Evaporative Emission (EVAP) Canister Purge Valve

The EVAP canister purge valve is controlled by the powertrain control module (PCM). The EVAP canister purge valve controls the flow of fuel vapors from the EVAP canister to the engine intake manifold during various engine operating modes. The EVAP canister purge valve is normally closed.

Canister Vent Solenoid

During the Evaporative Emission Running Loss System Test Monitor, Evaporative Emissions Repair Verification Drive Cycle, and the Evaporative Emission System Leak Test, the canister vent solenoid is closed to allow either a vacuum to be drawn on the fuel tank or to hold a specified pressure in the system. The canister vent solenoid is normally open.

Evaporative Emission (EVAP) Canister

Fuel vapors from the fuel tank are stored in the EVAP canister assembly. When the engine is running, the vapors are purged from the EVAP canister for combustion.

Fuel Vapor Vent Valve (FVV) Assembly

The fuel vapor vent (FVV) valve assembly is mounted on the top of the fuel tank. It is used to control the flow of fuel vapors entering the EVAP system. The assembly also has a spring float, which prevents liquid fuel from entering the vapor delivery system under severe handling or vehicle rollover conditions. In the upright position, the open bottom of the float will lift and shut off the orifice. Under severe handling conditions, the spring will push the float closed when angles allow liquid fuel to reach the orifice. In a rollover condition, the weight of the open bottom float and spring pressure will close the orifice. The valve cannot be serviced separately; a new fuel tank must be installed.

Fuel Filler Pipe Check Valve

The fuel filler pipe check valve is an integral part of the fuel tank. It is intended to prevent liquid fuel from re-entering the fuel filler pipe from the fuel tank on refueling or rollover conditions.

Evaporative Emission System Monitor

When a fault occurs, the EVAP system monitor is reset to NO and a diagnostic trouble code (DTC) is set in the PCM memory. After the DTC is repaired, the vehicle drive cycle must be completed to reset the monitor in preparation for inspection and maintenance testing.

EVAP Running Loss System Leak Test

To start the testing, conditions of stable purging and vehicle speed must be satisfied. During the first stage, the canister vent solenoid is closed, while the EVAP canister purge valve remains open, applying and building vacuum in the system as indicated by the FTP sensor. This phase checks for major leaks in the EVAP system.

In the second stage, the EVAP canister purge valve closes and the system looks for minimal decay rate in the EVAP vacuum, indicating the absence of any small EVAP system leaks.

The last stage is entered only if stage two of the leak test has failed and checks whether the failed test was due to excess vapor generation. It monitors fuel vapor generation rate. Initially, the canister vent solenoid is opened to equalize EVAP system pressure to atmosphere. Then the canister vent solenoid is closed, allowing pressure to build if vapor generation is present in sufficient quantity. If the rate of generation is found to be too high, the EVAP running loss system leak test is aborted. If not, then a small leak is diagnosed.

On-Board Refueling Vapor Recovery (ORVR) Evaporative Emission (EVAP) System

The basic elements forming the ORVR system are as follows:

- The fuel filler pipe forms a seal to prevent vapors from escaping the fuel tank while liquid is entering the fuel tank. Liquid in the one inch diameter tube blocks vapors from rushing back up the fuel filler pipe.
- A fuel vapor control valve controls the flow of vapors out of the fuel tank. The valve closes when the liquid level reaches a height associated with fuel tank usable capacity. The valve accomplishes the following:
    - ♦ Limits the total amount of fuel that can be dispensed into the fuel tank.
    - ♦ Prevents liquid gasoline from exiting the fuel tank when submerged or when tipped well beyond a horizontal plane as part of the vehicle rollover protection in road accidents.
    - ♦ Minimizes vapor flow resistance during anticipated refueling conditions.
- Fuel vapor tubing connects the fuel vapor control valve to the EVAP canister. This routes the fuel tank vapors, displaced by the incoming liquid, to the EVAP canister.
- A check valve in the fuel filling system prevents liquid from rushing back up the fuel filler pipe during the liquid flow variations associated with the filler nozzle shut-off.

Between refueling events, the EVAP canister is purged with fresh air so that it may be used again to store vapors accumulated during engine soaks or subsequent refueling events. The vapors drawn off of the carbon in the EVAP canister are consumed by the engine.

Inspection and Verification

1. Verify the customer concern is with the evaporative emission (EVAP) system.

2. Visually inspect the following for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
• Fuel filler cap • EVAP test port • EVAP canister assembly or canister vent solenoid

- EVAP lines or hoses
- Vacuum lines or hoses

3. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the scan tool menu. If the scan tool does not communicate with the vehicle:

- check that the program card is correctly installed.
- check the connections to the vehicle.
- check the ignition switch position.

4. If the scan tool still does not communicate with the vehicle, refer to the scan tool manual.

5. Carry out the DATA LINK DIAGNOSTICS test. If the scan tool responds with:

- CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
- NO RESP/NOT EQUIP for PCM, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
- SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the PCM KOEO self-test.

6. If the DTCs retrieved are related to the concern, go to the PCM Diagnostic Trouble Code (DTC) Index to continue diagnostics.

7. If the concern remains after the inspection, determine the symptom. GO to Symptom Chart .

PCM Diagnostics Trouble Code (DTC) Index

DTC	Description	Source	Action
P0442	Small leak detected in EVAP system (As small as 1.02 mm [0.040 inch])	PCM	Go To Pinpoint Test A .
P0455	Major leak or no flow detected	PCM	Go To Pinpoint Test B .
P0456	Very small leak detected in EVAP system (as small as 0.051 mm [0.020 in])	PCM	Go To Pinpoint Test A .
P0457	Check for missing or leaking fuel filler cap	PCM	Go To Pinpoint Test A .
P1443	Very small or no purge flow detected	PCM	Go To Pinpoint Test B .
P1450	Excessive vacuum detected in the fuel tank	PCM	Go To Pinpoint Test C .
	Any other PCM DTC	PCM	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Symptom Chart

Symptom Chart

Pinpoint Tests

NOTE: Reinstall or install new evaporative emission hose clamps removed or damaged during testing procedures.

PINPOINT TEST A: DTC P0442 SMALL LEAK IN EVAP SYSTEM, DTC P0456 VERY SMALL LEAK IN EVAP SYSTEM, DTC P0457 MISSING OR LEAKING FUEL FILLER CAP

Test Step	Result / Action to Take
A1 VISUALLY INSPECT THE COMPONENTS FOR SMALL LEAKS	
• Check for the presence of a fuel filler cap. Do not tighten or check for correct installation at this time. • Verify the canister vent solenoid hose is correctly seated on the canister vent solenoid. • Check for cut or loose connections to fuel vapor hoses, tubes and connections in the following locations: ♦ EVAP canister to EVAP canister purge valve ♦ EVAP canister to fuel vapor vent valve assembly ♦ fuel vapor control valve tube assembly to fuel tank ♦ fuel vapor control valve • Check the fuel filler pipe for damage. • **Is a concern with a hose, tube, connection or valve visually evident?**	**Yes** REPAIR or INSTALL new components as necessary. GO to A2 . **No** GO to A2 .
A2 CHECK AT THE EVAP TEST PORT FOR SMALL SYSTEM LEAKS	
• Disconnect and plug the evaporative emission return tube at the intake manifold. • Complete the evaporative emission system leak test. Refer to Evaporative Emission System Leak Test in this section. • **Does the system pass the leak test?**	**Yes** GO to A3 . **No** GO to A4 .
A3 VISUALLY INSPECT THE FUEL FILLER CAP	
• Visually inspect the fuel filler cap for damage. • **Is the fuel filler cap damaged?**	**Yes** INSTALL a new fuel filler cap. GO to A4 . **No** GO to A4 .
A4 CHECK FOR SMALL LEAKS AT THE FUEL FILLER CAP AND EVAP TEST PORT	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Key in ON position.	**Yes** REPAIR or INSTALL new components as necessary. GO to A5 . **No**

• Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • Using the ultrasonic leak detector, check the fuel filler cap and EVAP test port for leaks. • **Is a leak detected?**	INSTALL the fuel filler cap. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
A5 CHECK FOR CONCERN OTHER THAN THE FUEL FILLER CAP	
• Refer to previous test results. • **Did the system pass the evaporative emission system leak test carried out in pinpoint test Step A2?**	**Yes** CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL the fuel filler cap. GO to A6 .
A6 CHECK FOR SMALL LEAK WITH TESTER SET AT FILL POSITION	
• Connect the Evaporative Emission System Leak Tester to the EVAP test port. • Key in ON position. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section. • Turn the selector on the Evaporative Emission System Leak Tester to the FILL position. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure on the EVAP system hold between 3.43 kPa and 3.53 kPa (13.80 inches and 14.20 inches H_2O)?**	**Yes** GO to A7 . **No** DISCONTINUE pressurizing the system. GO to A8 .
A7 CHECK FOR LEAKS IN THE COMPLETE EVAP SYSTEM	
• Connect the Evaporative Emission System Leak Tester to the EVAP test port. • Key in ON position. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • Using the ultrasonic leak detector, check the following EVAP system locations:	**Yes** REPAIR or INSTALL new components as necessary. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** DISCONTINUE pressurizing the system. GO to A8 .

♦ EVAP return tube to EVAP canister purge valve ♦ EVAP canister purge valve to EVAP canister canister vent solenoid assembly ♦ EVAP canister canister vent solenoid assembly to fuel tank ♦ fuel filler cap and fuel filler tube • **Is a leak detected at EVAP return tube, EVAP canister purge outlet tube or EVAP canister tube or associated hose?**	
A8 CHECK FOR SMALL LEAK FROM THE EVAP RETURN TUBE TO THE FUEL VAPOR CONTROL VALVE TUBE	
• Disconnect the fuel vapor control valve tube assembly from the under vehicle fuel supply and vapor tube assembly. Plug the open end of the under vehicle fuel supply and vapor tube assembly.  A0004677 • Connect the Evaporative Emission System Leak Tester to the EVAP test port. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • Using the ultrasonic leak detector, check the EVAP system from the intake manifold to the plugged end of the under vehicle fuel supply and vapor tube assembly. • **Is a leak detected?**	**Yes** REPAIR or INSTALL new components as necessary. REPEAT Step A6 to verify the repair. GO to A9 . **No** GO to A9 .
A9 CHECK FOR SMALL LEAK BETWEEN EVAP CANISTER AND FUEL TANK FILLER PIPE	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Transfer the plug from the under-vehicle fuel supply and vapor tube assembly to the fuel vapor control valve tube. • Turn the Evaporative Emission System Leak Tester selector to the FILL position. • Key in ON position. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section.	**Yes** REPAIR or INSTALL new components as necessary. GO to A10 . **No** GO to A10 .

• Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • Using the ultrasonic leak detector, check the fuel vapor control valve tube to the fuel tank for leaks. Check the fuel tank pressure sensor, fuel vapor control valve tube and the fuel filler pipe. Check tubes from the fuel tank to the EVAP canister and the canister vent solenoid. • **Is a leak detected?**	
A10 CHECK EVAP SYSTEM AT FUEL FILLER PIPE	
• Reconnect the fuel vapor control valve tube assembly to the under-vehicle fuel supply and vapor tube assembly. • Complete the evaporative emission system leak test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** RESTORE the system to normal operation. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to A6 .

PINPOINT TEST B: DTC P0455 MAJOR LEAK OR NO FLOW DETECTED OR DTC P1443 VERY SMALL OR NO PURGE FLOW DETECTED IN SYSTEM

Test Step	Result / Action to Take
NOTE: Condition DTC P0455 set: -1.74 kPa (-7.0 inches H_2O) over 30 seconds.	
NOTE: Condition DTC P1443 set: -1.74 kPa (-7.0 inches H_2O) over 30 seconds with more than 0.02 lb/min vapor flow.	
B1 CHECK FOR DIAGNOSTIC TROUBLE CODE P0455 OR P1443	
• Use the recorded results from the PCM DTCs. • **Is DTC P0455 or P1443 present?**	**Yes** GO to B2 . **No** GO to B3 .
B2 VISUALLY CHECK FOR GROSS EVAP SYSTEM LEAKS	
• Check for the presence of a fuel filler cap. Do not tighten or check for correct installation at this time. • Check the input port vacuum and EVAP return	**Yes** REPAIR or INSTALL new EVAP components as necessary. GO to B3 . **No** GO to B3 .

tube are connected to the EVAP canister purge valve. • Check that the canister vent solenoid hose is correctly attached to the canister vent solenoid. • Check for disconnected or cracked fuel vapor hoses or tubes between the intake manifold and following components: ♦ EVAP canister purge valve ♦ EVAP canister ♦ fuel vapor vent valve assembly ♦ fuel vapor control valve tube assembly • Check for damaged fuel tank or fuel filler pipe. • **Is a concern with a hose, tube, connection or valve visually evident?**	
B3 CHECK FOR EVAP SYSTEM LEAKS	
• Disconnect the EVAP return tube from the intake manifold and plug the EVAP return tube. • Connect the Evaporative Emissions System Leak Tester to the EVAP test port. • Carry out the evaporative emissions system leak test. Refer to Evaporative Emission System Leak Test in this section. • **Does the system pressure stay above 1.99 kPa (8 inches H_2O)?**	**Yes** GO to B4 . **No** VERIFY that the fuel filler cap is installed correctly. REPAIR or INSTALL new components as necessary. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
B4 CHECK FOR BLOCKAGE BETWEEN THE EVAP CANISTER PURGE VALVE AND CANISTER VENT SOLENOID	
• Key in ON position. • Close the canister vent solenoid. Refer to	**Yes** GO to B5 . **No**

Canister Vent Solenoid Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • Open the canister vent solenoid. • **Does the pressure drop immediately?**	Go To Pinpoint Test D .
B5 CHECK FOR BLOCKAGE BETWEEN FUEL FILLER PIPE AND THE FUEL VAPOR CONTROL VALVE TUBE ASSEMBLY	
• Connect the Evaporative Emissions System Leak Tester to the fuel filler pipe. • Pressurize the EVAP system to 3.48kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** GO to B6 . **No** Go To Pinpoint Test D .
B6 CHECK FOR FAILED EVAP CANISTER PURGE VALVE OR FUEL TANK PRESSURE SENSOR	
• Use the recorded results from the PCM DTCs. • **Are DTC codes P0455 and P1443 present?**	**Yes** INSTALL a new EVAP canister purge valve. REFER to Evaporative Emission Canister and Purge Valve in this section. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If no leak is detected, CARRY OUT the evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL a new fuel tank. REFER to Fuel Tank and Filler Pipe in this section. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.

PINPOINT TEST C: DTC P1450 EXCESSIVE VACUUM DETECTED IN THE FUEL TANK

Test Step	Result / Action to Take
NOTE: Condition P1450 DTC set: more than -1.79 kPa (-7.2 inches H_2O) over 30 seconds.	

C1 CHECK FOR VISUAL CAUSES OF EXCESSIVE FUEL TANK VACUUM	
• Check for kinks or bends in the fuel vapor hoses and tubes. • Visually check the canister vent solenoid inlet port for contamination or foreign material. • Check the canister vent solenoid for blockage or contamination. • **Is a concern with a hose, tube, connection or component visually evident?**	**Yes** REMOVE any contamination or foreign material around fuel vapor hoses and tubes. REPAIR the hoses, tubes or components as necessary. After all visual concerns are repaired, GO to C2 . **No** GO to C2 .
C2 CHECK FOR BLOCKAGE BETWEEN EVAP TEST PORT AND CANISTER VENT SOLENOID	
• Disconnect and plug the EVAP return tube at the intake manifold. • Connect the Evaporative Emissions System Leak Tester to the EVAP test port. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** GO to C3 . **No** Go To Pinpoint Test D .
C3 CHECK FOR BLOCKAGE BETWEEN THE FUEL FILLER PIPE AND THE FUEL VAPOR CONTROL VALVE TUBE ASSEMBLY	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** GO to C4 . **No** Go To Pinpoint Test D .
C4 CHECK FOR FUEL TANK PRESSURE SENSOR PID WITHOUT PRESSURE APPLIED	
• Disconnect the EVAP canister outlet tube from the fuel vapor control valve tube assembly.	**Yes** GO to C5 . **No** REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue diagnosis.

 A0002143 • Key in ON position. • Access PCM PID FTP V. • Record the reading. • **Is PID FTP V reading between 2.40 and 2.80 volts?**	
C5 CHECK FOR STUCK OPEN EVAP CANISTER PURGE VALVE CONDITION AT IDLE	
• Reconnect the EVAP canister outlet tube. • Remove the plug from the EVAP return tube and reconnect the tube to the intake manifold. • Verify that the fuel filler cap is correctly installed. • Key in ON position. • Access PCM PIDs FTP V and EVAPPDC. • Start the engine and allow to idle. • Monitor the FTP V and EVAPPDC PIDs. • **When PID EVAPPDC is zero, is PID FTP V reading below 2.40 volts?**	**Yes** INSTALL a new EVAP canister purge valve. REFER to Evaporative Emission Canister and Purge Valve in this section. CARRY OUT an EVAP system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT an evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** CARRY OUT the EVAP system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emissions repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.

PINPOINT TEST D: HISS WHEN OPENING FUEL CAP OR UNABLE TO REFUEL VEHICLE

Test Step	Result / Action to Take
D1 TEST FOR FUEL TANK PRESSURE SENSOR OPERATION	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Key in ON position. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section.	**Yes** GO to D2 . **No** GO to D3 .

• Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Is the FTP (FTP V) PID reading 3.11 kPa to 3.86 kPa (12.5 to 15.5 inches H_2O) (4.22 to 4.90 volts)?**	
D2 TEST FOR BLOCKAGE IN VENTING PORTION OF EVAP SYSTEM	
• Open the canister vent solenoid. • **Does the pressure drop immediately?**	**Yes** CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to D5 .
D3 TEST FOR BLOCKAGE IN FUEL FILLER PIPE	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Disconnect the fuel filler pipe hose from the fuel tank. • Pressurize the EVAP system to (3.48 kPa) (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** GO to D4 . **No** INSTALL a new fuel filler pipe assembly. REFER to Fuel Tank and Filler Pipe in this section. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
D4 TEST FOR PINCHED FUEL VAPOR CONTROL VALVE TUBE	
• Reconnect the fuel filler pipe hose to the fuel tank. • Lower the fuel tank about 19 mm (0.76 in). • Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Close the canister vent solenoid. Refer to Canister Vent Solenoid	**Yes** GO to D2 . **No** Fuel vapor control valve tube or fuel tank vapor control valve is blocked. REMOVE the fuel tank assembly. REFER to Fuel Tank and Filler Pipe in this section. REMOVE the fuel vapor control tube from the tank and INSPECT it for any blockages or kinks. If the fuel vapor control tube is faulty, INSTALL a new one. If the vapor control tube is not restricted, INSTALL a new fuel tank assembly. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle.

Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Is the FTP (FTP V) PID reading 3.11 kPa to 3.86 kPa (12.5 to 15.5 inches H_2O) (4.22 to 4.90 volts)?**	REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
D5 ISOLATE LOCATION OF BLOCKAGE	
• Disconnect the fuel vapor control valve tube assembly from the EVAP canister purge outlet tube.  • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** GO to D6 . **No** Fuel vapor control valve tube or fuel tank vapor control valve is blocked. REMOVE the fuel tank assembly. REFER to Fuel Tank and Filler Pipe in this section. REMOVE the vapor control tube from the tank and INSPECT it for any blockage or kinks. If the fuel vapor control tube is faulty, INSTALL a new one. If the fuel vapor control tube is not restricted, INSTALL a new fuel tank assembly. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
D6 TEST FOR BLOCKAGE IN CANISTER VENT SOLENOID	
• Reconnect the fuel vapor control valve tube assembly to the EVAP canister purge outlet tube. • Lower the differential to access the canister vent solenoid as necessary. Refer to Section 205-00 . • Disconnect the canister vent solenoid from the canister vent solenoid hose.	**Yes** INSTALL a new canister vent solenoid. REFER to Evaporative Emission Canister Vent Solenoid in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to D7 .

 A0004672 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	
D7 TEST FOR BLOCKAGE IN THE CANISTER VENT SOLENOID HOSE	
• Reinstall the differential. Refer to Section 205-00 . • Remove the rear subframe to access the EVAP canister with bracket assembly. Refer to Section 502-00 . • Lower the EVAP canister with bracket assembly. • Disconnect the canister vent solenoid hose from the 1.0L EVAP canister.  A0004673 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** INSTALL a new canister vent solenoid hose. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to D8 .
D8 TEST FOR BLOCKAGE IN 1.0L EVAP CANISTER	
• Disconnect the fuel vapor storage canister inlet tube from the 1.0L EVAP canister.	**Yes** INSTALL a new 1.0L EVAP canister. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.

 A0004674 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**No** GO to D9 .
D9 TEST FOR BLOCKAGE IN FUEL VAPOR STORAGE CANISTER INLET TUBE	
• Disconnect the fuel vapor storage canister inlet tube from the 2.0L EVAP canister.  A0004675 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** INSTALL a new fuel vapor storage canister inlet tube. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to D10 .
D10 TEST FOR BLOCKAGE IN 2.0L EVAP CANISTER	
• Disconnect the EVAP canister purge outlet tube from the 2.0L EVAP canister.  A0004676 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** INSTALL a new 2.0L EVAP canister. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL a new EVAP canister purge outlet tube. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.

PINPOINT TEST E: EXCESSIVE FUEL ODOR

Test Step	Result / Action to Take
E1 TEST THE EVAPORATIVE EMISSION (EVAP) RUNNING LOSS SYSTEM MONITOR	
• Carry out the evaporative emission repair verification drive cycle. Refer to Evaporative Emission Repair Verification Drive Cycle in this section. • **Are PCM DTCs retrieved?**	**Yes** For DTCs P0442, P0455, P1443 and P1450, REFER to the Diagnostic Trouble Code (DTC) Index in this section. For all other DTCs, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. **No** GO to E2 .
E2 EVAPORATIVE EMISSION SYSTEM LEAK TEST	
• Carry out the evaporative emission system leak test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** GO to E3 . **No** GO to E9 .
E3 TEST FOR FUEL TANK PRESSURE SENSOR OPERATION	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Is the FTP (FTP V) PID reading 3.11 kPa to 3.86 kPa (12.5 to 15.5 inches H_2O) (4.22 to 4.90 volts)?**	**Yes** GO to E4 . **No** Go To Pinpoint Test D .
E4 TEST FOR BLOCKAGE IN VENTING PORTION OF	

THE EVAP SYSTEM	
• Open the canister vent solenoid. • **Does the pressure drop immediately?**	**Yes** GO to E5 . **No** Go To Pinpoint Test D .
E5 TEST FOR BLOCKAGE THROUGH EVAPORATIVE EMISSION TEST PORT	
• Connect the Evaporative Emission System Leak Tester to the evaporative emission test port. • Close the canister vent solenoid. Refer to Canister Vent Solenoid Closing Procedure in this section. • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Is the FTP (FTP V) PID reading 3.11 kPa to 3.86 kPa (12.5 to 15.5 inches H_2O) (4.22 to 4.90 volts)?**	**Yes** Evaporative emission system operating correctly. GO to Symptom Chart . **No** GO to E6 .
E6 TEST FOR BLOCKAGE IN FUEL VAPOR CONTROL VALVE TUBE ASSEMBLY	
• Disconnect the fuel vapor control valve tube assembly from the under vehicle fuel supply and vapor tube assembly.  • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** Fuel vapor control valve tube or fuel tank vapor control valve is blocked. REMOVE the fuel tank assembly. REFER to Fuel Tank and Filler Pipe in this section. REMOVE the vapor control tube from the tank and INSPECT it for any blockage or kinks. If the fuel vapor control tube is faulty, INSTALL a new one. If the fuel vapor control tube is not restricted, INSTALL a new fuel tank assembly. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E7 .
E7 TEST FOR BLOCKAGE IN UNDER-VEHICLE FUEL SUPPLY AND VAPOR TUBE ASSEMBLY	

• Remove the front left wheel and wheel house liner. • Disconnect the under-vehicle fuel supply and vapor tube from the engine compartment fuel supply and vapor tube.  A0065026 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** INSTALL a new under-vehicle fuel supply and vapor tube assembly. REFER to Fuel Lines and Fuel Filter in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E8 .
E8 TEST FOR BLOCKAGE IN THE ENGINE COMPARTMENT FUEL SUPPLY AND VAPOR TUBE ASSEMBLY	
• Disconnect the engine compartment fuel supply and vapor tube assembly from the evaporative emission canister purge valve.  A0065025 • Pressurize the EVAP system to 3.48 kPa (14 inches H_2O). • **Does the pressure drop immediately?**	**Yes** INSTALL a new engine compartment fuel supply and vapor tube assembly. RECONNECT all components. GO to E7 . CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL a new evaporative emission canister purge valve. REFER to Evaporative Emission Canister and Purge Valve in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
E9 TEST TO DETERMINE GENERAL LOCATION OF LEAK	
• Connect the Evaporative Emission System Leak Tester to the fuel filler pipe.	**Yes** Leak is in the front portion of the EVAP system. GO to E10 . **No** Leak is in the rear portion of the EVAP system. GO to E14 .

• Disconnect the fuel vapor control valve tube from the under-vehicle fuel supply and vapor tube assembly and plug both tubes.  • Carry out the Evaporative Emission System Leak Test procedure. Refer to Evaporative Emission System Leak Test in this section. • **Does the system pass the leak test?**	
E10 TEST TO CONFIRM LEAK IS IN THE FRONT PORTION OF THE EVAP SYSTEM	
• Connect the Evaporative Emission System Leak Tester to the EVAP system test port. • Plug the under-vehicle fuel supply and vapor tube assembly. • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** INSTALL new O-ring seals between the evaporative emission fuel vapor control valve tube assembly and the under-vehicle fuel supply and vapor tube assembly. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E11 .
E11 TEST FOR LEAK IN UNDER-VEHICLE FUEL SUPPLY AND VAPOR TUBE ASSEMBLY	
• Remove the front left wheel and wheel house liner. • Disconnect the under-vehicle fuel supply and vapor tube assembly	**Yes** INSTALL a new under-vehicle fuel supply and vapor tube assembly. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this

from the engine compartment fuel supply and vapor tube assembly.  A0065026 • Plug the engine compartment fuel supply and vapor tube assembly. • Carry out the Evaporative Emission System Leak Test procedure. Refer to Evaporative Emission System Leak Test in this section. • **Does the system pass the leak test?**	section. **No** GO to E12 .
E12 TEST FOR LEAK IN THE ENGINE COMPARTMENT FUEL SUPPLY AND VAPOR TUBE ASSEMBLY	
• Disconnect the engine compartment fuel supply and vapor tube assembly from the evaporative emission canister purge valve.  A0065026 • Plug the evaporative emission canister purge valve. • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** INSTALL a new engine compartment fuel supply and vapor tube assembly. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E13 .

E13 TEST FOR LEAK IN EVAP CANISTER PURGE VALVE	
• Disconnect the evaporative emission return tube from the EVAP canister purge valve.  A0065025 • Plug the EVAP canister purge valve. • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the system pass the leak test?**	**Yes** INSTALL a new evaporative emission return tube. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL a new EVAP canister purge valve assembly. REFER to Evaporative Emission Canister and Purge Valve in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
E14 TEST TO DETERMINE IF LEAK IS IN EVAP CANISTER OR FUEL TANK PORTION OF THE SYSTEM	
• Disconnect the fuel vapor control valve tube from EVAP canister purge outlet tube.  A0002143 • Connect the evaporative emission system leak tester to the fuel filler pipe. • Plug the open end of the fuel vapor control valve tube. • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission	**Yes** RECONNECT all components. GO to E15 . **No** GO to E20 .

System Leak Test in this section. • **Does the EVAP system pass the leak test?**	
E15 TEST FOR LEAK IN CANISTER VENT SOLENOID	
• Reconnect the fuel vapor control valve tube to the EVAP canister purge outlet tube.  • Lower the differential to access the canister vent solenoid. Refer to Section 205-00 . • Disconnect the canister vent solenoid from the canister vent solenoid hose and plug the hose.  • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** INSTALL a new canister vent solenoid. REFER to Evaporative Emission Canister Vent Solenoid in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E16 .
E16 TEST THE CANISTER VENT SOLENOID HOSE FOR LEAK	
• Reinstall the differential. Refer to Section 205-00 . • Lower the rear subframe out of the way. Refer to Section 502-00 . • Remove the EVAP canister and bracket	**Yes** INSTALL a new canister vent solenoid hose. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **Yes** GO to E17 .

assembly. • Connect the Evaporative Emission System Leak Tester to the EVAP canister purge outlet tube. • Disconnect the canister vent solenoid hose from the 1.0L EVAP canister and plug the EVAP canister.  A0004673 • Pressurize the system to 3.48 kPa (14 inches H_2O). • **Does the pressure hold?**	
E17 TEST FOR LEAK IN 1.0L EVAP CANISTER	
• Disconnect the fuel vapor storage canister inlet tube from the 1.0L EVAP canister and plug the inlet tube.  A0004674 • Pressurize the system to 3.48 kPa (14 inches H_2O). • **Does the pressure hold?**	**Yes** INSTALL a new 1.0L EVAP canister. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E18 .
E18 TEST FOR LEAK IN FUEL VAPOR STORAGE CANISTER INLET TUBE	
• Disconnect the fuel vapor storage canister inlet tube from the 2.0L EVAP canister and plug the EVAP canister.	**Yes** INSTALL a new fuel vapor storage canister inlet tube. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No**

 A0004675 • Pressurize the system to 3.48 kPa (14 inches H_2O). • **Does the pressure hold?**	GO to E19 .
E19 TEST FOR LEAK IN 2.0L EVAP CANISTER	
• Disconnect the EVAP canister purge outlet tube from the 2.0L EVAP canister and plug the outlet tube.  A0004676 • Pressurize the system to 3.48 kPa (14 inches H_2O). • **Does the pressure hold?**	**Yes** INSTALL a new 2.0L EVAP canister. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** INSTALL a new EVAP canister purge outlet tube. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.
E20 TEST FOR LEAK IN FUEL VAPOR CONTROL VALVE TUBE AND FUEL TANK ASSEMBLY	
• Disconnect the fuel filler pipe hose at the fuel tank and plug the hose. • Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	**Yes** INSTALL a new fuel tank assembly. REFER to Fuel Tank and Filler Pipe in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section. **No** GO to E21 .
E21 TEST FOR LEAK IN FUEL FILLER PIPE HOSE	
• Disconnect the fuel filler pipe hose from the fuel filler pipe and plug the fuel filler pipe.	**Yes** INSTALL a new fuel filler pipe hose. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair

• Carry out the Evaporative Emission System Leak Test. Refer to Evaporative Emission System Leak Test in this section. • **Does the EVAP system pass the leak test?**	Verification Drive Cycle in this section. **No** INSTALL a new fuel filler pipe assembly. REFER to Fuel Tank and Filler Pipe in this section. RECONNECT all components. CARRY OUT the evaporative emission system leak test. REFER to Evaporative Emission System Leak Test in this section. If the system passes the leak test, CARRY OUT the evaporative emission repair verification drive cycle. REFER to Evaporative Emission Repair Verification Drive Cycle in this section.

Fuel System Pressure Release

Printable View (86 KB)

Special Tool(s)

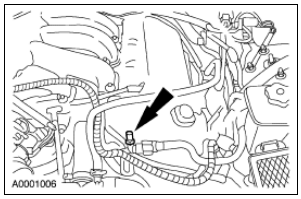
 ST1371-A	Fuel Pressure Gauge 310-012 (T80L-9974-B)

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

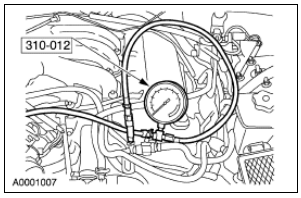
⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. **NOTE:** 3.0L shown, 3.9L similar.

   Remove the Schrader valve cap and install the special tool.



2. Slowly open the manual valve on the special tool and relieve the fuel pressure.
   - This will drain some fuel out of the system.



Evaporative Emission System Leak Test

Printable View (20 KB)

Special Tool(s)

ST2116-A	Evaporative Emission System Leak Tester 310-F007 (134-00056) or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool

⚠ CAUTION: The evaporative emission system must not be pressurized to more than 3.48 kPa (14 inches H_2O) or damage to the evaporative emission system may occur.

1. Connect the Evaporative Emission System Leak Tester to the evaporative emission test port.
2. Close the canister vent solenoid. For additional information, refer to Canister Vent Solenoid Closing Procedure in this section.
3. Pressurize the evaporative emission system to 3.48 kPa (14 inches/H_2O).
4. Monitor the system for two minutes. The system fails the Leak Test if the pressure falls below 2.0 kPa (8 inches/H_2O).
5. Repair any leaks as required.
6. Repeat the Leak Test until the system remains above 2.0 kPa (8 inches/H_2O) after the two-minute test period.

Evaporative Emission Repair Verification Drive Cycle

Printable View (21 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool

Drive Cycle Recommendations

NOTE: The following procedure is designed to execute and complete the evaporative emission repair verification drive cycle and to clear the Ford P1000, inspection and maintenance (I/M) readiness code. When the ambient air temperature is below 4.4°C (40°F) or above 37.8°C (100°F), or the altitude is above 2,438 meters (8,000 feet), the EVAP monitor will not run. If the P1000 must be cleared in these conditions, the powertrain control module (PCM) must detect them once (twice on some applications) before the EVAP monitor can be bypassed and the P1000 cleared. The EVAP bypassing procedure is described in the following drive cycle.

1. Most OBD II monitors will complete more readily using a steady foot driving style during cruise or acceleration modes. Operating the throttle in a smooth fashion will minimize the time necessary for monitor completion.

2. Fuel tank level should be between one-half and three-quarters full with three-quarters full being the most desirable.

3. The evaporative monitor can only operate during the first 30 minutes of engine operation. When executing the procedure for this monitor, stay in part throttle mode and drive in a smooth fashion to minimize fuel slosh.

Drive Cycle Preparation

NOTE: For best results, follow each of the following steps as accurately as possible.

4. **NOTE:** This step bypasses the engine soak timer and resets OBD II monitor status.

   Install the scan tool. Turn the key ON with the engine OFF. Cycle the key off, then on. Select the appropriate vehicle and engine qualifier. Clear all diagnostic trouble codes (DTCs) and carry out a PCM reset.

5. Begin to monitor the following PIDs: ECT, EVAPDC, FLI (if available) and TP MODE. Press Diagnostic Data Link, PCM, PID/Data monitor and record, press trigger to select each PID, then start.

6. Start the engine without returning the key to the OFF position.

Preparation for Monitor Entry

⚠ WARNING: Strict observance of posted speed limits and attention to driving conditions are mandatory when proceeding through the following drive cycle.

7. **NOTE:** This step allows engine warm-up and provides intake air temperature (IAT) input to the PCM.

   Idle the vehicle for 15 seconds. Drive at 64 km/h (40 mph) until the ECT is at least 76.7°C (170°F).

8. Is IAT above 4.4°C (40°F) and below 37.8°C (100°F)? If not, continue with the following steps but note that the EVAP Monitor Bypass portion of the drive cycle (Step 13) will be required to bypass the EVAP monitor and clear the P1000.

9. **NOTE:** This step executes the heated oxygen sensor (HO2S) monitor.

   Cruise at 64 km/h (40 mph) for 60 seconds.

10. **NOTE:** This executes the EVAP monitor if IAT is above 4.4°C (40°F) and below 37.8°C (100°F).

    NOTE: To initiate the monitor, TP MODE should equal PT, EVAPDC must be greater than 75%, and FLI must be between 15 and 85%.

    NOTE: Avoid sharp turns and hills.

    Cruise at 72 to 104 km/h (45 to 65 mph) for 10 minutes.

11. **NOTE:** This step executes the ISC portion of the Secondary Air/CCM.

    Bring the vehicle to a stop. Idle with the transmission in DRIVE (for automatic transmission) or NEUTRAL (for manual transmission) for two minutes.

Pending Code and EVAP Monitor Bypass Check

12. **NOTE:** This determines if a pending code is preventing the clearing of P1000.

    NOTE: If the EVAP monitor is not complete and IAT was below 4.4°C (40°F) or above 37.8°C (100°F) temperature range in Step 8, or the altitude is above 2,438 meters (8,000 feet), the EVAP Monitor Bypass (Step 13) must be carried out.

    Using the scan tool, check for pending codes. Conduct normal repair procedures for any pending code concerns. Rerun any incomplete monitor.

EVAP Monitor Bypass

13. **NOTE:** This allows the bypass counter to increment to two.

    NOTE: Do not repeat Step 4.

    Park the vehicle for a minimum of eight hours. Repeat Steps 5 through 12.

Canister Vent Solenoid Closing Procedure

Printable View (15 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool

⚠ CAUTION: The canister vent solenoid must not be energized for more than nine minutes at one time. Once the canister vent solenoid is energized and de-energized, adequate time must be allowed for the component to cool adequately. Failure to allow the component to cool may create a false failure in the diagnostics, causing unnecessary repairs.

1. Connect the scan tool and select the output test mode.
2. If PID monitors are not active, select PIDs.
3. Select the fuel tank pressure (FTP) and the volts (V) parameter identification (PID) for monitoring.
4. Select the ALL OFF mode.
5. Close the canister vent solenoid by pushing the START button on the scan tool.

Fuel Tank and Filler Pipe

Printable View (569 KB)

Special Tool(s)

ST2134-A	Fuel Drain Hose 310-102
	Fuel Storage Tanker 164-R3202 or equivalent

Removal and Installation

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

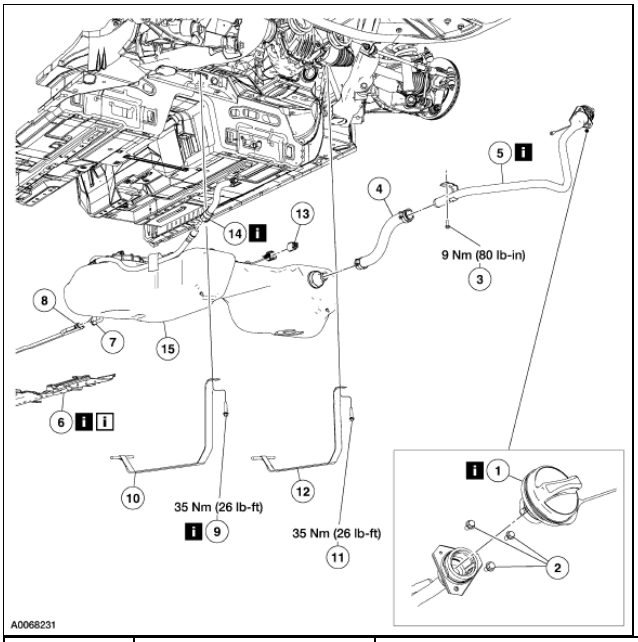
⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel causing personal injury or a fire hazard.

1. If the fuel tank is being removed, remove the driveshaft. For additional information, refer to Section 205-00 .

2. To remove individual components, only carry out the listed steps.

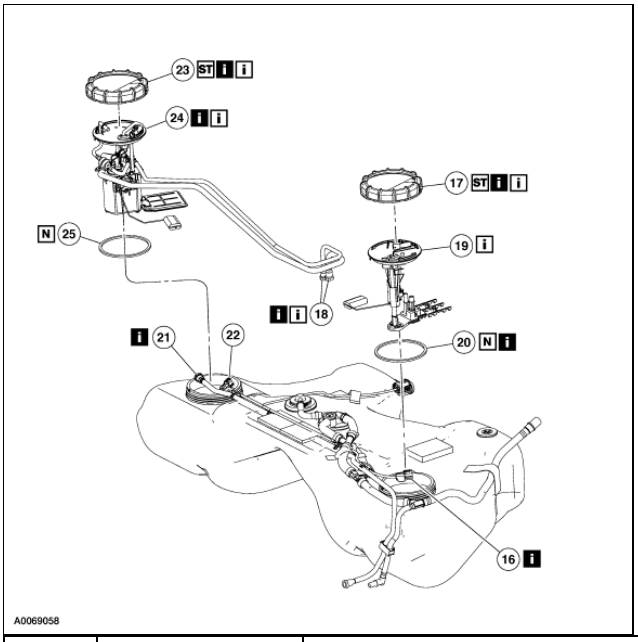
Component	Steps
Fuel filler pipe	1-7
Fuel tank	6-22
Fuel transfer pump	18-22
Fuel delivery module	18-27

3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	9030	Fuel filler cap Removal Note
2		Fuel filler pipe mounting screws
3		Fuel filler pipe mounting bolt
4	9047	Fuel hose and clamps
5		Fuel filler pipe Removal Note
6	9C291	Fuel tube shield Removal Note
6	9C291	Fuel tube shield Installation Note
7		Fuel supply quick-connect fitting
8	9J274	Vapor tube fitting
9	N811781	Fuel tank strap mounting bolt Removal Note
10	9055	Fuel tank strap
11	N811781	Fuel tank strap mounting bolt
12	9055	Fuel tank strap
13	14A624	Fuel tank electrical connector
14	9J724	Vapor tube quick-connect fitting Removal Note
15	9010	Fuel tank

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
16	14A464	Fuel transfer pump electrical connector Removal Note
17	9A307	Fuel transfer pump lock ring Removal Note
17	9A307	Fuel transfer pump lock ring Installation Note
18		Fuel crossover hose quick-connect fittings Removal Note
18		Fuel crossover hose quick-connect fittings Installation Note
19	9A309	Fuel transfer pump Installation Note
20	9276	Fuel transfer pump gasket Removal Note
21		Fuel delivery tube quick-connect fitting Removal Note
22	14A464	Fuel delivery module electrical connector
23	9A307	Fuel delivery module lock ring Removal Note
23	9A307	Fuel delivery module lock ring Installation Note
24	9A309	Fuel delivery module Removal Note
24	9A309	Fuel delivery module Installation Note
25	9276	Fuel delivery module gasket

5. To install, reverse the removal procedure.

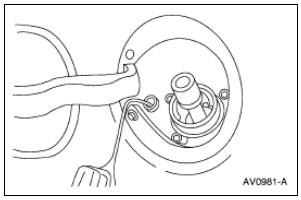
6. Fill the fuel tank.

7. Turn the ignition key to the ON position to pressurize the fuel system.

8. Visually inspect the fuel system for leaks.

Item 1: Fuel Filler Cap Removal Note

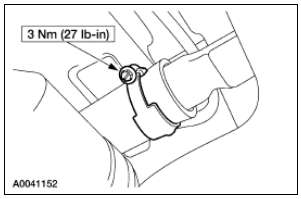
1. Using the special tool, drain the fuel from the passenger side of the fuel tank.



Item 5: Fuel Filler Pipe Removal Note

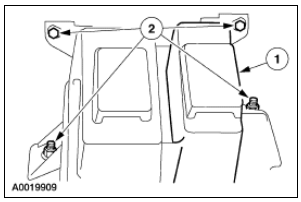
1. Remove the right rear well inner fender splash shield.
2. **⚠ CAUTION: Some fuel will remain in the filler pipe after draining the fuel tank. Carefully drain the filler pipe into an approved container.**

   Loosen the clamp at the fuel tank filler pipe and remove the filler pipe.



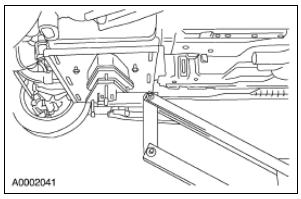
Item 6: Fuel Tube Shield Removal Note

1. Position the fuel tube shield aside.
   1. Remove the pin-type retainers.
   2. Remove the bolt.



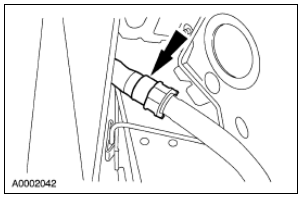
Item 9: Fuel Tank Strap Mounting Bolt Removal Note

1. Position a suitable lifting device to support the fuel tank.



Item 14: Quick-Connect Fitting Removal Note

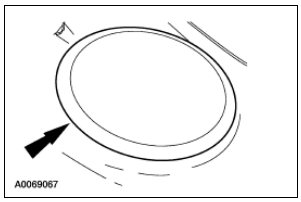
1. Partially lower the fuel tank and disconnect the vapor tube.



Item 16: Fuel Transfer Pump Electrical Connector Removal Note

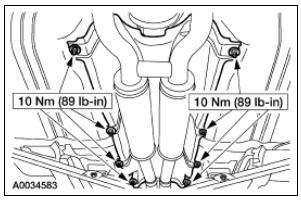
1. Remove the rear seat cushion.

2. Remove the fuel transfer pump access cover.

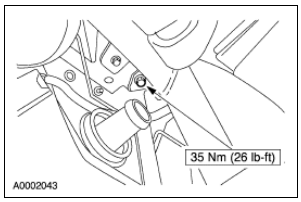


Item 17: Fuel Transfer Pump Lock Ring Removal Note

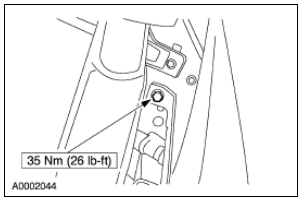
1. Remove the bolts and nuts and position the exhaust heat shield onto the exhaust system.



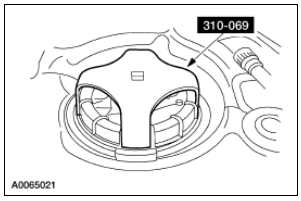
2. Loosen the right fuel tank support strap approximately one inch.



3. Loosen the left fuel tank support strap approximately one inch.



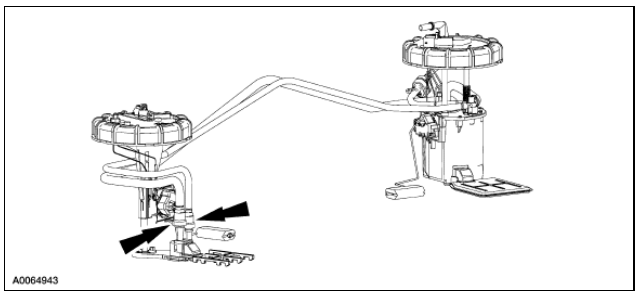
4. Using the special tool, remove the lock ring.



Item 18: Fuel Crossover Hose Quick-Connect Fitting Removal Note

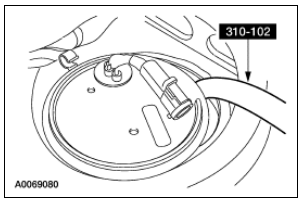
1. **NOTE:** The routing of the internal fuel crossover hoses is critical to correct fuel system operation. Note the routing of the internal fuel crossover hoses at this time.

   Partially raise the fuel transfer pump and disconnect the internal fuel crossover hose quick-connect fittings.



Item 20: Fuel Transfer Pump Gasket Removal Note

1. Using the special tool and a suitable fuel recovery system, drain the fuel from the driver side of the fuel tank.

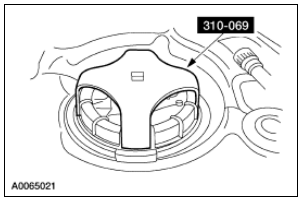


Item 21: Fuel Delivery Tube Removal Note

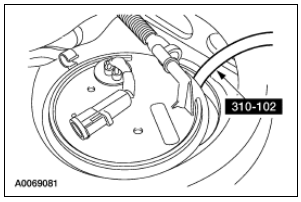
1. Remove the fuel delivery module access cover.

Item 23: Fuel Delivery Module Lock Ring Removal Note

1. Using the special tool, remove the fuel delivery module lock ring.



2. Using the special tool and a suitable fuel recovery system, drain the fuel from the passenger side of the fuel tank.



Item 24: Fuel Delivery Module Removal Note

1. **⚠ CAUTION: Drain the remaining fuel from the fuel delivery module into the fuel tank prior to removal.**

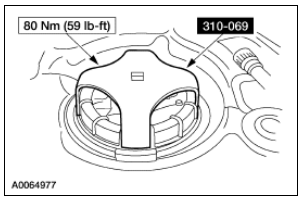
   Remove the fuel delivery module and fuel crossover hoses as an assembly.

Item 24: Fuel Delivery Module Installation Note

1. Install the fuel delivery module and fuel crossover hoses as an assembly. Route the fuel crossover hoses into the driver side of the fuel tank so they are visible within the fuel transfer pump opening.

Item 23: Fuel Delivery Module Lock Ring Installation Note

1. Using the special tool, install the fuel delivery module lock ring.



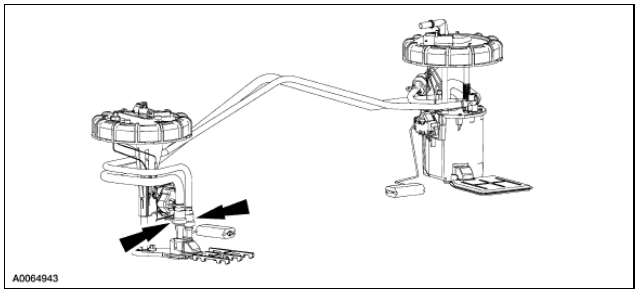
Item 19: Fuel Transfer Pump Installation Note

1. Partially install the fuel transfer pump.

Item 18: Fuel Crossover Hose Quick-Connect Fittings Installation Note

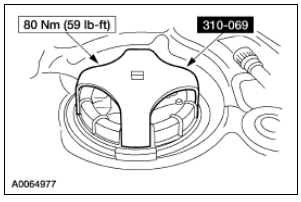
1. **NOTE:** Make sure that the fuel crossover hoses are routed correctly.

   Raise the fuel transfer pump and connect the fuel crossover hose quick-connect fittings.



Item 17: Fuel Transfer Pump Lock Ring Installation Note

1. Using the special tool, install the fuel transfer pump lock ring.



Item 6: Fuel Tube Shield Installation Note

1. Install the fuel tube shield.
    1. Install the pin type retainers.
    2. Install the bolt.

Fuel Lines and Fuel Filter

Printable View (356 KB)

Special Tool(s)

ST1146-A	Disconnect Tool, Spring Lock Coupling (3/8 inch) 310-D004 (D87L-9280-A) or equivalent

Removal and Installation

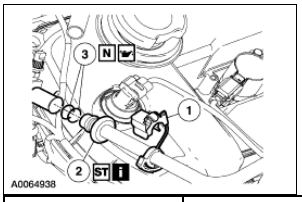
⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Relieve the fuel system pressure. For additional information, refer to Fuel System Pressure Release in this section.
4. Remove the left front wheel well rear splash shield.
5. To remove individual components, only carry out the listed steps.

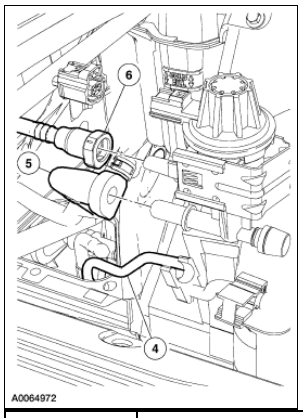
Component	Steps
Fuel filter	9-13
Fuel lines	1-20

6. Illustration 1 of 4. Remove the components in the order indicated in the following illustration and table.



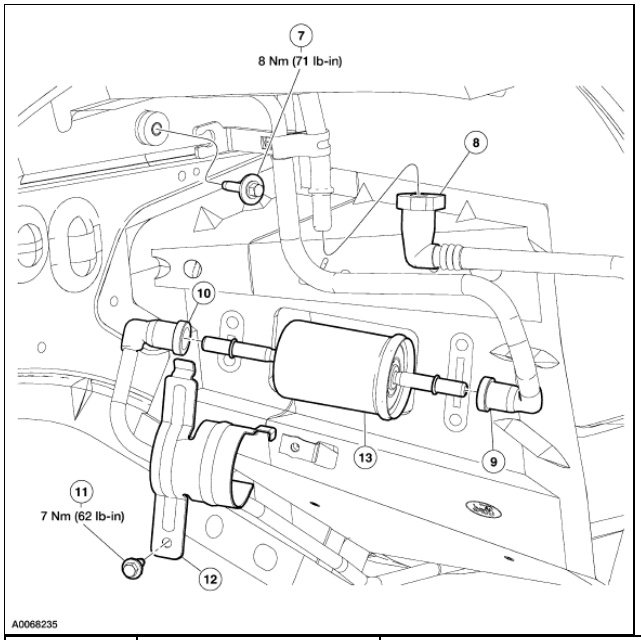
Item	Part Number	Description
1	N805528	Fuel hose safety clip
2	9J274	Spring lock coupling Removal Note
3	9J274	O-rings

7. Illustration 2 of 4. Remove the components in the order indicated in the following illustration and table.



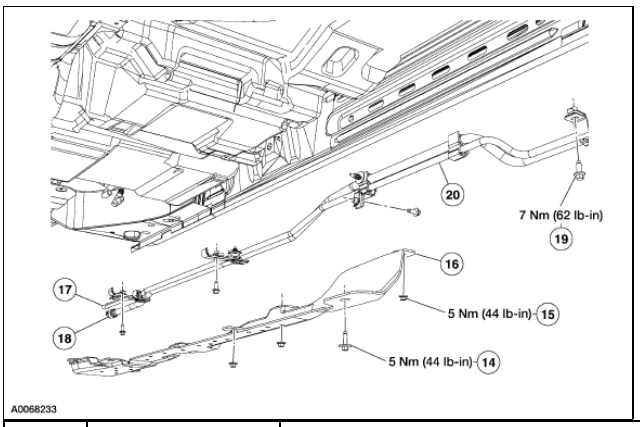
Item	Part Number	Description
4	9D676	Fuel tube
5	9J274	Vapor tube quick-connect fitting
6	9J274	Vapor tube quick-connect fitting

8. Illustration 3 of 4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
7	N803882	Fuel hose mounting bolt
8	9J274	Vapor tube quick-connect fitting
9	9B324	Fuel tube quick-connect fitting
10	9B324	Fuel tube quick-connect fitting
11	W500212	Fuel filter bracket mounting bolt
12	9180	Fuel filter bracket
13	9155	Fuel filter

9. Illustration 4 of 4. Remove the components in the order indicated in the following illustration and table.

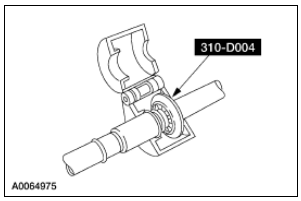


Item	Part Number	Description
14	W503924	Fuel tube shield mounting bolt
15	N804795	Fuel tube shield mounting fasteners (3 req'd)
16	9C291	Fuel tube shield
17	9B324	Fuel tube quick-connect fitting
18	9J274	Vapor tube quick-connect fitting
19	W500212	Fuel tube mounting bolts (4 req'd)
20		Fuel tube assembly

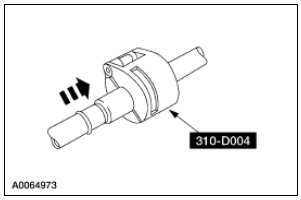
10. To install, reverse the removal procedure.

Item 2: Spring Lock Coupling Removal Note

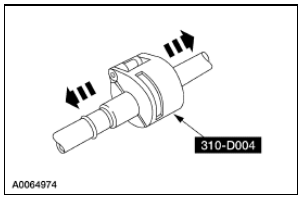
1. Install the special tool.



2. Press the special tool into the open end of the cage.



3. Separate the spring lock coupling.

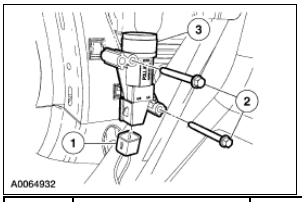


Inertia Fuel Shutoff (IFS) Switch

Printable View (30 KB)

Removal and Installation

1. Remove the left-hand lower A-pillar trim panel.
2. Remove the components in the order indicated in the following illustration and table.



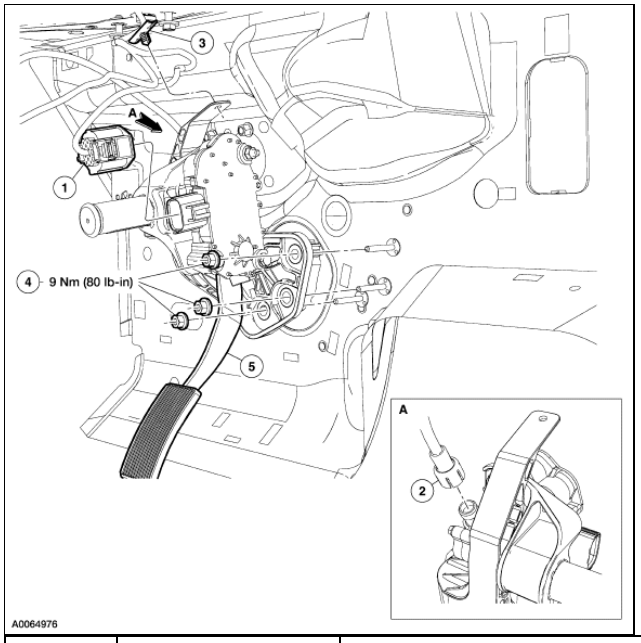
Item	Part Number	Description
1	14A464	Inertia fuel shutoff switch (IFS) electrical connector
2	W504148	IFS mounting bolts
3	9341	Inertia fuel shutoff switch

Accelerator Pedal and Shaft

Printable View (145 KB)

Removal and Installation

1. Remove the components in the order indicated in the following illustration and table.
2. To install, reverse the removal procedure.



Item	Part Number	Description
1		Accelerator pedal electrical connector
2		Accelerator pedal drive cable
3		Wiring harness
4		Accelerator pedal mounting nuts
5		Accelerator pedal

Evaporative Emission Canister and Purge Valve Printable View (388 KB)

Removal and Installation

⚠ WARNING: The evaporative emission system contains fuel vapor and condensed fuel vapor. Although not present in large quantities, it still presents the danger of explosion or fire. Disconnect the battery ground cable from the battery to minimize the possibility of an electrical spark occurring, possibly causing a fire or explosion if fuel vapor or liquid fuel are present in the area. Failure to follow these instructions can result in personal injury.

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

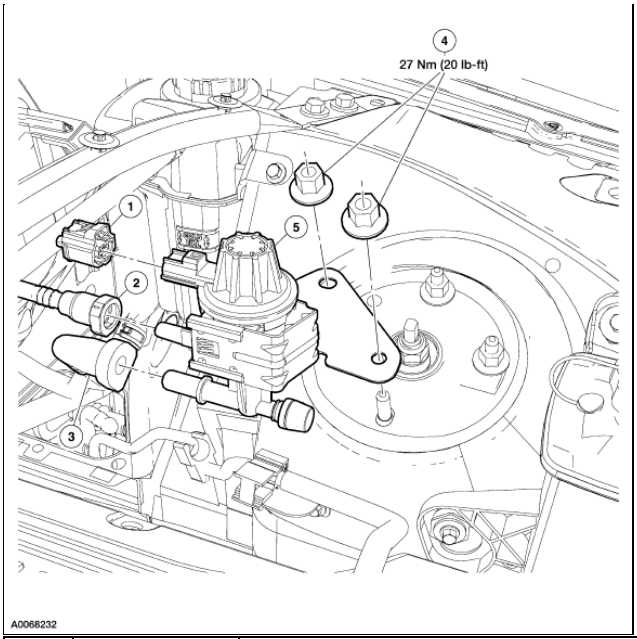
1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .

2. If the canisters are to be removed, remove the rear subframe. For additional information, refer to Section 502-00 .

3. To remove individual components, only carry out the listed steps.

Component	Steps
Evaporative emissions canister purge valve	1-5
Evaporative emissions canisters	6-19

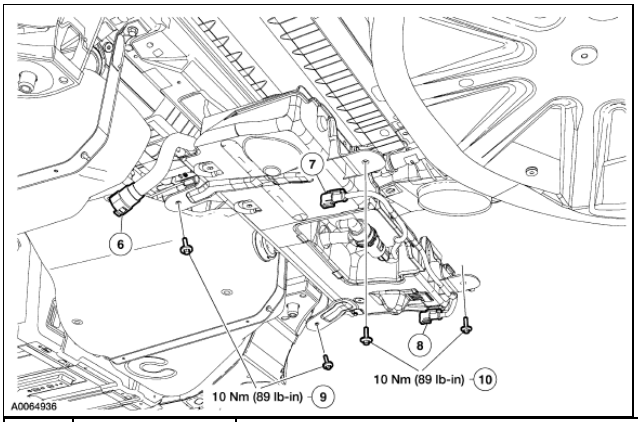
4. Illustration 1 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	

		Evaporative emissions canister purge valve electrical connector
2	9J274	Vapor tube quick-connect fitting
3	9J274	Vapor tube quick-connect fitting
4	W704790	Evaporative emissions canister purge valve mounting nuts
5	9G641	Evaporative emissions canister purge valve

5. Illustration 2 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
6	9J274	Vapor tube quick-connect fitting
7	14A464	Evaporative emissions canister bracket assembly electrical connector
8	14A464	Evaporative emissions canister bracket assembly electrical connector
9	W503925	Evaporative emissions canister bracket assembly mounting bolts

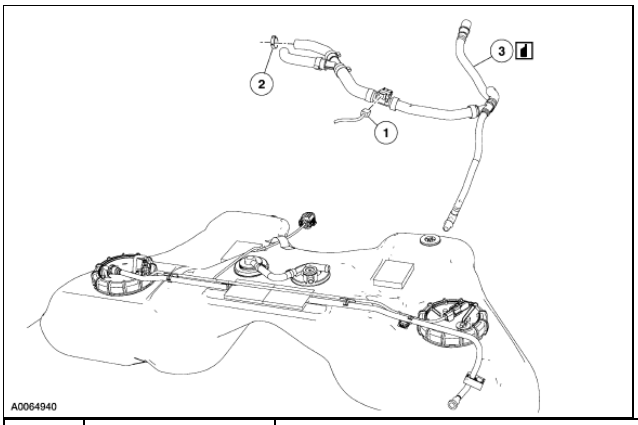
Removal and Installation

⚠ WARNING: The evaporative emission system contains fuel vapor and condensed fuel vapor. Although not present in large quantities, it still presents the danger of explosion or fire. Disconnect the battery ground cable from the battery to minimize the possibility of an electrical spark occurring, possibly causing a fire or explosion if fuel vapor or liquid fuel are present in the area. Failure to follow these instructions may result in personal injury.

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in personal injury.

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the fuel tank. For additional information, refer to Fuel Tank and Filler Pipe in this section.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	14A464	Fuel tank pressure sensor electrical connector
2		Vapor hose clamp
3		Fuel vapor control tube assembly valve

5. Carry out a leak test. For additional information, refer to Evaporative Emission System Leak Test in this section.
6. Carry out the evaporative emission repair verification drive cycle. For additional information, refer to Evaporative Emission Repair Verification Drive Cycle in this section.

Speed Control Switch Screws	7		62

Speed Control Printable View (12 KB)

The speed control system is designed to maintain a selected vehicle speed between 48 and 200 km/h (30 and 124 mph).

Principles of Operation

The speed control system is controlled by the powertrain control module (PCM). The speed control system is designed to maintain a selected vehicle speed between 48 and 200 km/h (30 and 124 mph).

The speed control system is controlled by the steering wheel-mounted switches (ON, OFF, SET+, SET-, RESUME, and CANCEL), and the brake pedal. The steering wheel-mounted switches are backlit.

The speed control functions include:

- turn on the speed control system
- set and maintain the desired vehicle speed
- accelerate the vehicle speed
- tap-up/tap-down the vehicle speed
- resume the prior vehicle speed
- turn off the vehicle speed control system
- cancel the speed control

Pressing and releasing the ON switch turns the system on. Pressing and releasing the SET+ or SET- switch while the vehicle is traveling at the desired speed activates the system. The vehicle maintains the desired speed.

Tapping the SET+ or SET- buttons, while in the set mode respectively, increases or decreases the maintained vehicle speed by 2 km/h (1 mph) per tap. If the respective button is pressed and held, the vehicle speed continues to accelerate or decelerate until the button is released.

Pressing and releasing the OFF switch, or positioning the ignition switch in the OFF position, turns the speed control off. Pressing the brake pedal or pressing the CANCEL button puts the system in the STANDBY mode. Pressing the RESUME button, when the system is in STANDBY mode causes the vehicle to accelerate until the last set speed is resumed. Resume does not function if the OFF button is pressed, the ignition switch is in the OFF position, or if the current vehicle speed is below the minimum operational speed.

Whenever the speed control system is engaged and active, a speed control illuminator is set.

The inputs to the PCM for the speed control system are the:

- anti-lock brake (ABS) module
- digital transmission range (TR) sensor
- speed control deactivator switch
- brake pedal position (BPP) switch
- speed control switches
- throttle position sensor (TPS)

The outputs from the PCM for the speed control system are the:

- instrument cluster
- throttle command

The speed control system does not require an electronic actuator for electronic throttle control (ETC) vehicles. Throttle position is completely controlled by the PCM through the electronic throttle stepper motor. Speed control electronics are contained entirely within the ETC subsystem.

When the speed control is active, the electronic actuator corrects for deviations in the actual vehicle speed by proportionally moving through the throttle plate. The control electronics modulate the throttle to minimize error between actual vehicle speed and the desired speed.

The PCM strategy uses the engine control for smooth accelerations. In instances where the vehicle tends to exceed set speed, the PCM invokes an engine braking strategy and the transmission downshifts to help maintain the desired vehicle speed.

The PCM sends a requested standard corporate protocol (SCP) vehicle speed control set speed status (enable/disable) whenever the speed control set telltale should be turned ON or OFF.

The driver commands the speed control system by pressing steering-wheel mounted switches. The steering wheel switches are hardwired to the PCM.

The speed control system operates in the following modes:

- ON
- OFF
- SET
- SET+/TAP UP
- SET-/TAP DOWN
- HARD DEACTIVATE
- SOFT DEACTIVATE

When the speed control is in the ON mode, and the PCM receives a SET+ or SET- switch input, the speed control system enters into the SET mode and maintains present vehicle speed (provided the vehicle speed is within the system operating range). When the PCM receives a SET+ switch input, the speed control system will accelerate the vehicle 1.00 to 1.68 mph/second (on level roads). The speed control system continues to accelerate the vehicle until the switch is no longer depressed and then will maintain that vehicle speed. If the duration of the switch input is less than 640ms the speed control system will increase vehicle speed by 2 km/h (1 mph). When the system is in the standby mode, and a RESUME switch input is received, the speed control subsystem transitions into SET mode and modifies vehicle speed to resume the last SET vehicle speed, provided the speed control system has previously been in the SET mode subsequent to the key on last cycle.

When the PCM receives a SET- switch input, the speed control system will decrease vehicle speed 1.00 to 1.68 mph/second (on level roads). Once the switch is no longer pressed, the speed control system ceases vehicle deceleration and maintains present vehicle speed. If the duration of the switch input is less than 640ms, the speed control system will decrease vehicle speed by 2 km/h (1 mph).

In the event of an OFF command or a deactivation request from any source, except the cancel switch and brake pedal tap, the system will carry out a hard deactivation and immediately return the throttle to the idle position.

In the event of CANCEL switch input, the system will deactivate and return the throttle to the idle position at a smooth and controlled rate.

The speed control system provides self-diagnostics. Speed control is disabled anytime an error is detected in

the system. No cluster telltale or message center messages are displayed when faults occur. Fault codes will be logged by the PCM.

Speed Control

Printable View (122 KB)

Refer to Wiring Diagrams Cell 31 , Speed Control for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool with apropriate adapter cable

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Throttle lever	• Battery junction box (BJB) fuse 37 (5A) • Circuitry • Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. Verify the speedometer operates correctly without speed control by test driving the vehicle. If the speedometer does not operate correctly, refer to Section 413-00 .
5. Verify the stoplamps operate correctly with the ignition switch in the OFF position. If the stoplamps do not operate correctly, refer to Section 417-01 .
6. Verify the parking brake is not applied and is operating correctly. If the parking brake is not operating correctly, refer to Section 206-00 .

7. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

8. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

9. Carry out the data link diagnostics test. If the diagnostic tool responds with:
   - SCP+, SCP-, CAN+, CAN-, ISO or UBP circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for PCM, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self test diagnostics for the PCM.

10. If the DTCs retrieved are related to the concern, go to the Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index.

11. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

NOTE: DTC P0703 and DTC P1572 must be repaired before any other DTC.

Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index

DTCs	Description	Source	Action
P0500	Vehicle Speed Error	PCM	REFER to Section 206-09 .
P0579	Cruise Control Multifunction Input A Circuit Range/Performance	PCM	Go To Pinpoint Test A .
P0581	Cruise Control Multifunction Circuit High	PCM	Go To Pinpoint Test A .
P0703	Brake On/Off Failure	PCM	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

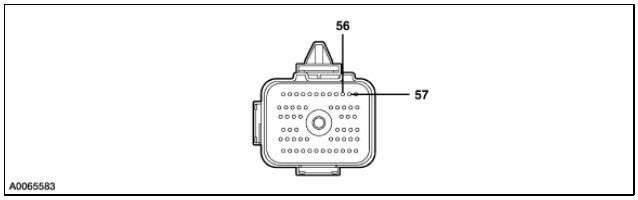
Symptom Chart

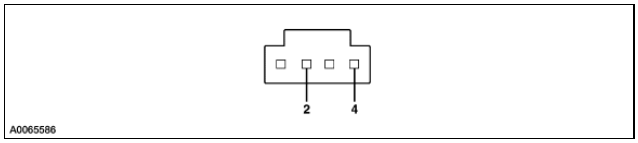
Symptom Chart
Connector Circuit Reference

PCM C175a



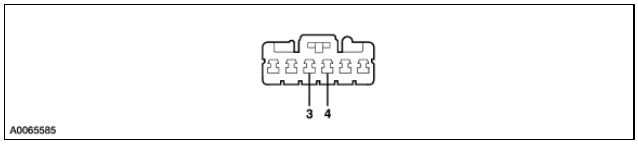
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
56	31S-PG24 (BK/OG) PCM ground to clockspring	0 voltage, less than 5 ohms between the clockspring and the PCM, greater than 10,000 ohms between the PCM and ground with the clockspring disconnected.
57	7-PG24 (YE/BU) PCM (VREF) feed to clockspring	Greater than 4.5 voltage, less than 5 ohms between the clockspring and the PCM, greater than 10,000 ohms between the PCM and ground.

Speed Control Switch C208



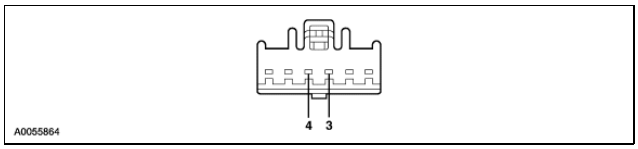
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2		0 voltage, less than 5 ohms between the speed control switch and the clockspring. Greater than 10,000 ohms between the speed control switch and ground.
4		0 voltage, less than 5 ohms between the speed control switch and the clockspring. Greater than 10,000 ohms between the speed control switch and ground.

Horn Switch C217



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3		0 voltage, less than 5 ohms between the clockspring and the speed control switch. Greater than 10,000 ohms between the clockspring and ground.
4		0 voltage, less than 5 ohms between the clockspring and the speed control switch. Greater than 10,000 ohms between the clockspring and ground.

Clockspring C218b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31S-PG1 (BK/BU) speed control switch circuit	0 voltage, less than 5 ohms between the clockspring and the speed control switch, greater than 10,000 ohms between the clockspring and ground with the PCM disconnected.
4	7-PG24 (YE/BU) speed control switch VREF feed circuit	Greater than 4.5 voltage, less than 5 ohms between the clockspring and the speed control switch, greater than 10,000 ohms between clockspring and ground.

Pinpoint Test A: The Speed Control Is Inoperative

Normal Operation

The powertrain control module (PCM) sends a signal through circuit 7-PG24 (YE/BU) to the speed control switches which passes through the clockspring. The return signal is sent through circuit 31S-PG1 (BK/BU) and the clockspring.

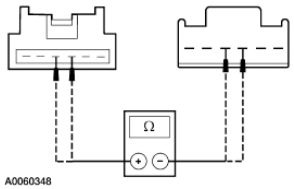
Possible Causes

- circuit 7-PG24 (YE/BU) open, shorted to power or shorted to ground
- circuit 31S-PG1 (BK/BU) open, shorted to power or shorted to ground
- clockspring
- PCM
- speed control switch

PINPOINT TEST A: SPEED CONTROL IS INOPERATIVE

Test Step	Result / Action to Take
A1 CHECK CIRCUITS 7-PG24 (YE/BU) AND 31S-PG24 (BK/OG) FOR SHORT TO BATTERY	
• Key in OFF position • Disconnect: PCM C175a. • Disconnect: Clockspring C218b. • Key in ON position. • Measure the voltage between the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side and ground; and the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and ground.	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to A2 .

 • **Is any voltage present?**	
A2 CHECK CIRCUITS 7-PG24 (YE/BU) AND 31S-PG24 (BK/OG) FOR SHORT TO GROUND	
• Key in OFF position • Measure the resistance between the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side and ground; and the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to A3 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test
A3 CHECK CIRCUITS 7-PG24 (YE/BU) AND 31S-PG24 (BK/OG) FOR AN OPEN	
• Measure the resistance between the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side and clockspring C218b-3, circuit 31S-PG1 (BK/BU), harness side; and the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and clockspring C218b-4, circuit 7-PG24 (YE/BU), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
A4 CHECK THE CLOCKSPRING	
• Remove the driver side air bag. Refer to Section 501-20B . • Disconnect: Upper Clockspring. • Measure the resistance between the clockspring C218b-3, circuit 31S-PG1 (BK/BU), (component side) and the upper clockspring pin 3, (component side); and measure the resistance between the clockspring C218b-4, circuit 7-PG24 (YE/BU), (component side) and the upper clockspring pin 4, (component side).	**Yes** GO to A5 . **No** INSTALL a new clockspring. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test.



- **Are the resistances less than 5 ohms?**

A5 CHECK THE HORN SWITCH WIRING HARNESS	
• Disconnect: Horn Switch Wiring Harness Connector. • Inspect the horn switch wiring harness for shorts, opens or any damage. • **Is the horn switch wiring harness OK?**	**Yes** GO to A6 . **No** REPAIR or INSTALL a new horn switch wiring harness. CLEAR the DTCs. REPEAT the self-test.
A6 CHECK THE SPEED CONTROL SWITCH	
• Connect: Horn Switch Wiring Harness Connector. • Measure the resistance between the horn switch harness pin 3, harness side and the horn switch harness pin 4, harness side while pressing the switches. Speed Control Switch **Speed Control Switch** / **Resistance Value** Cancel — Between 114 and 126 ohms SET- — Between 285 and 315 ohms SET+ — Between 570 and 630 ohms Resume — Between 1,055 and 1,165 ohms On — Between 1,995 and 2,205 ohms Off — Less than 5 ohms  • **Are the speed control switch resistance values OK?**	**Yes** GO to A7 . **No** INSTALL a new speed control switch. REFER to Speed Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
A7 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all PCM connectors and make sure they are seated correctly.
• Operate the system and verify the concern is still present.
	Yes
	INSTALL a new PCM. REFER to Section 303-04A or Section 303-04B . TEST the system for normal operation.
	
	No
	The system is operating

• **Is the concern still present?**	correctly at this time. Concern may have been caused by a loose or corroded connector. REPEAT the self-test.

Pinpoint Test B: The Speed Control Switch Is Inoperative

Normal Operation

The powertrain control module (PCM) sends a signal through circuit 7-PG24 (YE/BU) to the speed control switches which passes through the clockspring. The return signal is sent through circuit 31S-PG24 (BK/OG) and the clockspring.

Possible Causes

- circuit 7-PG24 (YE/BU) open, shorted to power or shorted to ground
- circuit 31S-PG24 (BK/OG) open, shorted to power or shorted to ground
- clockspring
- PCM
- speed control switch

PINPOINT TEST B: SPEED CONTROL SWITCH IS INOPERATIVE

Test Step	Result / Action to Take
B1 CHECK FOR SHORT TO GROUND OR STUCK SWITCH	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: PID/DATA Record and Monitor. • Monitor the PCM PIDs SET/ACL, COAST, RESUME, CANCEL, SC_OFF and SC_ON without pressing any speed control switch. • **Do any of the PCM PIDs indicate YES?**	**Yes** INSTALL a new speed control switch. REFER to Speed Control Switch in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to B2 .
B2 CHECK CIRCUITS 7-PG24 (YE/BU) AND 31S-PG24 (BK/OG)	
• Key in OFF position. • Disconnect: PCM C175a. • Measure the resistance between the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and ground; and between the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side and ground.  	**Yes** GO to B3 . **No** GO to B5 .

• **Are the resistances less than 5 ohms?**	
B3 CHECK THE HORN SWITCH WIRING HARNESS FOR SHORT TO GROUND	
• Remove the driver side air bag. Refer to Section 501-20B . • Disconnect: Horn Switch Wiring Harness Connector. • Measure the resistance between the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and ground; and between the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** GO to B4 . **No** REPAIR or INSTALL a new horn switch wiring harness. CLEAR the DTCs. REPEAT the self-test.
B4 CHECK THE CLOCKSPRING	
• Disconnect: Clockspring C218b. • Measure the resistance between the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and ground; and between the PCM C175a-56, circuit 31S-PG24, harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new clockspring. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test.
B5 CHECK FOR A SHORT CIRCUIT	
• Measure the resistance between the PCM C175a-57, circuit 7-PG24 (YE/BU), harness side and the PCM C175a-56, circuit 31S-PG24 (BK/OG), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to B6 . **No** GO to B9 .
B6 CHECK THE SPEED CONTROL SWITCH	

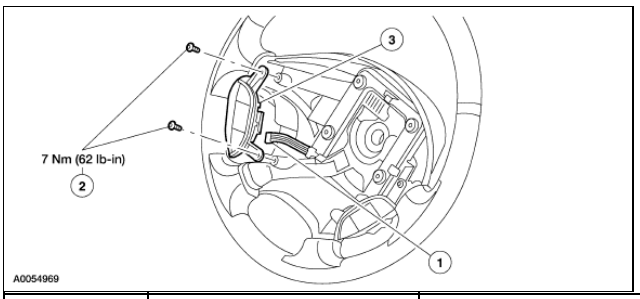
• Remove the driver side air bag. Refer to Section 501-20B . • Disconnect: Speed Control Switch. • Measure the resistance between the speed control switch pin 1 (component side) and the speed control switch pin 2 (component side).  A0065792 • **Is the resistance approximately 4.3k ohms?**	**Yes** GO to B7 . **No** INSTALL a new speed control switch. REFER to Speed Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
B7 CHECK THE HORN SWITCH WIRING HARNESS	
• Disconnect: Horn Switch Wiring Harness Connector. • Measure the resistance between the horn switch harness connector pin 3, circuit 31S-PG24 (BK/OG), harness side and the horn switch harness connector pin 4, circuit 7-PG24 (YE/BU), harness side. • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new horn switch wiring harness. CLEAR the DTCs. REPEAT the self-test. **No** GO to B8 .
B8 CHECK THE CLOCKSPRING FOR A SHORT	
• Measure the resistance between the upper clockspring pin 3 (component side) and the upper clockspring pin 4 (component side).  A0060350 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new clockspring. REFER to Section 501-20B . CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
B9 CHECK FOR CORRECT PCM OPERATION	

• Disconnect all the PCM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all PCM connectors and make sure they are seated correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new PCM. REFER to Section 303-04A or Section 303-04B . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Speed Control Switch

Printable View (57 KB)

1. Remove the air bag. For additional information, refer to Section 501-20B .
2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A005	Electrical connector
2	W705342-S424	Speed control switch screws
3	9C888	Speed control switch

3. To install, reverse the removal procedure.

Steering System

Printable View (8 KB)

The power steering system consists of:

- Power steering pump
- Fluid reservoir
- Rack and pinion steering gear
- Fluid cooler
- Power steering pressure and return lines/hoses
- Variable assist power steering (VAPS) actuator

Principles of Operation

Variable Assist Power Steering (VAPS)

The VAPS system controls the level of power assistance available to the driver based on vehicle speed. Below 3.2 km/h (2 mph), full power steering assist is provided to lessen steering efforts and increase maneuverability. Between 3.2 km/h (2 mph) and 191 km/h (119 mph), steering assist will decrease gradually at a calibrated rate to raise steering efforts for increased directional stability and greater road feel. Above 191 km/h (119 mph), steering assist is constant.

The front electronic module (FEM) outputs a pulse-width-modulated (PWM) current to the control valve actuator. The control valve actuator controls the hydraulic valve that determines the amount of hydraulic assist provided to the steering gear. The amount of assistance provided varies with the control valve actuator current, which is based on vehicle speed according to a look-up table internal to the FEM. The FEM pulse-width modulates the control valve actuator current to provide the desired amount of assistance. The amount of hydraulic steering assistance provided by the VAPS subsystem is proportional to the average control valve current.

The vehicle speed is provided to the FEM through the standard corporate protocol (SCP) network from the anti-lock brake system (ABS).

The engine rpm is provided to the FEM through the SCP network from the powertrain control module (PCM). The FEM uses the engine rpm to determine if the engine is running. The FEM will only output control valve actuator current when the engine is running to minimize noise, vibration, or harshness when the engine is off. The FEM will assume the engine is running only if the engine rpm is greater than 100 rpm.

Upon engine start, the FEM will provide a 200 millisecond full-on pulse followed by a 150 millisecond full-off pulse to the control valve actuator. Normal VAPS system operation will begin after this cleaning stroke is complete. In an event that the rpm signal is invalid from the PCM (less than 100 rpm), and the vehicle speed is less than 1.6 km/h (1 mph), the VAPS system will not carry out the cleaning stroke or apply current to the control valve actuator. When the engine speed exceeds 100 rpm, the system carries out the cleaning stroke and begins applying calibrated current to the actuator.

Inspection and Verification

⚠ CAUTION: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump can result.

NOTE: Make the following preliminary checks before repairing the steering system:

1. Verify the customer concern by operating the steering system.
   - Check the tire pressure. For additional information, refer to the Vehicle Certification (VC) label.
   - Verify that all tires are sized to specification. For additional information, refer to Section 204-00 .
   - Check the tires for damage or uneven wear. For additional information, refer to Section 204-00 .

2. Visually inspect for obvious signs of mechanical or electrical damage. Refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
• Binding or misaligned steering column • Loose steering column intermediate shaft universal joints • Steering gear • VAPS solenoid connector • VAPS solenoid • Power steering pump • Bent or pinched power steering hoses • Loose tie-rod ends • Loose suspension components	• Rear battery junction box (RBJB) relay 32 • Battery junction box (BJB) fuse 30 (10A) • Front electronic module (FEM) • Wiring • Connectors

3. Check the belt and tensioner.
   - Refer to Section 303-01B or Section 303-01B for diagnosis and testing of the accessory drive system.

4. Check the fluid level.
   - Verify that the power steering fluid level is within the appropriate hot or cold range on the dipstick. Add MERCON® Multi-Purpose (ATF) Transmission Fluid XT-2-QDX or MERCON® equivalent.

5. Check for air bleeding.
   - Verify that there is no air in the power steering system. Run the engine until it reaches normal operating temperature. Turn the steering wheel to the left and right several times without hitting the stops. If any air bubbles are present, refer to Power Steering System Purging in this section.

6. Check for external leaks.
   - With the ignition switch at OFF, wipe any dirt or debris off of the power steering pump, power steering pressure hose, power steering return hose, power steering fluid cooler and hose assembly and steering gear.
   - ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump can occur.**

     With the engine running, turn the steering wheel from stop-to-stop several times. Repair as necessary if leaks are observed.

7. Check turning effort.
   - Refer to Turning Effort Test under Component Tests in this section.

8. If an obvious cause for an observed or reported malfunction is found, correct the cause (if possible) before proceeding to the next step.

9. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel, and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - Check that the program card is correctly installed.
   - Check the connections to the vehicle.
   - Check the ignition switch position.

10. If the diagnostic tool still does not communicate with the vehicle, refer to the tester manual.

11. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
    - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
    - NO RESP/NOT EQUIP for VAPS, refer to Section 418-00 .
    - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the FEM module.

12. If the DTCs retrieved are related to the concern, go to Diagnostic Trouble Code (DTC) Index to continue diagnostics. If there are FEM DTCs not concerning the VAPS system, refer to Section 418-00 for further diagnostics.

13. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

14. If the fault is not visually evident, determine the symptom and GO to Symptom Chart .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

Front Electronic Module (FEM) Module Diagnostic Trouble Code (DTC) Index

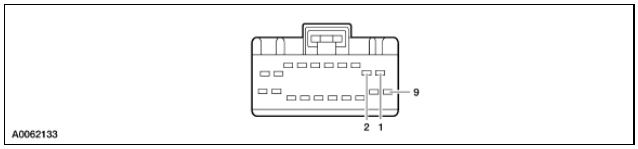
DTC	Description	Source	Action
B1342	ECU Is Defective	FEM	CLEAR the DTC. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 418-00 . CLEAR the DTC. REPEAT the self-test.
C1924	VAPS Solenoid Actuator Output Short To Ground	FEM Module	Go To Pinpoint Test B .
C1925	VAPS Solenoid Actuator Return Circuit Failure	FEM Module	Go To Pinpoint Test C .

Symptom Chart

Symptom Chart

Connector Reference and Terminal Readings

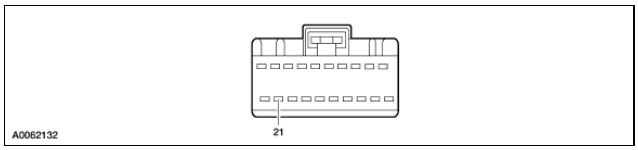
Front Electronic Module (FEM)-C201a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 29S-DK21 (OG/WH) Power supply to FEM from BJB Fuse 30 (10A)	Greater than ten volts at all times.
2	CKT 9-CE9 (BN/GN) VAPS solenoid feedback signal (to FEM module)	Voltage varies with VAPS solenoid position.
9		

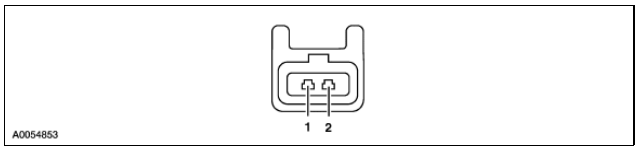
	CKT 8-CE9 (WH/GN) VAPS solenoid input signal	Voltage varies with FEM module output from 1 to 12 volts.

Front Electronic Module (FEM)-C201b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
21	CKT 31S-DK21 (BK/WH) Rear battery junction box (RBJB) relay 32 coil ground	Zero voltage, less than five ohms to chassis ground.

VAPS Solenoid-C120



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-CE9 (WH/GN) VAPS solenoid input signal	Voltage varies with FEM module output from 1 to 12 volts.
2	CKT 9-CE9 (BN/GN) VAPS solenoid feedback signal (to FEM module)	Voltage varies with VAPS solenoid position.

Pinpoint Tests

Pinpoint Test A: No Communication With The FEM Module/Unable To Enter Self-Test

Normal Operation

The FEM module operates at a voltage between 10 and 17 volts. Voltage is supplied by circuit 29S-DK21 (OG/WH) (B+ at all times). RBJB relay 32 coil ground is provided through circuit 31S-DK21 (BK/WH).

Possible Causes

- RBJB relay 32 coil ground circuit 31S-DK21 (BK/WH)
- RBJB relay 32
- Relay 32 power-out circuit 30-DD2 (RD/BU)
- BJB fuse 30 (10A)
- Power supply circuit 29S-DK21 (OG/WH)
- FEM

PINPOINT TEST A: NO COMMUNICATION WITH THE FEM MODULE/UNABLE TO ENTER SELF-TEST

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
A1 CHECK BJB FUSE 30 (10A)	
• Check BJB fuse 30 (10A). • **Is the fuse OK?**	**Yes** GO to A2 . **No** INSTALL a new fuse. REPEAT the self-test.
A2 CHECK THE VOLTAGE TO THE FEM MODULE	
• Key in OFF position. • Disconnect: FEM Module C201a. • Key in ON position. • Measure the voltage between FEM module C201a-1 circuit 29S-DK21 (OG/WH), harness side and ground • **Is the voltage greater than 10 volts?**	**Yes** GO to A3 . **No** REPAIR circuit 29S-DK21 (OG/WH). REPEAT the self-test.
A3 CHECK THE RBJB RELAY 32 COIL GROUND	
• Key in OFF position. • Measure the resistance between FEM module C201b-21, circuit 31S-DK21 (BK/WH), harness side, and ground. • **Is the resistance less than 5 ohms?**	**Yes** CHECK the DLC connector and wiring. REFER to Section 418-00 . **No** REPAIR circuit 31S-DK21 (BK/WH). REPEAT the self-test.

Pinpoint Test B: DTC 1924 VAPS Solenoid Actuator Output Short To Ground

Normal Operation

The FEM module sends the VAPS solenoid a pulse width modulated (PWM) current through circuit 8-CE9 (WH/GN). The VAPS solenoid sends a feedback voltage to the FEM module, (depending on power steering assist demand), through circuit 9-CE9 (BN/GN).

Possible Causes

- VAPS solenoid
- Circuit 8-CE9 (WH/GN)

PINPOINT TEST B: DTC 1924 VAPS SOLENOID ACTUATOR OUTPUT SHORT TO GROUND

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
B1 ISOLATE THE VAPS SOLENOID	
• Raise and support the vehicle. For additional information, refer to Section 100-00 .	**Yes** GO to B2 . **No**

• Disconnect: VAPS Solenoid C120. • Measure the resistance across the VAPS solenoid C120, terminals 1 and 2, component side. • **Is the resistance approximately 6 to 8 ohms?**	INSTALL a new VAPS solenoid. REFER to Steering Gear in this section. CLEAR the DTC. REPEAT the self-test.
B2 CHECK CIRCUIT 8-CE9 (WH/GN) FOR A SHORT TO GROUND	
• Measure the resistance between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B3 . **No** REPAIR circuit 8-CE9 (WH/GN). CLEAR the DTC. REPEAT the self-test.
B3 CHECK CIRCUIT 8-CE9 (WH/GN) AND VAPS SOLENOID FOR A SHORT TO GROUND	
• Measure the resistance between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) component side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** CARRY OUT the FEM diagnosis. REFER to Section 418-00 . CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new VAPS solenoid. REFER to Steering Gear in this section. CLEAR the DTC. REPEAT the self-test.

Pinpoint Test C: DTC 1925 VAPS Solenoid Actuator Return Circuit Failure

Normal Operation

The FEM module sends the VAPS solenoid a pulse width modulated (PWM) current through circuit 8-CE9 (WH/GN). The VAPS solenoid sends a feedback voltage to the FEM module, (depending on power steering assist demand), through circuit 9-CE9 (BN/GN).

Possible Causes

- VAPS solenoid
- Circuit 8-CE9 (WH/GN)
- Circuit 9-CE9 (BN/GN)

PINPOINT TEST C: DTC 1925 VAPS SOLENOID ACTUATOR RETURN CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
C1 ISOLATE THE VAPS SOLENOID	
• With the vehicle in Neutral, position it on a hoist. For additional information, refer to Section 100-00 . • Disconnect: VAPS Solenoid C120. • Measure the resistance across the VAPS solenoid C120, terminals 1 and 2, component side.	**Yes** GO to C2 . **No** INSTALL a new VAPS solenoid. REFER to Steering Gear in this section. CLEAR

• **Is the resistance approximately 6 to 8 ohms?**	The DTC. REPEAT the self-test.
C2 CHECK CIRCUITS 8-CE9 (WH/GN) AND 9-CE9 (BN/GN) FOR A SHORT TO BATTERY	
• Measure the voltage between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) harness side and ground and between C120-2 circuit 9-CE9 (BN/GN) harness side and ground. • **Is voltage present?**	**Yes** REPAIR circuit 8-CE9 (WH/GN) or circuit 9-CE9 (BN/GN). CLEAR the DTC. REPEAT the self-test. **No** GO to C3 .
C3 CHECK CIRCUIT 8-CE9 (WH/GN) FOR AN OPEN	
• Disconnect: FEM Module C201a. • Measure the resistance between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) harness side and C201a-9 circuit 8-CE9 (WH/GN) harness side. • **Is the resistance less than 5 ohms?**	**Yes** GO to C4 . **No** REPAIR the open circuit(s). CLEAR the DTC. REPEAT the self-test.
C4 CHECK CIRCUIT 9-CE9 (BN/GN) FOR AN OPEN	
• Measure the resistance between VAPS solenoid C120-2 circuit 9-CE9 (BN/GN) harness side and C201a-2 circuit 9-CE9 (BN/GN) harness side. • **Is the resistance less than 5 ohms?**	**Yes** GO to C5 . **No** REPAIR circuit 9-CE9 (BN/GN). CLEAR the DTC. REPEAT the self-test.
C5 CHECK CIRCUIT 9-CE9 (BN/GN) FOR A SHORT TO GROUND	
• Measure the resistance between VAPS solenoid C120-2 circuit 9-CE9 (BN/GN) harness side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C6 . **No** REPAIR circuit circuit 9-CE9 (BN/GN). CLEAR the DTC. REPEAT the self-test.
C6 CHECK CIRCUIT 9-CE9 (BN/GN) AND VAPS SOLENOID FOR A SHORT TO GROUND	
• Measure the resistance between VAPS solenoid C120-2 circuit 9-CE9 (BN/GN) component side and ground. • **Is the resistance greater than 10,000 ohms?**	**Yes** CARRY OUT the FEM diagnosis. REFER to Section 418-00 . CLEAR the DTC. REPEAT the self-test. **No** INSTALL a new VAPS solenoid. REFER to Steering Gear in this section. CLEAR the DTC. REPEAT the self-test.

Pinpoint Tests D: Hard Steering/Lack of Assist With No DTCs

Normal Operation

The VAPS system provides power assist to steering input by multiplying the turning force applied at the steering wheel. When the vehicle is at rest or at a speed below 3.2 km/h (2 mph), the VAPS system supplies maximum assist. Between 3.2 km/h (2 mph) and 191 km/h (119 mph), power assist will decrease gradually at a calibrated rate to raise steering efforts for increased directional stability and greater road feel. Above 191 km/h (119 mph), steering assist is constant.

Possible Causes

- Circuit 8-CE9 (WH/GN)
- Circuit 9-CE9 (BN/GN)
- VAPS solenoid

PINPOINT TEST D: HARD STEERING/LACK OF ASSIST WITH NO DTCS

Test Step	Result / Action to Take
D1 CHECK CIRCUIT 8-CE9 (WH/GN) AND 9-CE9 (BN/GN) FOR SHORT TOGETHER	
• Disconnect: VAPS Solenoid C120. • Measure the resistance between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) and C120-2 circuit 9-CE9 (BN/GN) harness side. • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D2 . **No** REPAIR the circuits. TEST the system for normal operation.
D2 CHECK THE STABILITY ASSIST MODULE	
• Measure the resistance between VAPS solenoid C120-1 circuit 8-CE9 (WH/GN) and C120-2 circuit 9-CE9 (BN/GN) component side. • **Is the resistance greater than 10,000 ohms?**	**Yes** CARRY OUT the FEM diagnosis. REFER to Section 418-00 . TEST the system for normal operation. **No** INSTALL a new VAPS solenoid. TEST the system for normal operation.

Component Tests

Steering System Symptom Definitions

Drift/Pull

Pull is a tugging sensation, felt by the hands on the steering wheel, that must be overcome to keep the vehicle going straight.

Drift describes what a vehicle with this condition does with hands off the steering wheel.

- A vehicle-related drift/pull, on a flat road, can cause a consistent deviation from the straight-ahead path and require constant steering input in the opposite direction to counteract the effect.
- Drift/pull can be induced by conditions external to the vehicle (i.e., wind, road camber).

Excessive Steering Wheel Play

Excessive steering wheel play is a condition in which there is too much steering wheel movement before the wheels move. A small amount of steering wheel play is considered normal.

Feedback

Feedback is a roughness felt in the steering wheel when the vehicle is driven over rough pavement.

Hard Steering or Lack of Assist

Hard steering or lack of assist is experienced when the steering wheel effort exceeds specifications. Hard steering can remain constant through the full turn or occur near the end of a turn. It is important to know the difference between hard steering/lack of assist and binding.

Hard steering or lack of assist can result from either hydraulic or mechanical conditions. It is extremely important to know if this concern occurs during driving, or during very heavy or static parking maneuvers.

Nibble

Sometimes confused with shimmy, nibble is a condition resulting from tire interaction with various road surfaces and observed by the driver as small rotational oscillations of the steering wheel.

Poor Returnability/Sticky Steering

Poor returnability and sticky steering is used to describe the poor return of the steering wheel to center after a turn or the steering correction is completed.

Shimmy

Shimmy, as observed by the driver, is large, consistent, rotational oscillations of the steering wheel resulting from large, side-to-side (lateral) tire/wheel movements.

Shimmy is usually experienced near 64 km/h (40 mph), and can begin or be amplified when the tire contacts pot holes or irregularities in the road surface.

Wander

Wander is the tendency of the vehicle to require frequent, random left and right steering wheel corrections to maintain a straight path down a level road.

Steering Linkage

1. With the parking brake applied, carry out the following:
    1. **NOTE:** Excessive vertical or horizontal motion of the stud relative to the steering linkage ball sockets may indicate excessive wear.

       Have an assistant rotate the steering wheel back and forth 360 degrees and watch for relative motion of the studs in the steering linkage ball sockets.
    2. Watch for a loose steering gear attachment to the frame.
2. Another method is to raise the front of the vehicle, grasp the tire at the front and rear and watch for excessive play in the joints while trying to pivot the wheels by hand.
3. **NOTE:** Incorrect separation of the tapered stud from its seat will cause premature failure of the ball socket.

   Joints can be checked for excessive wear by measuring the torque it takes to turn the stud.

    1. Separate the tapered stud from its seat and thread the attaching nut back onto the stud.
    2. **NOTE:** Some joint turning torques will be as little as 0.2 Nm (2 lb-in) within the first 1,000 miles and will remain there for the life of the joint.

Turn the stud with an inch-pound torque wrench and note the torque required to turn the stud.

Torque Required to Turn Stud in Socket	Nm	Lb-In
New joints	2.0-5.0	18-47
Used joints	0.2-3.0	2-26
Joints with excessive play	Less than 0.2	Less than 0.2

3. **NOTE:** Some joint turning torques will be as little as 0.2 Nm (2 lb-in) within the first 1,000 miles and will remain there for the life of the joint.

   Install new ball joints as necessary. For additional information, refer to Section 204-00 .

Pump Flow and Pressure Test

⚠ **WARNING: Do not touch the flowmeter during the test procedure or severe burns and serious injury can occur.**

1. ⚠ **CAUTION: Make sure that the connection point will not interfere with any of the engine accessory drive components or drive belts.**

   Install the Power Steering Analyzer at the high pressure port of the power steering pump. Make sure the power steering analyzer gate valve is fully open.

   - On some vehicles, the power steering pump high pressure port is inaccessible, and therefore, the Power Steering Analyzer should be installed either at the steering gear or at a point in the high pressure line between the power steering pump and the steering gear.

2. Place a Dial Thermometer in the power steering pump reservoir.

3. Check the power steering fluid level. If necessary, add power steering fluid.
   - Use Motorcraft MERCON® Multi-Purpose (ATF) Transmission Fluid XT-2-QDX or equivalent meeting Ford specification MERCON®.

4. Install the digital tachometer.

5. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump will occur.**

   Start the engine. Place the transmission in N (neutral). Set the parking brake. Raise the power steering fluid temperature to 74-80°C (165-175°F) by rotating the steering wheel fully to the left and right several times.

6. Set the engine speed to idle. Record the flow rate and pressure readings.
   - If the flow rate is below the idle flow rate specification, the power steering pump may require repair. Continue with the test procedure.
   - If the pressure reading is above the idle pressure specification, then check the power steering hoses for kinks and restrictions.

7. Partially close the gate valve to obtain 5,102 kPa (725 psi). Record the flow rate.
   - If the flow rate is less than the specified flow rate, install a new power steering pump.

8. ⚠ **CAUTION: Do not allow the gate valve to remain closed for more than five seconds.**

   Completely close and partially open the gate valve three times. Record the pressure relief valve actuation pressure reading.

   - If the pressure does not meet the relief pressure specification, install a new power steering pump.

9. Set the engine speed to 1,500 rpm. Record the flow rate.
   - If the flow rate varies more than 3.785 liters/minute (1 gallon/minute) from the initial flow rate reading, install a new power steering pump.

10. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump can occur.**

    Set the engine speed at idle. Turn (or have an assistant turn) the steering wheel to the left and right stops. Record flow rate and pressure readings at the stops.

    - The pressure reading at both stops should be nearly the same as the maximum pump relief pressure.
    - The flow rate should drop below 1.9 liters/minute (0.5 gallon/minute).
    - If the pressure does not reach the maximum pump relief pressure or the flow rate does not drop below the specified value, excessive internal leakage is occurring. Repair or install a new steering gear as necessary. For additional information, refer to Steering Gear in this section.

11. Turn (or have an assistant turn) the steering wheel slightly in both directions and release it quickly while watching the pressure gauge.
    - The pressure reading should move from the normal backpressure reading and snap back as the steering wheel is released.
    - If the pressure returns slowly or sticks, the rotary valve in the steering column is binding. Check the steering column and linkage before repairing the steering gear.

Turning Effort Test

NOTE: Make sure front wheels are correctly aligned and tire pressure is correct before checking turning effort.

1. Park the vehicle on dry concrete and set the parking brake.

2. Insert a thermometer into the power steering fluid reservoir.

⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump can occur.**

3. Idle the engine for two to three minutes. Turn the steering wheel to the left and right several times to warm the fluid to 43-49°C (110-120°F).

4. With the engine running, attach a suitable spring tension gauge to the rim of the steering wheel. Measure pull required to turn one complete revolution in each direction. Refer to Specifications for Static Steering Wheel Turning Efforts for the acceptable measurements.

Steering Gear Insulator

1. With the wheel normally loaded (on the ground), check the steering gear housing for excessive lateral movement.
    - If the steering gear housing moves more than 1.5 mm (0.05 in), the steering gear insulators may have deteriorated or the steering gear mounting nuts may have loosened. INSTALL new steering gear mounting nuts and tighten to specification.
    - If the steering gear housing movement is still excessive after tightening the gear mounting nuts, install new steering gear insulators.

Steering Gear Valve

NOTE: The following check applies to with a steering pull.

1. With the vehicle in motion, place the transmission in N (neutral) and turn the engine OFF.
    - If the vehicle does not pull with the engine OFF, REPAIR or INSTALL a new steering gear. For additional information, refer to Steering Gear in this section.
    - If the vehicle pull direction does not change, CHECK the front suspension components and wheel alignment. For additional information, refer to Section 204-00 .

Tie-Rod Articulation Torque

1. **NOTE:** This check can be done with the steering gear on or off the vehicle.

   Disconnect the tie-rod end from the front wheel knuckle. For additional information, refer to Steering Gear in this section.

2. Move the spindle tie-rod back and forth three times.

3. Hook the Spring Scale over the tie-rod end or the threaded portion of the tie-rod and measure the force required to move the spindle tie-rod. For additional information, refer to Tie-Rod Articulation Torque in Specifications in this section.

4. If the force required to move the tie-rod does not meet the specifications, install a new tie-rod.

Inspection and Verification

1. Verify the customer's concern by operating the ignition switch and the multifunction switch on the steering column.

2. Visually inspect for obvious signs of mechanical and electrical damage; refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
• Multifunction switch • Ignition key • Ignition switch • Tilt/telescope switch	• Circuit • Rear battery junction box (RBJB) Fuse: ♦ 22 (20A) • Battery junction box (BJB) Fuse: ♦ 4 (5A) ♦ 13 (5A) ♦ 17 (5A)

NOTE: For multifunction switch concerns, refer to one of the following sections:

- Exterior Lighting, Section 417-01 .
- Wipers and Washers, Section 501-00 .

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

4. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
    - CKT914, CKT915 or CKT70-ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 for the front electronic module (FEM).
    - Section 413-00 for the instrument cluster module (ICM).

5. If DTCs are present, refer to Section 418-00 for FEM related DTCs, for ICM related DTCs, refer to Section 413-00 for further diagnostics.

6. If no DTCs are present, GO to Symptom Chart to continue diagnostics.

Pinpoint Tests

Pinpoint Test E: The Ignition Switch Is Inoperative

Normal Operation

The ignition switch receives overload protected battery power from the rear battery junction box (RBJB) fuse 22 (20A) through circuit 30-DA5 (RD/BK). The ignition switch has four possible states:

- OFF.
- ACC.
- RUN.
- START.

Possible Causes

- (RBJB) fuse 22 (20A)
- Circuit 30-DA5 (RD/BK), 30-BB20 (RD) or 30-BB9 (RD)
- Ignition switch
- Instrument cluster module (ICM)

PINPOINT TEST E: THE IGNITION SWITCH IS INOPERATIVE

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
E1 CHECK RBJB FUSE 22 (20A)	

• CHECK the RBJB fuse 22 (20A). • **Is the fuse OK?**	**Yes** GO to E2 . **No** INSTALL a new fuse. TEST the system for normal operation.
E2 CHECK IGNITION SWITCH	
• Carry out the Ignition Switch Component Test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the ignition switch OK?**	**Yes** GO to E3 . **No** INSTALL a new ignition switch. For additional information, refer to Steering Column Switches . TEST the system for normal operation.
E3 CHECK CIRCUITS 30-BB20 (RD) AND 30-BB9 (RD)	
• Key in OFF position. • Disconnect: Ignition Switch C250. • Measure the voltage between ignition switch C250-7, circuit 30-BB20 (RD), harness side, and ground; and between ignition switch C250-1, circuit 30-BB9 (RD), harness side, and ground.  A0000315 • **Are the voltages greater than 10 volts?**	**Yes** CHECK the instrument cluster module (ICM) for faults. REFER to Section 413-00 . **No** REPAIR the affected circuit(s). TEST the system for normal operation.

Pinpoint Test F: No Power in ACC

Normal Operation

The ignition switch receives overload protected B+ power from the RBJB fuse 22 (20A) through circuit 30-DA5 (RD/BK). The ignition switch has four possible states:

- OFF.
- ACC.
- RUN.
- START.

Possible Causes

- RBJB fuse 22 (20A)
- Circuit 75-DD1 (YE)
- Circuit 30-BB20 (RD)
- BJB fuse 13 (5A)
- Ignition switch
- Instrument cluster module (ICM)

PINPOINT TEST F: NO POWER IN ACC

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
F1 CHECK RBJB FUSE 22 (20A)	
• CHECK the RBJB fuse 22 (20A). • **Is the fuse OK?**	**Yes** GO to F2 . **No** INSTALL a new fuse. TEST the system for normal operation.
F2 CHECK IGNITION SWITCH	
• Carry out the Ignition Switch Component Test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the ignition switch OK?**	**Yes** GO to F3 . **No** INSTALL a new ignition switch. For additional information, refer to Steering Column Switches . TEST the system for normal operation.
F3 CHECK CIRCUIT 30-BB20 (RD)	
• Disconnect: Ignition Switch C250. • Measure the voltage between ignition switch C250-7, circuit 30-BB20 (RD), harness side, and ground. • **Is the voltage greater than 10 volts?**	**Yes** GO to F4 . **No** REPAIR the affected circuits(s). TEST the system for normal operation.
F4 CHECK CIRCUIT 75-DD1 (YE)	
• Key in OFF position. • Disconnect: BJB C270a. • Key in ON position. • Measure the voltage between the BJB C270a-15, circuit 75-DD1 (YE), and ground.  A0001613 • **Is the voltage greater than 10 volts?**	**Yes** GO to F5 . **No** REPAIR the circuit. TEST the system for normal operation.
F5 CHECK BJB FUSE 13 (5A)	
• CHECK the BJB fuse 13 (5A). • **Is the fuse OK?**	**Yes** CHECK the instrument cluster module (ICM) for faults. REFER to Section 413-00 . **No** INSTALL a new fuse. TEST the system for normal operation.

Pinpoint Test G: No Power In START/RUN

Normal Operation

The ignition switch receives overload protected battery power from the BJB fuse 22 (20A) through circuit 30-DA5 (RD/BK). The ignition switch has four possible states:

- OFF.
- ACC.
- RUN.
- START.

Possible Causes

- RBJB fuse 22 (20A)
- Circuit 30-DA5 (RD/BK)
- BJB fuse 17 (5A)
- Ignition switch
- Instrument cluster module (ICM)

PINPOINT TEST G: NO POWER IN START/RUN

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
G1 CHECK IGNITION SWITCH	
• Carry out the Ignition Switch Component Test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the ignition switch OK?**	**Yes** GO to G2 . **No** INSTALL a new ignition switch. For additional information, refer to Steering Column Switches . TEST the system for normal operation.
G2 CHECK CIRCUIT 30-BB20 (RD)	
• Disconnect: Ignition Switch C250. • Measure the voltage between ignition switch C250-7, circuit 30-BB20 (RD), harness side, and ground. • **Is the voltage greater than 10 volts?**	**Yes** GO to G3 . **No** REPAIR the affected circuit(s). TEST the system for normal operation.
G3 CHECK CIRCUIT 15-DD4 (GN/BK)	
• Measure the voltage between the BJB C270a-3, circuit 15-DD4 (GN/BK), and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to G4 . **No** REPAIR the circuit. TEST the system for normal operation.

G4 CHECK BJB FUSE 17 (5A)	
• CHECK the BJB fuse 17 (5A). • **Is the fuse OK?**	**Yes** CHECK the instrument cluster module (ICM) for faults. REFER to Section 413-00 . **No** INSTALL a new fuse. TEST the system for normal operation.

Pinpoint Test H: The Multifunction Switch/Hazard Switch Does Not Operate Correctly

Normal Operation

The multifunction/hazard switch controls the following components:

- Turn signals
- High/Low beam/flash-to-pass headlamps
- Wiper/washers
- Hazard lamps

Possible Causes
- Multifunction/hazard switch

PINPOINT TEST H: THE MULTIFUNCTION SWITCH/HAZARD SWITCH DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
H1 CHECK TURN SIGNAL LEVER POSITIONS	
NOTE: Prior to testing, make sure the hazard knob is pushed in fully to the OFF position. • Key in ON position. • Check the turn signal lever in the RH and LH turn positions with the steering wheel locked in the straight-ahead position. Lock the lever in position for each. • Check the lever by slightly holding it in the RH and LH turn positions. When releasing, observe that the lever springs back to normal position. • Road test the vehicle and observe the turn signals for the RH and LH turn positions while manually turning the steering wheel for each position. Verify the lever cancels when the steering returns from the desired turn position. • **Does the turn signal lever operate correctly?**	**Yes** GO to H2 . **No** If the lever will not cancel, CHECK the turn indicator cancel cam for damage. If the lever is worn or damaged, INSTALL a new multifunction switch. REFER to Steering Column Switches . TEST the system for normal operation.
H2 CHECK HAZARD SWITCH	
• Fully press the hazard switch and release to turn ON the hazard lamps. Verify the switch	**Yes** GO to H3 .

operation. • Fully press the hazard switch and release to turn OFF the hazard lamps. Verify the switch operation. • **Does the hazard switch operate correctly?**	**No** If the hazard switch is worn or damaged, INSTALL a new multifunction switch. REFER to Steering Column Switches . TEST the system for normal operation.
H3 CHECK HIGH BEAM AND FLASH-TO-PASS	
• Turn the headlamps ON. • Move the turn signal lever toward the instrument panel to the STOP position. Release the lever. Verify the high beams. • Move the lever back toward the seat. Release the lever. Verify the low beams. • Pull the lever toward the driver seat gently to the flash-to-pass position. Hold the position, and verify both the high and low beams illuminate. • Release the lever. Verify the low beams. • Turn the headlamps OFF. • Pull the lever to the flash-to-pass again and hold. Verify the high beams illuminate. Release the lever. Verify no high beams. • **Does the high beam, low beam and flash-to-pass operate?**	**Yes** GO to H4 . **No** If the lever is worn or damaged, INSTALL a new multifunction switch. REFER to Steering Column Switches . TEST the system for normal operation.
H4 CHECK WINDSHIELD WIPER AND WASH	
• Rotate the windshield wiper switch to LOW, HIGH and intermittent positions. Verify the rotation of the switch and wiper operation. • Turn the switch to the OFF position. Verify that the switch rotates to OFF and the wipers stop operating. • Push the end of the switch in toward the center of the steering column to the WASH position. Release the wash position. Verify the wipers operate for a few cycles and return to OFF. • Operate WASH in all speeds of the wiper switch. Verify the wipers return to selected speed after releasing from the WASH position. • **Does the windshield wiper switch and WASH operate correctly?**	**Yes** CHECK the tilt/telescope switch. REFER to Steering Column in this section. **No** If the switch or lever is worn or damaged, INSTALL a new wiper switch; REFER to Section 501-00 .

Component Test

Ignition Switch Mechanical Check

Test the mechanical operation of the ignition switch by rotating the lock cylinder through all switch positions. The movement should not stick or bind and should return from the START position back to the ON position without assistance (spring return). If sticking or binding is encountered, check for the following:

- burrs on the lock cylinder key.
- insufficient lube on the lock cylinder.
- excessive rubbing of the actuator against the transmission shift socket.
- binding lock cylinder.
- shroud rubbing against the lock cylinder.
- burrs or foreign material around the rack and pinion actuator in the lock cylinder housing.
- ⚠ **CAUTION: Do not apply lubricant to the inside of the ignition switch.**

  insufficient lube on the actuator.
- binding ignition switch.

Ignition Switch

Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Multifunction Switch

Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Steering Column Printable View (179 KB)

Refer to Wiring Diagrams Cell 128 for schematic and connector information.

Special Tool(s)

ST1137-A	77 III Automotive Meter 105-R0056 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation STAR (NGS) Tester 418-F052 or equivalent scan tool
ST2574-A	Flex Probe Kit 105-R025B

Inspection and Verification

1. Verify the customer's concern by operating the tilt/telescope switch to duplicate the condition.
2. Visually inspect for obvious signs of mechanical and electrical damage; refer to the following chart:

   Visual Inspection Chart

Mechanical	Electrical
• Steering column	• Battery junction box (BJB) fuse 19 (15A) • Tilt/telescope switch • Circuitry • Electrical connectors

3. If inspection reveals obvious concern(s) that can be readily identified, repair as required.
4. If the concern remains after the inspection, connect scan tool to the data link connector (DLC) located beneath the instrument panel to carry out DATA LINK DIAGNOSTIC TEST. Refer to Section 418-00 . If the DATA LINK DIAGNOSTIC TEST is passed for the instrument cluster module (ICM), retrieve the continuous diagnostic trouble codes (DTCs).
5. If diagnostic trouble codes (DTCs) are retrieved, go to the Instrument Cluster Module (ICM) Diagnostic Trouble Code (DTC) Index to continue diagnostics.
6. If the self test is passed and no diagnostic trouble codes (DTCs) are retrieved, GO to Symptom Chart to continue diagnostics.

7. If the ICM cannot be accessed by the scan tool, refer to the instrument cluster diagnostics for further instructions. Refer to Section 413-00 .

Instrument Cluster Module (ICM) Diagnostic Trouble Code (DTC) Index

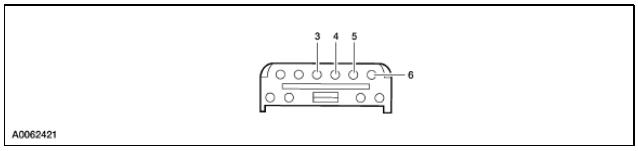
DTC	Description	Source	Action
B1342	ECU is Defective	ICM	CLEAR the DTC. REPEAT the self-test. If other DTCs are retrieved, repair those and REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new instrument cluster. For additional information, REFER to Section 413-00 .
B2328	Steering Column Reach (Telescopic) Feedback Potentiometer Circuit Failure	ICM	Go To Pinpoint Test I .
B2332	Steering Column Tilt Feedback Potentiometer Circuit Failure	ICM	Go To Pinpoint Test J .
B2351	Steering Column Switch Signal Circuit Failure	ICM	Go To Pinpoint Test K .

Symptom Chart

Symptom Chart

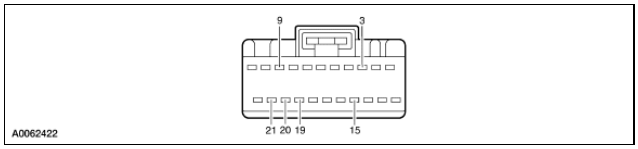
Connector Reference and Terminal Readings

Retractor Box C218a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	CKT 9-AL17 (BN/WH) Tilt and telescope motor potentiometer input from ICM	Five volt reference with ignition in ACC and RUN position
4	CKT 7-AL17 (YE/VT) Tilt and Telescope motor potentiometer signal ground from ICM	Zero volts, less than 5 ohms resistance to chassis ground.
5	CKT 8-AL17 (WH/VT) Tilt motor potentiometer signal	Voltage varies with tilt motor position
6	CKT 8-AL16 (WH/BK) Telescope motor potentiometer signal	Voltage varies with telescope motor position

Instrument Cluster Module (ICM) C220c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	CKT 9-AL10 (BN) Tilt/telescope switch input signal from ICM	Voltage varies with switch actuation, zero volts with switch in neutral position
9	CKT 9-AL17 (BN/WH) Tilt and telescope motor potentiometer input from ICM	Five volt reference with ignition in ACC and RUN position
15	CKT 8-AL10 (WH) Tilt/telescope switch input signal to ICM	Five volt reference with ignition in ACC and RUN position
19	CKT 7-AL17 (YE/VT) Tilt and Telescope motor potentiometer signal ground from ICM	Zero volts, less than 5 ohms resistance to chassis ground.
20	CKT 8-AL17 (WH/VT) Tilt motor potentiometer signal	Voltage varies with tilt motor position
21	CKT 8-AL16 (WH/BK) Telescope motor potentiometer signal	Voltage varies with telescope motor position

Steering Column Potentiometer C222

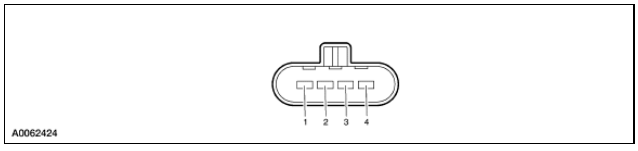
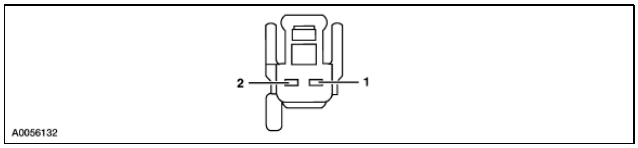
2	CKT 7-AL17 (YE/VT) Tilt and Telescope motor potentiometer signal ground from ICM	Zero volts, less than 5 ohms resistance to chassis ground.
3	CKT 8-AL17 (WH/VT) Tilt motor potentiometer signal	Voltage varies with tilt motor position
4	CKT 9-AL17 (BN/WH) Tilt and telescope motor potentiometer input from ICM	Five volt reference with ignition in ACC and RUN position

Tilt/Telescope Motor C227



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AL6 (YE/BU) Tilt motor power	Ten to twelve volts upon tilt/telescope switch actuation or memory position recall with ignition in ACC and RUN.
2	CKT 32-AL6 (WH/BU) Tilt motor ground	Zero volts, less than 5 ohms to chassis ground
3	CKT 35-AL7 (VT/BK) Telescope motor ground	Zero volts, less than 5 ohms to chassis ground
4	CKT 34-AL7 (BU/BK) Telescope motor power	Ten to twelve volts upon tilt/telescope switch actuation or memory position recall with ignition in ACC and RUN.

Tilt/Telescope Switch C2250



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-AL10 (WH) Tilt/telescope switch input signal to ICM	Five volt reference with ignition in ACC and RUN position
2	CKT 9-AL10 (BN) Tilt/telescope switch input signal from ICM	Voltage varies with switch actuation, zero volts with switch in neutral position

Pinpoint Tests

Pinpoint Test I: DTC B2328: Steering Column Reach (Telescopic) Feedback Potentiometer Circuit Failure

Normal Operation

The steering column telescopic motor receives information from the potentiometer when a memory position is requested. The potentiometer sends the telescopic motor position information to the instrument cluster module (ICM) where it is stored and is used when several adjustable features are requested. The potentiometer sends the steering column telescopic position to the ICM through circuit 8-AL16 (WH/BK).

Possible Causes

- Circuit 8-AL16 (WH/BK)
- Telescopic motor potentiometer
- Steering column mechanical component
- ICM

PINPOINT TEST I: DTC B2328 STEERING COLUMN REACH (TELESCOPIC) FEEDBACK POTENTIOMETER CIRCUIT FAILURE

Test Step	Result / Action to Take

⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.

I1 CHECK CONTINUOUS DTCs	
• Enter the following diagnostic mode on the diagnostic tool: ICM Continuous DTCs . • **Is DTC B2328 present?**	**Yes** GO to I7 . **No** GO to I2 .
I2 CHECK FOR MECHANICAL FAULTS	
• Disconnect and reconnect the battery. • Enter the following diagnostic mode on the diagnostic tool: ICM Clear DTCs. • Actuate the steering column to the full IN position. • Actuate the steering column to the full OUT position. • Enter the following diagnostic mode on the diagnostic tool: ICM Self-Test. • **Is DTC B2328 present?**	**Yes** GO to I3 . **No** The system was deactivated due to ICM registering an excessive number of motion faults. NOTIFY the owner that concern has been corrected.
I3 CHECK STEERING COLUMN BEARINGS	
• Remove the steering column shrouds. • Check the steering column bearings to make sure that they are fully seated back against the stops. • **Are the steering column bearings correctly seated back against the stops?**	**Yes** GO to I4 . **No** INSTALL a new steering column. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test.
I4 ISOLATE THE POTENTIOMETERS	
• Disconnect: Steering Column Potentiometer Assembly C222. • Connect a jumper wire between the steering column potentiometer assembly C222-4, circuit 9-AL17 (BN/WH), harness side and the steering column potentiometer assembly terminal 1.  AG0154-A • Connect a jumper wire between the steering column potentiometer assembly C222-2, circuit 7-AL17 (YE/VT), harness side and the steering column potentiometer assembly terminal 4. • Connect a jumper wire between the steering column potentiometer assembly C222-3, circuit 8-AL17 (WH/VT) and the steering column potentiometer assembly terminal 3.	**Yes** INSTALL a new steering column. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to I5 .

• Connect a jumper wire between the steering column potentiometer assembly C222-1, circuit 8-AL16 (WH/BK) and the steering column potentiometer assembly terminal 2. • Enter the following diagnostic mode on the diagnostic tool: ICM Self-Test. • **Is DTC B2328 retrieved?**	
I5 CHECK FOR STEERING COLUMN MOVEMENT	
NOTE: This active command will only power motors for one second. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor UP Command. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor DOWN Command. • **Does the steering column tilt up and down?**	**Yes** GO to I7 . **No** GO to I6 .
I6 ISOLATE THE MOTOR	
• Disconnect: Tilt/Telescope Motor C227. • Connect a voltmeter between the tilt/telescope motor C227-3, circuit 35-AL7 (VT/BK), harness side, and the tilt/telescope motor C227-4, circuit 34-AL7 (BU/BK), harness side.  • Enter the following diagnostic mode on the diagnostic tool: Trigger The Telescope Motor IN Command. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Telescope Motor OUT Command. • Measure the voltage during the active commands. • **Is voltage present for one second after each command is sent?**	**Yes** INSTALL a new telescope motor. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to I7 .
I7 CHECK CIRCUIT 8-AL17 (WH/VT) FOR A SHORT TO POWER	
• Disconnect: ICM C220c. • Measure the voltage at ICM C220c-20, circuit 8-AL17 (WH/VT), harness side.  • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to I8 .

I8 CHECK CIRCUIT 8-AL17 (WH/VT) FOR A SHORT TO GROUND	
• Measure the resistance between the ICM C220c-20, circuit 8-AL17 (WH/VT), harness side and steering column potentiometer.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
I9 CHECK CIRCUIT 8-AL17 (WH/VT) FOR AN OPEN	
• Measure the resistance between the ICM C220c-20, circuit 8-AL17 (WH/VT), harness side and steering column potentiometer C222-3, harness side, circuit 8-AL17 (WH/VT). • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new ICM. For additional information, refer to Section 413-00 . REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: DTC B2332: Steering Column Tilt Feedback Potentiometer Circuit Failure

Normal Operation

The steering column tilt motor receives information from the potentiometer when a memory position is requested. The potentiometer sends the tilt motor position information to the instrument cluster module (ICM) where it is stored and is used when several adjustable features are requested. The potentiometer sends the steering column tilt position to the ICM through circuit 8-AL17 (WH/VT), and circuit 33-AL6 (YE/BU) powers the tilt motor.

Possible Causes

- Circuit 8-AL17 (WH/VT)
- Tilt motor potentiometer
- Steering column mechanical component
- ICM

PINPOINT TEST J: DTC B2332 STEERING COLUMN TILT FEEDBACK POTENTIOMETER CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
J1 CHECK CONTINUOUS DTCs	
• Enter the following diagnostic mode on the diagnostic tool: ICM Continuous DTCs . • **Is DTC B2332 present?**	**Yes** GO to J7 . **No** GO to J2 .

J2 CHECK FOR MECHANICAL FAULTS	
• Disconnect and reconnect the battery. • Enter the following diagnostic mode on the diagnostic tool: ICM Clear DTCs. • Actuate the steering column to the full in position. • Actuate the steering column to the full out position. • Enter the following diagnostic mode on the diagnostic tool: ICM Self-Test. • **Is DTC B2332 present?**	**Yes** GO to J3 . **No** System was deactivated due to ICM registering an excessive number of motion faults. NOTIFY the owner that concern has been corrected.
J3 CHECK STEERING COLUMN BEARINGS	
• Remove the steering column shrouds. • Check the steering column bearings to make sure that they are fully seated back against the stops. • **Are the steering column bearings correctly seated back against the stops?**	**Yes** GO to J4 . **No** INSTALL a new steering column. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test.
J4 ISOLATE THE POTENTIOMETERS	
• Disconnect: Steering Column Potentiometer Assembly B222. • Connect a jumper wire between the steering column potentiometer assembly B222-4, circuit 9-AL17 (BN/WH), harness side and the steering column potentiometer assembly terminal 1.  AG0154-A • Connect a jumper wire between the steering column potentiometer assembly B222-2, circuit 7-AL17 (YE/VT), harness side and the steering column potentiometer assembly terminal 4. • Connect a jumper wire between the steering column potentiometer assembly B222-3, circuit 8-AL17 (WH/VT) and the steering column potentiometer assembly terminal 3. • Connect a jumper wire between the steering column potentiometer assembly B222-1, circuit 8-AL16 (WH/BK) and the steering column potentiometer assembly terminal 2. • Enter the following diagnostic mode on the diagnostic tool: ICM Self-Test. • **Is DTC B2332 retrieved?**	**Yes** INSTALL a new steering column. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to J5 .
J5 CHECK FOR STEERING COLUMN MOVEMENT	

NOTE: This active command will only power motors for one second. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor UP Command. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor DOWN Command. • **Does the steering column tilt up and down?**	**Yes** INSTALL a new steering column. For additional information, refer to Steering Column in this section. Clear the DTC. REPEAT the self-test. **No** GO to J6 .
J6 ISOLATE THE MOTOR	
• Disconnect: Tilt/Telescope Motor C227. • Connect a voltmeter between the tilt/telescope motor C227-2, circuit 32-AL6 (WH/BU), harness side, and the tilt/telescope motor C227-1, circuit 33-AL6 (YE/BU), harness side.  A0005886 • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor UP Command. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Tilt Motor DOWN Command. • Measure the voltage during the active commands. • **Is voltage present for one second after each command is sent?**	**Yes** INSTALL a new tilt motor. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to J7 .
J7 CHECK CIRCUIT 8-AL17 (WH/VT) FOR A SHORT TO POWER	
• Disconnect: ICM B220c. • Measure the voltage at ICM B220c-20, circuit 8-AL17 (WH/VT), harness side.  A0005330 • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to J8 .
J8 CHECK CIRCUIT 8-AL17 (WH/VT) FOR A SHORT TO GROUND	
• Measure the resistance between the ICM C220c-20, circuit 8-AL17 (WH/VT), harness side and steering column potentiometer	**Yes** GO to J9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

 A0005882 • **Is the resistance greater than 10,000 ohms?**	
J9 CHECK CIRCUIT 8-AL17 (WH/VT) FOR AN OPEN	
• Measure the resistance between the ICM C220c-20, circuit 8-AL17 (WH/VT), harness side and steering column potentiometer C222-3, harness side, circuit 8-AL17 (WH/VT). • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new ICM. For additional information, refer to Section 413-00 . REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test K: DTC B2351: Steering Column Switch Signal Circuit Failure

Normal Operation

The tilt/telescope switch is hardwired to the ICM. Depending on the direction of the switch (UP/DOWN/IN/OUT) a signal is sent to the ICM to activate the tilt or the telescope motor.

Possible Causes
- Circuit 8-AL10 (WH)
- Circuit 9-AL10 (BN)
- Tilt/telescope switch
- ICM

PINPOINT TEST K: DTC B2351 STEERING COLUMN SWITCH SIGNAL CIRCUIT FAILURE

Test Step	Result / Action to Take
⚠ **CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.**	
K1 CHECK THE STEERING COLUMN POSITION PIDS	

• Monitor the corresponding ICM PIDs while actuating the tilt/telescope switch in the following positions:
  • tilt
  ♦ UP
  ♦ DOWN
  • telescope
  ♦ IN
  ♦ OUT
  • neutral
• **Do the PIDs match with each of the corresponding tilt/telescope switch positions?**
	Yes
	GO to K4 .
	
	No
	GO to K2 .

K2 CHECK THE TILT MOTOR PID	

• Monitor the tilt motor PIDs while actuating the tilt/telescope switch in the tilt UP and tilt DOWN positions. • **Does the tilt PID read UP with the switch in the up position and DOWN with the switch in the down position and OFF with the switch in the neutral position?**	**Yes** GO to K3 . **No** INSTALL a new tilt/telescope switch. CLEAR the DTC. REPEAT the self-test.
K3 CHECK THE STEERING COLUMN TELESCOPE MOTOR PID	
• Actuate the tilt/telescope switch in the telescope IN and telescope OUT positions while monitoring the telescope motor PIDs • **Does the telescope PID read IN with the switch in the IN position and OUT with the switch in the OUT position and OFF with the switch in the neutral position?**	**Yes** REPEAT the self-test. If DTC B2351 is retrieved, INSTALL a new ICM. REFER to Section 413-00 . CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new tilt/telescope switch. CLEAR the DTCs. REPEAT the self-test.
K4 CHECK CIRCUIT 8-AL10 (WH) AND 9-AL10 (BN) FOR A SHORT TO POWER	
• Measure the voltage between tilt/telescope switch C2250-2, circuit 8-AL10 (WH) and ground and tilt/telescope switch C2250-2, circuit 9-AL10 (BN) and ground. • **Is voltage present?**	**Yes** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. **No** GO to K5 .
K5 CHECK CIRCUIT 8-AL10 (WH) AND 9-AL10 (BN) FOR A SHORT TO GROUND	
• Measure the resistance between tilt/telescope switch C2250-1, circuit 8-AL10 (WH) and ground and tilt/telescope switch C2250-2, circuit 9-AL10 (BN) and ground. • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to K6 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test.
K6 CHECK CIRCUIT 8-AL10 (WH) AND 9-AL10 (BN) FOR AN OPEN	
• Measure the resistance between tilt/telescope switch C2250-1, circuit 8-AL10 (WH), harness side and ICM C220c-15, circuit 8-AL10 (WH). • Measure the resistance between tilt/telescope switch C2250-2, circuit 9-AL10 (BN) harness side and ICM C2250-3, circuit 9-AL10 (BN). • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new ICM. For additional information, refer to Section 413-00 . REPEAT the self-test. **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test L: The Tilt And Telescopic Adjustments Are Inoperative

Normal Operation

The steering column telescopic motor receives information from the potentiometer when a memory position is requested. The potentiometer sends the telescopic motor position information to the instrument cluster module (ICM) where it is stored and is used when several adjustable features are requested. The potentiometer sends

the steering column telescopic position to the ICM through circuit 8-AL16 (WH/BK).

Possible Causes

- Circuit:
  - 9-AL17 (BN/WH)
  - 7-AL17 (YE/VT)
- Steering column
- ICM

PINPOINT TEST L: THE TILT AND TELESCOPIC ADJUSTMENTS ARE INOPERATIVE

Test Step	Result / Action to Take
⚠ CAUTION: Use the Flex Probe Kit for all test connections to prevent damage to the wiring terminals. Do not use standard multimeter probes.	
L1 CHECK CONTINUOUS DTCs	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve the ICM Continuous DTCs . • **Are DTCs B2328, B2332 or B2351 present?**	**Yes** Go To Pinpoint Test H , Go To Pinpoint Test I or Go To Pinpoint Test J respectively. **No** GO to L2 .
L2 CHECK CIRCUIT 9-AL17 (BN/WH) FOR A SHORT TO POWER	
• Disconnect: ICM Connector C220c. • Key in ON position. • Measure the voltage between ICM C220c-9, circuit 9-AL17 (BN/WH), harness side and ground.  • **Is voltage present?**	**Yes** GO to L3 . **No** GO to L4 .
L3 CHECK CIRCUIT 7-AL17 (YE/VT) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: Steering Column Potentiometer Assembly C222. • Key in ON position. • Measure the voltage at the ICM C220c-19, circuit 7-AL17 (YE/VT), harness side.	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to L4 .

 A0000431 • **Is voltage present?**	
L4 CHECK CIRCUIT 9-AL17 (BN/WH) FOR AN OPEN	
• Disconnect: Steering Column Potentiometer Assembly C222. • Measure the resistance between the ICM C220c-9, circuit 9-AL17 (BN/WH), harness side and the steering column potentiometer assembly C222-1, circuit 9-AL17 (BN/WH), harness side.  A0000432 • **Is the resistance less than 5 ohms?**	**Yes** GO to L5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L5 CHECK THE STEERING COLUMN POSITION SENSOR SIGNAL	
• **NOTE:** The proceeding active commands will only power the motors for one second. • Monitor the telescope and tilt position PIDs and trigger the tilt UP, tilt DOWN, telescope IN and telescope OUT commands, one at a time. • **Do the PIDs match when the corresponding motors are triggered?**	**Yes** INSPECT the steering column potentiometer assembly connection and the steering column connectors for looseness. CLEAR the DTCs. REPEAT the self-test. **No** GO to L6 .
L6 CHECK CIRCUIT 9-AL17 (BN/WH) FOR AN OPEN	
• Disconnect: Retractor Box C218a. • Measure the resistance between the steering column potentiometer assembly C222-1, circuit 9-AL17 (BN/WH), harness side and retractor box C218a-3, circuit 9-AL17 (BN/WH).  A0000433 • **Is the resistance less than 5 ohms?**	**Yes** GO to L7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L7 CHECK CIRCUIT 9-AL17 (BN/WH) FOR A SHORT TO GROUND	

• Measure the resistance between the steering column potentiometer assembly C222-1, circuit 9-AL17 (BN/WH), harness side and ground.  A0000434 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to L8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L8 CHECK CIRCUIT 9-AL17 (BN/WH) FOR AN OPEN	
• Connect: Steering Column Potentiometer Assembly C222. • Measure the resistance between the retractor box C218a-3, circuit 9-AL17 (BN/WH), harness side and the ICM C220c-9, circuit 9-AL17 (BN/WH), harness side.  A0006100 • **Is the resistance less than 5 ohms?**	**Yes** GO to L9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L9 CHECK CIRCUIT 9-AL17 (BN/WH) FOR A SHORT TO GROUND	
• Measure the resistance between the ICM C220c-9, circuit 9-AL17 (BN/WH), harness side and ground.  A0006101 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to L10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L10 ISOLATE THE POTENTIOMETERS	
• Disconnect: Steering Column Potentiometer Assembly C222. • Enter the following diagnostic mode on the diagnostic tool: Trigger The Telescope IN Command. • Measure the voltage at steering column potentiometer assembly C222-2, circuit 7-AL17 (YE/VT), harness side during the active command.	**Yes** INSTALL a new steering column. For additional information, refer to Steering Column in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to L11 .

 A0006113 • **Is the voltage greater than 10 volts?**	
L11 CHECK CIRCUIT 7-AL17 (YE/VT) FOR A SHORT TO GROUND	
• Measure the resistance between steering column potentiometer assembly C222-2, circuit 7-AL17 (YE/VT), harness side and ground.  A0006119 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to L12 .
L12 CHECK CIRCUIT 7-AL17 (YE/VT) FOR AN OPEN	
• Measure the resistance between steering column potentiometer assembly C222-2, circuit 7-AL17 (YE/VT), harness side and retractor box C218a-4, circuit 7-AL17 (YE/VT).  A0006115 • **Is the resistance less than 5 ohms?**	**Yes** GO to L13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
L13 CHECK CIRCUIT 7-AL17 (YE/VT) FOR A SHORT TO GROUND	
• Measure the resistance between ICM C220c-19, circuit 7-AL17 (YE/VT), harness side and ground.  A0006116 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to L14 .
L14 CHECK CIRCUIT 7-AL17 (YE/VT) FOR AN OPEN	

• Measure the resistance between ICM C220c-19, circuit 7-AL17 (YE/VT), harness side and retractor box C218a-4, circuit 7-AL17 (YE/VT), harness side.  A0006117 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new ICM. For additional information, refer to Section 413-00 . REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Power Steering System Flushing

Printable View (61 KB)

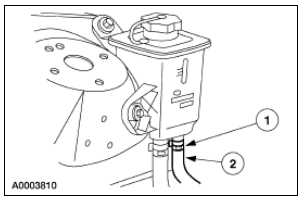
Material

Item	Specification
Motorcraft MERCON® Multi-Purpose (ATF) Transmission Fluid XT-2-QDX	MERCON®

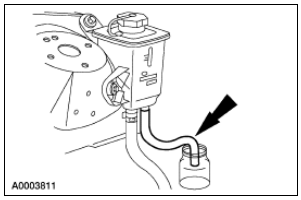
⚠ WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.

1. Remove the coil on plug (COP) Fuse 12 in the underhood auxiliary junction box (AJB) to disable the engine from starting.

2. Disconnect the power steering return hose.
    1. Compress and move the hose clamp.
    2. Disconnect the power steering return hose and plug the fitting to the reservoir.

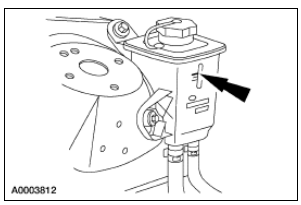


3. Attach an extension hose between the power steering reservoir port and an empty container.



4. **⚠ WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.**

   Fill the power steering fluid reservoir.



5. Raise the front wheels off the ground. For additional information, refer to Section 100-00 .

6. ⚠ **CAUTION: Do not operate the starter motor for more than 10 seconds at a time. Damage to the starter motor could result.**

   Turn the steering wheel from stop to stop while cranking the engine until the fluid exiting the extension hose is clean.

7. Lower the vehicle.

8. Disconnect the extension hose from the power steering return hose and attach the power steering return hose to the power steering fluid reservoir.

9. ⚠ **WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.**

   ⚠ **CAUTION: Do not overfill the power steering fluid reservoir.**

   Fill the power steering fluid reservoir.

10. Install the COP fuse.

11. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump will occur.**

    Start the engine and turn the steering wheel from stop to stop.

12. **NOTE:** If power steering is noisy and accompanied by evidence of aerated fluid, it will be necessary to purge the power steering system. Refer to Power Steering System Purging .

    Check the power steering fluid level.

Power Steering System Purging

Printable View (49 KB)

Special Tool(s)

ST1176-A	Vacuum Pump Kit 416-D002 (D93L-7559-A) or equivalent

Material

Item	Specification
Motorcraft MERCON® Multi-Purpose (ATF) Transmission Fluid XT-2-QDX	MERCON®

⚠ WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.

⚠ CAUTION: If the air is not purged from the power steering system correctly, pump failure could result. This condition can occur on pre-delivery vehicles with evidence of aerated fluid or on vehicles that had steering component repairs.

NOTE: A whine heard from the power steering pump may be caused by air in the system. The power steering purge procedure must be carried out prior to any component repair for which power steering noise complaints are accompanied by evidence of aerated fluid and after installation of any new power steering system components.

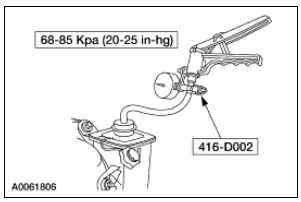
1. **⚠ CAUTION: Do not overfill the power steering fluid reservoir.**

   Remove the fluid reservoir cap and check the fluid.

   - Using the special tool, tightly insert the stopper into the fluid reservoir.

2. Raise the front wheels off the floor. For additional information, refer to Section 100-00 .

3. Using the special tool, apply and maintain maximum vacuum.

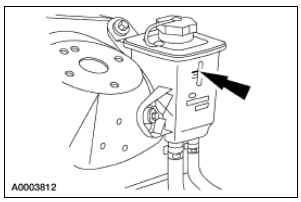


4. Cycle the steering wheel fully to the left and right ten times.

5. Release the vacuum and remove the special tool.

6. **⚠ CAUTION: Do not overfill the reservoir.**

Fill the reservoir.



7. Start the engine.
8. Using the special tool, apply and maintain maximum vacuum.
9. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump can occur.**

   Cycle the steering wheel fully to the left and right ten times.
10. Remove the special tool and install the fluid reservoir cap.
11. Lower the vehicle.
12. ⚠ **WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.**

    Check the fluid level and for leaks at all connections. If the power steering still shows signs of aeration, repeat this procedure.

Power Steering System Filling

Printable View (10 KB)

Item	Specification
Motorcraft MERCON® Multi-Purpose (ATF) Transmission Fluid XT-2-QDX	MERCON®

1. **WARNING: Do not mix fluid types. Any mixture of an unapproved fluid could lead to seal deterioration and leaks. A leak could ultimately cause loss of fluid, which could result in a loss of power steering assist.**

   Fill the power steering reservoir to the appropriate level.

2. Remove the coil on plug (COP) Fuse 12 in the underhood auxiliary junction box (AJB) to disable the engine from starting.

3. Raise the front wheels off the floor. For additional information, refer to Section 100-00 .

4. **CAUTION: Do not operate the starter motor for more than 10 seconds at a time. Damage to the starter motor could result.**

   Turn the steering wheel from stop-to-stop while cranking the engine.

5. Lower the vehicle.

6. **CAUTION: Do not overfill the power steering fluid reservoir.**

   Fill the power steering fluid reservoir to the appropriate level.

7. Install the COP fuse.

8. **NOTE:** If the power steering is noisy and accompanied by evidence of aerated fluid, it will be necessary to purge the power steering system. For additional information, refer to Power Steering System Purging .

   Clear the diagnostic trouble codes (DTCs). For additional information, refer to Section 2 in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

   - Run the vehicle and check the system for leaks.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Printable View (636 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (014-R1076)
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

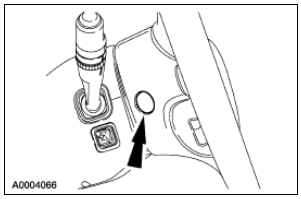
   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

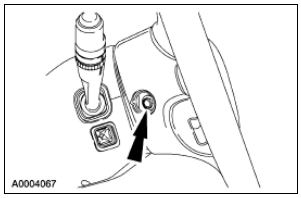
   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

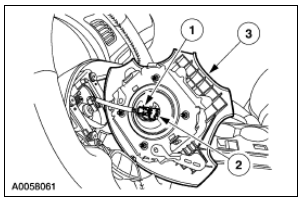
2. Remove the two steering wheel plugs (one shown).



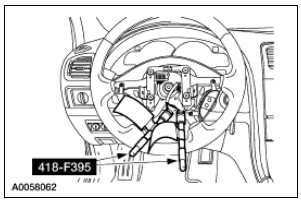
3. Remove the two driver air bag module bolts (one shown).



4. Disconnect and remove the driver air bag module.
    1. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    2. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    3. Remove the driver air bag module.



5. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

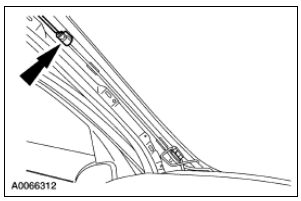


Vehicles with side air curtains

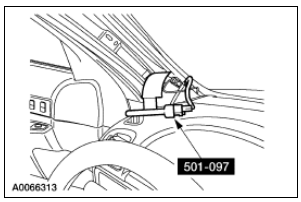
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

6. Remove the A-pillar trim panel. For additional information, refer to Section 501-01 .

7. Disconnect the driver side air curtain module electrical connector.



8. Attach the restraint system diagnostic tool to the vehicle harness side of the driver side air curtain module electrical connector.



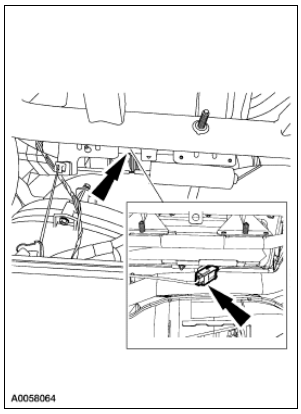
All vehicles

9. Remove the glove compartment. For additional information, refer to Section 501-01 .

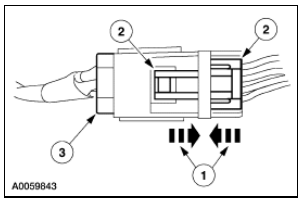
10. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

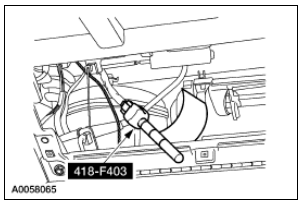
    Locate the passenger air bag module electrical connector.



11. Disconnect the passenger air bag module.
    1. Push the passenger air bag module electrical connector together.
    2. Push down, pivoting the electrical connector and release the electrical connector retainer.
    3. Pull out, disconnecting the vehicle harness end of the connector from the component end.



12. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag module electrical connector.

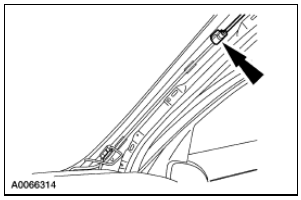


Vehicles with side air curtains

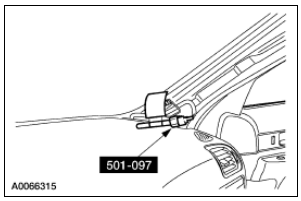
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

13. Remove the A-pillar trim panel. For additional information, refer to Section 501-01

14. Disconnect the passenger side air curtain module electrical connector.



15. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger side air curtain module electrical connector.



All vehicles

16. Connect the battery ground cable. For additional information, refer to Section 414-00 .

17. Move and tilt the front seats to their highest and most forward position.

18. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

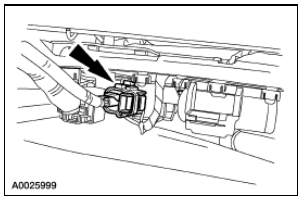
    The first row side impact sensors are located at or near the base of the B-pillars.

    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

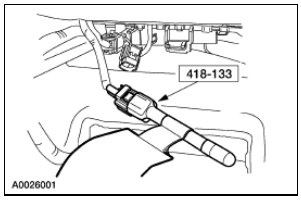
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

19. From under the passenger seat, release the tab and disconnect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



Vehicles without side air curtains

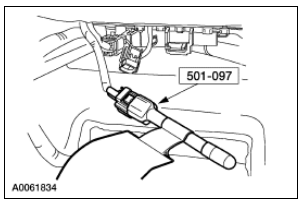
20. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side air bag electrical connector.



Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

21. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side thorax air bag electrical connector.

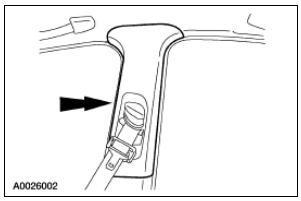


All vehicles

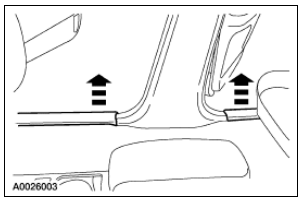
22. Remove the passenger side B-pillar weatherstripping.

23. Position the passenger side safety belt shoulder height adjuster to its highest point.

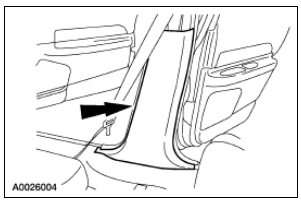
24. Detach the passenger side B-pillar trim panel.



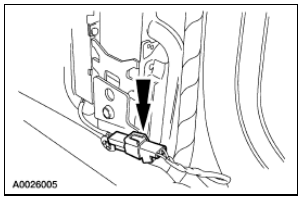
25. Remove the passenger side front and rear door scuff plates.



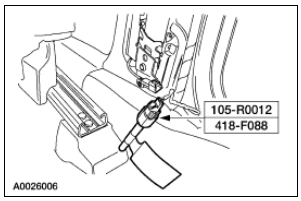
26. Remove the passenger side B-pillar lower trim panel.



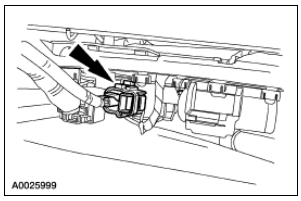
27. Disconnect the passenger side safety belt retractor pretensioner electrical connector.



28. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

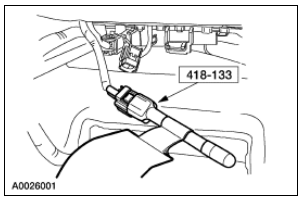


29. From under the driver seat, release the tab and disconnect the driver seat side air bag or driver seat side thorax air bag electrical connector.



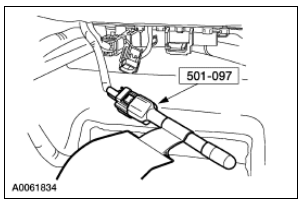
Vehicles without side air curtains

30. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side air bag electrical connector.



Vehicles with side air curtains

31. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side thorax air bag electrical connector.

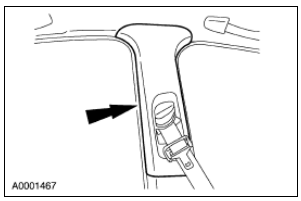


All vehicles

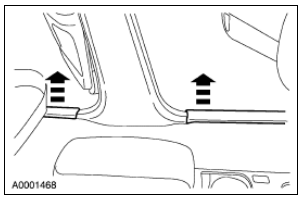
32. Remove the driver side B-pillar weatherstripping.

33. Position the driver side safety belt shoulder height adjuster to its highest point.

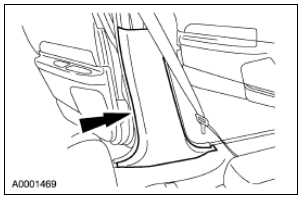
34. Detach the driver side B-pillar upper trim panel.



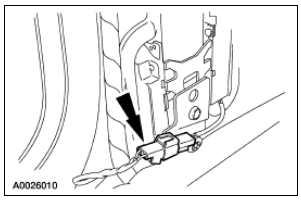
35. Remove the driver side front and rear door scuff plate.



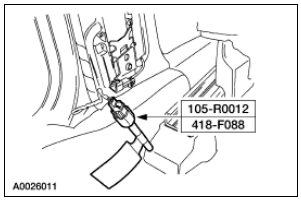
36. Remove the driver side B-pillar trim panel.



37. Disconnect the driver side safety belt retractor pretensioner electrical connector.



38. Attach the restraint system diagnostic tool to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



39. Connect the battery ground cable. For additional information, refer to Section 414-00 .

40. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

41. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Reactivation

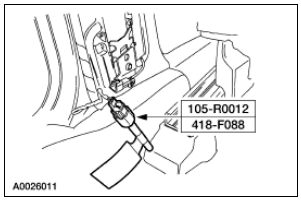
⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions,

and notes at the beginning of the deactivation procedure.

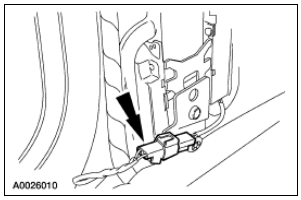
All vehicles

1. **NOTE:** Make sure the battery negative cable is still disconnected before proceeding with the reactivation procedure.

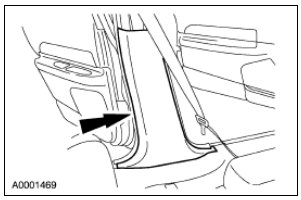
   Remove the restraint system diagnostic tool from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



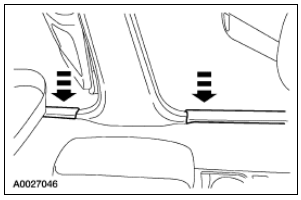
2. Connect the driver side safety belt retractor pretensioner electrical connector.



3. Install the driver side B-pillar lower trim panel.

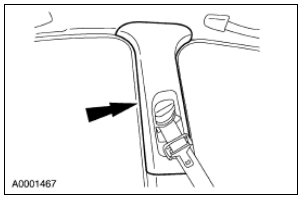


4. Install the driver side front and rear door scuff plates.



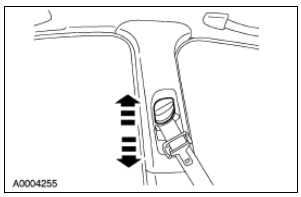
5. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

   Install the driver side B-pillar upper trim panel.



6. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks

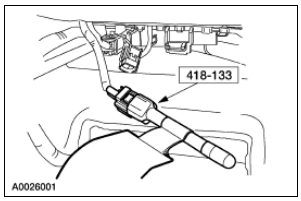
correctly in each position.



7. Install the driver side B-pillar weatherstripping.

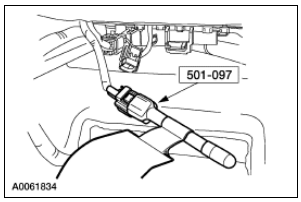
Vehicles without side air curtains

8. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



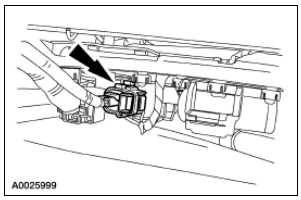
Vehicles with side air curtains

9. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.

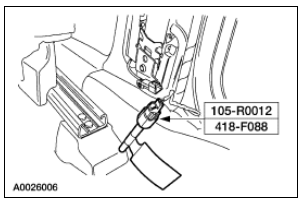


All vehicles

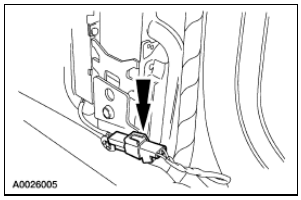
10. Connect the driver seat side air bag or driver seat side thorax air bag electrical connector.



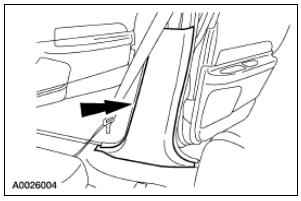
11. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.



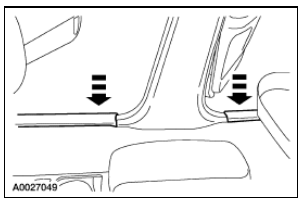
12. Connect the passenger side safety belt retractor pretensioner electrical connector.



13. Install the passenger side B-pillar lower trim panel.

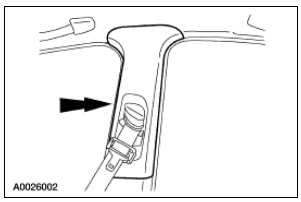


14. Install the passenger side front and rear door scuff plates.

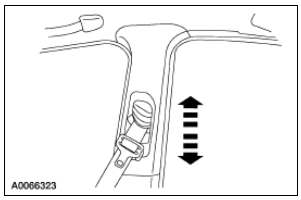


15. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

    Install the passenger side B-pillar upper trim panel.



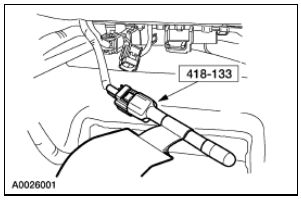
16. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



17. Install the passenger side B-pillar weatherstripping.

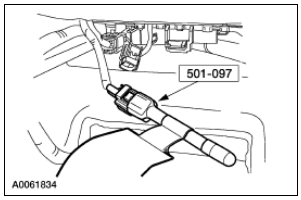
Vehicles without side air curtains

18. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side air bag electrical connector.



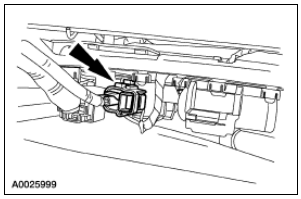
Vehicles with side air curtains

19. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side thorax air bag electrical connector.



All vehicles

20. Connect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



21. Connect the battery ground cable. For additional information, refer to Section 414-00 .

22. Position the front seats rearward.

23. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

    The first row side impact sensors are located at or near the base of the B-pillars.

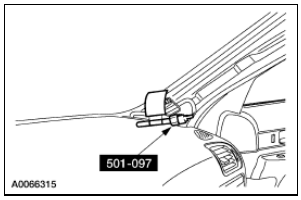
    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

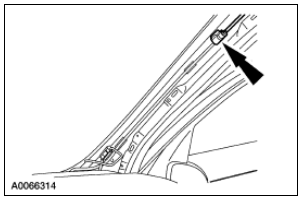
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Vehicles with side air curtains

24. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger side air curtain module electrical connector.



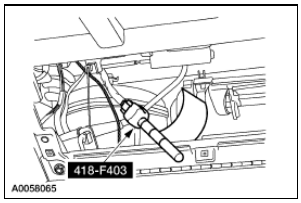
25. Connect the passenger side air curtain module electrical connector.



26. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .

All vehicles

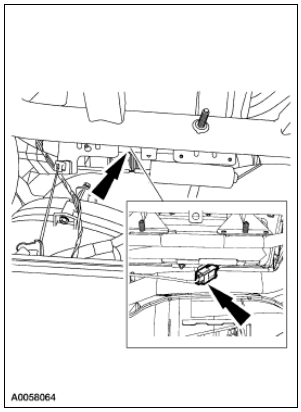
27. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



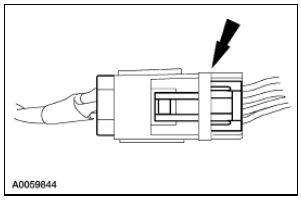
28. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

    Locate the passenger air bag module electrical connector.



29. Connect the passenger air bag module.

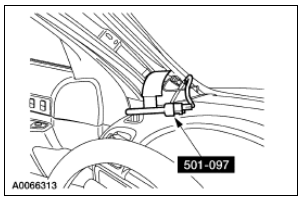


30. Install the glove compartment. For additional information, refer to Section 501-01 .

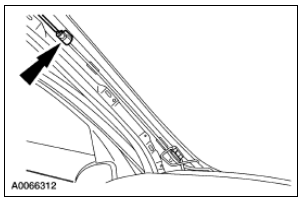
Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

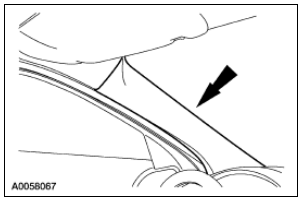
31. Remove the restraint system diagnostic tool from the vehicle harness side of the driver side air curtain module electrical connector.



32. Connect the driver side air curtain module electrical connector.

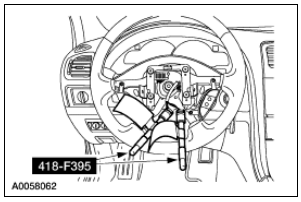


33. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .



All vehicles

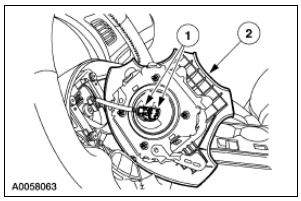
34. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



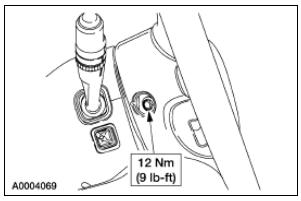
35. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Connect and position the driver air bag module.

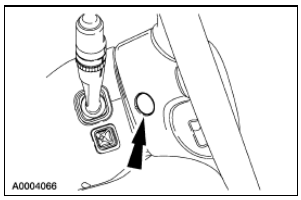
1. Connect the driver air bag module electrical connectors.
2. Position the driver air bag module to the steering wheel.



36. Install the two driver air bag module bolts (one shown).



37. Install the two steering wheel plugs (one shown).



38. Connect the battery ground cable. For additional information, refer to Section 414-00 .

39. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

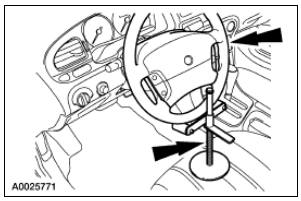
40. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Steering Gear

Printable View (134 KB)

1. **CAUTION: Do not allow the steering wheel to rotate while the intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .**

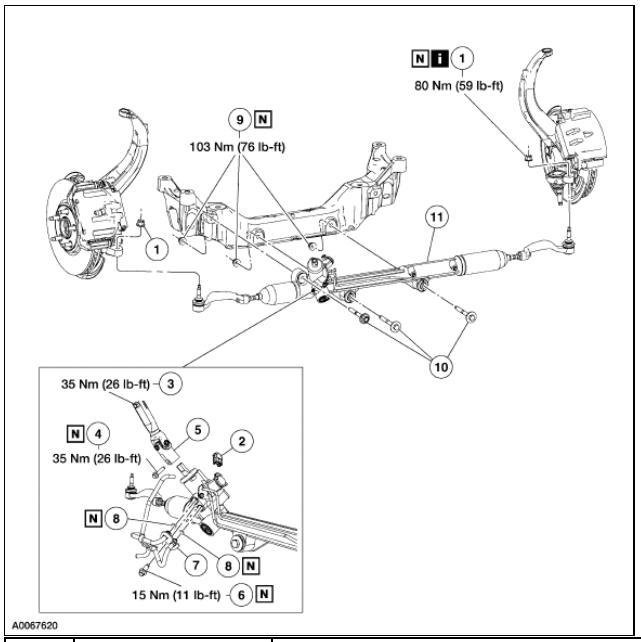
   Hold the steering wheel in the straight-ahead position using a suitable holding device.



2. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

3. Remove the components in the order indicated in the following illustration and table.

4. To install, reverse the removal procedure.



Item	Part Number	Description
1	W520214-S427	Tie-rod end nuts Removal Note
2	12B637	Variable assist power steering (VAPS) actuator electrical connector
3		Intermediate shaft slider bolt (loosen only)
4	W705113-S426	Intermediate shaft-to-steering gear bolt
5	3B676	Intermediate shaft
6	W708113-S426	Steering line clamp plate bolt

7		Steering lines and clamp plate
8		O-rings
9	W520214-S427	Steering gear-to-crossmember nuts
10	W708659-S426	Steering gear-to-crossmember bolts
11	3504	Steering gear

5. Fill, purge and leak test the system. For additional information, refer to Power Steering System Purging and Power Steering System Filling in this section.

6. Check and, if necessary, adjust the front end alignment. For additional information, refer to Section 204-00 .

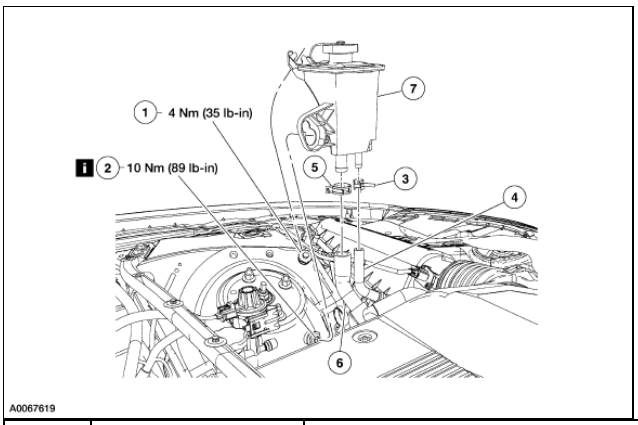
Item 1: Tie-Rod End Nuts Removal Note

1. Use the hex holding feature to prevent the stud from turning when removing the tie-rod end nut.

Power Steering Reservoir

Printable View (89 KB)

1. Remove the components in the order indicated in the following illustration and table.
2. To install, reverse the removal procedure.



Item	Part Number	Description
1	N803882	Upper reservoir isolator bolt (loosen only)
2	W705012-S306	Lower reservoir isolator bolt (loosen only) Removal Note
3	3A713	Clamp
4	3A713	Cooler-to-reservoir return hose
5	3691	Clamp
6	3691	Reservoir-to-pump supply hose
7	3E764	Fluid reservoir

3. Fill, purge and leak test the system. For additional information, refer to Power Steering System Purging and Power Steering System Filling in this section.

Item 2: Lower Reservoir Isolator Bolt Removal Note

1. Loosen the bolt and detach the reservoir from the isolators.

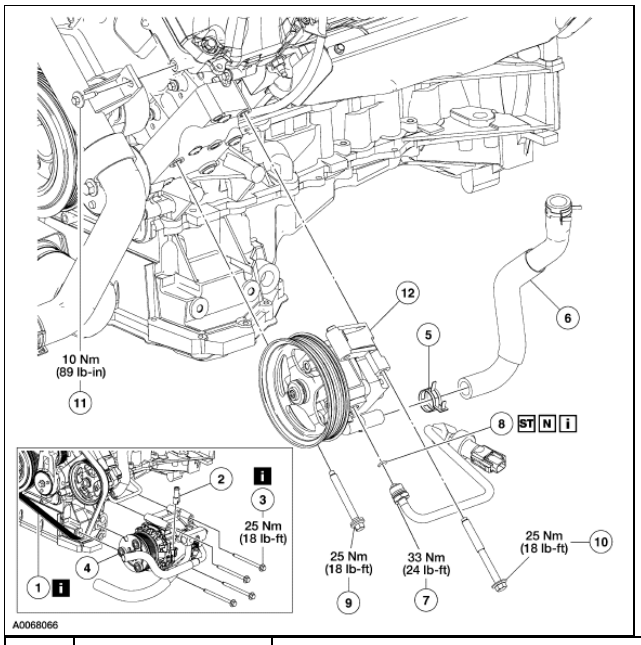
Power Steering Pump

Printable View (258 KB)

Special Tool(s)

 ST1444-A	Installer Set, Teflon Seal 211-D027 (D90P-3517-A) or equivalent

1. Remove the engine appearance cover.
2. Remove the air cleaner and the air cleaner outlet tube. For additional information, refer to Section 303-04A 3.0L engine or Section 303-04B 3.9L engine.
3. With the vehicle in NEUTRAL, position on a hoist.
4. Remove the LH front frame rail deflector shields.
5. Remove the components in the order indicated in the following illustration and table.
6. To install, reverse the removal procedure.



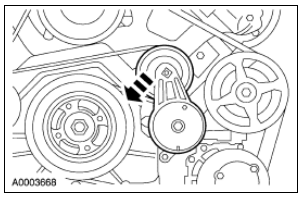
Item	Part Number	Description
1	8620	Accessory drive belt (position aside) Removal Note
2		Air conditioning compressor electrical connector (3.9L only)
3	W705825-S	Compressor bolts (3.9L only) Removal Note
4	19703	Compressor (3.9L only, position aside)
5		Clamp (part of 3691)

6	3691	Reservoir-to-pump supply hose
7	3A719	Pressure line fitting
8	3E764	O-ring Installation Note
9	W704792-S309	Forward pump bolts (2 req'd)
10	W704752-S309	Rearward pump bolts (2 req'd)
11	W503925-S	Radiator hose tube-to-engine bolt (3.9L engine only, 2 req'd)
12	3A674	Power steering pump

7. Fill, purge and leak test the system. For additional information, refer to Power Steering System Purging and Power Steering System Filling in this section.

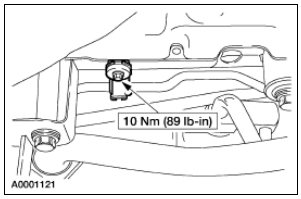
Item 1: Accessory Drive Belt Removal Note

1. Release the tension and position the belt aside.



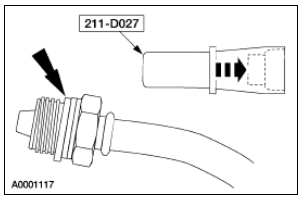
Item 3: Compressor Bolts (3.9L only) Removal Note

1. To ease the removal of the upper air conditioning compressor bolts, remove the bolt and detach the power steering line retainer bracket aside.



Item 8: O-Ring Installation Note

1. Using the special tool, install a new O-ring on the pressure line fitting.



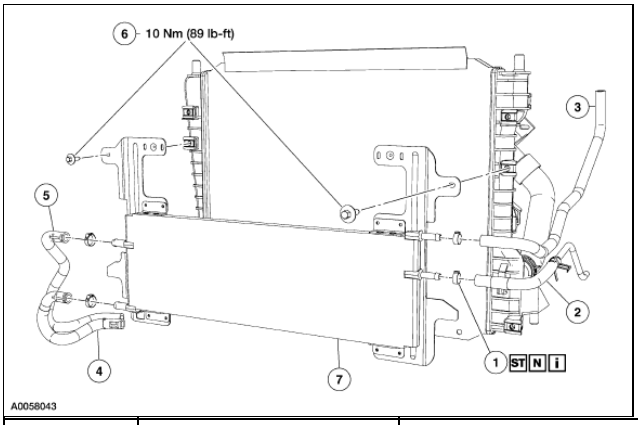
Power Steering Fluid Cooler

Printable View (94 KB)

Special Tool(s)

 ST1301-A	Installer, Constant Velocity Boot Clamp 205-343 (T95P-3514-A)

1. Remove the air conditioning condenser. For additional information, refer to Section 412-00 .
2. Remove the components in the order indicated in the following illustration and table.
3. To install, reverse the removal procedure.

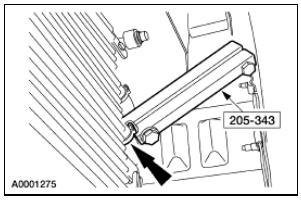


Item	Part Number	Description
1	3C750	Hose clamps (4 req'd) Installation Note
2	3A713	Steering gear-to-cooler hose
3	3493	Cooler-to-reservoir return hose
4	7A030	Transmission cooler line
5	7A031A	Transmission cooler line
6	W500211-S426	Cooler-to-radiator bolts
7	3F749	Power steering fluid cooler

4. Fill, purge and leak test the system. For additional information, refer to Power Steering System Purging and Power Steering System Filling in this section.

Item 1: Hose Clamps Installation Note

1. Using the special tool, tighten the clamps.



205-343
A0001275

Steering Column

Printable View (183 KB)

Special Tool(s)

 ST1321-A	Remover, Differential Bearing 205-116 (T77F-4220-B1)

⚠ CAUTION: Do not allow the steering column shaft to rotate while the intermediate shaft is disconnected or damage to the clockspring can result. If there is evidence that the shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .

NOTE: If removing the steering wheel only, carry out steps one and two before starting the removal procedure. If removing the intermediate shaft, proceed to item seven in the removal procedure.

1. Disconnect the battery negative cable for at least one minute to deplete the backup power supply. For additional information, refer to Section 414-00 .

2. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes in the deactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

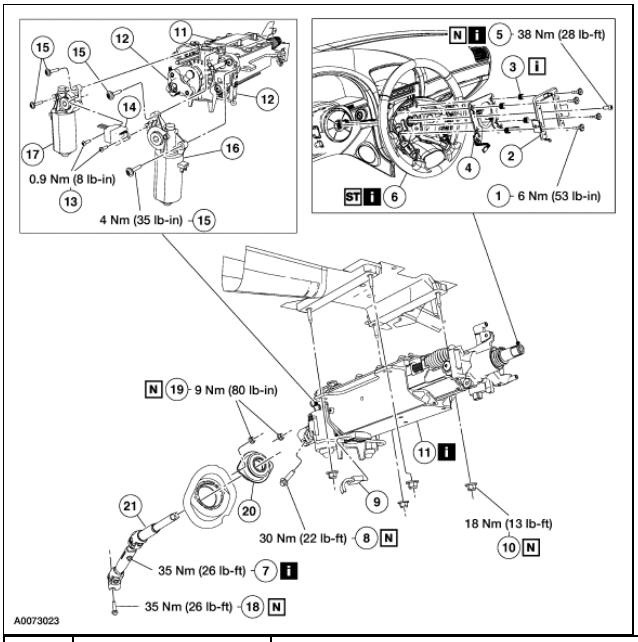
3. If removing the steering column, remove the steering column opening trim cover and reinforcement.

4. If removing the steering column, remove the multifunction switch. For additional information, refer to Steering Column Switches in this section.

5. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Steering wheel	1-6
Steering column	1-11
Steering column release motors	1-17
Intermediate shaft	7, 8, 18-21

6. To install, reverse the removal procedure.



Item	Part Number	Description
1	13A875	Bolts (4 req'd)
2	13A875	Horn switch pad
3	13A875	Horn switch springs (4 req'd) Installation Note
4	13A875	Horn switch
5	N807493-S301	Steering wheel bolt Removal Note
6	3600	Steering wheel Removal Note
7	3B676	Intermediate shaft slider bolt Removal Note
8	W705113-S436	Steering column-to-intermediate shaft bolt
9		Electrical connector
10	N806423-S56	Steering column-to-instrument panel nuts (4 req'd)
11	3C529	Steering column Removal Note
12	3C529	Release motor electrical connectors
13	390345-S36	Screws (2 req'd)
14	3F818	Rotation sensor
15	W701912-S436	Screws (4 req'd)
16	3D538H	Column release motor (telescopic)
17	3D538G	Column release motor (tilt)
18	W705113-S436	Intermediate shaft-to-steering gear bolt
19	N806385-S58	Plate-to-collar nuts
20	3E735	Plate
21	3C662	Intermediate shaft

7. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes in the reactivation procedure.**

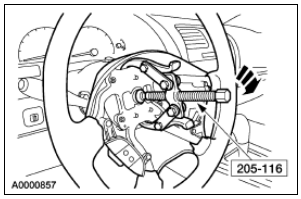
If deactivated, reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Item 5: Steering Wheel Bolt Removal Note

1. Loosen the bolt and do not remove until the steering wheel has been loosened from the column.

Item 6: Steering Wheel Removal Note

1. Using the special tool, press on the bolt until the steering wheel is loose from the column.
    - Remove and discard the steering wheel bolt.
    - Remove the steering wheel.



Item 7: Intermediate Shaft Slider Bolt Removal Note

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .

Item 11: Steering Column Removal Note

1. If the steering column release motors are being removed, support the steering column in a soft-jawed vice.

Item 3: Horn Switch Springs Installation Note

1. To provide correct tension between the horn pad and the horn switch, install the yellow horn switch springs at the bottom of the horn switch pad and the silver springs at the top.

Steering Column Switches

 ST2507-A	Diagnostic Tool, Restraint System (4 req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 req'd) 418-F088 (105-R0012)
 ST1220-A	Remover, Differential Bearing 205-116 (T77F-4220-B1)

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Tilt the steering column all the way down and extend it all the way out.

2. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

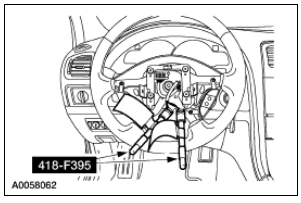
   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

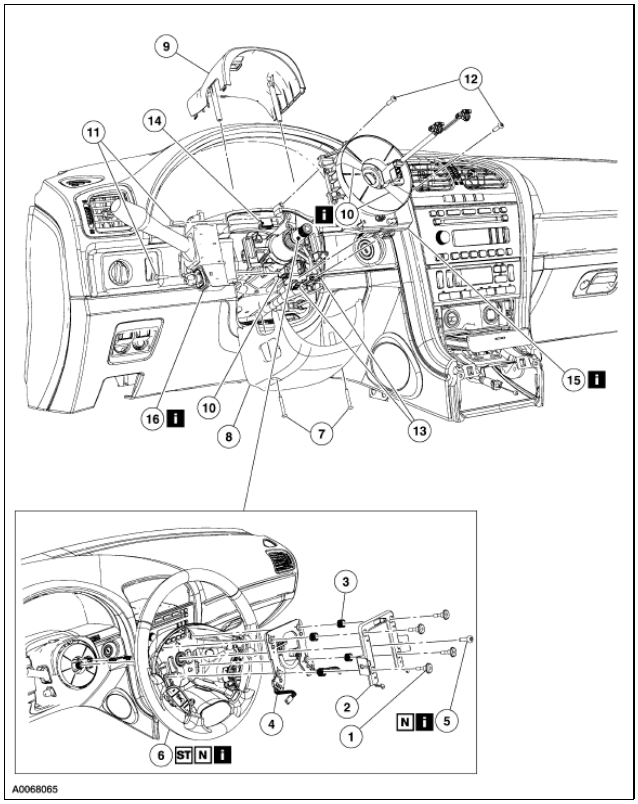
4. Position the front wheels to the straight-ahead position.

5. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



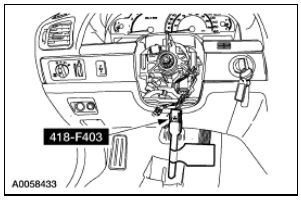
6. **NOTE:** Do not allow the clockspring to turn from its removal position.

   Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	13A875	Bolts (4 req'd)
2	13A875	Horn switch pad
3	13A875	Horn switch springs (4 req'd)
4	13A875	Horn switch
5	N807493-S301	Steering wheel bolt Removal Note
6	3600	Steering wheel Removal Note
7	W504246-S	Screw
8	3533	Lower steering column shroud
9	3530	Upper steering column shroud
10		Tape Removal Note
11	W390345-S	Screw
12	W390345-S	Screw
13	14401	Connector
14	14401	Connector
15	14A664	Clockspring Removal Note
16	13K359	Multifunction switch Removal Note

7. Attach the restraint system diagnostic tool to the vehicle harness side of the clockspring electrical connector.



8. Connect the battery ground cable. For additional information, refer to Section 414-00 .

9. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of Section 501-20B .

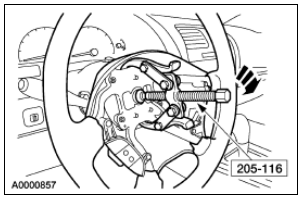
10. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Item 5: Steering Wheel Bolt Removal Note

1. Loosen the bolt and do not remove until the steering wheel has been loosened from the column.

Item 6: Steering Wheel Removal Note

1. Using the special tool, press on the bolt until the steering wheel is loose from the column.
   - Remove and discard the steering wheel bolt.
   - Remove the steering wheel.



Item 10: Tape Removal Note

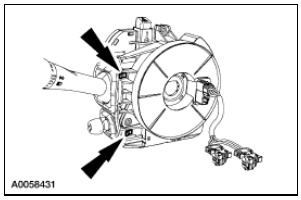
1. Apply two strips of masking tape across the clockspring to prevent accidental rotation when the clockspring and multifunction switch are removed.

Item 15: Clockspring Removal Note

1. Remove the clockspring and the multifunction switch as an assembly.

Item 16: Multifunction Switch Removal Note

1. Release the tabs and slide the multifunction switch out of the clockspring.



Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

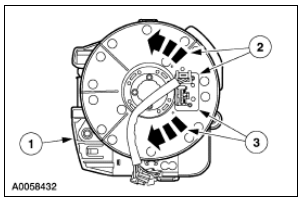
1. **⚠ WARNING: Incorrect centralization can result in premature component failure. If in doubt when centralizing the clockspring, repeat the centralizing procedure. Failure to follow this instruction can result in personal injury.**

   ⚠ CAUTION: Make sure the front wheels are in the straight-ahead position.

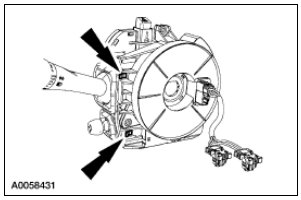
   If the clockspring has rotated out of center, follow these steps to center the clockspring.

   1. Hold the clockspring outer housing stationary.
   2. **⚠ CAUTION: Overturning will destroy the clockspring. The internal ribbon wire acts as the stop and can be broken from its internal connection.**

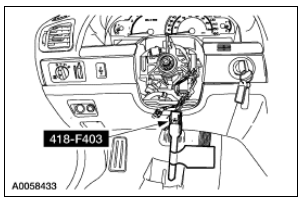
      While turning the rotor counterclockwise, carefully feel for the ribbon wire to run out of length and for a slight resistance. Stop turning at this point.
   3. Turn the clockspring clockwise approximately 2-1/2 turns. This is the center point of the clockspring.
   - Do not allow the rotor to turn from this position.



2. Align the multifunction switch to the clockspring and slide the two together.
   - Make sure the tabs are interlocked.

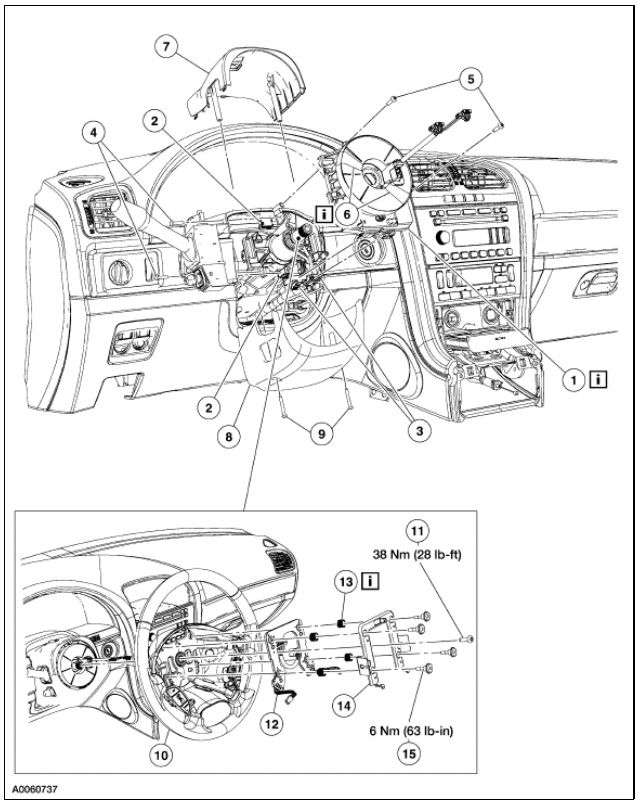


3. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.



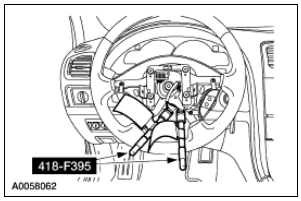
4. **NOTE:** Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	3678	Clockspring Installation Note
2	14401	Connector (2)
3	14401	Connector (2)
4	W390345-S	Screw (2)
5	W390345-S	Screw (2)
6		Tape Installation Note
7	3530	Upper steering column shroud
8	3533	Lower steering column shroud
9	W504246-S	Screw
10	3600	Steering wheel
11	N807493-S101	Steering wheel bolt
12	13A875	Horn switch
13	13A875	Horn switch springs (4 req'd) Installation Note
14	13A875	Horn switch pad
15	13A875	Bolts (4 req'd)

5. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.



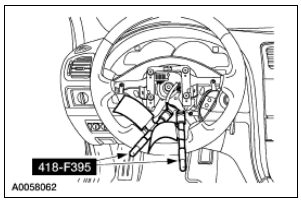
6. Connect the battery ground cable. For additional information, refer to Section 414-00 .

7. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of Section 501-20B .

8. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

9. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



10. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

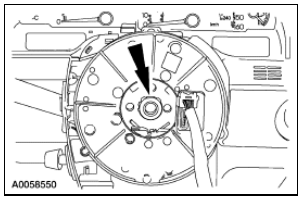
11. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of Section 501-20B .

Item 1: Clockspring Installation Note

1. **NOTE:** Slight turning of the clockspring rotor is allowable for alignment purposes to the steering column.

   With the flat of the clockspring aligned to the flat of the steering column, slide the clockspring onto the steering column.



Item 6: Tape Installation Note

1. Remove the tape from the clockspring.

Item 13: Horn Switch Springs Installation Note

1. To provide correct tension between the horn pad and the horn switch, install the yellow horn switch springs at the bottom of the horn switch pad and the silver springs at the top.

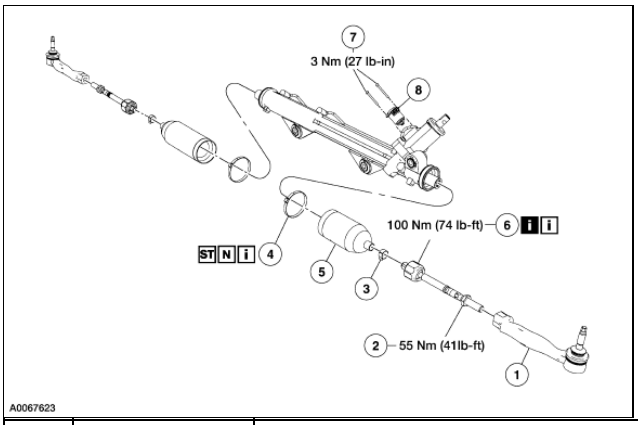
Steering Gear

Printable View (101 KB)

Special Tool(s)

 ST1301-A	Installer, Constant Velocity Joint Boot Clamp 205-343 (T95T-3514-A)

1. Remove the steering gear. For additional information, refer to Steering Gear in this section.
2. Drain any excess power steering fluid from the steering gear and then clean the exterior of the gear using a suitable solvent.
3. Index-mark the tie-rod end to the tie-rod end jam nut and to the spindle tie-rod.
4. Disassemble the components in the order indicated in the following illustration and table.
5. To assemble, reverse the disassembly procedure.



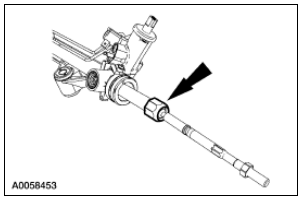
Item	Part Number	Description
1	3A130	Tie-rod end
2	N803637-S36	Tie-rod end jam nuts
3	3C650	Outer bellows clamp
4	3K745	Inner bellows clamp Assembly Note
5	3332	Steering gear bellows
6	3A131	Spindle tie-rod Disassembly Note
6	3280	Spindle tie-rod Assembly Note
7		Variable assist power steering (VAPS) actuator bolts
8	3N803	VAPS actuator

6. After installing the steering gear in the vehicle, adjust the front toe. For additional information, refer to Section 204-00 .

Item 6: Spindle Tie-Rod Disassembly Note

1. **⚠ CAUTION: To resist rotation and prevent damage to the steering gear during removal of the spindle tie-rods, center the steering gear and position the rack gear in a soft-jawed vice.**

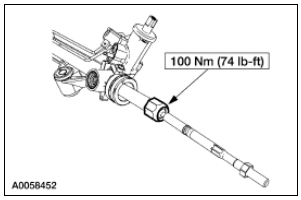
   Remove the spindle tie-rod.



Item 6: Spindle Tie-Rod Assembly Note

1. **⚠ CAUTION: To resist rotation and prevent damage to the steering gear during removal of the spindle tie-rods, center the steering gear and position the rack gear in a soft-jawed vice.**

   Install the spindle tie-rod.



Item 4: Inner Bellows Clamp Assembly Note

1. Using the special tool, install the clamps.

Climate Control System

Printable View (517 KB)

⚠ WARNING: To avoid accidental deployment and possible injury, the air bag system backup power supply must be depleted before repairing any climate control components. To deplete the backup power supply, disconnect the battery ground cable and wait one minute.

⚠ WARNING: Carbon monoxide is colorless, odorless and dangerous. If it is necessary to operate the engine with vehicle in a closed area such as a garage, always use an exhaust collector to vent the exhaust gases outside the closed area.

⚠ WARNING: R-134a is classified as a safe refrigerant, but misuse can make it dangerous. The following precautions must be observed:

- Always wear safety goggles when repairing an air conditioning system.
- Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13°F) under atmospheric pressure and it will freeze skin tissue.
- Never allow refrigerant R-134a gas to escape in quantity in an occupied space. R-134a is non-toxic, but it will displace the oxygen needed to support life.
- Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but when it is exposed to high temperatures, such as a torch flame, it decomposes. During decomposition it releases irritating and toxic gases (as described in the MSDS sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.
- Do not allow any portion of the charged air conditioning system to become too hot. The pressure in an air conditioning system rises as the temperature rises and temperatures of approximately 85°C (185°F) can be dangerous.
- Allow the engine to cool sufficiently prior to carrying out maintenance or serious burns and injury can occur.

⚠ CAUTION: To avoid damaging the vehicle or A/C components, the following precautions must be observed:

- The A/C refrigerant of all vehicles must be identified and analyzed prior to refrigerant charging. Failure to do so can contaminate the shop bulk refrigerant and other vehicles.
- Do not add R-12 refrigerant to an A/C system that requires the use of R-134a refrigerant. These two types of refrigerant must never be mixed. Doing so can damage the A/C system.
- Charge the A/C system with the engine running using the low-pressure side of the A/C system.
- Use only R-134a refrigerant. Due to environmental concerns, when the air conditioning system is drained, the refrigerant must be collected using refrigerant recovery/recycling equipment. Federal law REQUIRES that R-134a be recovered into appropriate recovery equipment and the process be conducted by qualified technicians who have been certified by an approved organization, such as MACS, ASI, etc. Use of a recovery machine dedicated to R-134a is necessary to reduce the possibility of oil and refrigerant incompatibility concerns. Refer to the instructions provided by the equipment manufacturer when removing refrigerant from or charging the air conditioning system.
- Refrigerant R-134a must not be mixed with air for leak testing or used with air for any other purpose above atmospheric pressure. R-134a is combustible when mixed with high concentrations of air and higher pressures.
- A number of manufacturers are producing refrigerant products that are described as direct substitutes for refrigerant R-134a. The use of any unauthorized substitute refrigerant can severely damage the A/C components. If repair is required, use only new or recycled refrigerant R-134a.

⚠ CAUTION: To avoid contamination of the A/C system:

- Never open or loosen a connection before discharging the system.
- When loosening a connection, if any residual pressure is evident, allow it to leak out before opening the fitting.
- Before charging, evacuate a system that has been opened to install a new component or a system that has discharged through leakage.
- Seal open fittings with a cap or plug immediately after disconnecting a component from the system.
- Clean the outside of the fittings thoroughly before disconnecting a component from the system.
- Do not remove the sealing caps from a new component until ready to install.
- Refrigerant oil will absorb moisture from the atmosphere if left uncapped. Do not open an oil container until ready to use, and install the cap immediately after using. Store the oil in a clean, moisture-free container.
- Install a new O-ring seal before connecting an open fitting. Coat the fitting and the O-ring seal with refrigerant oil before connecting.
- When installing a refrigerant line, avoid sharp bends. Position the line away from the exhaust or any sharp edges that can chafe the line.
- Tighten threaded fittings only to specifications. The steel and aluminum fittings used in the refrigerant system will not tolerate overtightening.
- When disconnecting a fitting, use a wrench on both halves of the fitting to prevent twisting of the refrigerant lines or tubes.
- Do not open a refrigerant system or uncap a new component unless it is as close as possible to room temperature. This will prevent condensation from forming inside a component that is cooler than the surrounding air.

The dual automatic temperature control system maintains the selected vehicle interior temperature by heating and/or cooling the air.

- During A/C operation the system also reduces the relative humidity of the air.
- The driver may override the automatic mode of operation.

Principles of Operation

There are four main principles involved with the basic theory of operation:

- heat transfer
- latent heat of vaporization
- relative humidity
- effect of pressure on boiling or condensation

Heat Transfer

If two substances of different temperature are placed near each other, the heat in the warmer substance will transfer to the colder substance.

Latent Heat of Vaporization

When a liquid boils (converts to gas) it absorbs heat without raising the temperature of the resulting gas. When the gas condenses (converts back to a liquid), it gives off heat without lowering the temperature of the resulting liquid.

Relative Humidity

The amount of moisture (water vapor content) that the air can hold is directly related to the air temperature. The more heat there is in the air, the more moisture the air can hold. The lower the moisture content in the air, the more comfortable you feel. Removing moisture from the air lowers its relative humidity and improves

personal comfort.

Effects of Pressure on Boiling or Condensation

As the pressure is increased on a liquid, the temperature at which the liquid boils (converts to gas) also increases. Conversely, when the pressure on a liquid is reduced, its boiling point is also reduced. When in the gas state, an increase in pressure causes an increase in temperature, while a decrease in pressure will decrease the temperature of the gas.

The Refrigerant Cycle

During stabilized conditions (air conditioning system shutdown), the refrigerant is in a vaporized state and pressures are equal throughout the system. When the A/C compressor is in operation it increases pressure on the refrigerant vapor, raising its temperature. The high-pressure and high-temperature vapor is then released into the top of the A/C condenser core.

The A/C condenser, being close to ambient temperature, causes the refrigerant vapor to condense into a liquid when heat is removed from the refrigerant by ambient air passing over the fins and tubing. The now liquid refrigerant, still at high pressure, exits from the bottom of the A/C condenser and enters the inlet side of the A/C receiver drier. The receiver drier is designed to remove moisture from the refrigerant.

The outlet of the receiver drier is connected to the thermostatic expansion valve (TXV). The TXV provides the orifice which is the restriction in the refrigerant system and separates the high and low pressure sides of the A/C system. As the liquid refrigerant passes across this restriction, its pressure and boiling point are reduced.

The liquid refrigerant is now at its lowest pressure and temperature. As it passes through the A/C evaporator, it absorbs heat from the airflow passing over the plate/fin sections of the A/C evaporator. This addition of heat causes the refrigerant to boil (convert to gas). The now cooler air can no longer support the same humidity level of the warmer air and this excess moisture condenses on the exterior of the evaporator coils and fins and drains outside the vehicle.

The refrigerant cycle is now repeated with the A/C compressor again increasing the pressure and temperature of the refrigerant.

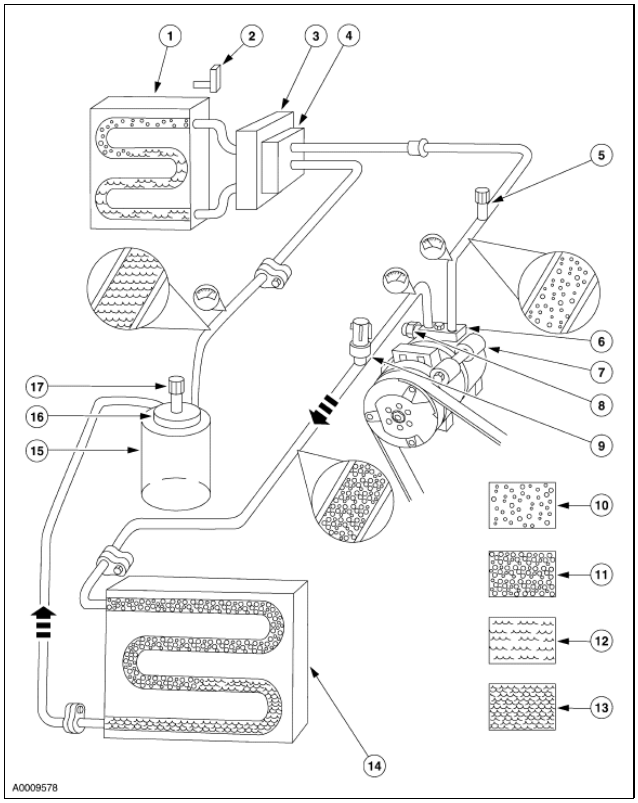
A thermistor which monitors the temperature of the air that has passed through the evaporator core controls A/C clutch cycling. If the temperature of the evaporator core discharge air is low enough to cause the condensed water vapor to freeze, the A/C clutch is disengaged by the vehicle powertrain control module (PCM).

The high-side line pressure is also monitored so that A/C compressor operation will be interrupted if the system pressure becomes too high or is determined to be too low (low charge condition).

The A/C compressor thermal protection switch will interrupt compressor operation if the compressor housing exceeds temperature limits.

The A/C compressor relief valve will open and vent refrigerant to relieve unusually high system pressure.

Clutch Cycling Thermostatic Expansion Valve Type Refrigerant System



Item	Part Number	Description
1	19860	A/C evaporator core
2	19C734	A/C evaporator core outlet temperature thermistor
3	19849	Thermostatic expansion valve
4	19835	Manifold and tube assembly thermostatic expansion valve
5	19D701	A/C charge valve port (low side)
6	19D734	Manifold and tube assembly A/C compressor
7	19703	A/C compressor
8	19D644	A/C pressure relief valve
9	19D594	A/C pressure transducer
10		Low pressure vapor
11		High pressure vapor
12		Low pressure liquid
13		High pressure liquid
14	19712	A/C condenser core
15	19959	A/C receiver drier
16	19835	Manifold and tube assembly receiver drier
17	19D701	A/C charge valve port (high side)

Dual Automatic Temperature Control (DATC) Module Description

The DATC system automatically maintains a selected temperature for vehicle interior comfort and regulates the volume of airflow between the instrument panel registers, floor ducts, windshield defroster nozzle, and side window demisters. The system will automatically select between fresh and recirculated air with an optional manual override. The DATC system will also include a manual A/C override, blower speed override,

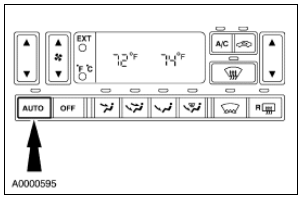
and airflow direction overrides.

The dual temperature zone feature provides the driver and the front seat passenger with their own independent temperature set points. The DATC system provides both the driver and front seat passenger with their selected temperature for interior comfort. In situations where the difference between the driver and the front seat passenger set points are very large, the DATC will tend to favor the driver's setting and make the front seat passenger as comfortable as possible.

The driver and front seat passenger will not have independent air distribution mode or fan controls so the system is dual temperature only. In some cases the passenger temperature set point may influence the air distribution mode or blower speed in automatic mode.

System Air Flow

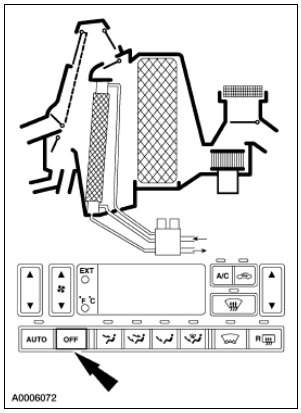
AUTO



When AUTO is selected:

- The temperature control setting(s) are manually set to the desired setting(s).
- The air inlet door actuator is automatically controlled by the DATC module, based on the temperature setting(s), but can be manually overridden by selecting the recirculation button.
- The panel door, floor door, defrost door and cold air bypass door actuators are automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by selecting any of the air distribution buttons.
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C compressor is automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by selecting the A/C button. The A/C compressor will not operate if the outside temperature is lower than approximately 2°C (35°F).
- The blower motor is on. The blower motor speed is automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by adjusting the blower speed rocker button.

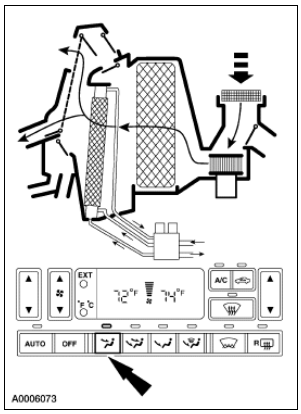
OFF



When OFF is selected:

- The air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment.
- The floor door actuator positions the floor door in the open position, and the panel door actuator, defrost door actuator, and cold air bypass door actuator position the panel door, defrost door, and cold air bypass door in the closed positions. This closes off airflow to the defrost duct, the side window demisters and the instrument panel A/C registers.
- The dual coolant control valve is in the closed position, preventing the flow of hot coolant to the heater core.
- The blower motor is off.

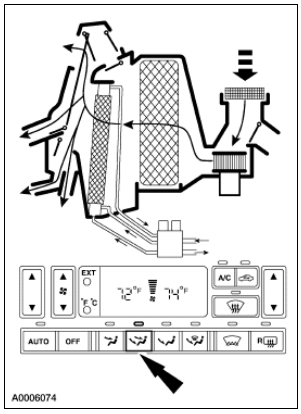
PANEL



When PANEL is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The panel door actuator positions the panel door in the open position and the floor door and defrost door actuators position the floor door and defrost door in the closed position, directing airflow to the instrument panel A/C registers. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

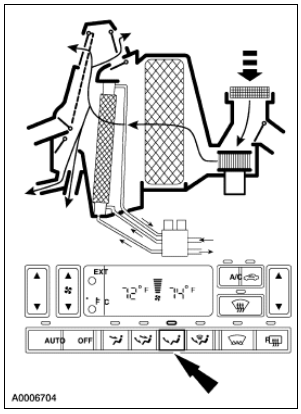
PANEL/FLOOR



When PANEL/FLOOR is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door as to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The panel door and floor door actuators position the panel door and floor door in the open position and the defrost door actuator positions the defrost door in the closed position, directing airflow to the instrument panel A/C registers and the floor duct. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

FLOOR

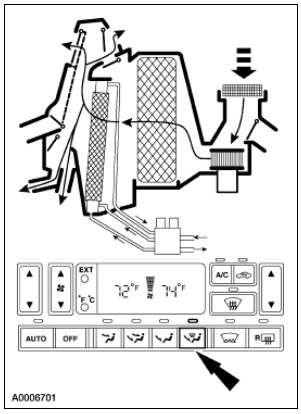


When FLOOR is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door as to admit only outside air into the passenger compartment. The DATC will automatically revert to the outside air position after approximately 1 to 4 minutes to prevent window fogging.
- The floor door actuator positions the floor door in the open position and the panel door and defrost door actuators position the panel door and defrost door in the closed position, directing airflow to the

floor duct. A small amount of airflow from the outboard instrument panel A/C registers will be present. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

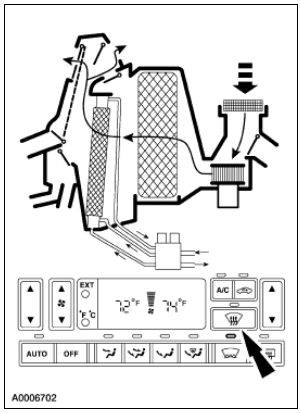
FLOOR/DEFROST



When FLOOR/DEFROST is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door as to admit only outside air into the passenger compartment. The DATC will automatically revert to the outside air position after approximately 1 to 4 minutes to prevent window fogging.
- The floor door and defrost door actuators position the floor door and defrost door in the open position and the panel door actuator positions the panel door in the closed position, directing airflow to the floor duct, the windshield defroster ducts, and the side window demisters. A small amount of airflow from the outboard instrument panel A/C registers will be present. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

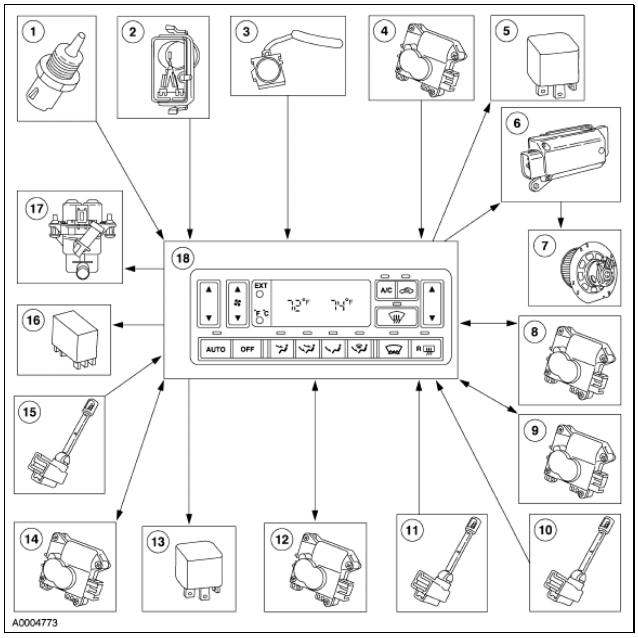
DEFROST



When DEFROST is selected:

- The Recirc request button is disabled. The air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The defrost door actuator positions the defrost door in the open position and the panel door, floor door, and cold air bypass door actuators position the panel door, floor door, and cold air bypass door in the closed position, directing airflow to the windshield defroster ducts and the side window demisters. A small amount of airflow from the outboard instrument panel A/C registers will be present.
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is disabled. To reduce fogging, the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F).
- The blower motor is on.

Climate Control System Electrical Components Directly Linked to DATC Module



Item	Part Number	Description
1	12A647	Ambient air temperature sensor
2	19C734	In-vehicle temperature control sensor
3	19E663	Dual sunload sensor
4	19E616	Panel door actuator

5	14N089	Blower motor ignition relay
6	19E624	Blower motor speed control
7	19805	Blower motor
7	18504	Blower wheel (not serviced with motor)
8	19E616	Air inlet door actuator
9	19E616	Cold air bypass door actuator
10	19C734	Passenger air discharge temperature sensor
11	19C734	Evaporator discharge air temperature sensor
12	19E616	Floor door actuator
13	14N089	Heated wiper park relay
14	19E616	Defrost door actuator
15	19C734	Driver air discharge temperature sensor
16	14N089	Electric water pump relay
17	18495	Dual coolant control valve
18	19980	Dual automatic temperature control module

Climate Control System Components J1850 Communications Network (SCP) Linked

Inspection and Verification

1. Verify the customer's concern by operating the climate control system to duplicate the condition.
2. Inspect to determine if one of the following mechanical or electrical concerns apply:

   Visual Inspection Chart

Mechanical	Electrical
• Loose, missing or damaged A/C compressor drive belt • Loose or disconnected A/C	• Fuse(s) • Blower motor inoperative • A/C compressor inoperative

clutch • Broken or leaking refrigerant lines • Obstructed in-vehicle temperature sensor • Disconnected in-vehicle temperature aspirator hose • A/C registers are not working (open/close) • Front floor ducts not in place • Incorrectly installed in-vehicle temperature sensor • Incorrectly installed ambient air temperature sensor	• Circuit short/open. • Disconnected, loose fitting, or incorrectly installed electrical connectors and pins • Cooling fan inoperative • Relays not functional or not installed

3. As pinpoint tests and measurements are being carried out, be sure to inspect for any disconnected, loose-fitting, or incorrectly installed component, module and in-line electrical connectors and pins.

4. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

5. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the scan tool menu. If the vehicle selection cannot be entered:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.
    - check that the battery voltage is greater than 9V.

If the scan tool still does not allow the vehicle selection to be entered, refer to the scan tool manual.

6. Carry out the Data Link Diagnostic Test using the scan tool. If the scan tool responds with:
    - SCP+, SCP- or UBP circuits fault = ALL MODULE NO RESPONSE/NOT EQUIPPED, go to Module Communication Network Diagnostics to diagnose the network concern.
    - If the powertrain control module (PCM) is not listed for a communication concern, turn the A/C controls to OFF and execute the self-test diagnostics for the PCM.
    - If the DATC module is not listed for a communication concern, execute the self-test diagnostics for the DATC module.

7. If any PCM or DATC DTCs are retrieved, and are related to the concern, go to the Powertrain Control Module Diagnostic Trouble Code (DTC) Index or the Dual Automatic Temperature Control (DATC) Module Diagnostic Trouble Code (DTC) Index in this section to continue the diagnostics.

8. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue the diagnostics.

9. If the DATC module cannot be accessed by the scan tool, Go To Pinpoint Test A .

Dual Electronic Automatic Temperature Control (DATC) Module Diagnostic Trouble Codes DTCs

If using the scan tool or front panel diagnostics to check for DATC DTCs:

1. Check continuous DTCs.

2. Run DATC self-test. Refer to Front Panel DATC Self-Test (On-demand Diagnostic Trouble Codes DTCs).

General Information:

- If the DTC is continuous only and does not appear in the self-test, this indicates an intermittent fault condition, such as a poor wiring connection or a loose terminal. If the DATC does not appear after running the self-test it may also indicate that the DTC may no longer exist.
- If the DTC is continuous and appears in the self-test, this indicates a hard fault. A hard fault suggests a permanent wiring failure, disconnected connector or component failure.

Front Panel DATC Module Self-Test (On-Demand Diagnostic Trouble Codes DTCs)

On-demand DTCs are those that are reported by an ECU when a failure is detected while executing a diagnostic test. For the DATC module this means that all faults (hard) that occur while the module is conducting a self-test shall be reported as an on-demand DTC.

- The DATC module self-test will not detect concerns associated with data link messages such as engine coolant temperature or vehicle speed signals. The scan tool must be used to retrieve these concerns.
- The vehicle interior temperature should be between 0-32°C (32-90°F) when carrying out the self-test. If the temperatures are not within the specified ranges, false temperature sensor DTCs may be displayed.

The DATC module self-test through the front panel display:

- can be initiated at any time. Normal operation of the system stops when the self-test is activated.
- is entered by pressing the OFF and FLOOR buttons simultaneously and then pressing the AUTO button within two seconds. The display will show counts of 1 to 25 in the center of the display window. Record all DTCs displayed.
- concludes by reporting all on-demand DTCs. Follow the diagnostics procedure given under ACTION in the DTC index for each DTC given.
- reports individual on-demand DTCs as four-digit DTCs (less the alpha character).
- will calibrate all the mode doors and check all analog inputs. The DATC module will only report on-demand (hard) faults that occurred while the DATC module was conducting its self-test.
- will light all control panel display segments if no faults are detected.
- will report individual on-demand DTCs without the °C symbol lit.

To exit the self-test, press the defrost button. This will clear all on-demand codes from the DATC module memory. If no button is pushed, DTCs will continue to be displayed.

Upon exit from the self-test the DATC module returns to operational status. The DATC module executes a hard (cold boot) reset which places the DATC system in the OFF mode.

If a condition exists but no DTCs appear during the self-test, GO to Symptom Chart Condition: The DATC System Is Inoperative, Intermittent or Incorrect Operation.

Always exit the self-test before powering the system down (system turned OFF).

Front Panel DATC Module Display Retrieve Continuous Diagnostic Trouble Codes (DTCs)

Continuous DTCs are fault codes recorded by the DATC module which have occurred during normal operation. For the DATC module this means that all faults (intermittent or hard) that occur while the module is in an operational state shall be reported as a continuous DTC.

- To retrieve continuous DTCs, press the OFF and PANEL buttons simultaneously, followed by pressing the AUTO button within two seconds.
- The DATC module will report all continuous DTCs to the vacuum fluorescent (VF) display.
- The DATC module will not carry out a self-test; it will only display continuous faults codes which are stored in memory.
- All VF display segments will light if no faults are detected.
- Individual continuous DTCs will be reported with the °C symbol lit.
- DTCs shall be reported as a four-digit DTC (less the alpha character).
- Pressing the front defrost button will exit the retrieve continuous DTCs mode and clear all continuous DTCs from DATC module memory.
- Pressing any other button (other than DEFROST) will exit the retrieve continuous DTCs mode and maintain all continuous DTCs in DATC module memory.
- Upon exit from the retrieve continuous DTCs mode the DATC module returns to operational status. The DATC module executes a hard (cold boot) reset which places the DATC system in the OFF mode.

Diagnostic Trouble Code Index

Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Action
P1460	WOT A/C cutout internal driver malfunction	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1461	A/C pressure sensor circuit high input	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

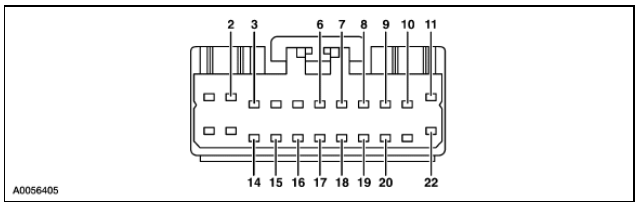
B2429	2429	Passenger heater core discharge temperature sensor short circuit	Go To Pinpoint Test E .
B2477	2477	Module configuration failure	RECONFIGURE the DATC module.
U1041	5041	SCP invalid or missing data for function read vehicle speed	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1073	5073	SCP invalid or missing data for engine coolant	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1027	5027	SCP invalid or missing data for engine rpm	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1178	5178	SCP invalid or missing data for voice command	This code will only appear if the vehicle is equipped with voice command.

U1222	5222	SCP invalid or missing data for interior lamps	

Symptom Chart

Symptom Chart
Connector Circuit Reference

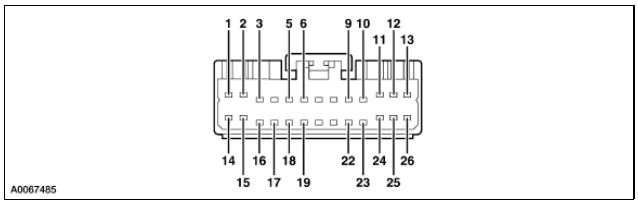
DATC Module C228a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 31-FA10 (BK) DATC module to blend door actuator	Less than 5 ohms to chassis ground.
3	CKT 20-FA10 (PK/OG) DATC module to ATC solenoid and manifold	Greater than 10 volts to chassis ground with the ignition ON.
6	CKT 8-FA51 WH/BK) DATC module to temperature blend door actuator (RH)	Greater than 10,000 ohms to chassis ground and 0 volts.
7	CKT 8-FA53 (WH/BU) DATC module to temperature blend door actuator (LH)	Greater than 10,000 ohms to chassis ground and 0 volts.
8	CKT 9-FA49 (BN/WH) DATC module to temperature blend door actuator (LH)	Greater than 10,000 ohms to chassis ground and 0 volts.
9	CKT 8-FA48 (WH/GN) DATC module to ATC solenoid and manifold	Resistance of 24,000-37,000 ohms to chassis ground.
10	CKT 8-FA44 (WH/RD) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
11	CKT 9-FA1 (BN) DATC module to ATC solenoid and manifold	Resistance of 3,000-5,000 ohms to chassis ground.
14	CKT 29-FA10 (OG/GN) DATC module to ATC solenoid and manifold	Greater than 10 volts at all times.
15	CKT 8-FA45 (WH/BU) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
16	CKT 9-FA44 (BN/RD) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
17	CKT 8-FA49 (WH/VT) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
18	CKT 8-FA47 (WH/GN) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
19	CKT 9-FA3 (BN/BU) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.

20	CKT 10-FA53 (GY/VT) DATC module to ATC solenoid and manifold	Greater than 10,000 ohms to chassis ground and 0 volts.
22	CKT 7-FA1 (YE) DATC module to ATC solenoid and manifold	Resistance of 800-1,000 ohms to chassis ground.

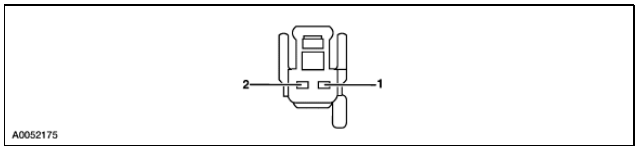
DATC Module C228b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-FB5 (WH/BK) ground	Approximately 0-5 volts with the DATC ON.
2	CKT 8-FB2 (WH/RD) ground	Approximately 0-5 volts with the DATC ON.
3	CKT 8-FB7 (WH) voltage supplied ignition on	Approximately 0-5 volts with the DATC ON.
5	CKT 91S-FB3 (BN/BU) DATC module to front blower motor speed control module	Greater than 10 volts at all times.
6	CKT 91S-FB4 (BN/GN) sensor signal return (ground)	Greater than 10 volts at all times.
9	CKT 33-FB8 (YE/RD) DATC module to temperature blend door actuator (LH)	Greater than 10,000 ohms to chassis ground and 0 volts.
10	CKT 32-FB8 (WH/RD) DATC module to temperature blend door actuator (RH)	Greater than 10,000 ohms to chassis ground and 0 volts.
11	CKT 32-FB2 (WH/RD) DATC module to temperature blend door actuator (RH)	Greater than 10,000 ohms to chassis ground and 0 volts.
12	CKT 33-FB2 (YE/RD) DATC module to temperature blend door actuator (RH)	Greater than 10,000 ohms to chassis ground and 0 volts.
13	CKT 32-FB5 (WH/BK) voltage supplied at all times	Greater than 10,000 ohms to chassis ground and 0 volts.
14	CKT 9-FA48 (BN/GN) DATC module to temperature blend door actuator (RH)	Approximately 0-5 volts with the DATC ON.
15	CKT 8-FB8 (WH/RD) front blower motor speed control input	Approximately 0-5 volts with the DATC ON.
16	CKT 8-FB6 (WH/VT) solar radiation sensor input (RH)	Approximately 0-5 volts with the DATC ON.
17	CKT 9-FA2 (BN/RD) ambient air temperature sensor input	Approximately 0-5 volts with the DATC ON.
18	CKT 91S-FA76 (BN/BU) solar radiation sensor input (LH)	Greater than 10 volts at all times.
19	CKT 31S-FA23 (BK/BU) DATC module to temperature blend door actuator (RH)	Greater than 10 volts at all times.

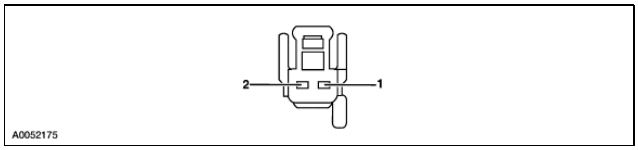
22	CKT 32-FB6 (WH/VT) DATC module to blend door actuator	Greater than 10,000 ohms to chassis ground and 0 volts.
23	CKT 33-FB6 (YE/VT) DATC module to blend door actuator	Greater than 10,000 ohms to chassis ground and 0 volts.
24	CKT 32-FB7 (WH)) DATC module to blend door actuator	Greater than 10,000 ohms to chassis ground and 0 volts.
25	CKT 33-FB7 (YE) DATC module to blend door actuator	Greater than 10,000 ohms to chassis ground and 0 volts.
26	CKT 33-FB5 (YE/BK) DATC module to blend door actuator	Greater than 10,000 ohms to chassis ground and 0 volts.

In-Vehicle Temperature Sensor C233



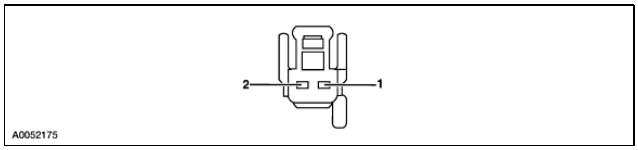
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-FA48 (WH/GN) in-vehicle air temperature sensor input	Approximately 5 volts with the DATC ON.
2	CKT 9-FA48 (BN/GN) sensor signal return (ground)	Less than 5 ohms to chassis ground.

Discharge Temperature Sensor (LH) C235



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-FA47 (WH/GN) LH discharge temperature sensor input	Approximately 5 volts with the DATC ON.
2	CKT 9-FA47 (BN/GN) sensor signal return (ground)	Less than 5 ohms to chassis ground.

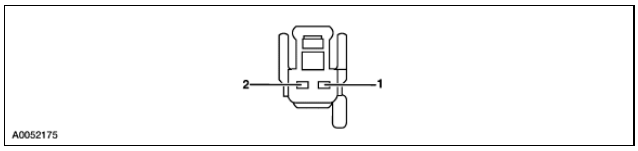
Discharge Temperature Sensor (RH) C255



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement

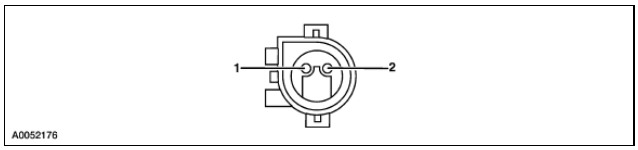
1	CKT 8-FA51 (WH/BK) RH discharge temperature sensor input	Approximately 5 volts with the DATC ON.
2	CKT 9-FA51 (BN/YE) sensor signal return (ground)	Less than 5 ohms to chassis ground.

Evaporator Discharge Air Temperature Sensor C296



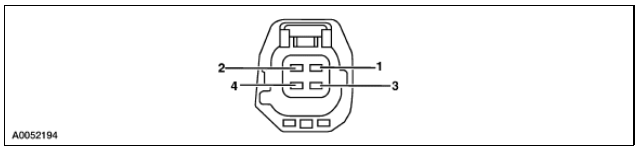
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 9-FA44 (BN/RD) sensor signal return (ground)	Less than 5 ohms to chassis ground.
2	CKT 8-FA44 (WH/RD) evaporator discharge air temperature sensor input	Approximately 5 volts with the DATC ON.

Ambient Air Temperature Sensor C132



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 8-FA49 (WH/VT) ambient air temperature sensor input	Approximately 5 volts with the DATC ON.
2	CKT 9-FA49 (BN/WH) sensor signal return (ground)	Less than 5 ohms to chassis ground.

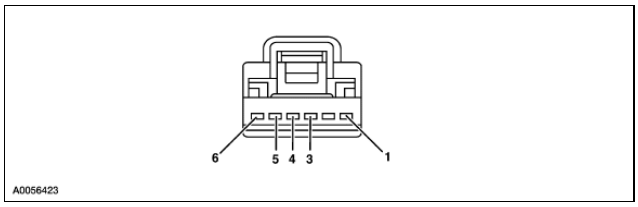
Blower Motor Speed Control Module C297



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31S-FA18 (BK/RD) blower motor speed control module to blower motor	Greater than 10,000 ohms to chassis ground and 0 volts.
2	CKT 31-FA45 (BK) blower motor speed control module ground	Less than 5 ohms to chassis ground.
3	CKT 8-FA45 (WH/BU) DATC module to blower motor speed control module input	Less than 1 volt in the lowest blower setting to greater than 4.5

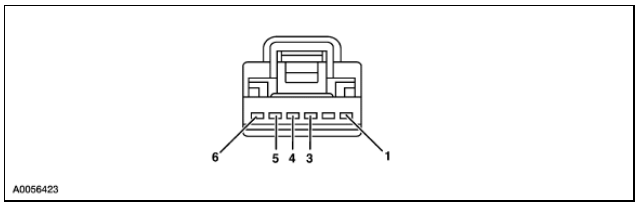
		volts in the highest blower setting.
4	CKT 30S-FA18 (RD/BK) voltage supply to blower motor speed control module	Greater than 10 volts with the DATC ON.

Cool Air Bypass Door Actuator C295



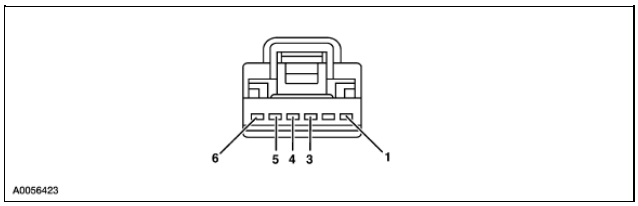
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-FB2 (WH/RD) cool air bypass door actuator close circuit	Greater than 10,000 ohms to chassis ground and 0 volts.
3	CKT 8-FB2 (WH/RD) cool air bypass door actuator feedback circuit	Less than 5 ohms chassis ground.
4	CKT 9-FB2 (BN/RD) cool air bypass door actuator ground	Less than 5 ohms chassis ground.
5	CKT 7-FB2 (YE/RD) cool air bypass door actuator reference voltage	Greater than 4.5 volts to chassis ground with the DATC ON.
6	CKT 33-FB2 (YE/RD) cool air bypass door actuator open circuit	Greater than 10,000 ohms to chassis ground and 0 volts.

Air Inlet Door Actuator C289



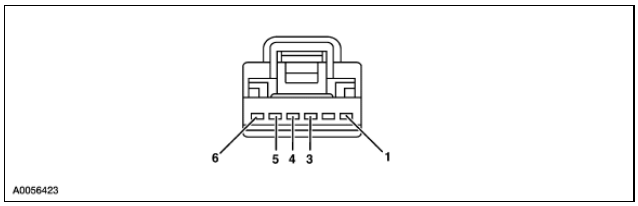
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-FB8 (YE/RD) door actuator close circuit	Greater than 10,000 ohms to chassis ground and 0 volts.
3	CKT 8-FB8 (WH/RD) door actuator feedback circuit	Less than 5 ohms chassis ground.
4	CKT 7-FB8 (YE/RD) door actuator reference voltage	Greater than 4.5 volts to chassis ground with the DATC ON.
5	CKT 9-FB8 (BN/RD) door actuator ground	Less than 5 ohms chassis ground.
6	CKT 32-FB8 (WH/RD) door actuator open circuit	Greater than 10,000 ohms to chassis ground and 0 volts.

Floor Mode Door Actuator C234



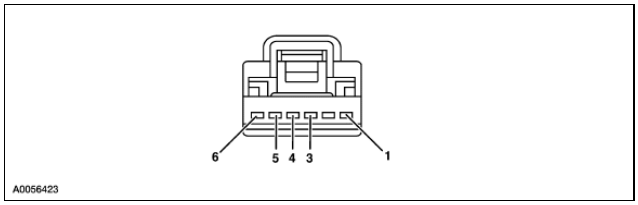
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-FB6 (WH/VT) door actuator open circuit	Greater than 10,000 ohms to chassis ground and 0 volts.
3	CKT 8-FB6 (WH/VT) door actuator feedback circuit	Less than 5 ohms chassis ground.
4	CKT 9-FB6 (BN/WH) door actuator ground	Less than 5 ohms chassis ground.
5	CKT 7-FB6 (YE/VT) door actuator reference voltage	Greater than 4.5 volts to chassis ground with the DATC ON.
6	CKT 33-FB6 (YE/VT) door actuator close circuit	Greater than 10,000 ohms to chassis ground and 0 volts.

Panel Mode Door Actuator C236



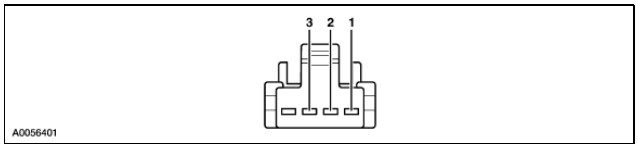
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-FB7 (YE) door actuator close circuit	Greater than 10,000 ohms to chassis ground and 0 volts.
3	CKT 8-FB7 (WH) door actuator feedback circuit	Less than 5 ohms chassis ground.
4	CKT 7-FB7 (YE) door actuator reference voltage	Greater than 4.5 volts to chassis ground with the DATC ON.
5	CKT 9-FB7 (BN) door actuator ground	Less than 5 ohms chassis ground.
6	CKT 32-FB7 (WH) door actuator open circuit	Greater than 10,000 ohms to chassis ground and 0 volts.

Defrost Mode Door Actuator C232



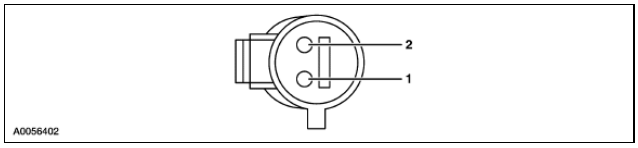
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-FB5 (YE/BK) door actuator close circuit	Greater than 10,000 ohms to chassis ground and 0 volts.
3	CKT 8-FB5 (WH/BK) door actuator feedback circuit	Less than 5 ohms chassis ground.
4	CKT 7-FB5 (YE/BK) door actuator reference voltage	Greater than 4.5 volts to chassis ground with the DATC ON.
5	CKT 9-FB5 (BN/YE) door actuator ground	Less than 5 ohms chassis ground.
6	CKT 32-FB5 (WH/BK) door actuator open circuit	Greater than 10,000 ohms to chassis ground and 0 volts.

Solar Radiation Sensor C286



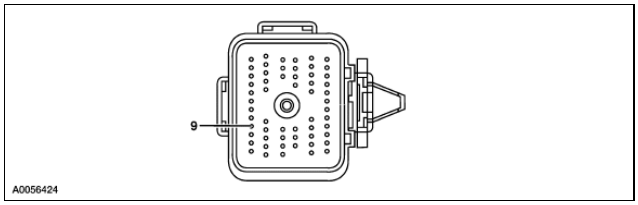
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 10-FA53 (GY/VT) solar radiation sensor input	Greater than 4.5 volts to chassis ground with the DATC ON.
2	CKT 9-FA53 (BN/BU) ground	Less than 5 ohms chassis ground.
3	CKT 8-FA53 (WH/BU) solar radiation sensor input	Greater than 4.5 volts to chassis ground with the DATC ON.

A/C Compressor Clutch Field Coil C100



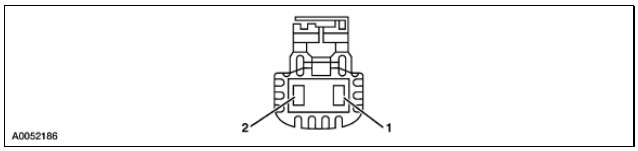
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 15-FA6 (GN/YE) A/C compressor clutch relay switched output	Greater than 10 volts with the A/C commanded on.
2	CKT 31-FA6 (BK/YE) ground	Less than 5 ohms chassis ground.

Powertrain Control Module (PCM) C175a



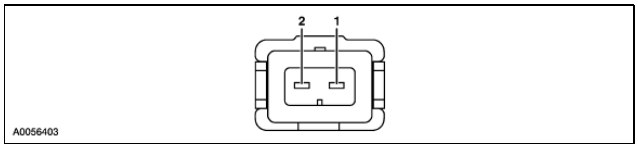
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
9	CKT 91S-FA79 (BN/BU) A/C compressor clutch relay control	Greater than 10 volts with the ignition on.

Blower Motor C288



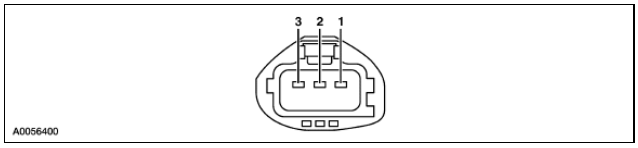
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30S-FA18 (RD/BK) blower motor relay switched output	Greater than 10 volts with the DATC ON.
2	CKT 31S-FA18 (BK/RD) blower motor relay to blower motor control module	Resistance of less than 5 ohms to chassis ground with blower in the highest setting.

Auxiliary Coolant Pump Motor C163



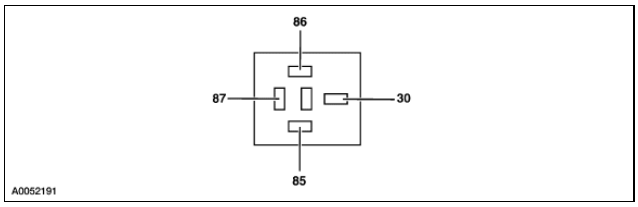
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30S-FB1 (RD/YE) auxiliary coolant pump motor switched voltage from the auxiliary coolant pump relay.	Greater than 10 volts with the auxiliary coolant pump relay ON.
2	CKT 31-FB1 (BK/YE) auxiliary coolant pump ground	Less than 5 ohms to chassis ground.

Coolant Control Valve Solenoid C1034



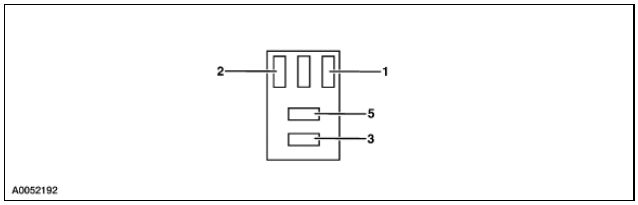
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 91S-FB4 (BN/GN) auxiliary temperature blend door actuator feed	Less than 5 ohms with the DATC in full COOL mode.
2	CKT 30-FB3 (RD/OG) front auxiliary controls to rear auxiliary controls	Greater than 10 volts at all times.
3	CKT 91S-FB3 (BN/BU) front auxiliary controls to rear auxiliary controls	Less than 5 ohms with the DATC in full COOL mode.

Blower Motor Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30	CKT 30-FA24 (RD/OG) blower motor relay switch voltage	Greater than 10 volts at all times.
85	CKT 31S-FA23 (BK/BU) blower motor relay control from DATC module	Less than 100 ohms to chassis ground with the blower in the lowest setting.
86	CKT 30-FA24 (RD/OG) blower motor relay coil voltage	Greater than 10 volts at all times.
87	CKT 30S-FA18 (RD/BK) blower motor relay switched output	Less than 5 ohms to chassis ground with the blower in the highest setting.

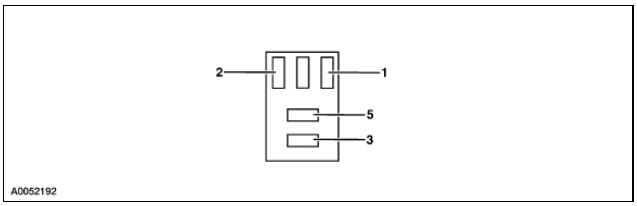
A/C Compressor Clutch Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 15S-FA79 (GN/RD) A/C clutch relay coil voltage	Greater than 10 volts with the ignition on.

2	CKT 91S-FA79 (BN/BU) A/C compressor clutch relay control	Resistance of less than 5 ohms to chassis ground when the A/C is commanded on.
3	CKT 30-FA79 (RD/OG) A/C clutch relay switch voltage	Greater than 10 volts at all times.
5	CKT 15S-FA6 (GN/YE) A/C compressor clutch relay switched output	Less than 100 ohms to chassis ground.

Auxiliary Coolant Pump Relay



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 30-FA74 (RD/GN) auxiliary coolant pump relay coil voltage	Greater than 10 volts at all times.
2	CKT 91S-FA76 (BN/BU) auxiliary coolant pump relay control	Resistance of less than 5 ohms to chassis ground when the auxiliary coolant pump relay is commanded on.
3	CKT 30-FA74 (RD/GN) auxiliary coolant pump relay switch voltage	Greater than 10 volts at all times.
5	CKT 30S-FB1 (RD/YE) auxiliary coolant pump relay switched output	Less than 100 ohms to chassis ground.

Pinpoint Test A: No Communication With The Dual Automatic Temperature Control (DATC) Module

Normal Operation

Under normal operation, the Dual Automatic Temperature Control (DATC) module receives battery voltage through circuit 29-FA10 (OG/GN) and ignition voltage through circuit 20-FA10 (PK/OG). A ground is provided for the DATC module through circuit 31-FA10 (BK).

Possible Causes

- An open in circuit 29-FA10 (OG/GN), 20-FA10 (PK/OG) or 31-FA10 (BK).
- DATC module.

PINPOINT TEST A: NO COMMUNICATION WITH THE DUAL AUTOMATIC TEMPERATURE CONTROL (DATC) MODULE

Test Step	Result / Action to Take
A1 CHECK THE CJB FUSE 220 (10A)	
• Key in OFF position.	**Yes** GO to A2 .

• Turn the headlights on. • **Does the DATC backlighting come on?**	**No** INSTALL a new fuse. TEST the system for normal operation.
A2 CHECK THE CJB FUSE 214 (10A)	
• Key in ON position. • **Does the vacuum fluorescent (VF) display and indicators come on when DATC buttons are pushed?**	**Yes** GO to A3 . **No** INSTALL a new fuse. TEST the system for normal operation.
A3 CHECK CIRCUIT 31-FA10 (BK) FOR AN OPEN	
• Disconnect: DATC Module C228a. • Measure the resistance between DATC module C228a-2, circuit 31-FA10 (BK), harness side and ground.  A0002036 • **Is the resistance less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR circuit 31-FA10 (BK). TEST the system for normal operation.
A4 CHECK CIRCUIT 29-FA10 (OG/GN) FOR VOLTAGE	
• Key in ON position. • Measure the voltage between DATC module C228a-14, circuit 29-FA10 (OG/GN), harness side and ground.  A0002317 • **Is the voltage greater than 10 volts?**	**Yes** GO to A5 . **No** REPAIR circuit 29-FA10 (OG/GN). TEST the system for normal operation.
A5 CHECK CIRCUIT 20-FA10 (PK/OG) FOR VOLTAGE	
• Key in ON position. • Measure the voltage between DATC module C228a-3, circuit 20-FA10 (PK/OG), harness side and ground.	**Yes** Diagnose the network concern. **No** REPAIR circuit 20-FA10 (PK/OG). TEST the system for normal operation.

 A0002318 • **Is the voltage greater than 10 volts?**	

Pinpoint Test B: The DATC System Is Inoperative, Intermittent or Incorrect Operation

Normal Operation

Under normal operation, the Dual Automatic Temperature Control (DATC) module receives battery voltage through circuit 29-FA10 (OG/GN) and ignition voltage through circuit 20-FA10 (PK/OG). A ground is provided for the DATC module through circuit 31-FA10 (BK).

Possible Causes

- An open in circuit 29-FA10 (OG/GN), 20-FA10 (PK/OG) or 31-FA10 (BK).
- DATC module.

PINPOINT TEST B: THE DATC SYSTEM IS INOPERATIVE, INTERMITTENT OR INCORRECT OPERATION

Test Step	Result / Action to Take
B1 VERIFY AUTOMATIC OPERATION	
• Key in START position. • Press the AUTOMATIC button. • **Does the indicator above the AUTO button illuminate and the selected temperature for both the driver and passenger appear in the display window?**	**Yes** GO to B2 . **No** GO to B11 .
B2 PERFORM THE DATC MODULE SELF-TEST	
• Key in ON position. • Carry out the DATC module self-test. Record the DTCs displayed, if any. • **Were any DTCs displayed as a result of the DATC self-test?**	**Yes** REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as required. **No** GO to B3 .
B3 CHECK THE VACUUM FLUORESCENT DISPLAY	
• Exit self-test by pressing the DEFROST button. Observe the button indicators and function symbols displayed on the vacuum fluorescent display while changing the temperature, blower speed and functions. • **Are the display and indicators correct and complete without any missing elements?**	**Yes** GO to B4 . **No** INSTALL a new DATC module. TEST the system for normal operation.

B4 CHECK THE BLOWER MANUAL OVERRIDE OPERATION	
• Press the blower motor speed override control fully up and down. • **Does the blower motor speed increase from low to high speed?**	**Yes** GO to B5 . **No** If the blower motor is inoperative, Go To Pinpoint Test N . If the blower motor does not operate correctly, Go To Pinpoint Test O .
B5 VERIFY THE DEFROST OVERRIDE OPERATION	
• Press the override button for DEFROST operation. • **Is outside air being discharged from the windshield defroster nozzle and the side window demisters?**	**Yes** GO to B6 . **No** Go To Pinpoint Test C .
B6 VERIFY THE FLOOR OVERRIDE OPERATION	
• Press the override button for FLOOR operation. • **Is outside air being discharged from the floor duct?**	**Yes** GO to B7 . **No** Go To Pinpoint Test C .
B7 VERIFY THE VENT OVERRIDE OPERATION	
• Press the override button for VENT operation. • **Is outside air being discharged from the instrument panel registers?**	**Yes** GO to B8 . **No** Go To Pinpoint Test C .
B8 VERIFY THE A/C CLUTCH DOES NOT ENGAGE IN THE VENT MODE	
• Press the override button for VENT operation. • **Does the A/C clutch engage when the VENT override button is pressed?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. **No** GO to B9 .
B9 VERIFY THE RECIRC OVERRIDE OPERATION	
• Press the VENT and RECIRC override buttons. • **Is recirculated air being discharged from the instrument panel registers?**	**Yes** GO to B10 . **No** Go To Pinpoint Test C .
B10 VERIFY A/C CLUTCH ENGAGEMENT IN THE A/C MODE	
• Press the VENT and A/C override buttons for A/C operation.	**Yes** The test is complete. The system is functioning normally.

• **Does the A/C clutch engage when the VENT and A/C override buttons are pressed?**	**No** Go To Pinpoint Test L .
B11 CHECK THE DATC MODULE FUNCTIONS	
• Press each function button and observe the display. • **Does the DATC perform and display any functions?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** GO to B12 .
B12 CHECK THE VOLTAGE TO THE DATC	
• Key in OFF position. • Disconnect: DATC C228b. • Key in ON position. • Measure the voltage between ground and DATC module C228b-14, circuit 29-FA10 (OG/GN).  A0002317 • Measure the voltage between ground and DATC module C228b-3, circuit 20-FA10 (PK/OG).  A0002318 • **Are the voltages greater than 10 volts?**	**Yes** GO to B13 . **No** REPAIR the affected circuit. TEST the system for normal operation.
B13 CHECK THE GROUND CIRCUIT TO THE DATC	
• Key in OFF position. • Measure the resistance between the DATC module C228b-2, circuit 31-FA10 (BK) and ground.  A0002036 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 31-FA10 (BK) for an open. TEST the system for normal operation.

Pinpoint Test C: Incorrect/Erratic Direction Of Airflow From Outlets

Normal Operation

Under normal operation, to open the mode doors, the DATC module supplies the cold air bypass, air inlet, defrost, panel mode and floor mode door actuator motors voltage through the door actuator open circuits and ground through the door actuator close circuits. To close the mode doors, the DATC module reverses the voltage and ground circuits.

The mode door actuator feedback resistors are supplied a ground from the DATC module by the mode door actuator return circuits and a 5-volt reference voltage on the mode door actuator reference circuits. The DATC module reads the voltage on the mode door actuator feedback circuits to determine the mode door actuator position by the position of the actuator feedback resistor wiper arm.

Door actuator open circuits

- Cold air bypass 32-FB2 (WH/RD)
- Air inlet 32-FB8 (WH/RD)
- Defrost 32-FB5 (WH/BK)
- Panel mode 32-FB7 (WH)
- Floor mode 32-FB6 (WH/VT)

Door actuator close circuits

- Cold air bypass 33-FB2 (YE/RD)
- Air inlet 33-FB8 (YE/RD)
- Defrost 33-FB5 (YE/BK)
- Panel mode 33-FB7 (YE)
- Floor mode 33-FB6 (YE/VT)

Door actuator return circuits

- Cold air bypass 9-FB2 (BN/RD)
- Air inlet 9-FB8 (BN/RD)
- Defrost 9-FB5 (BN/YE)
- Panel mode 9-FB7 (BN)
- Floor mode 9-FB6 (BN/WH)

Door actuator reference circuits

- Cold air bypass 7-FB2 (YE/RD)
- Air inlet 7-FB8 (YE/RD)
- Defrost 7-FB5 (YE/BK)
- Panel mode 7-FB7 (YE)
- Floor mode 7-FB6 (YE/VT)

Door actuator feedback circuits

- Cold air bypass 8-FB2 (WH/RD)
- Air inlet 8-FB8 (WH/RD)
- Defrost 8-FB5 (WH/BK)
- Panel mode 8-FB7 (WH)
- Floor mode 8-FB6 (WH/VT)

Possible Causes

- An open, short to voltage, ground or together in door actuator open, close, return, reference or feedback circuits.
- Cold air bypass, air inlet, defrost, panel mode and floor mode door actuator motor.
- DATC module.
- Stuck or bound linkage or door.

PINPOINT TEST C: INCORRECT/ERRATIC DIRECTION OF AIRFLOW FROM OUTLETS

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>C1 REQUEST CONTINUOUS DTCs AND CARRY OUT THE DATC SELF-TEST</td><td></td></tr>

Pinpoint Test D: DTC B1251 OR DTC 1253 A/C In-Vehicle Temperature Sensor Open Circuit or Short to Ground

Normal Operation

Under normal operation, the in-vehicle temperature sensor receives a ground from the Dual Automatic Temperature Control (DATC) module through circuit 9-FA48 (BN/GN). A 5-volt reference voltage is supplied to the in-vehicle temperature sensor from the DATC module through circuit 8-FA48 (WH/GN)

Possible Causes

- An open in circuit 9-FA48 (BN/GN) or 8-FA48 (WH/GN).
- A short together in circuits 9-FA48 (BN/GN) and 8-FA48 (WH/GN).
- A short to ground in circuit 8-FA48 (WH/GN).
- DATC module.
- In-vehicle air temperature sensor.

PINPOINT TEST D: DTC B1251 OR DTC1253 A/C IN-VEHICLE TEMPERATURE SENSOR OPEN CIRCUIT OR SHORT TO GROUND

Test Step	Result / Action to Take
D1 CHECK THE SENSOR RESISTANCE	
• Key in OFF position. • Disconnect: In-Vehicle Temperature Sensor C233. • Measure the resistance between in-vehicle temperature sensor terminals.	**Yes** GO to D2 . **No** INSTALL a new in-vehicle temperature sensor. TEST the system for normal operation.

 A0004766 • **Is the resistance within the specified values for these temperature ranges: 10-20°C (50-68°F) 37,000-58,000 ohms; 20-30°C (68-86°F) 24,000-37,000 ohms; 30-40°C (86-104°F) 16,000-24,000 ohms?**	
D2 CHECK THE DATC SENSOR OUTPUT VOLTAGE	
• Key in ON position. • Measure the voltage between in-vehicle temperature sensor C233, circuits 9-FA48 (BN/GN), harness side and 8-FA48 (WH/GN), harness side.  A0001977 • **Is the voltage between 4.7 and 5.1 volts?**	**Yes** INSTALL a new DATC module. **No** If DTC B1253 is present, GO to D3 . If DTC B1251 is present, GO to D5 .
D3 CHECK CIRCUIT 8-FA48 (WH/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228a. • Disconnect: DATC Module C228b. • Measure the resistance between DATC module C228a-9, circuit 8-FA48 (WH/GN), harness side and ground.  A0001979 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D4 . **No** REPAIR circuit 8-FA48 (WH/GN). TEST the system for normal operation.
D4 CHECK CIRCUIT 8-FA48 (WH/GN) FOR A SHORT TO CIRCUIT 9-FA48 (BN/GN)	
• Measure the resistance between in-vehicle temperature sensor C233, circuits 9-FA48 (BN/GN), harness side and 8-FA48 (WH/GN), harness side.  A0052122	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 8-FA48 (WH/GN) for a short to circuit 9-FA48 (BN/GN). TEST the system for normal operation.

• **Is the resistance greater than 10,000 ohms?**	
D5 CHECK CIRCUIT 8-FA48 (WH/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: DATC Module C228a. • Measure the resistance between DATC module C228a-9, circuit 8-FA48 (WH/GN), harness side and the in-vehicle temperature sensor C233 circuit 8-FA48 (WH/GN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to D6 . **No** REPAIR circuit 8-FA48 (WH/GN). TEST the system for normal operation.
D6 CHECK CIRCUIT 9-FA48 (BN/GN) FOR AN OPEN	
• Disconnect: DATC Module C228b. • Measure the resistance between DATC pin C228b-14, circuit 9-FA48 (BN/GN), harness side and the in-vehicle temperature sensor C233 circuit 9-FA48 (BN/GN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 9-FA48 (BN/GN). TEST the system for normal operation.

Pinpoint Test E: Evaporator Or Heater Core Discharge Air Temperature Sensor Circuit Open Or Short To Ground

Normal Operation

Under normal operation, the LH and RH discharge temperature sensors receive a ground from the Dual Automatic Temperature Control (DATC) module through circuit (LH) 9-FA47 (BN/GN)/9-FA3 (BN/BL) and (RH) 9-FA51 (BN/YE)/9-FA3 (BN/BL). The evaporator discharge temperature sensor receives a ground from the DATC module through circuit 9-FA44 (BN/RD).

A 5-volt reference voltage is supplied to the LH and RH discharge temperature sensors from the DATC module through circuits (LH) 8-FA47 (WH/GN) and (RH) 8-FA51 (WH/BK). A 5-volt reference voltage is supplied to the evaporator discharge temperature sensor from the DATC module through circuit 8-FA44 (WH/RD).

Possible Causes

- An open in circuit 9-FA47 (BN/GN), 9-FA51 (BN/YE), 9-FA3 (BN/BL), 9-FA44 (BN/RD), 8-FA47 (WH/GN), 8-FA51 (WH/BK) or 8-FA44 (WH/RD).
- A short together in circuits 8-FA44 (WH/RD) and 9-FA44 (BN/RD), 8-FA51 (WH/BK) and 9-FA51 (BN/YE), 8-FA47 (WH/GN) and 9-FA47 (BN/GN).
- A short to ground in circuit 8-FA47 (WH/GN), 8-FA51 (WH/BK) or 8-FA44 (WH/RD).
- LH discharge temperature sensor.

- RH discharge temperature sensor.
- Evaporator discharge temperature sensor.
- DATC module.

PINPOINT TEST E: EVAPORATOR OR HEATER CORE DISCHARGE AIR TEMPERATURE SENSOR CIRCUIT OPEN OR SHORT TO GROUND

<table>

- **Is the voltage between 4.7 and 5.1 volts?**

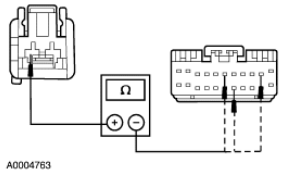
to E3 .

If DTC B1947, B1967 or B2429 is present, GO to E5 .

E3 CHECK THE REFERENCE CIRCUIT FOR AN OPEN

- Key in OFF position.
- Disconnect: DATC Module C228a.
- Refer to the following chart and measure the resistance of the reference circuit between DATC module C228a and the sensor connector.

Sensor	Connector	Circuit	DATC C228a Pin
Veep Discharge	C296	8-FA44 (WH/RD)	10
Passenger Side	C255	8-FA51 (WH/BK)	6
Driver	C235	8-FA47 (WH/GN)	18



- **Is the resistance less than 5 ohms?**

Yes
GO to E4 .

No
REPAIR the affected circuit. TEST the system for normal operation.

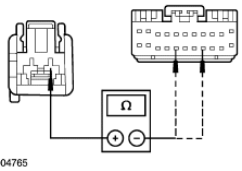
E4 CHECK RETURN CIRCUIT FOR AN OPEN

- Refer to the following chart and measure the resistance of the return circuit between sensor and DATC module C228a for an open.

Sensor Connector	DATC Module C228a Pin	Circuit
Evap/C296	16	9-FA44 (BN/RD)
Passenger/ C255	19	9-FA51 (BN/YE)
Driver/C235	19	9-FA47 (BN/GN)

Yes
INSTALL a new DATC module. TEST the system for normal operation.

No
REPAIR the affected circuit. TEST the system for normal operation.

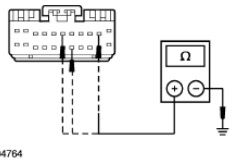


- **Is the resistance less than 5 ohms?**

E5 CHECK THE REFERENCE CIRCUIT FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: DATC Module C228a.
- Refer to the following chart and measure the resistance of the sensor reference circuit between DATC module C228a and ground.

Temperature Sensor	DATC Module C228a Pin	Circuit
Evaporator Core	10	8-FA44 (WH/RD)
Passenger	6	8-FA51 (WH/BK)
Driver	18	8-FA47 (WH/GN)



- **Is the resistance greater than 10,000 ohms?**

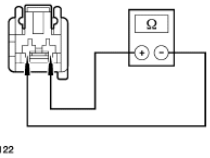
Yes
GO to E6 .

No
REPAIR the affected circuit. TEST the system for normal operation.

E6 CHECK THE REFERENCE CIRCUITS FOR A SHORT TO THE RETURN CIRCUITS

- Refer to the following chart and measure the resistance between temperature sensor harness side circuits.

Connector	Circuit	Circuit
C296	8-FA44 (WH/RD)	9-FA44 (BN/RD)
C255	8-FA51 (WH/BK)	9-FA51 (BN/YE)
C235	8-FA47 (WH/GN)	9-FA47 (BN/GN)



- **Is the resistance greater than 10,000 ohms?**

Yes
INSTALL a new DATC module. TEST the system for normal operation.

No
REPAIR the reference circuit for a short to the return circuit. TEST the system for normal operation.

Pinpoint Test F: DTC B1255 OR DTC B1257 A/C Ambient Temperature Sensor Open Circuit or Short to Ground

Normal Operation

Under normal operation, the ambient air temperature sensor receives a ground from the Dual Automatic Temperature Control (DATC) module through circuit 9-FA49 (BN/WH). A 5-volt reference voltage is supplied to the ambient air temperature sensor from the DATC module through circuit 8-FA49 (WH/VT).

Possible Causes

- An open in circuit 9-FA49 (BN/WH) or 8-FA49 (WH/VT).
- A short to together in circuits 9-FA49 (BN/WH) and 8-FA49 (WH/VT).
- A short to ground in circuit 8-FA49 (WH/VT).
- Ambient air temperature sensor.
- DATC module.

PINPOINT TEST F: DTC B1255 OR DTC B1257 A/C AMBIENT TEMPERATURE SENSOR OPEN CIRCUIT OR SHORT TO GROUND

Test Step	Result / Action to Take
F1 CHECK THE AMBIENT TEMPERATURE SENSOR RESISTANCE	
• Key in OFF position. • Disconnect: Ambient Temperature Sensor C132. • Measure the resistance between ambient temperature sensor terminals.  A0002817 • **Is the resistance within the specified values for these temperature ranges: 10-20°C (50-68°F) 37,000-58,000 ohms; 20-30°C (68-86°F) 24,000-37,000 ohms; 30-40°C (86-104°F) 16,000-24,000 ohms?**	**Yes** GO to F2 . **No** INSTALL a new A/C ambient air temperature sensor. TEST the system for normal operation.
F2 CHECK THE DATC SENSOR OUTPUT VOLTAGE	
• Key in ON position. • Measure the voltage between ambient temperature sensor C132, circuits 8-FA49 (WH/VT), harness side and 9-FA49 (BN/WH), harness side.	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** If DTC B1255, GO to F3 . If DTC B1257, GO to F5 .

 A0002818 • **Is the voltage between 4.7 and 5.1 volts?**	
F3 CHECK CIRCUIT 8-FA49 (WH/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: DATC Module C228b. • Measure the resistance between DATC module C228b-17, circuit 8-FA49 (WH/VT), harness side and ambient temperature sensor connector C132 circuit 8-FA49 (WH/VT), harness side.  A0006706 • **Is the resistance less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR circuit 8-FA49 (WH/VT). TEST the system for normal operation.
F4 CHECK CIRCUIT 9-FA49 (BN/WH) FOR AN OPEN	
• Measure the resistance between DATC module C228b-8, circuit 9-FA49 (BN/WH), harness side and the ambient temperature sensor connector C132 circuit 9-FA49 (BN/WH), harness side.  A0006705 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 9-FA49 (BN/WH). TEST the system for normal operation.
F5 CHECK CIRCUIT 8-FA49 (WH/VT) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228b. • Measure the resistance between DATC module C228b-17, circuit 8-FA49 (WH/VT), harness side and ground.  A0001983 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to F6 . **No** REPAIR circuit 8-FA49 (WH/VT) for a short to ground. TEST the system for normal operation.
F6 CHECK CIRCUIT 8-FA49 (WH/VT) FOR A SHORT TO CIRCUIT 9-FA49 (BN/WH)	

• Measure the resistance between in-vehicle temperature sensor C132, circuits 8-FA49 (WH/VT), harness side and 9-FA49 (BN/WH), harness side.  A0038068 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 8-FA49 (WH/VT) for a short to circuit 9-FA49 (BN/WH). TEST the system for normal operation.

Pinpoint Test G: DTC B1259 OR DTC B1261 Solar Radiation Sensor Open Circuit or Short to Ground

Normal Operation

Under normal operation, the solar radiation sensor receives a ground from the Dual Automatic Temperature Control (DATC) module through circuit 9-FA53 (BN/BL)/9-FA3 (BN/BL). A 5-volt reference voltage is supplied to the solar radiation sensor from the DATC module through circuits 8-FA53 (WH/BL) and 10-FA53 (GY/VT).

Possible Causes

- An open in circuit 9-FA53 (BN/BL)/9-FA3 (BN/BL), 8-FA53 (WH/BL) or 10-FA53 (GY/VT).
- A short together in circuits 9-FA48 (BN/GN) and 8-FA48 (WH/GN) or 9-FA48 (BN/GN) and 10-FA53 (GY/VT).
- A short to ground in circuit 8-FA53 (WH/BL) or10-FA53 (GY/VT).
- Solar radiation sensor.
- DATC module.

PINPOINT TEST G: DTC B1259 OR DTC B1261 SOLAR RADIATION SENSOR OPEN CIRCUIT OR SHORT TO GROUND

Test Step	Result / Action to Take
G1 CHECK THE SOLAR RADIATION SENSOR RESISTANCE	
• Key in OFF position. • Disconnect: Solar Radiation Sensor C286. • **NOTE:** Connect the ground lead of the multimeter to the sensor ground terminal. • Measure the resistance between each solar radiation sensor terminal and the ground terminal.  A0003985 • **Are the resistances between 39,000 and 41,000 ohms?**	**Yes** GO to G2 . **No** INSTALL a new A/C solar radiation sensor. TEST the system for normal operation.
G2 CHECK THE DATC OUTPUT VOLTAGE	

• Key in ON position. • Measure the voltage between solar radiation C286-3, circuit 8-FA53 (WH/BU), harness side and C286-2, circuit 9-FA53 (BN/BU), harness side and between C286-1 circuit 10-FA53 (GY/VT), harness side and C286-2, circuit 9-FA53 (BN/BU), harness side.  A0002819 • **Are the voltages between 4.7 and 5.1 volts?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** If DTC B1259 is present, GO to G6 . If DTC B1261 is present,GO to G3 .
G3 CHECK CIRCUIT 10-FA53 (GY/VT) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228a. • Measure the resistance between DATC module C228a-20, circuit 10-FA53 (GY/VT), harness side and ground.  A0001987 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to G4 . **No** REPAIR circuit 10-FA53 (GY/VT). TEST the system for normal operation.
G4 CHECK CIRCUIT 8-FA53 (WH/BU) FOR A SHORT TO GROUND	
• Measure the resistance between DATC module C228a-7, circuit 8-FA53 (WH/BU), harness side and ground.  A0003986 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to G5 . **No** REPAIR circuit 8-FA53 (WH/BU). TEST the system for normal operation.
G5 CHECK THE REFERENCE CIRCUIT FOR A SHORT TO THE RETURN CIRCUIT	
• Measure the resistance between solar radiation C286-3, circuit 8-FA53 (WH/BU), harness side and C286-2, circuit 9-FA53 (BN/BU), harness side and between C286-1 circuit 10-FA53 (GY/VT), harness side and C286-2, circuit 9-FA53 (BN/BU), harness side.	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR the reference circuit for a short to the return circuit . TEST the system for normal

 A0056540 • **Is the resistance greater than 10,000 ohms?**	operation.
G6 CHECK CIRCUIT 10-FA53 (GY/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: DATC Module C228a. • Measure the resistance between DATC module C228a-20, circuit 10-FA53 (GY/VT), harness side and solar radiation sensor C286-1, circuit 10-FA53 (GY/VT), harness side.  A0003987 • **Is the resistance less than 5 ohms?**	**Yes** GO to G7 . **No** REPAIR circuit 10-FA53 (GY/VT). TEST the system for normal operation.
G7 CHECK CIRCUIT 8-FA53 (WH/BU) FOR AN OPEN	
• Measure the resistance between DATC module C228a-7, circuit 8-FA53 (WH/BU), harness side and the solar radiation sensor C286-3, circuit 8-FA53 (WH/BU), harness side.  A0003988 • **Is the resistance less than 5 ohms?**	**Yes** GO to G8 . **No** REPAIR circuit 8-FA53 (WH/BU). TEST the system for normal operation.
G8 CHECK THE RETURN CIRCUIT FOR AN OPEN	
• Measure the resistance between DATC module C228a-19, circuit 9-FA3 (BN/RD), harness side and solar radiation C286-2, circuit 9-FA53 (BN/BU), harness side.  A0002403 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR the affected circuit. TEST the system for normal operation.

Pinpoint Test H: Insufficient, Erratic or No Heat

Normal Operation

Under normal operation, the coolant control valve receives battery voltage through circuit 30-FB3 (RD/OG). The coolant control valve is provided a ground through circuit 91S-FB3 (BN/BL) and/or 91S-FB4 (BN/GN) from the Dual Automatic Temperature Control (DATC) module, depending on which side of the heater core warm coolant is to flow through.

Possible Causes

- An open in circuit 30-FB3 (RD/OG), 91S-FB3 (BN/BL) or 91S-FB4 (BN/GN).
- A short to ground or voltage in circuit 91S-FB3 (BN/BL) or 91S-FB4 (BN/GN).
- Coolant control valve.
- DATC module.
- Evaporator discharge air temperature sensor.
- Thermostat.

PINPOINT TEST H: INSUFFICIENT, ERRATIC, OR NO HEAT

Test Step	Result / Action to Take
⚠ CAUTION: The coolant control valve jumper harness-to-engine compartment wiring harness connector halves are identified as C134. Make sure to carefully identify the correct half of the connector before carrying out any electrical measurements. Failure to do so can result in damage to the DATC module.	
H1 CHECK FOR CORRECT COOLANT LEVEL	
• Key in OFF position. • Check the engine coolant level with the engine at cold and hot temperatures. • **Is the engine coolant at the correct level (both cold and hot)?**	**Yes** GO to H4 . **No** GO to H2 .
H2 CHECK THE ENGINE COOLING SYSTEM FOR LEAKS	
⚠ WARNING: Never remove the pressure relief cap under any condition while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine, or can result in personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, use the cloth to remove the pressure relief cap. • Fill and bleed the engine cooling system. • Pressure check the engine cooling system, including the pressure relief cap. • **Does the engine cooling system, including the pressure relief cap, hold pressure?**	**Yes** GO to H3 . **No** REPAIR the engine cooling system leak. TEST the system for normal operation.
H3 VERIFY THE FAULT WAS A LOW ENGINE COOLANT LEVEL	
NOTE: When carrying out this test step, allow time for the system to respond. • Key in START position.	**Yes** Test is complete. **No** GO to H4 .

• With the engine at normal operating temperature, set the DATC module driver and passenger side temperature settings to full hot (32°C [90°F]) and note the discharge air temperature. • **Is the discharge air temperature at full hot?**	
H4 BLEED THE ENGINE COOLING SYSTEM	
⚠ **WARNING: Never remove the pressure relief cap under any condition while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine, or can result in personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, use the cloth to remove the pressure relief cap. NOTE:** When carrying out this test step, allow time for the system to respond. • Bleed the engine cooling system. • With the engine at normal operating temperature, set the DATC module driver and passenger side temperature settings to full hot (32°C [90°F]) and note the discharge air temperature. • **Is the discharge air temperature at full hot?**	**Yes** Test is complete. **No** GO to H5 .
H5 CHECK FOR HOT COOLANT AT THE HEATER CORE INLET HOSES	
⚠ **WARNING: The heater core inlet hoses will become too hot to handle and can cause serious burns if the system is working correctly. Failure to follow these instructions can result in personal injury.** • Key in START position. • Carefully feel both heater core inlet hoses.  A0024800 • **Are both heater core inlet hoses too hot to handle?**	**Yes** CARRY OUT the heater core component test. REFER to Heater Core under Component Tests in this section to determine whether a plugged or partially plugged condition exists. **No** GO to H6 .
H6 CHECK THE COOLANT CONTROL VALVE	
NOTE: Disconnecting the coolant control valve defaults the DATC system to full hot. **NOTE:** When carrying out this test step, allow time for the system to respond. • Disconnect: Coolant Control Valve Jumper Harness and Engine Compartment Wiring Harness C134. • Key in START position. • **NOTE:** For 3.9L engines, run the engine at 3,000 rpm to compensate for the disconnected auxiliary coolant pump. • With the engine at normal operating temperature, set the DATC module driver and passenger side settings to full hot (32°C [90°F]) and	**Yes** GO to H8 . **No** GO to H7 .

note the discharge air temperature. • **Is the discharge air temperature at full hot?**	
H7 CHECK THE THERMOSTAT	
• Key in OFF position. • Carry out the thermostat component test. • **Is the thermostat operating correctly?**	**Yes** INSTALL a new coolant control valve. TEST the system for normal operation. **No** INSTALL a new thermostat. TEST the system for normal operation.
H8 CHECK SOURCE VOLTAGE FOR TESTING	
• Measure the voltage between the underhood auxiliary junction box (UAJB) fuse terminal F124, circuit 30-KA23 (RD/OG) and ground.  A0024801 • **Is the voltage greater than 10 volts?**	**Yes** GO to H9 . **No** REPAIR circuit 30-KA23 (RD/OG). GO to H9 .
H9 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB4 (BN/GN)	
• ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134-6, circuit 91S-FB4 (BN/GN).  A0024802 • **Is the voltage greater than 10 volts?**	**Yes** GO to H11 . **No** GO to H10 .
H10 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB3 (BN/BU)	
• ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134-3, circuit 91S-FB3 (BN/BU).	**Yes** GO to H12 . **No** GO to H13 .

 A0024803 • **Is the voltage greater than 10 volts?**	
H11 CHECK CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228b. • ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the resistance between the engine compartment wiring harness C134-6, circuit 91S-FB4 (BN/GN) and ground.  A0024804 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H16 . **No** REPAIR circuit 91S-FB4 (BN/GN). TEST the system for normal operation.
H12 CHECK CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228b. • ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the resistance between the engine compartment wiring harness C134-3, circuit 91S-FB3 (BN/BU) and ground.  A0024805 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to H16 . **No** REPAIR circuit 91S-FB3 (BN/BU). TEST the system for normal operation.
H13 CHECK THE COOLANT CONTROL VALVE SOLENOID RESISTANCE	
• Key in OFF position. • Measure the resistance between the coolant control valve jumper harness C134-4, circuit 30-FB3 (RD/OG) and C134-6, circuit 91S-FB4 (BN/GN).	**Yes** INSTALL a new coolant control valve. TEST the system for normal operation. **No**

 A0007541 • Measure the resistance between the coolant control valve jumper harness C134-4, circuit 30-FB3 (RD/OG) and C134-3, circuit 91S-FB3 (BN/BU).  A0024806 • **Do both resistances measure between 10-23 ohms?**	If the resistance is greater than 23 ohms, GO to H14 . If the resistance is less than 10 ohms, GO to H15 .
H14 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS	
• Measure the resistance between the coolant control valve jumper harness C134-4, circuit 30-FB3 (RD/OG) and the coolant control valve C1034-2, circuit 30-FB3 (RD/OG).  A0024807 • Measure the resistance between the coolant control valve jumper harness C134-3, circuit 91S-FB3 (BN/BU) and the coolant control valve C1034-3, circuit 91S-FB3 (BN/BU).  A0024809 • Measure the resistance between the coolant control valve jumper harness C134-6, circuit 91S-FB4 (BN/GN) and the coolant control valve C1034-1, circuit 91S-FB4 (BN/GN).  A0024808 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new coolant control valve. TEST the system for normal operation. If system operation is still not correct, INSTALL a new DATC module. **No** REPAIR the affected circuit(s) of the coolant control valve jumper harness. TEST the system for normal operation.

H15 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUITS 91S-FB3 (BN/BU) AND 91S-FB4 (BN/GN) FOR A SHORT TO VOLTAGE	
• Measure the resistance between the coolant control valve jumper harness C134-3, circuit 91S-FB3 (BN/BU) and C134-4, circuit 30-FB3 (RD/OG).  A0024806 • Measure the resistance between the coolant control valve jumper harness C134-6, circuit 91S-FB4 (BN/GN) and C134-4, circuit 30-FB3 (RD/OG).  A0007541 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new coolant control valve. TEST the system for normal operation. **No** REPAIR the affected circuit(s) of the coolant control valve jumper harness. TEST the system for normal operation. If system operation is still not correct, INSTALL a new DATC module.
H16 CHECK EVAPORATOR DISCHARGE TEMPERATURE SENSOR	
• Connect: DATC Module C228b. • Key in START position. • Press the DATC MAX A/C override button. Make sure the A/C indicator LED is on. • Enter the following diagnostic mode on the diagnostic tool: Evaporator Discharge Temperature Sensor. • **Does the sensor temperature change at all?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** INSTALL a new evaporator discharge temperature sensor. TEST the system for normal operation.

Pinpoint Test I: Insufficient Heat During Engine Idle 3.9 L Engine

Normal Operation

Under normal operation, the auxiliary coolant pump relay coil receives a ground from the Dual Automatic Temperature Control (DATC) module through circuit 91S-FA76 (BN/BL). The Coil receives battery voltage through circuit 30-FA74 (RD/GN). Battery voltage is supplied to the relay contacts from circuit 30-FA74 (RD/GN). When the relay coil is energized, voltage is delivered to the auxiliary coolant pump motor through circuit 30S-FB1 (RD/YE). Ground for the motor is provided through circuit 31-FB1 (BK/YE).

Possible Causes

- An open in circuit 31-FB1 (BK/YE), 30-FA74 (RD/GN), 30S-FB1 (RD/YE) or 91S-FA76 (BN/BL).
- A short to voltage in circuit 91S-FA76 (BN/BL).

- Auxiliary coolant pump relay.
- Auxiliary coolant pump motor.
- DATC module.

PINPOINT TEST I: INSUFFICIENT HEAT DURING ENGINE IDLE 3.9L ENGINE

Test Step	Result / Action to Take
I1 CARRY OUT THE DATC MODULE SELF-TEST	
• Key in ON position. • Carry out the DATC module self-test and retrieve continuous DTCs. Refer to Climate Control System . Record the DTCs displayed, if any. • **Are any DTCs displayed?**	**Yes** REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary. **No** GO to I2 .
I2 RECHECK DATC MODULE CONFIGURATION	
• Enter Module Identification mode. • Enter the following diagnostic mode on the diagnostic tool: PID CNFG Data. • **Does the data read 4N_3N_2Y?**	**Yes** GO to I3 . **No** RECONFIGURE the DATC module.
I3 CHECK THE COOLANT LEVEL	
• Check the coolant level with the engine at hot and cold temperatures. • **Is the engine coolant at the correct level (hot and cold)?**	**Yes** GO to I4 . **No** REFILL the system and PRESSURE TEST for leaks. In addition, if the coolant level had dropped below the "MIN" level, SET the system to MAX heat and RUN the engine at 3,000 rpm for 3 to 5 minutes until hot air blows from the outlets. RECHECK coolant level.GO to I4 .
I4 CHECK FOR AUXILIARY COOLANT PUMP OPERATION	
• Connect the diagnostic tool. • Key in ON position. • In the active command mode, request Climate Control System and select Pump/VCB or set driver side temperature to 32°C (90°F). • **Can the auxiliary cooling pump be heard running or be felt running?**	**Yes** System is operating correctly. **No** GO to I5 .
I5 CHECK THE AUXILIARY PUMP MOTOR	

• Key in OFF position. • Disconnect: Auxiliary Coolant Pump C163. • Key in ON position. • Make sure the active command Pump/VBC is still selected or the driver side temperature is set to 32°C (90°F). • Measure the voltage between auxiliary coolant pump C163, circuit 30S-FB1 (RD/YE), harness side and circuit 31-FB1 (BK), harness side.  A0002330 • **Is the voltage greater than 10 volts?**	**Yes** INSPECT terminals for damage and correct installation. If pins are installed correctly, INSTALL a new auxiliary coolant pump. TEST the system for normal operation. **No** GO to I6 .
I6 CHECK CIRCUIT 31-FB1 (BK) FOR AN OPEN	
• Measure the resistance between auxiliary coolant pump C163, circuit 31-FB1 (BK), harness side and ground.  A0002331 • **Is the resistance less than 5 ohms?**	**Yes** GO to I7 . **No** REPAIR circuit 31-FB1 (BK). TEST the system for normal operation.
I7 CHECK THE AUXILIARY COOLANT PUMP RELAY	
• Key in OFF position. • Disconnect: Auxiliary Coolant Pump Relay C1005. • Measure the voltage between CJB auxiliary coolant pump relay pins 2 and 5, circuit 30-FA74A (RD), harness side and ground.  A0006707 • **Is the voltage greater than 10 volts?**	**Yes** GO to I8 . **No** REPAIR circuit 30-FA74A (RD). TEST the system for normal operation.
I8 CARRY OUT THE RELAY COMPONENT TEST	
• Carry out the relay component test.	**Yes** GO to I9 .

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the relay OK?**	**No** INSTALL a new auxiliary coolant pump relay. TEST the system for normal operation.
I9 CHECK CIRCUIT 30S-FB1 (RD/YE) FOR AN OPEN	
• Disconnect: Auxiliary Coolant Pump Relay C1005. • Measure the resistance between auxiliary coolant pump C163, circuit 30S-FB1 (RD/YE), harness side and auxiliary coolant pump relay pin 3, circuit 30S-FB1 (RD/YE), harness side.  A0002334 • **Is the resistance less than 5 ohms?**	**Yes** GO to I10 . **No** REPAIR circuit 30S-FB1 (RD/YE). TEST the system for normal operation.
I10 CHECK THE DATC MODULE	
• Key in OFF position. • Connect: Auxiliary Coolant Pump Relay C1005. • Connect: Auxiliary Coolant Pump C163. • Disconnect: DATC Module C228a. • Disconnect: DATC Module C228b. • Connect a fused jumper wire between DATC module C228b-18, circuit 91S-FA76 (BN/BU), harness side and DATC module C228a-2, circuit 31-FA10 (BK), harness side.  A0002332 • **Does the auxiliary coolant pump motor operate?**	**Yes** INSPECT all connectors and terminals, RECONNECT the connectors, and TEST the system for normal operation. If condition still exists, INSTALL a new DATC module. TEST the system for normal operation. **No** GO to I11 .
I11 CHECK CIRCUIT 91S-FA76 (BK/OG) FOR A SHORT TO POWER	
NOTE: If a short to power is found, it is necessary to install a new DATC module. • Disconnect: Auxiliary Coolant Pump Relay C1005. • Measure the voltage between auxiliary coolant pump relay pin 2, circuit 91S-FA76 (BK/OG), harness side and ground.	**Yes** REPAIR circuit 91S-FA76 (BK/OG). INSTALL a new DATC module. TEST the system for normal operation. **No** GO to I12 .

 A0002333 • **Is any voltage present?**	
I12 CHECK CIRCUIT 91S-FA76 (BK/OG) FOR AN OPEN	
• Measure the resistance between auxiliary coolant pump relay circuit 91S-FA76 (BK/OG), harness side and DATC module C228b-18, circuit 91S-FA76 (BK/OG), harness side.  A0003989 • **Is the resistance less than 5 ohms?**	**Yes** INSPECT all connectors and terminals, RECONNECT the connectors and TEST the system. If condition still exists, INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 91S-FA76 (BK/OG). TEST the system for normal operation.

Pinpoint Test J: Full Heat Only In All Modes

Normal Operation

Under normal operation, the coolant control valve receives battery voltage through circuit 30-FB3 (RD/OG)/30-FA1 (RD). The coolant control valve is provided a ground through circuit 91S-FB3 (BN/BL) and/or 91S-FB4 (BN/GN) from the Dual Automatic Temperature Control (DATC) module, depending on which side of the heater core the warm coolant is to flow through.

Under normal operation, the auxiliary coolant pump relay coil receives a ground from the Dual Automatic Temperature Control (DATC) module through circuit 91S-FA76 (BN/BL). The Coil receives battery voltage through circuit 30-FA74 (RD/GN). Battery voltage is supplied to the relay contacts from circuit 30-FA74 (RD/GN). When the relay coil is energized, voltage is delivered to the auxiliary coolant pump motor through circuit 30S-FB1 (RD/YE). Ground for the motor is provided through circuit 31-FB1 (BK/YE).

Possible Causes

- An open in circuit 30-FB3 (RD/OG)/30-FA1 (RD), 91S-FB3 (BN/BL) or 91S-FB4 (BN/GN).
- A short to ground or voltage in circuit 91S-FB3 (BN/BL) or 91S-FB4 (BN/GN).
- A short to voltage in circuit 91S-FB3 (BN/BL) or 91S-FB4 (BN/GN).
- Coolant control valve.
- Evaporator discharge air temperature sensor.
- DATC module.

PINPOINT TEST J: FULL HEAT ONLY IN ALL MODES

Test Step	Result / Action to Take
⚠ CAUTION: The coolant control valve jumper harness-to-engine compartment wiring harness connector halves are identified as C134. Make sure to carefully identify the correct half of the	

connector before carrying out any electrical measurements. Failure to do so can result in damage to the DATC module.	
J1 CHECK CIRCUIT 30-FB3 (RD/OG)	
• Key in OFF position. • Disconnect: Coolant Control Valve Jumper Harness and Engine Compartment Wiring Harness C134. • ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the voltage between the engine compartment wiring harness C134-4, circuit 30-FB3 (RD/OG) and ground.  A0007536 • **Is the voltage greater than 10 volts?**	**Yes** GO to J2 . **No** REPAIR circuit 30-FB3 (RD/OG) or circuit 30-FA1 (RD). TEST the system for normal operation.
J2 CHECK THE COOLANT CONTROL VALVE DRIVER SIDE SOLENOID RESISTANCE	
• Measure the resistance between the coolant control valve jumper harness C134-4, circuit 30-FB3 (RD/OG) and C134-6, circuit 91S-FB4 (BN/GN).  A0007541 • **Does the resistance measure between 10-23 ohms?**	**Yes** GO to J3 . **No** If the resistance is greater than 23 ohms, GO to J7 . If the resistance is less than 10 ohms, GO to J9 .
J3 CHECK THE COOLANT CONTROL VALVE PASSENGER SIDE SOLENOID RESISTANCE	
• Measure the resistance between the coolant control valve jumper harness C134-4, circuit 30-FB3 (RD/OG) and C134-3, circuit 91S-FB3 (BN/BU).	**Yes** GO to J4 . **No** If the resistance is greater than 23 ohms, GO to J8 . If the resistance is less than 10 ohms, GO to J10 .

 A0024806 • **Does the resistance measure between 10-23 ohms?**	
J4 CHECK SOURCE VOLTAGE FOR TESTING	
• Measure the voltage between the underhood auxiliary junction box (UAJB) fuse terminal F124, circuit 30-KA23 (RD/OG) and ground.  A0024801 • **Is the voltage greater than 10 volts?**	**Yes** GO to J5 . **No** REPAIR circuit 30-KA23 (RD/OG). GO to J5 .
J5 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB4 (BN/GN)	
• Key in START position. • Press the PANEL button and set the driver and passenger side temperature settings to full cool on the DATC module. • ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134-6, circuit 91S-FB4 (BN/GN).  A0024802 • **Is the voltage greater than 10 volts?**	**Yes** GO to J6 . **No** GO to J11 .
J6 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB3 (BN/BU)

J14 CHECK CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO VOLTAGE	
• Key in ON position. • ⚠ **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.** • Measure the voltage between the engine compartment wiring harness C134-3, circuit 91S-FB3 (BN/BU) and ground.  A0007545 • **Is voltage present?**	**Yes** REPAIR circuit 91S-FB3 (BN/BU). If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation. **No** GO to J16 .
J15 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Coolant Control Valve C1034. • Measure the resistance between the coolant control valve jumper harness C134-6, circuit 91S-FB4 (BN/GN) and C134-4, circuit 30-FB3 (RD/OG).  A0007541 • **NOTE:** Carry out this step only on vehicles equipped with a 3.9L engine. • Measure the resistance between the coolant control valve jumper harness C134-6, circuit 91S-FB4 (BN/GN) and C134-1, circuit 30S-FB1 (RD/YE).  A0006758 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to J17 . **No** REPAIR the affected circuit(s) of the coolant control valve jumper harness. If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.

J16 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Coolant Control Valve C1034. • Measure the resistance between the coolant control valve jumper harness C134-3, circuit 91S-FB3 (BN/BU) and C134-4, circuit 30-FB3 (RD/OG).  A0024806 • **NOTE:** Carry out this step only on vehicles equipped with a 3.9L engine. • Measure the resistance between the coolant control valve jumper harness C134-3, circuit 91S-FB3 (BN/BU) and C134-1, circuit 30S-FB1 (RD/YE).  A0024812 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to J17 . **No** REPAIR the affected circuit(s) of the coolant control valve jumper harness. If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.
J17 CHECK EVAPORATOR DISCHARGE TEMPERATURE SENSOR	
• Connect: Coolant Control Valve C1034. • Key in START position. • Press the DATC MAX A/C override button. Make sure the A/C indicator LED is on. • Enter the following diagnostic mode on the diagnostic tool: Evaporator Discharge Temperature Sensor. • **Does the sensor temperature change at all?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** INSTALL a new evaporator discharge temperature sensor. TEST the system for normal operation.

Pinpoint Test K: The Dual Temperature Control Is Inoperative/Does Not Operate Correctly

Normal Operation

Under normal operation, the LH and RH discharge temperature sensors receive a ground from the Dual Automatic Temperature Control (DATC) module through circuit (LH) 9-FA47 (BN/GN)/9-FA3 (BN/BL) and (RH) 9-FA51 (BN/YE)/9-FA3 (BN/BL). A 5-volt reference voltage is supplied to the LH and RH discharge temperature sensors from the DATC module through circuits (LH) 8-FA47 (WH/GN) and (RH) 8-FA51 (WH/BK).

Possible Causes

- An open in circuit 9-FA47 (BN/GN) or 9-FA51 (BN/YE)
- DATC module.

PINPOINT TEST K: THE DUAL TEMPERATURE CONTROL IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
K1 VERIFY THE CONCERN	
NOTE: When carrying out this test step, allow time for the system to respond. • With the engine at normal operating temperature, select PANEL mode and A/C on the DATC module. • Using the driver side temperature control, set the driver side temperature to 16°C (60°F) and then set to 32°C (90°F). • **Do both the driver side and passenger side air temperatures go to full cool then to full heat?**	**Yes** GO to K2 . **No** If driver or passenger side only does not go to full cool and then full heat,GO to K6 .
K2 CHECK MODULE CONFIGURATION	
• Enter Module Identification mode. • Enter the following diagnostic mode on the diagnostic tool: PID CNFG Data. • **Does PID CNFG data read ON and 4N_3N_2Y?**	**Yes** GO to K3 . **No** RECONFIGURE the DATC module.
K3 REQUEST CONTINUOUS CODES AND CARRY OUT THE DATC SELF-TEST	
• Request Continuous DTCs and carry out the DATC Module Self-Test. Refer to Climate Control System . Record the DTCs displayed, if any. • **Are any DTCs displayed?**	**Yes** REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary. **No** GO to K4 .
K4 CHECK THE TEMPERATURE SENSORS FOR CORRECT INSTALLATION	
• Key in OFF position. • Check the driver side, passenger side, evaporator core and ambient air temperature sensors for correct installation. • Check the in-vehicle temperature sensor and venturi hose for correct installation. • **Are the sensors installed correctly?**	**Yes** GO to K5 . **No** CORRECT the sensor installation. TEST the system for normal operation.
K5 CHECK FOR CORRECT HEATER HOSE CONNECTIONS	
NOTE: The hose assembly that connects to the inboard port on the coolant control valve connects to	**Yes** GO to K6 .

the inboard port (driver side) on the heater core. • Check the heater hose connections for correct installation. • **Are the heater hoses installed correctly?**	**No** CORRECT the heater hose installation. TEST the system for normal operation.
K6 CHECK FOR CORRECT COOLANT FLOW TO THE HEATER CORE	
⚠ **WARNING: The heater core inlet hoses will become too hot to handle and can cause serious burns if the system is working correctly. Failure to follow these instructions can result in personal injury.** • Remove the passenger side cowl cover. • Key in START position. • With the engine running at normal operating temperature and the DATC module set to 32°C (90°F), see if both inlet heater hoses are too hot to handle. • **Are both inlet heater hoses too hot to handle?**	**Yes** GO to K7 . **No** Go To Pinpoint Test H .
K7 CHECK CORRECT COOLANT CONTROL VALVE OPERATION	
• Remove the passenger side cowl cover. • Clamp off the three heater hoses going to the heater core, as close to the heater core as possible.  A0000938 • Key in START position. • Set the DATC module to 16°C (60°F). • **Is cooling restored?**	**Yes** Concern is with coolant control valve operation. Go To Pinpoint Test J . **No** GO to K8 .
K8 CHECK CIRCUITS 8-FA51 (WH/BK) AND 8-FA47 (WH/GN)	
• Key in OFF position. • Disconnect: Passenger Side Discharge Air Temperature Sensor C255. • Disconnect: Driver Side Discharge Air Temperature Sensor C235. • Disconnect: DATC Module C228a. • Measure the resistance between the passenger side discharge air temperature sensor C255, circuit 8-FA51 (WH/BK) and the DATC module C228a-18, circuit 8-FA51 (WH/BK).	**Yes** RECHECK all connections, RECONNECT and RETEST the system. If the condition still exists, INSTALL a new DATC module. TEST the system for normal operation. **No** CHECK to make sure that circuit 8-FA47 (WH/GN) is connected to DATC module C228a-6 and that circuit 8-FA51 (WH/BK) is connected to DATC module C228b-18. REPAIR as required. TEST the system for normal operation.

 A0004987 • Measure the resistance between the driver side discharge air temperature sensor C235, circuit 8-FA47 (WH/GN) and the DATC module C228a-6, circuit 8-FA47 (WH/GN).  A0004988 • **Are the resistances less than 5 ohms?**	

Pinpoint Test L: The A/C Does Not Operate/Does Not Operate Correctly

Normal Operation

Under normal operation, when the Powertrain Control Module (PCM) receives an A/C request signal from the DATC module, the PCM provides a ground for the A/C clutch relay coil through circuit 91S-FA79 (BN/BL). The A/C clutch relay coil receives ignition voltage through circuit 15S-FA79 (GN/RD). The relay switch receives battery voltage through circuit 30-FA79 (RD/OG). When the relay coil is grounded, voltage is delivered through circuit 15-FA6 (GN/YE) to the A/C compressor clutch field coil. Ground for the A/C compressor clutch field coil is provided through circuit 31-FA6 (BK/YE).

Possible Causes

- An open in circuit 31-FA6 (BK/YE), 30S-FA79 (RD), 91S-FA79 (BN/BL), 15S-FA79 (GN/RD) or 15-FA6 (GN/YE).
- A short to voltage in circuit 91S-FA79 (BN/BL).
- A/C clutch relay.
- A/C compressor clutch/field coil.
- DATC module.
- Evaporator discharge air temperature sensor.
- PCM

PINPOINT TEST L: THE A/C DOES NOT OPERATE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
NOTE: The ambient temperature must be above 0°C (32°F) to permit the A/C compressor to operate.	
L1 VERIFY CUSTOMER COMPLAINT	
• Make sure the engine is at operating temperature. • Select panel and A/C modes. • **Is full heat present in all temperature settings?**	**Yes** Go To Pinpoint Test J . **No** GO to L2 .

L2 CARRY OUT THE PCM AND DATC MODULE SELF-TESTS	
• Enter the following diagnostic mode on the diagnostic tool: PCM Self Test. • Key in ON position. • Carry out the PCM self-test. Record any DTCs displayed. • Carry out the DATC module self-test and retrieve continuous DTCs. Refer to Climate Control System . Record the DTCs displayed, if any. • **Were any DTCs displayed?**	**Yes** REFER to the PCM or DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary. **No** GO to L3 .
L3 CHECK PID WACF WITH THE A/C ON	
NOTE: When PCM PID WACF is YES, this is the same fault as DTC P1460. • Key in START position. • Press the DATC PANEL and A/C override button. Make sure the A/C indicator LED is on. • Enter the following diagnostic mode on the diagnostic tool: PCM PID WACF. • **Does the PCM PID WACF read YES?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue the diagnosis. **No** GO to L4 .
L4 CHECK PID ACCS WITH THE A/C ON	
• Make sure PID EXT_FT2 reading is greater than 0°C (32°F). • Make sure that the PID ACPEVAP reading is greater than 2°C (35°F). • Make sure the engine is at idle. • Press the DATC PANEL and the A/C override buttons. Make sure the A/C indicator LED is on. • Enter the following diagnostic mode on the diagnostic tool: PCM PID ACCS. • **Does the PCM PID ACCS read ON?**	**Yes** GO to L5 . **No** INSTALL a new DATC module. TEST the system for normal operation.
L5 CHECK PID WAC WITH THE A/C ON	
• Press the DATC PANEL and the A/C override button. Make sure the A/C indicator LED is on. • Enter the following diagnostic mode on the diagnostic tool: PCM PID WAC. • **Does the PID WAC read ON?**	**Yes** GO to L6 . **No** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue the diagnosis.
L6 CHECK THE REFRIGERANT SYSTEM PRESSURE	
• Key in OFF position. • Connect the manifold set to the service ports. Refer to Manifold Gauge Set Connection in this section.	**Yes** GO to L7 . **No** CHECK the system for refrigerant system leaks.

• **Is the pressure between 345 kPa (50 psi) and 1,724 kPa (250 psi)?**	REPAIR as necessary. TEST the system for normal operation.
L7 CHECK FOR POWER TO THE A/C RELAY	
• Key in OFF position. • Disconnect: A/C Clutch Relay. • Key in ON position. • Measure the voltage between A/C clutch relay C1008 pin 3, circuit 30-FA79 (RD/OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to L8 . **No** REPAIR circuit 30-FA79 (RD) for an open. TEST the system for normal operation.
L8 CHECK CIRCUIT 15S-FA79 (GN/RD) FOR VOLTAGE	
• Measure the voltage between A/C clutch relay C1008 pin 1, circuit 15S-FA79 (GN/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to L9 . **No** REPAIR circuit 15S-FA79 (GN/RD) for an open. TEST the system for normal operation.
L9 CHECK CIRCUIT 30-FA79 (RD) FOR A SHORT TO GROUND	
• Press the DEFROST override button on the DATC module. • Measure the voltage between A/C clutch relay C1008 pin 1, circuit 15S-FA79 (GN/RD) and pin 2, circuit 91S-FA79 (BN/BU).  • **Is the voltage greater than 10 volts?**	**Yes** GO to L12 . **No** GO to L10 .
L10 CHECK CIRCUIT 91S-FA79 (BN/BU) FOR AN OPEN	

• Key in OFF position. • Disconnect: PCM C175. • Measure the resistance between the A/C control relay socket pin 2, circuit 91S-FA79 (BN/BU) and the PCM C175a-9 circuit 91S-FA79 (BN/BU).  A0034116 • **Is the resistance less than 5 ohms?**	**Yes** GO to L11 . **No** REPAIR circuit 91S-FA79 (BN/BU) for an open. TEST the system for normal operation.
L11 CHECK CIRCUIT 91S-FA79 (BN/BU) FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the A/C control relay socket pin 2, circuit 91S-FA79 (BN/BU) and the ground.  A0055256 • **Is voltage present?**	**Yes** REPAIR circuit 91S-FA79 (BN/BU). CLEAR the DTCs. TEST the system for normal operation. **No** INSTALL a new PCM. TEST the system for normal operation.
L12 CHECK THE A/C CLUTCH INPUT	
• Key in OFF position. • Connect: A/C Clutch Relay. • Disconnect: A/C Clutch Field Coil C100. • Key in ON position. • With the engine running, measure the voltage between A/C clutch field coil C100, circuit 15S-FA6 (GN/YE), harness side and ground.  A0001957 • **Is the voltage greater than 10 volts?**	**Yes** GO to L14 . **No** GO to L13 .
L13 CHECK CIRCUIT 15S-FA6 (GN/YE) FOR AN OPEN	

• Key in OFF position. • Measure the resistance between A/C clutch C100, circuit 15S-FA6 (GN/YE) and A/C clutch relay C1008 pin 5, circuit 15S-FA6 (GN/YE).  A0056515 • **Is the resistance 5 ohms or less?**	**Yes** INSTALL a new A/C clutch relay. TEST the system for normal operation. **No** REPAIR circuit 15S-FA6 (GN/YE) for an open. TEST the system for normal operation.
L14 CHECK THE A/C CLUTCH GROUND CIRCUIT FOR AN OPEN	
• Key in OFF position. • Measure the resistance between A/C clutch C100, circuit 31-FA6 (BK/YE), harness side and ground.  A0001959 • **Is the resistance 5 ohms or less?**	**Yes** GO to L15 . **No** REPAIR circuit 31-FA6 (BK/YE). TEST the system for normal operation.
L15 CHECK THE CLUTCH AIR GAP	
• Measure the A/C compressor clutch air gap at three equally spaced locations between the clutch hub and the A/C compressor clutch pulley. • **Is the A/C compressor clutch air gap greater than 0.75 mm (0.030 in)?**	**Yes** ADJUST the A/C compressor clutch field coil. TEST the system for normal operation. **No** INSTALL a new A/C compressor clutch field coil. TEST the system for normal operation.

Pinpoint Test M: The Air Conditioning (A/C) Is Always On

Normal Operation

Under normal operation, when the Powertrain Control Module (PCM) receives an A/C request signal from the DATC module, the PCM provides a ground for the A/C clutch relay coil through circuit 91S-FA79 (BN/BL). The A/C clutch relay coil receives ignition voltage through circuit 15S-FA79 (GN/RD). The relay switch receives battery voltage through circuit 30-FA79 (RD/OG). When the relay coil is grounded, voltage is delivered through circuit 15-FA6 (GN/YE) to the A/C compressor clutch field coil. Ground for the A/C compressor clutch field coil is provided through circuit 31-FA6 (BK/YE).

Possible Causes

- A short to voltage in circuit 15-FA6 (GN/YE).
- A/C clutch relay.
- A/C compressor clutch/field coil.
- DATC module.

- PCM

PINPOINT TEST M: THE A/C IS ALWAYS ON

Test Step	Result / Action to Take
M1 CARRY OUT THE PCM AND DATC MODULE SELF-TESTS	
• Enter the following diagnostic mode on the diagnostic tool: PCM Self Test. • Key in ON position. • Carry out the PCM self-test. Record any DTCs. • Carry out the DATC module self-test and retrieve continuous DTCs. Refer to Climate Control System under Diagnosis and Testing in this section. Record the DTCs displayed, if any. • **Are any PCM or DATC DTCs displayed?**	**Yes** REFER to the PCM or DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary. **No** GO to M2 .
M2 CHECK DATC BUTTONS	
• With the engine running, toggle between DATC OFF button and the A/C button. • **DOES the A/C indicator light turn on when the A/C button is pushed, and off when the OFF button is pushed?**	**Yes** GO to M3 . **No** INSTALL a new DATC module. TEST the system for normal operation.
M3 CHECK PCM PID ACCS	
• Enter the following diagnostic mode on the diagnostic tool: PCM PID ACCS. • Key in ON position. • Push the DATC OFF button, then push the A/C button. • **Does the A/C indicator light turn off and on and the PCM PID ACCS continue to read ON?**	**Yes** RERUN the Data Link Diagnostic Test. **No** GO to M4 .
M4 CHECK PID WACF WITH THE A/C OFF	
• Key in ON position. • Push the DATC OFF button. • Enter the following diagnostic mode on the diagnostic tool: PCM PID WACF. • **Does PCM PID WACF read YES?**	**Yes** REPAIR circuit 91S-FA79 (BK/OG) for a short to ground. TEST the system for normal operation. **No** GO to M5 .
M5 CHECK FOR POWER ALWAYS ON CIRCUIT 15S-FA6 (GN/YE)	
• Key in OFF position. • Disconnect: A/C Clutch C100. • Key in ON position. • Make sure the DATC is in the OFF position. • Measure the voltage between A/C clutch field coil C100, circuit 15S-FA6 (GN/YE), harness side and ground.	**Yes** GO to M7 . **No** GO to M6 .

 A0001957 • **Is the voltage greater than 10 volts?**	
M6 CHECK THE CLUTCH AIR GAP	
• Measure the A/C compressor clutch air gap at three equally spaced locations between the clutch hub and the A/C compressor clutch pulley. • **Is the A/C compressor clutch air gap greater than 0.75 mm (0.030 in)?**	**Yes** ADJUST the A/C compressor clutch field coil. TEST the system for normal operation. **No** INSTALL a new A/C compressor clutch field coil. TEST the system for normal operation.
M7 CHECK CIRCUIT 15-FA6 (GN/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: A/C Clutch Relay. • Key in ON position. • With the engine running, measure the voltage between A/C clutch field coil C100, circuit 15S-FA6 (GN/YE), harness side and ground.  A0001957 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 15S-FA6 (GN/YE) for a short to voltage. TEST the system for normal operation. **No** INSTALL a new A/C clutch relay. TEST the system for normal operation.

Pinpoint Test N: The Blower Motor Is Inoperative

Normal Operation

Under normal operation, the blower motor relay coil receives a ground from the DATC module through circuit 31S-FA23 (BK/BU). The coil receives voltage through circuit 30-FA24 (RD/OG). Voltage is supplied to the relay contacts from circuit 30-FA24 (RD/OG). When the relay coil is energized, voltage is delivered to the blower motor through circuit 30S-FA18 (RD/BK). Ground for the motor is provided through circuit 31S-FA18 (BK/RD) from the blower control module. Ground for the blower control module is provided by circuit 31-FA45 (BK). The DATC module sends a 0-volt (LO) to 5-volt (HI) signal to the blower control module through circuit 8-FA45 (BN/BU) to control the blower speed.

Possible Causes

- An open in circuit 31-FA45 (BK), 31S-FA18 (BK/RD), 30S-FA18 (RD/BK), 30-FA24 (RD/OG) or 31S-FA23 (BK/BU).
- A short to ground in circuit 8-FA45 (BN/BU).
- A short to voltage in circuit 31S-FA23 (BK/BU).
- A/C blower relay.

- Blower motor control module.
- DATC module.

PINPOINT TEST N: THE BLOWER MOTOR IS INOPERATIVE

Test Step	Result / Action to Take
N1 VERIFY THE BLOWER MOTOR OPERATION	
• Key in ON position. • Press the PANEL button on the DATC module. Adjust the blower motor setting to LO and then to HI. • **Is the blower motor inoperative in all settings?**	**Yes** GO to N2 . **No** Go To Pinpoint Test O .
N2 CHECK FOR VOLTAGE TO THE BLOWER MOTOR	
• Key in OFF position. • Disconnect: Blower Motor C288. • Key in ON position. • Measure the voltage between the blower motor C288, circuit 30S-FA18 (RD/BK) and ground.  AM0416-A • **Is the voltage greater than 10 volts?**	**Yes** GO to N3 . **No** GO to N9 .
N3 CHECK FOR VOLTAGE TO THE BLOWER MOTOR CONTROLLER	
• Key in OFF position. • Disconnect: Blower Motor Speed Control C297. • Key in ON position. • Measure the voltage between the blower motor speed control C297-4, circuit 30S-FA45 (RD/OG) and ground.  A0052329 • **Is the voltage greater than 10 volts?**	**Yes** GO to N4 . **No** REPAIR circuit 30S-FA45 (RD/OG) for an open. TEST the system for normal operation.
N4 CHECK CIRCUIT 31-FA45 (BK) FOR AN OPEN	
• Measure the resistance between the blower motor speed control C297-2, circuit 31-FA45 (BK) and ground.	**Yes** GO to N5 . **No** REPAIR circuit 31-FA45 (BK) for an open. TEST the

 A0056181 • **Is the resistance less than 5 ohms?**	system for normal operation.
N5 CHECK CIRCUIT 31S-FA18 (BK/RD) FOR AN OPEN	
• Measure the resistance between the blower motor C288, circuit 31S-FA18 (BK/RD) and the blower motor speed control C197-1, circuit 31S-FA18 (BK/RD).  A0056182 • **Is the resistance less than 5 ohms?**	**Yes** GO to N6 . **No** REPAIR circuit 31S-FA18 (BK/RD) for an open. TEST the system for normal operation.
N6 CHECK THE BLOWER MOTOR	
• Connect: Blower Motor C288. • Connect a fused jumper lead between the blower motor speed control C197-1, circuit 31S-FA18 (BK/RD) and C197-2, circuit 31-FA45 (BK).  A0056183 • Key in ON position. • **Does the blower motor operate?**	**Yes** GO to N7 . **No** INSTALL a new blower motor. TEST the system for normal operation.
N7 CHECK CIRCUIT 8-FA45 (WH/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Removed the fused jumper lead from the blower motor speed control C297. • Disconnect: DATC Module C228b. • Measure the resistance between the blower motor speed control C197-3, circuit 8-FA45 (WH/BU) and ground.  A0052330 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to N8 . **No** REPAIR circuit 8-FA45 (WH/BU). TEST the system for normal operation.

N8 CHECK THE DATC MODULE OUTPUT	
• Connect: DATC Module C228b. • Connect: Blower Motor Speed Control C297. • Key in ON position. • Adjust the blower motor speed to HI (7 bars). • Measure the voltage between the DATC module C228a-15, circuit 8-FA45 (WH/BU) and ground by back-probing the DATC module C228a.  A0028942 • **Is the voltage greater than 4.5 volts?**	**Yes** INSTALL a new blower motor speed control. TEST the system for normal operation. **No** INSTALL a new DATC module. TEST the system for normal operation.
N9 CHECK CIRCUIT 30S-FA18 (RD/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: Blower Motor Relay C1011. • Measure the resistance between the blower motor relay C1011 socket pin 87, circuit 30S-FA18 (RD/BK) and the blower motor C288, circuit 30S-FA18 (RD/BK).  A0032572 • **Is the resistance less than 5 ohms?**	**Yes** GO to N10 . **No** REPAIR circuit 30S-FA18 (RD/BK) for an open. TEST the system for normal operation.
N10 CHECK CIRCUIT 30-FA24A (RD/OG) FOR AN OPEN	
• Measure the voltage between the blower motor relay C1011 socket pin 86, circuit 30-FA24A (RD/OG) and ground.  A0020210 • **Is the voltage greater than 10 volts?**	**Yes** GO to N11 . **No** REPAIR circuit 30-FA24A (RD/OG) for an open. TEST the system for normal operation.
N11 CHECK CIRCUIT 30-FA24 (RD/OG) FOR AN OPEN	
• Measure the voltage between the blower motor relay C1011 socket pin 30, circuit 30-FA24 (RD/OG) and ground.	**Yes** GO to N12 . **No** REPAIR circuit 30-FA24 (RD/OG) for an open. TEST

 A0032581 • **Is the voltage greater than 10 volts?**	the system for normal operation.
N12 CHECK THE DATC MODULE OUTPUT	
• Key in ON position. • Measure the voltage between the blower motor relay C1011 socket pin 86, circuit 30-FA24A (RD/OG) and socket pin 85, circuit 31S-FA23 (BK/BU).  A0034149 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new blower motor relay. TEST the system for normal operation. **No** GO to N13 .
N13 CHECK CIRCUIT 31S-FA23 (BK/BU) FOR SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: DATC Module C228b. • Key in ON position. • Measure the voltage between the blower motor relay C1011 socket pin 85, circuit 31S-FA23 (BK/BU) and ground.  A0013862 • **Is voltage present?**	**Yes** REPAIR circuit 31S-FA23 (BK/BU). TEST the system for normal operation. **No** GO to N14 .
N14 CHECK CIRCUIT 31S-FA23 (BK/BU) FOR AN OPEN	
• Measure the resistance between the DATC module C228b-19, circuit 31S-FA23 (BK/BU) and the blower motor relay C1011 socket pin 85, circuit 31S-FA23 (BK/BU).  A0034631 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 31S-FA23 (BK/BU) for an open. TEST the system for normal operation.

Pinpoint Test O: The Blower Motor Does Not Operate Correctly

Normal Operation

Under normal operation, the blower motor relay coil receives a ground from the DATC module through circuit 31S-FA23 (BK/BU). The coil receives voltage through circuit 30-FA24 (RD/OG). Voltage is supplied to the relay contacts from circuit 30-FA24 (RD/OG). When the relay coil is energized, voltage is delivered to the blower motor through circuit 30S-FA18 (RD/BK). Ground for the motor is provided through circuit 31S-FA18 (BK/RD) from the blower control module. Ground for the blower control module is provided by circuit 31-FA45 (BK). The DATC module sends a 0-volt (LO) to 5-volt (HI) signal to the blower control module through circuit 8-FA45 (BN/BU) to control the blower speed.

Possible Causes

- An open in circuit 8-FA45 (BN/BU).
- A short to ground in circuit 31S-FA18 (BK/RD) or 31S-FA23 (BK/BU).
- A short to voltage in circuit 8-FA45 (BN/BU) or 30S-FA18 (RD/BK).
- Blower motor control module.
- DATC module.

PINPOINT TEST O: THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
O1 VERIFY THE BLOWER MOTOR OPERATION	
• Key in ON position. • Press the PANEL button on the DATC module. Adjust the blower motor setting to LO and then to HI. • **Does the blower motor operate at any setting?**	**Yes** If the blower motor operates always in HIGH, GO to O2 . If the blower motor is always ON, GO to O5 . **No** Go To Pinpoint Test N .
O2 CHECK CIRCUIT 31S-FA18 (BK/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Blower Motor Speed Control C297. • Key in ON position. • **Does the blower motor operate?**	**Yes** REPAIR circuit 31S-FA18 (BK/RD) for a short to ground. TEST the system for normal operation. **No** GO to O3 .
O3 CHECK CIRCUIT 8-FA45 (WH/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: DATC Module C228a. • Key in ON position. • Measure the voltage between the blower motor speed control C197-3, circuit 8-FA45 (WH/BU) and ground.	**Yes** REPAIR circuit 8-FA45 (WH/BU) for a short to voltage. TEST the system for normal operation. **No** GO to O4 .

 A0056184 • **Is voltage present?**	
O4 CHECK CIRCUIT 8-FA45 (WH/BU) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the blower motor speed control C197-3, circuit 8-FA45 (WH/BU) and DATC Module C228a-15, circuit 8-FA45 (WH/BU).  A0056185 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new blower motor speed control. TEST the system for normal operation. **No** REPAIR circuit 8-FA45 (WH/BU) for an open. TEST the system for normal operation.
O5 CHECK THE DATC MODULE OUTPUT	
• Key in OFF position. • Disconnect: Blower Motor Relay C1011. • Key in ON position. • Measure the voltage between the blower motor relay C1011 socket pin 86, circuit 30-FA24A (RD/OG) and socket pin 85, circuit 31S-FA23 (BK/BU).  A0034149 • **Is the voltage greater than 10 volts?**	**Yes** GO to O6 . **No** GO to O7 .
O6 CHECK CIRCUIT 31S-FA23 (BK/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DATC Module C228a. • Measure the resistance between the blower motor relay C1011 socket pin 85, circuit 31S-FA23 (BK/BU) and ground.  A0013869 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. **No** REPAIR circuit 31S-FA23 (BK/BU) for a short to ground. TEST the system for normal operation.

O7 CHECK CIRCUIT 30S-FA18 (RD/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Blower Motor C288. • Key in ON position. • Measure the voltage between the blower motor C288, circuit 30S-FA18 (RD/BK) and ground.  AM0416-A • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 30S-FA18 (RD/BK) for a short to voltage. TEST the system for normal operation. **No** GO to O8 .
O8 CHECK THE DATC MODULE BLOWER CONTROL OUTPUT	
• Adjust the blower motor speed to LO (1 bar). • Measure the voltage between the DATC module C228a-15, circuit 8-FA45 (WH/BU) and ground by back-probing the DATC module C228a.  A0028942 • **Is the voltage less than 1 volt?**	**Yes** INSTALL a new blower motor speed control. TEST the system for normal operation. **No** INSTALL a new DATC module. TEST the system for normal operation.

Component Tests

Heater Core

⚠ **WARNING: Carbon monoxide is colorless, odorless and dangerous. If it is necessary to operate the engine with the vehicle in a closed area such as a garage, always use an exhaust collector to vent the exhaust gases outside the closed area.**

1. **NOTE:** Testing of returned heater cores reveals that a large percentage of heater cores are good and did not require the installation of a new heater core. If a heater core leak is suspected, the heater core must be tested by following the plugged heater core component test before the heater core pressure test. Carry out a system inspection by checking the heater system thoroughly as follows:

   Inspect for evidence of coolant leakage at the heater hose to heater core attachments. A coolant leak in the heater hose could follow the heater core tube to the heater core and appear as a leak in the heater core.

2. **NOTE:** Spring-type clamps are installed as original equipment. Installation and overtightening of non-specified clamps can cause leakage at the heater hose connection and damage the heater core.

Check the integrity of the heater hose clamps.

Heater Core Plugged

⚠ WARNING: The heater core inlet hose will become too hot to handle if the system is working correctly.

1. Check to see that the engine coolant is at the correct level.

2. Start the engine and turn on the heater.

3. When the engine coolant reaches operating temperature, feel the heater core inlet and outlet hoses to see if they are hot.

4. If the outlet only is not hot:
   - the heater core may have an air pocket.
   - the heater core may be plugged.

5. If the inlet only is not hot:
   - the thermostat may not be working correctly.
   - the coolant control valve may not be working correctly.

Heater Core Pressure Test

Use the Pressure Test Kit to carry out the pressure test.

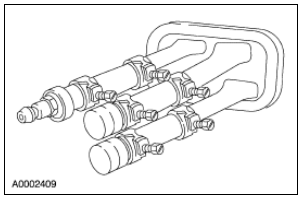
1. **NOTE:** Due to space limitations, a bench test may be necessary for pressure testing.

   Drain the coolant from the cooling system.

2. Disconnect the heater hoses from the heater core.

3. Install a short piece of heater hose, approximately 101 mm (4 inches) long on each heater core tube.

4. Fill the heater core and heater hoses with water and install the two plugs BT-7422-B and the adapter BT-7422-A from the Pressure Test Kit. Secure the heater hoses, plug and adapter with hose clamps.



5. Attach the pump and gauge assembly from the Pressure Test Kit to the adapter.

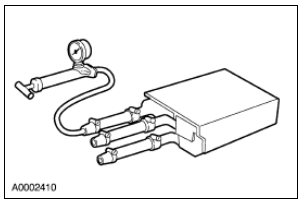
6. Close the bleed valve at the base of the gauge. Pump 241 kPa (35 psi) of air pressure into the heater core.

7. Observe the pressure gauge for a minimum of three minutes.

8. If the pressure drops, check the heater hose connections to the core tubes for leaks. If the heater hoses do not leak, remove the heater core from the vehicle and carry out the bench test.

Heater Core Bench Test

1. Remove the heater core from the vehicle.
2. Drain all of the coolant from the heater core.
3. Connect the 101 mm (4 inch) test heater hoses with plug and adapter to the core tubes. Then connect the Pressure Test Kit to the adapter.
4. Apply 241 kPa (35 psi) of air pressure to the heater core. Submerge the heater core in water.
5. If a leak is observed, install a new heater core.



Evaporator/Condenser Core On-Vehicle Leak Test

1. Discharge and recover the refrigerant. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.
2. Disconnect the suspect evaporator core or condenser core from the A/C system.
3. Clean the manifold fittings.
4. Connect the appropriate test fittings from the Set, A/C Fittings to the condenser core tube connections.
5. Connect the Vacuum Check Fitting, TXV to the thermostatic expansion valve.
6. **NOTE:** The automatic shut-off valves on some gauge set hoses do not open when connected to the test fittings. If available, use hoses without shut-off valves. If hoses with shut-off valves are used, make sure the valve opens when attached to the test fittings or install an adapter that will activate the valve. The test is not valid if the shut-off valve does not open.

   Connect the red and blue hoses from the R-134a Manifold Gauge Set to the test fittings on the evaporator core or condenser core. Connect the yellow hose to a known good vacuum pump.
7. Open both gauge set valves and start the vacuum pump. Allow the vacuum pump to operate for a minimum of 45 minutes after the gauge set low pressure gauge indicates 101 kPa (30 in-Hg). The 45-minute evacuation is necessary to remove any refrigerant from oil left in the evaporator core or condenser core. If the refrigerant is not completely removed from the oil, outgassing will degrade the vacuum and appear as a refrigerant leak.
8. If the low pressure gauge reading will not drop to 101 kPa (30 in-Hg) when the valves on the gauge and manifold set are open and the vacuum pump is operating, close the gauge set valves and observe the low pressure gauge. If the pressure rises rapidly to zero, a large leak is indicated. Recheck the test fitting connections and gauge set connections before installing a new evaporator core or condenser core.

9. After evacuating for 45 minutes, close the gauge set valves and stop the vacuum pump. Observe the low pressure gauge; it should remain at the 101 kPa (30 in-Hg) mark.
    - If the low pressure gauge reading rises 34 or more kPa (10 or more in-Hg) of vacuum from the 101 kPa (30 in-Hg) position in 10 minutes, a leak is indicated.
    - If a very small leak is suspected, wait 30 minutes and observe the vacuum gauge.
    - If a small amount of vacuum is lost, operate the vacuum pump with gauge valves open for an additional 30 minutes to remove any remaining refrigerant from the oil in the evaporator core or condenser core. Then recheck for loss of vacuum.
    - If a very small leak is suspected, allow the system to sit overnight with vacuum applied and check for vacuum loss.

10. If the evaporator core or condenser core does leak, as verified by the above procedure, install a new evaporator core or condenser core.

A/C Compressor External Leak Test

1. Install the A/C Pressure Test Adapter on the port of the A/C compressor, using the existing manifold retaining bolt.

2. Connect the high and low pressure lines of a manifold gauge set or a refrigerant recovery/recycling station such as the R-134a A/C service center to the corresponding fittings on the A/C Pressure Test Adapter.

3. Attach the center hose of a manifold gauge set to a refrigerant container standing in an upright position.

4. Hand-rotate the compressor shaft 10 complete revolutions to distribute the oil inside the A/C compressor.

5. Open the low pressure gauge valve, the high pressure gauge valve and the valve on the refrigerant container to allow the refrigerant vapor to flow into the A/C compressor.

6. Using the Refrigerant Leak Detector, check for leaks at the compressor shaft.

7. If a shaft or external leak is found, install a new A/C compressor.

8. When the leak test is complete, recover the refrigerant from the compressor.

Air Conditioning (A/C) System Check Retail Procedure Printable View (12 KB)

NOTE: This Retail Procedure is not eligible for claiming on Ford paid repairs (warranty and ESP).

NOTE: The engine should be run at idle for 10 minutes with the air conditioning on and set to MAX A/C before carrying out this retail procedure.

NOTE: Read and follow all of the Warnings, Cautions and Notes at the beginning of this section before continuing.

Visual inspection

1. Open the hood and visually inspect the heating and air conditioning systems for the following:
   - Coolant reservoir for correct coolant level
   - Heater hoses for deterioration or loose connections
   - Radiator and condenser for debris or damaged fins restricting airflow, loose mounting or connections
   - Accessory drive belt(s) and cooling fan(s) for wear or physical damage
   - Refrigerant lines and connections for physical damage or loose connections
   - Compressor for physical damage or loose connections
   - Receiver/drier for physical damage or loose connections
   - Wiring and connectors for excessive wear, loose or damaged connections, or incorrect routing

A/C refrigerant analysis

2. Carry out air conditioning refrigerant analysis. For additional information, refer to Refrigerant Identification Testing in this section.
   - If the refrigerant fails the analysis, discontinue diagnosis and make recommendations for repairs.
   - If the refrigerant passes the analysis, carry out the air conditioning system check.

Air conditioning system check

3. Connect manifold gauge set or charging station with gauges to refrigerant system.
   - With the vehicle in park, parking brake set, thermometer installed in center panel vent, and air conditioning system on and set to FULL COOL, start the engine.
   - Record air refrigerant system pressures while running the engine at 1,500 rpm and allow engine to return to idle.
   - Operate the blower motor in all control positions and check for correct blower speed changes.
   - With the blower motor on HI, operate air discharge mode selector in all positions and check for correct airflow in each position.
   - Operate the temperature blend selector in all positions and check for correct change in discharge temperature. Check the air discharge temperature with the selector in the coolest position and the air conditioning on and set to FULL COOL to determine if the air discharge temperature is acceptable for the current ambient air temperature.
   - Carry out the DATC self-test (if applicable).
     If the refrigerant system pressures were low, carry out the refrigerant system leak test.

Refrigerant system leak test

4. Use either an ultraviolet (UV) or an electronic leak detector to check for leaks at all refrigerant lines, connections, and components.
   After all tests have been completed, report all findings and recommended repairs to your service advisor before carrying out further diagnostic procedures.

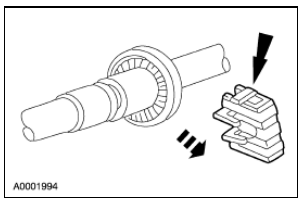
Spring Lock Coupling Printable View (158 KB)

Special Tool(s)

ST2352-A	Remover, Refrigerant Coupling Spring 412-039 (T84L-19623-B)

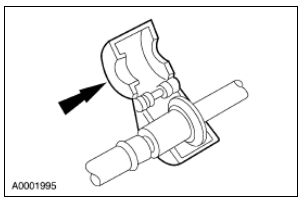
Disconnect

1. Remove the A/C tube lock coupling clip (19E746), if equipped.



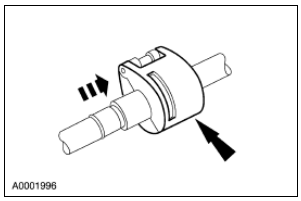
A0001994

2. Fit the special tool to the spring lock coupling.



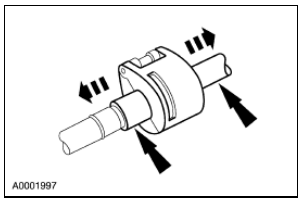
A0001995

3. Push the tool into the cage opening to release the female fitting from the A/C tube lock coupling spring (19E576).



A0001996

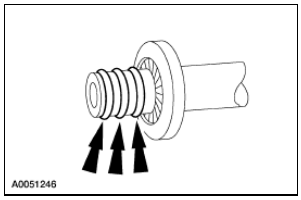
4. Pull the spring lock coupling fittings apart.



A0001997

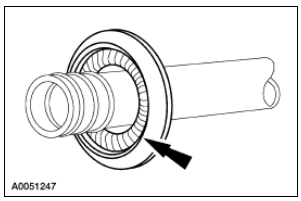
5. ⚠ **CAUTION: Do not use metal tools to remove the O-ring seals. They can cause axial scratches across the O-ring seal grooves, resulting in refrigerant leaks.**

   Remove the O-ring seals with a non-metallic tool.



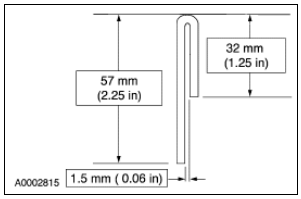
6. ⚠ **CAUTION: Do not use a screwdriver or similar tool to remove the A/C tube lock coupling spring; this can cause axial scratches across the O-ring seal grooves resulting in refrigerant leaks.**

   Remove the A/C tube lock coupling spring with a small hooked wire.



Cleaning

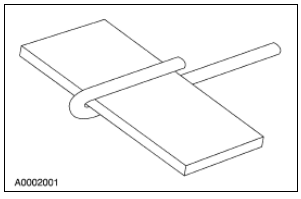
1. Fabricate a cleaning tool from a 1/8 inch diameter brazing rod.



2. Cut an abrasive pad from maroon colored 3M Scotch Brite® with the dimensions corresponding to the coupling size.

Coupling Size	Pad Size
3/8 inch	25 x 50 mm (1 x 2 inch)
1/2 inch	25 x 50 mm (1 x 2 inch)
5/8 inch	25 x 76 mm (1 x 3 inch)
3/4 inch	25 x 102 mm (1 x 4 inch)

3. Assemble the pad to the tool.

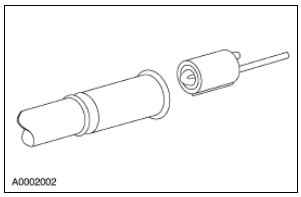


4. Coat the abrasive pad with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.

5. Roll the pad on the tool and install it in a variable speed drill motor.

6. ⚠ **CAUTION: Maintain low speed drill rotation when inserting or removing the cleaning tool to prevent axial scratches which may cause future leaks.**

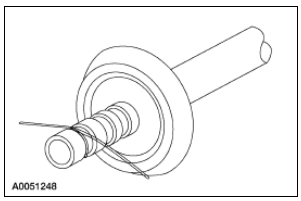
Polish for one minute at moderate speed (less than 1,500 rpm) or until the surface is clean and free of scratches or foreign material.



7. Clean the fitting with a lint-free cloth.

8. Inspect the surface for grooves or scratches. If grooves and scratches are still present, install a new component.

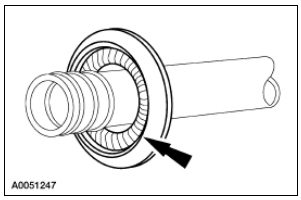
9. Clean the O-ring seal grooves with a 300 mm (12 inch) length of natural fiber string.
   - Loop the string around the grooves and pull the string back and forth.



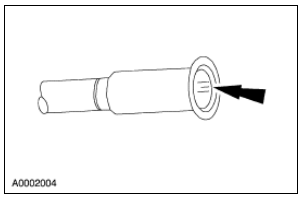
10. Remove any foreign material from the grooves with a lint-free cloth.

Connect

1. Install the A/C tube lock coupling spring.



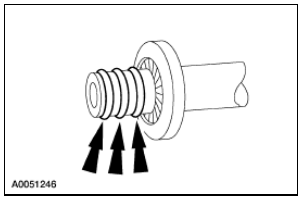
2. Lubricate the inside of the coupling with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.



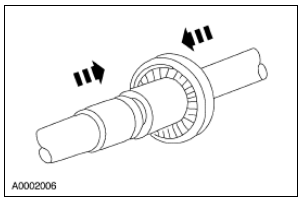
3. **⚠ CAUTION: Use only the new O-ring seals. The use of any O-ring seals other than those specified in the Ford Master Parts Catalog may result in intermittent leakage during vehicle operation.**

   Install the O-ring seals.

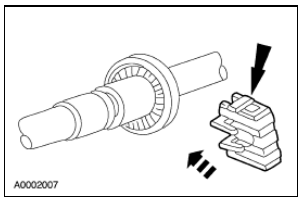
   - Lubricate the O-ring seals with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.



4. Connect the spring lock coupling fittings with a twisting motion until the A/C tube lock coupling spring snaps over the flared end of the female fitting.



5. Install the A/C tube lock coupling clip.



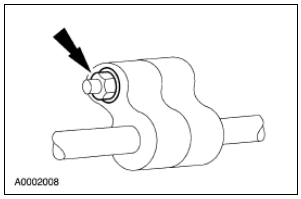
Air Conditioning Line (Peanut) Fitting

Printable View (48 KB)

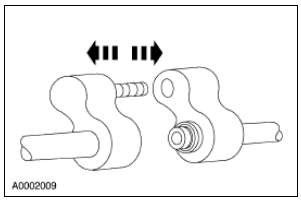
Disconnect

1. **CAUTION: Support the female fitting with a wrench to prevent the tubes from twisting.**

   Remove the nut from the peanut fitting.

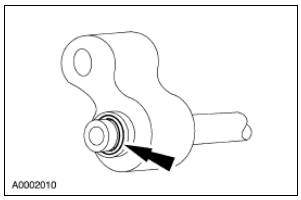


2. Pull the peanut fitting apart.



3. **CAUTION: Do not use metal tools to remove the O-ring seal. They can cause axial scratches across the O-ring seal groove, resulting in refrigerant leaks.**

   Remove the O-ring seal with a non-metallic tool.

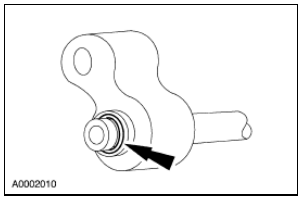


Connect

1. Clean all dirt or foreign material from the fittings.
2. **CAUTION: Use only the new O-ring seals. The use of any O-ring seals other than those specified in the Ford Master Parts Catalog may result in intermittent leakage during vehicle operation.**

   Install the O-ring seal.

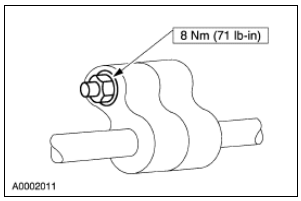
   - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.



3. Lubricate the inside of the fittings with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

4. **NOTE:** When correctly assembled, the male and female fittings should be flush.

   Assemble the male and female fittings together.



Heater Hose Coupling

Printable View (60 KB)

Special Tool(s)

 ST1648-A	Remover, Heater Hose Inlet Tube 412-042 (T85T-18539-AH)
 ST2589-A	Disconnect Tool, Heater Hose 412-127

Material

Item	Specification
MERPOL®	ESE-M99B144-B

Disconnect

⚠ CAUTION: Do not attempt to install a new bushing, spacer or O-rings in the heater hose coupling; damage to the heater hose coupling can result. If the heater hose coupling is the cause of a coolant leak, the affected heater hose must be replaced as an assembly.

1. **⚠ WARNING: The engine must be off, fully cool and the cooling system fully depressurized before attempting to disconnect any heater water hoses. Failure to comply with this warning can result in serious injury or burns from hot liquid escaping out of the engine cooling system.**

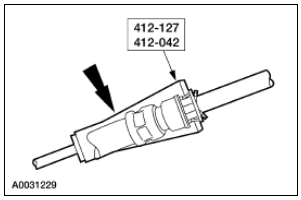
   Depressurize the engine cooling system.

2. Push the heater hose toward the tube to fully expose the locking tabs.

3. **NOTE:** When compressing the white coupling retainer with the special tool, the special tool must be perpendicular to and on the highest point of the coupling.

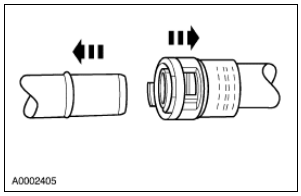
   NOTE: If the heater hose coupling is accessible, the retainer tabs can be compressed by hand to disconnect the heater hose.

   Push the special tool over the coupling retainer windows to compress the retainer locking tabs.

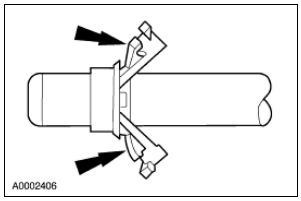


4. **NOTE:** A slight twisting motion while pulling on the heater water hose may be necessary to assist in the removal.

   Pull the heater hose away from the heater core tube.



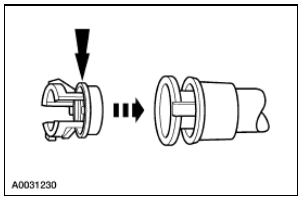
5. Spread the retainer tabs apart and slide the retainer off the tube.
    - Discard the retainer.



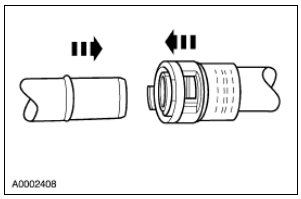
Connect

1. Clean the tubes and lubricate with coolant hose lubricant or plain water.

2. Install a new coupling retainer (18D434) into the heater hose coupling housing.



3. Push the heater hose coupling onto the tube.

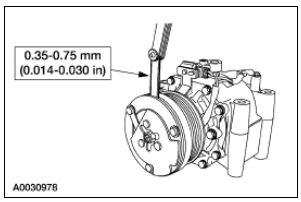


4. Make sure the heater hose coupling is fully engaged by lightly pulling on the heater hose.

A/C Clutch Air Gap Adjustment

Printable View (27 KB)

1. Check the A/C clutch air gap at three equally spaced places between the clutch hub and the A/C clutch pulley.



2. Remove the A/C clutch. Add or remove spacers between the A/C clutch and the compressor shaft until clearance is within specifications.

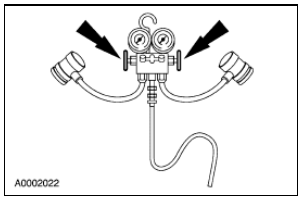
Manifold Gauge Set Connection

Printable View (81 KB)

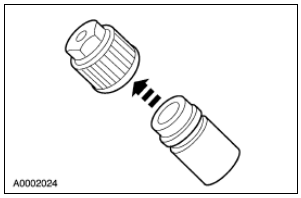
Special Tool(s)

 ST1928-A	R-134a Manifold Gauge Set 176-R032A or equivalent

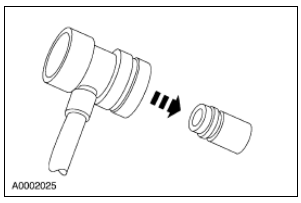
1. Turn both valves on the R-134a Manifold Gauge Set clockwise to close the low- and high-pressure hoses to the center manifold and center hose.



2. Remove the A/C charging valve cap from the high-pressure service gauge port valve.

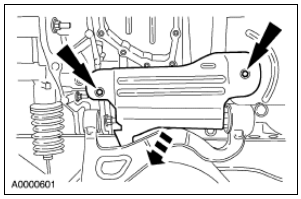


3. Connect the R-134a Manifold Gauge Set high-pressure hose and the R-134a high side quick disconnect to the high-pressure service gauge port valve.

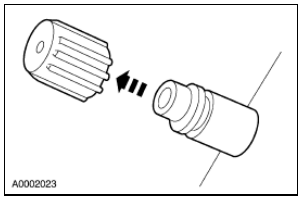


4. Raise the vehicle. For additional information, refer to Section 100-00 .

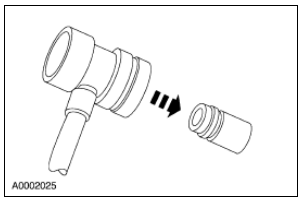
5. Remove the screws and the left sight shield.



6. Remove the A/C charging valve cap (19D702) from the low-pressure service gauge port valve.



7. Connect the R-134a Manifold Gauge Set low-pressure hose and the R-134a low side quick disconnect to the low-pressure service gauge port valve.



8. To disconnect the manifold and gauge set, reverse the connection procedure.

Electronic Leak Detection

Printable View (44 KB)

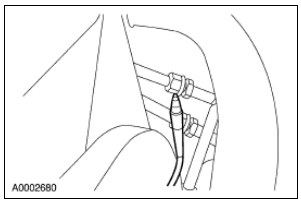
Special Tool(s)

ST2351-A	H10PM Refrigerant Leak Detector With Battery 216-00001 or equivalent

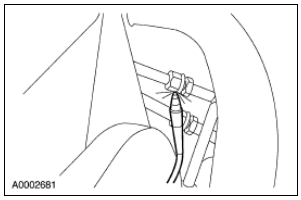
⚠ CAUTION: Good ventilation is necessary in the area where electronic A/C leak testing is to be carried out. If the surrounding air is contaminated with refrigerant gas, the leak detector will indicate this gas all the time. Odors from other chemicals such as antifreeze, diesel fuel, disc brake cleaner, or other cleaning solvents can cause the same problem. A fan, even in a well-ventilated area, is very helpful in removing small traces of contamination from the air that might affect the leak detector.

1. **NOTE:** The system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F) with the engine off.

   Leak test the refrigerant system using the Refrigerant Leak Detector. Follow the instructions included with the leak detector for handling and operation techniques.



2. If a leak is found, discharge and recover the refrigerant. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.
   - Repair the system.
   - Test the system for normal operation.



Fluorescent Dye Leak Detection

Printable View (119 KB)

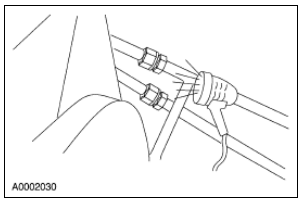
Special Tool(s)

ST1834-A	R-134a Refrigerant Service Center 023-00153 or equivalent
ST1261-A	120 Watt UV Spot Lamp 164-R0721 or equivalent
ST1705-B	R-134a Fluorescent Dye Injector 164-R0775 or equivalent
ST2651-A	High Intensity UV Lamp 12 Volt 164-R6000
ST2650-A	R-134a Leak Detection Dye 164-R6060
ST1928-A	R-134a Manifold Gauge Set 176-R032A
ST2649-A	Deluxe Injector Loop Kit 219-00069

Fluorescent Dye Detection

NOTE: Ford Motor Company vehicles are produced with R-134a fluorescent dye installed in the refrigerant system from the factory. The location of leaks can be pinpointed by the bright yellow-green glow of the fluorescent dye under a UV lamp. Since more than one leak can exist, make sure to inspect each component, line, and fitting in the refrigerant system for a leak.

1. Check for leaks using the special tool.
   - Inspect all components, lines, and fittings of the refrigerant system.



A0002030

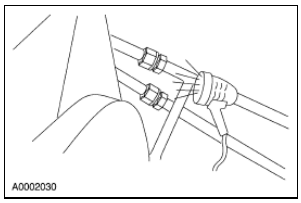
2. If a leak is found, recover the refrigerant. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

3. Repair the refrigerant system leak(s).

4. Evacuate and charge the refrigerant system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

5. After the leak(s) is/are repaired, remove any traces of fluorescent dye with a general purpose oil solvent.

6. Verify the repair by running the vehicle for a short period of time and rechecking the area of the leak with the special tool.



Fluorescent Dye Injection Using an A/C Refrigerant Center and Dye Injector

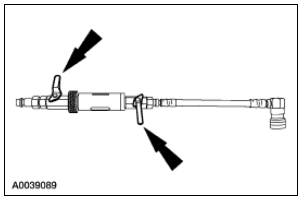
NOTE: Before using the R-134a fluorescent dye injector for the first time, refer to the manufacturers instructions on evacuation of any non-condensable gasses from the hoses.

NOTE: Only connect the R-134a fluorescent dye injector to a manifold and gauge set or R-134a service center when fluorescent dye is to be injected. The R-134a fluorescent dye injector has a one way check valve that will prevent refrigerant system recovery and evacuation.

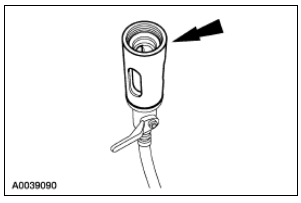
NOTE: Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F) with the engine off.

1. Install an R-134a A/C refrigerant service center or a manifold and gauge set. For additional information, refer to Manifold and Gauge Set Connection in this section.

2. Verify that the valves on the special tool are closed.



3. Fill the special tool reservoir with 7 ml (0.25 oz) of fluorescent dye.



4. Install the special tool between the low-pressure service gauge port valve and the R-134a refrigerant service center or manifold gauge set.

5. Open all valves and inject the fluorescent dye into the refrigerant system.

6. When fluorescent dye injection is complete, close all valves.

7. Recover the refrigerant from the R-134a fluorescent dye injector.

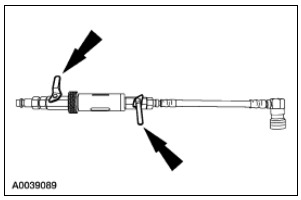
8. Remove the fluorescent dye injector from the low-pressure service gauge port valve and the R-134a A/C refrigerant service center or manifold gauge set.

Fluorescent Dye Injection Using a Dye Injector Loop Kit

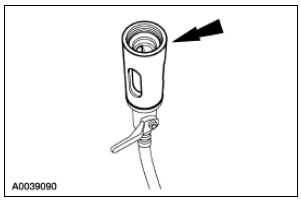
NOTE: Before using the R-134a fluorescent dye injector for the first time, refer to the equipment manufacturers instructions on evacuation of non-condensable gasses from the hoses.

NOTE: Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C.

1. Verify that the valves on the special tool are closed.



2. Fill the special tool reservoir with 7 ml (0.25 oz) of fluorescent dye.

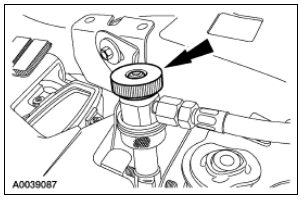


3. Install the special tool between the high-pressure and low-pressure service gauge port valves.

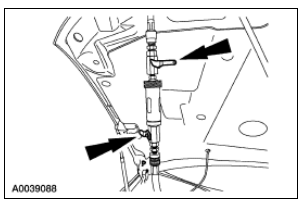
4. ⚠ **CAUTION: Make sure all tools and hoses are clear of the engine cooling fan and drive belt before starting the engine.**

   Start the engine.

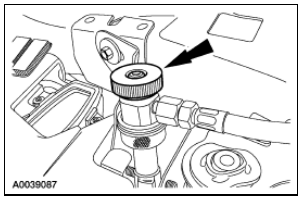
5. Open the high-pressure service valve.



6. Open the special tool valves and inject the fluorescent dye into the refrigerant system.

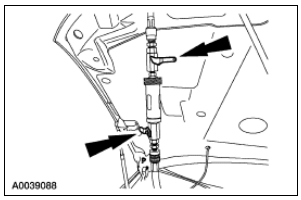


7. Close the high-pressure service valve to allow the pressure inside the special tool to equalize with the suction side of the refrigerant system.



8. **NOTE:** Close the valves on the special tool while the A/C compressor is operating.

   Close the valves on the special tool.



9. **NOTE:** Leave all valves on the special tool closed when not in use.

   Disconnect the high-pressure and low-pressure service valves and remove the special tool from the vehicle.

Air Conditioning (A/C) System Recovery, Evacuation and Charging

Printable View (36 KB)

Special Tool(s)

ST1226-A	R-134a A/C Refrigerant Center 176-00002 or equivalent
ST1834-A	R-134a A/C Refrigerant Center 023-00153 or equivalent
ST1928-A	R-134a Manifold Gauge Set 176-R032A or equivalent
 ST1685-A	1.2 CFM Vacuum Pump 023-00162 or equivalent
 ST1686-A	4.0 CFM Vacuum Pump 023-00163 or equivalent

Refrigerant System Recovery

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Prior to recovering the refrigerant system, you must verify the purity of the refrigerant. For additional information, refer to Refrigerant Identification Testing in this section.

2. Connect an R-134a A/C service center to the low- and high-pressure service gauge port valves. For additional information, refer to Manifold Gauge Set Connection in this section.

3. Recover the refrigerant from the system following the operating instructions provided by the equipment manufacturer.

4. Once the service center has recovered the vehicle A/C system refrigerant, close the service center inlet valve (if equipped). Then switch off the power supply.

5. Allow the vehicle A/C system to remain closed for about two minutes. Observe the system vacuum level as shown on the gauge. If the vacuum does not decrease, disconnect the refrigerant center hose(s).

6. If the system vacuum does decrease, repeat Steps 3 through 5 until the vacuum level remains stable for two minutes.

7. Carry out the required repairs.

Refrigerant System Evacuation

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Connect an R-134a service center to the low- and high-pressure service gauge port valves. For additional information, refer to Manifold Gauge Set Connection in this section.

2. Evacuate the system until the low-pressure gauge reads at least 99.4 kPa (29.5 in-Hg) of vacuum and as close to 101.1 kPa (30 in-Hg) as possible. Continue to operate the vacuum pump for a minimum of 45 minutes.

3. Turn off the vacuum pump. Observe the low-pressure gauge for five minutes to make sure that the system vacuum is held. If vacuum is not held for five minutes, leak test the system, service the leak, and evacuate the system again.

Refrigerant System Charging

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Correctly oil match the system to verify that the correct amount of refrigerant oil is present in the system. For additional information, refer to Refrigerant Oil Adding in this section.

2. Charge the system with the specified amounts of refrigerant oil and refrigerant.

3. When no more refrigerant is being drawn into the system, start the engine and select FULL COOL operation. Adjust the blower motor speed to the maximum and allow the remaining refrigerant to be drawn into the system. Continue to add refrigerant into the system until the specified weight of R-134a has been added. Close the charging cylinder valve and allow the system to pull any remaining refrigerant from the hose. When the low-pressure drops to approximately 207 kPa (30 psi), close the charging hose valve.

Air Conditioning (A/C) System Flushing

Printable View (23 KB)

Special Tool(s)

ST2466-A	A/C Flush and Purge Machine 219-00022 (part of 219-00023) or equivalent
 ST2469-A	A/C Flush and Purge Fitting Kit 219-00024 (part of 219-00023) or equivalent

⚠ WARNING: Use extreme care and observe all safety and service precautions related to the use of refrigerants.

⚠ WARNING: Due to refrigerant hazards, always wear safety goggles and non-penetrable gloves when working on or flushing A/C systems.

⚠ CAUTION: An A/C refrigerant analyzer must be used before the recovery of any vehicle's A/C refrigerant. Failure to do so puts the shop's bulk refrigerant at risk of contamination. If the vehicle's A/C refrigerant is contaminated, refer the customer to the service facility that carried out the last A/C service. If the customer wishes to pay the additional cost, use the A/C recovery equipment that is designated for recovering contaminated A/C refrigerant. All contaminated A/C refrigerant must be disposed of as hazardous waste. For all equipment, follow the equipment manufacturer's procedures and instructions.

⚠ CAUTION: Receiver/drier, muffler, hoses, thermal expansion valve, and fixed orifice tube should be removed when flushing the A/C system. Internal plumbing of these devices makes it impossible to correctly remove any residual-flushing agent. Except for the hoses, these components are typically discarded after A/C system contamination. Hoses without mufflers can normally be reused unless they are clogged with foreign material. The 3.785 liters (1 gallon) of A/C Systems Flushing Solvent F4AZ-19579-A and FL1-A filter used in A/C Flush and Purge Machine 219-00022 are intended for use on one vehicle only. They may be used to flush both the A/C condenser core and the A/C evaporator core on an individual vehicle, but under no circumstances should they be used on more than one vehicle.

1. **NOTE:** Prior to using the A/C Flush and Purge Machine 219-00022 for the first time, review the operating instructions.

   NOTE: Only the A/C Flush and Purge Machine kit 219-00023, which includes A/C Flush and Purge Machine 219-00022, A/C Flush and Purge Fitting Kit 219-00024, and the Ford Part number F4AZ-19579-A A/C Systems Flushing Solvent, is approved for use on Ford vehicles. No other flushing device or solvent is approved for flushing heat exchangers. Use of any other flusher or solvent may cause damage to the A/C system and the flushing unit.

   Ford Motor Company has approved a procedure to provide technicians with a non-CFC method of flushing contaminated A/C system heat exchangers, A/C evaporator core, and A/C condenser core. The procedure allows the specific components to be cleaned and flushed while installed in their normal in-vehicle location. The types of contamination flushed include particle matter that results from A/C compressor or desiccant failure within the suction accumulator/drier and gummy residue that can form when refrigerant oil is overheated during A/C compressor seizure. The flushing process

is a two-step procedure that involves the use of an A/C Flush and Purge Machine 219-00022 to:

- Circulate the flushing solvent through the heat exchanger in the reverse direction of normal refrigerant flow (back-flushing). Particulate matter picked up during flushing is filtered from the returning solvent before the solvent is returned to the reservoir for continued circulation.
- Remove the flushing solvent from the heat exchanger. In this step of the procedure, pressurized air 621-862 kPa (90-125 psi) is used to push and evaporate any remaining flush solvent from the heat exchanger.

2. Discharge the A/C system. Observe all safety precautions. For additional information, refer to the procedure in this section.

3. Disconnect the refrigerant lines from the heat exchanger(s) to be flushed.

4. Connect the A/C Flush and Purge Machine 219-00022 and A/C Flush and Purge Fitting Kit 219-00024 to the heat exchanger to be flushed. Do not flush through the thermostatic expansion valve, mufflers or hoses. Internal plumbing and material make-up of these components make it impossible to correctly remove foreign material or residual flushing solvent.

5. Use 3.785 liters (one gallon) of A/C Systems Flushing Solvent part number F4AZ-19579-A to flush the heat exchanger for a minimum of 15 minutes. The flush solvent may be used for one or both heat exchangers in the A/C system. However, the flush solvent is intended for one vehicle only. The filter used on the flushing unit is also intended for use on one vehicle only.

6. Flush the component for a minimum of 15 minutes.

7. Apply 621-862 kPa (90-125 psi) pressurized air to the component for a minimum of 30 minutes. The 30-minute purge time is required to force and evaporate all residual solvent from the A/C system component. Failure to successfully remove all residual solvent within the component can result in system damage when reconnected and operated. Dispose of the used flush solvent and filter in accordance with local, state and federal emissions.

8. **NOTE:** A/C system filtering as described in this section is optional if system flushing is carried out. However, the filter kit use is recommended after flushing if the A/C system contamination is extensive.

   Install a new thermostatic expansion valve in any vehicle being serviced for A/C compressor or desiccant failure.

9. Install new refrigerant hoses if clogged with foreign material.

10. Reconnect the heat exchanger being serviced.

11. Add additional refrigerant oil as required. For additional information, refer to the procedure in this section.

12. Evacuate, leak test and charge the A/C system. For additional information, refer to the procedure in this section.

13. Check the system for normal operation.

Refrigerant System Filtering After A/C Component Replacement

Printable View (40 KB)

Special Tool(s)

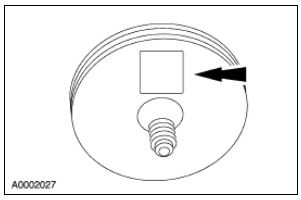
 ST1252-A	Set, A/C Fittings 412-DS028 (014-00333, D93L-19703-B) or equivalent

1. Install the new A/C compressor. For additional information, refer to Air Conditioning (A/C) Compressor - 3.0L (4V) or Air Conditioning (A/C) Compressor - 3.9L in this section.

2. Install the new receiver drier. For additional information, refer to Receiver Drier in this section.

3. Install the new thermostatic expansion valve. For additional information, refer to Thermostatic Expansion Valve in this section.

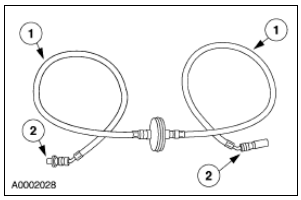
4. Orient the filter inlet toward the A/C condenser core.



5. **NOTE:** The pancake filter is not permanently installed and will be removed at the end of this procedure.

   Temporarily install the pancake filter between the A/C condenser core and the receiver/drier manifold and tube assembly.

   1. Use flexible refrigerant hose of 17,238 kPa (2,500 psi) burst rating.
   2. Make the connections using the R-12/R-134a Air Conditioning Test Fitting Set.



6. Correctly oil match the system. For additional information, refer to Refrigerant Oil Adding in this section.

7. Evacuate and charge the system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

8. Check all refrigerant system hoses, lines and the position of the newly installed filters to be sure they do not interfere with other engine compartment components. If necessary, use tie straps to make adjustments.

9. Provide adequate airflow to the front of the vehicle (with a fan, if necessary). Select A/C operation and set the blower motor speed to maximum. Start the engine and let it idle briefly. Make sure the A/C system is operating correctly.

10. Gradually bring the engine up to 1,200 rpm by running it at lower rpms for short periods (first at 800 rpm, then at 1,000 rpm). Set the engine at 1,200 rpm and run it for one hour with the A/C system operating.

11. Stop the engine.

12. Recover the refrigerant from the system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

13. Remove the fittings, flexible hoses and pancake filter from between the A/C condenser core and the receiver drier manifold and tube assembly.

14. Discard the pancake filter. It can be used one time only.

15. Reconnect the receiver drier manifold and tube assembly to the A/C condenser core.

16. Evacuate and charge the system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.

Refrigerant Oil Adding

Printable View (10 KB)

⚠ CAUTION: During normal A/C operation, oil is circulated through the system with the refrigerant, and a small amount is retained in each component. If certain components of the system are removed, some of the refrigerant oil will go with the component. To maintain the original total oil charge, it is necessary to compensate for the oil lost by adding oil to the system with the new part.

NOTE: Installation of new components such as the A/C pressure transducer do not require additional oil.

1. **NOTE:** New A/C compressors are shipped without compressor oil.

   Rotate the A/C compressor shaft six to eight revolutions while collecting the oil in a clean measuring device.

   - If the amount of oil drained from the old A/C compressor is between 90-150 ml (3-5 ounces), pour the same amount plus 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.
   - If the amount of oil that was removed from the old A/C compressor is greater than 150 ml (5 ounces), pour the same amount drained of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.
   - If the amount of oil that was removed from the old A/C compressor is less than 90 ml (3 ounces), pour 90 ml (3 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.

2. For the receiver drier, drill one 12.7 mm (0.5 in) hole in the receiver drier cylinder and drain the oil into a calibrated container.
   - Add a quantity of new oil to match that drained from the old receiver drier plus 59 ml (2 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

3. For the A/C evaporator core add 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the receiver drier inlet tube.

4. For the A/C condenser core, add 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the A/C condenser core or the receiver drier inlet tube.

5. Add 20 ml (.75 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the receiver drier inlet tube when carrying out each of the following repairs:
   - installation of a new TXV
   - installation of a new A/C compressor pressure relief valve (19D644)
   - installation of a new refrigerant line
   - repair of an O-ring seal leak
   - repair of a charge port leak

Refrigerant Identification Testing

Printable View (16 KB)

Special Tool(s)

ST1457-A	Refrigerant Identifier with Air-Radicator 198-00003 or equivalent

1. **NOTE:** An A/C refrigerant analyzer must be used to identify gas samples taken directly from the refrigeration system or storage containers prior to recovering or charging the refrigerant system.

   Follow the instructions included with the Deluxe Refrigerant Diagnostic Tool to obtain the sample for testing.

2. The diagnostic tool will display one of the following:
